3. Persons who should be registered: The following persons should, therefore, be registered:

(a) All male citizens of the United States and those who have declared their intention to become citizens who are between the ages of 18 and 45 years.

(b) All foreigners living or residing within the jurisdiction of the United States who are over 18 years of age.

4. The essential details of registration: The essential details of any practicable plan for registration for universal liability to personal military service are:

(a) The sanction necessary for its enforcement.

(b) The agency for effecting registration.

(c) The persons to be registered during the first and subsequent years.

(d) Periods for registration and notification to individuals of liability thereto, etc.

(e) Methods for effecting registration, securing information of movements of persons registered, forms for registration, etc., disposition of records.

(f) Compensation or reimbursement to individuals for registering.

5. The sanction: Complete and accurate registration lists constitute the only firm foundation for any system of universal liability to personal military service. If the lists are incomplete or inaccurate the system of personal service which they subserve is not universal. Those whose names are omitted escape liability to service, and to that extent the system fails to be universal or to bear equally upon all classes of persons. Therefore the sanction for the enforcement of registration must be such as to render it unlikely that attempts will be made to escape registration.

Imprisonment is the only recognized suitable sanction which appeals in the same way to all classes of persons, and therefore the only practicable punishment which will effect the desired result. Fines or forfeitures, no matter under what guise imposed, bear unequally upon the rich and poor, and therefore give no assurance that the system they support will be in fact universal. It is believed that a sentence of from one month's to one year's imprisonment should be made mandatory upon conviction of violation or attempt to violate whatever laws may be enacted relative to registration.

6. The agency for registration: The enrollment of even the number of persons necessary to effect complete registration of those liable to personal military service is a serious undertaking; and it is evident, if the system is to be initiated without undue delay and the work continued with the greatest economy consistent with efficiency and the least inconvenience to the public, that much depends upon the characteristics of the agency to which registration is intrusted.

This agency should be one strictly under Federal control; it should possess machinery and trained personnel which need only be increased to enable it to perform the work; it should have branches in every portion of the territory of the United States, and its normal functions should be such as to bring its personnel into close touch with all classes of people.

The Post Office Department fulfills these conditions to a marked degree and is deemed well fitted to undertake the work of registration. It now has offices in every city, town, and village, and in the operation of these, their branches and the rural delivery routes, the employees of the Post Office Department have become familiar with the names, residences, etc., and, to an extent, with the habits of life of a large portion of our population.

If the Post Office Department were charged with the duties of registration each person liable thereto could be registered at the post office or branch which normally affords him mailing facilities. Consequently the Post Office Department could perform the work with the least inconvenience to the public and the least expenditure of energy and time on the part of the persons liable to registration and of the officials concerned. The cost of increasing the personnel and office room to the required extent would be much less than that necessary to create a new agency for registration.

7. Persons liable to registration: Registration under any plan for universal liability to personal military service must be sufficiently comprehensive to include the enrollment of all persons liable for training in peace or service in war. This means the registration of all males between the ages when liability for training begins and liability for service in war ends. It also implies that certain aliens temporarily or permanently within our confines must be likewise accounted for. Unless all male aliens of military age are registered it will be impossible to determine whether persons liable for personal military service are escaping their duties under such liabilities. Moreover, the listing of all aliens capable of doing us harm would in itself be a measure of national security. This is because in time of actual or threatened war the alien registration lists would furnish accurate information as to just what possible enemies are in our midst and would enable us to take effective measures to thwart possible attempts to do us harm. The depredations on private industries in this country engaged in supplying certain European nations with war material are indications of what may be attempted by strangers within our gates should the United States become involved in war. Furthermore, should war occur or become imminent incalculable damage could be done to our means of communication by uncontrolled hostile sympathizers.

The Census Bureau has estimated (No. 156, Commerce Reports, July 5, 1916, p. 40) that there are about 21,000,000 men in the United States between the ages of 18 and 45 years who are citizens or who have declared their intention to become such. The number of aliens who should be registered is not accurately known, but it is estimated that they number about 7,000,000. In any event it is believed that safety demands that all aliens over 18 years of age should be registered.

8. Periods for registration: It is desirable that all persons liable for registration should be listed with the least practicable delay. It is essential to the universality of the system that all persons who become liable to military training and service in any year be registered during that year and in such portion thereof as will make it possible to eliminate those rejected for physical disability or exempted for other causes, and to call the others to the colors at the proper time.

It is equally necessary that all persons liable to military service who would be called out if war occurred in the near future, and all aliens capable of harm, be listed without undue delay. This means, considering our probable machinery therefor, that the following should be registered during the first year that the system becomes operative.

(a) All persons liable to military training and service who arrive at the age of 18 years during such year. These will number about 1,000,000.

(b) All persons liable to military service over 18 and under 25 years of age. These are the untrained men who should be called out for service should war occur before the system has generated the requisite number of trained reservists. In case of necessity they should be called out by classes according to age, beginning with the youngest. They will number about 5,500,000.

(c) All aliens between 18 and 25 years of age. Their number will be about 950,000.

The number of individual registrations, therefore, that would have to be accomplished during the first year is, roughly, 7,500,000.

During every subsequent year the persons described under (a) will have to be registered and their numbers will gradually increase in about the proportion of the increase in total population.

During the second year of registration all unregistered persons liable to military service and all unregistered aliens between the ages of 18 and 30 should be registered. These, together with the class which that year becomes liable to training and service, will number about 8,000,000. This is a larger number than will have to be registered during any other year.

During the third year all unregistered persons liable to military service and all unregistered aliens between the ages of 18 and 35 should be registered, and so on during each subsequent year, until all persons liable to military service and all aliens over 18 years of age shall have been registered.

Under this plan after the sixth year it would be necessary to register only the class which that year becomes liable to military service and training, those citizens and aliens who have been out of the country during the preceding registration years, and those aliens who are immigrants and visitors of that year.

As above stated, a larger number of persons would have to be registered in the second than in any other year. They will number about 8,000,000, or about 8 per cent of the total population of the United States proper.

The population of the District of Columbia is estimated at 300,000, who are served by one main and nine branch post offices. Assuming that the distribution of post-office facilities is practically the same in all the larger centers of population and that the work of registration is distributed equally throughout the whole year, each post office in such centers would have to register approximately 2,400 persons per year or 200 per month of 25 working days or 8 per day of 7 hours, or at the rate of one registration every 52½ minutes. It is believed that a comparatively small increase in the personnel of the post offices could effect this result and that economies as indicated in the accompanying estimates of costs would be possible during the years indicated.

In the smaller centers of population the number of people to each post office is believed to be much smaller. Consequently no serious difficulties are likely to arise in the smaller centers with respect to registration, and no increase in the post-office personnel at such place seems likely to be required.

9. The necessity for registration lists of aliens: The necessity for complete and accurate registration is further evidenced by the fact that at the present time no department of the Government is able to furnish exact data with respect to the number of unnaturalized foreigners domiciled in this country.

10. Necessity for registration periods: It is evident if registration is to be effected without undue expense and with the minimum of inconvenience to all concerned that each year for at least the first five years after the system becomes operative should be divided into registration periods.

Each such period should be of sufficient length to care for the registration of a certain class or of classes liable that year for registration. Moreover, whenever practicable, each class should be registered at such time during the year as will cause its members the least inconvenience. For example, the summer months constitute the best time of the year for the registration of the class who that year become liable for military training and service. This is because registration in the summer would interfere least with their education. their number the first year will be about one-eighth of the total number to be registered. This class, therefore, might be assigned a period of one and one-half months. However, other considerations might demand that this period be shortened in order that they may complete their registration at such time as to admit of their physical examination and the settlement of any claims for exemption before the date set for reporting for training and service. Those exempted for physical or other reasons will have suffered no interruption to their education.

11. Details should be left to regulations: Registration has nowhere been thoroughly worked out under conditions similar to those prevailing in the United States at the present time. Unquestionably any system adopted would upon trial be found wanting with respect to some details. Other details would require change. For these reasons laws providing for registration should, after prescribing the essentials, leave minor matters to the discretion of the President. The fixing of periods for registration is a detail that should be left to the President to decide. His decision should be published in the form of proclamations, which, in conjunction with such portions of the registration laws duly posted in a conspicuous place in each post office, should be deemed good and sufficient notice to all concerned of the time and place for registration and of their duties in the premises. The requirements contained in the draft laws of 1863 and 1864 that individuals receive personal notice of their duties under such laws served only to defeat their purpose. We ought not to repeat that mistake.

12. Method of effecting registration and keeping in touch with registered persons: Registration to be effective must include:

(a) The enrollment of each person liable to registration and the recording of certain material information concerning each person enrolled.

(b) Provision for ascertaining and recording movements of registered persons so far as they are material.

The enrollment of persons liable to registration should be made by means of a duplicating card system. Registration cards of suitable size should be so ruled and printed as to provide for the convenient recording of the following information with respect to each person registered: Full and correct name, age, date, and place of birth; names and nationality of parents; nationality of person registered; occupation or avocation; name and address of employer, if any; education, residence, and place of employment or business; married or single; number of dependents, if any; post-office address; military service or training, if any, and when and in what organizations; claim for exemption from training or service, if any, and facts upon which claim is based; citizenship; if not a citizen of the United States has declaration to become such been made, and if so, when and where? Each person registered should be required to sign for future indentification both duplicate cards relating to him. If he can not write, that fact should be recorded. Each card should be signed by the official by whom it was prepared. Cards relating to persons liable to military training and service, persons liable only to military service, and those relating to aliens should be filed separately, but in a manner admitting of convenient and accurate reference. The second file, consisting of the cards of those liable only for service, should be further divided according to the ages of the persons to whom they relate. One complete set of all three files should be forwarded without delay to the military authorities designated to receive them. The other set should form part of the permanent records of the post office where it was prepared.

Adequate methods for obtaining and recording the material movements of registered persons are less easy to provide. The first question that arises is with respect to what movements are material, and but little data which might serve as a guide are available. The known methods of other countries are perhaps not entirely applicable. Our population is believed to be much more prone to travel and to change of residence or employment than is that of any other country.

Due allowance should be made for this national peculiarity so far as may be consistent with the principle of universality of personal military service. It is believed that this principle can be conserved even though no notice is taken of short absences of registered persons from their usual places of residence. This would tend to lessen annoyances to the individual and to reduce paper work and expense to a minimum. It is necessary, however, that notice should be had of any change of residence in order that proper action can be taken in the premises. Report of change of residence should be made on an official form provided for that purpose and filed with the postmaster who has the custody of the registration card of the person concerned. After making proper notation on such registration card the postmaster should forward same to the postmaster at the new place of residence and he should send the notice of change to the officer authorized to receive the duplicate registration card of the person concerned.

The character of sanction heretofore recommended for violation of registration laws is equally applicable to failure to report change of residence. Otherwise a person liable for service or training, after complying with registration requirements, might with impunity abscond and thus escape liability to personal service. The sanction should, of course, be prescribed by law, but the details of notification, etc., should be left to the discretion of the President.

13. No compensation or reimbursement to individuals for registering: In the centers of population post offices are located within easy walking distances of the residences or places of business of the people they serve and the inhabitants of rural districts are in the habit of making frequent visits to near-by centers of population. Therefore in almost every case registration could be effected without expense or material loss of time to the person concerned. Consequently it is deemed unnecessary and inadvisable to recompense persons liable for registration for submitting thereto.

VI.—*Physical examinations.*

1. Persons who should be examined, etc.: All persons should be physically examined before making claim for exemption from military service and before enrollment in the United States Army, either in peace or war. Those liable to military training and service should be examined as soon as possible after the conclusion of the period designated for their registration. Those liable for service in war should be examined as soon as practicable after they are called out for such service. All physical examinations should be conducted strictly under the supervision of Federal military commanders and preferably under that of the commander of the divisional area in which the examination takes place. Examinations should be made either by permanent or reserve officers of the Medical Corps, or, when their numbers are insufficient, by civil practitioners specially employed for that purpose and thoroughly instructed respecting causes for rejection and classification. As far as may be practicable, each person liable therefor should be physically examined at or near his place of residence. This would make for economy to the Government and would reduce the inconvenience and loss of time of the individual to a minimum.

2. Classification and disposition of persons examined: The physical examination of any large group of persons should result in the individuals therein being separated into four classes; the first class should be composed of all persons whose examination showed them to be physically and mentally fit for service with arms; the second class should include all persons physically and mentally qualified only for quasi-military duties, such as transport service, base hospital work, etc.; the third class should consist of those temporarily unfitted for the duties of either of the first two classes; and the fourth class should be made up of only those persons who are found to be permanently disqualified for any kind of military service.

The members of the first two classes should be enrolled under the call. The third class, if called out for training, should be excused for one year, at the expiration of which they should be again examined, and if then found qualified, should be enrolled with the class of that year. If still unqualified, they should be excused for another year, and so on from year to year, until they have reached the age of 25, when, if still unfitted, they should become part of the unorganized reserves. The fourth class should be permanently excused. Those examined pursuant to a call for war service should be similarly classified and disposed of, except that all persons found to be temporarily unfit should be liable to, and ordered to report for, reexamination at such time as in the judgment of the medical examiners their temporary disabilities are likely to have disappeared.

3. Law should be general: The provisions of law relating to physical examinations should be very general in character. All matters of detail should be left to be covered by regulations to be prescribed by the President. The sections of the accompanying draft relating to physical examinations are intended to effect these results. The sanction therein prescribed is believed to be the least drastic that is likely to effect compliance with the law.

VII.—*Exemptions.*

1. Practices of other nations: All persons who are found to be permanently physically or mentally unfit must, of course, always be rejected for military service whether reliance is placed upon a volunteer system or recourse is had to universal service or to some form of compulsory service. National practices differ widely with respect to exemptions for other causes. Those nations which, like Germany, Belgium, Austria-Hungary, and the Argentine Republic, have compulsory and not universal service as the foundations for their military systems, excuse many persons who would be held to military service in France, Switzerland, or Sweden, whose national defense is based on universal service. It is, of course, axiomatic that the fewer exemptions from military service allowed, the more nearly will the system be universal.

2. Exemptions in countries having universal service: In 1912 the persons in France who that year became liable for military service for the first time numbered 290,896. Of these, 220,958 were enrolled for service with arms; 11,917 were enrolled for service without arms; 24,123 were temporarily or permanently rejected because physically or mentally unfit; 62 were prohibited from serving because of conviction for certain crimes; the services of 30,078 were postponed one year at the instance of the Government, and the enrollment of 3,758 was postponed for a like period at the instance of the individuals concerned. No person liable to military service was permanently excused except for permanent mental or physical unfitness or because of conviction for crime.

There are no available data with respect to the practices of Switzerland during the few years next preceding the present war. However, it is believed that but few exemptions for causes other than physical or mental unfitness were allowed. The data with respect to Sweden showed that prior to 1914 physical or mental unfitness was the only basis for permanent exemption.

3. Exemptions proposed for the United States: It is proposed that only such exemptions from military service be authorized in the United States as appear to be absolutely necessary and that only those persons be permanently exempted who are found to be permanently unfit. All other exemptions should be in the nature of postponement of liability until such time as the conditions upon which the exemptions were based become nonexistent.

Moreover, it is believed that fewer persons should be excused from training and service in peace than from service in war. This is because under the proposed plan the peace training and service of individuals will have been completed before many of them will have acquired a status justifying exemption. A large number of those liable for service in war will, however, be old enough to have acquired responsibilities which do not as a rule come to younger men. Some will have been

elected or appointed to Federal and State offices, while others will be occupying other responsible positions in which their services would be of more value to the Nation than service in the Army. For these reasons it seems logical and just that only those persons be excused from military training and service in peace who have depending upon them destitute and helpless relatives who would become public charges if their natural support were withdrawn. It is equally necessary to provide for the exemption from service in war of all those persons who are the sole support of helpless dependents. Common sense also dictates that those Federal and State officials and employees whose services in such positions are necessary for the proper functioning of the State and Federal Governments or for carrying out the provisions of this act should be exempted from service in war.

4. Character of proposed laws: The laws regulating exemptions should, however, be so drawn as to provide that all those liable for training and service, except the permanently physically or mentally unfit, should be trained prior to their twenty-fifth year if the causes for their prior exemption are then nonexistent. The laws should likewise provide that exemptions from service in war shall continue only so long as the causes on which they are based still exist. Sections 56 and 73 of the accompanying draft have been formulated to effect the results recommended in this paragraph.

5. Postponement of training of persons attending colleges, etc.: Due consideration has been given to the propriety of recommending that exemptions from training and service or postponement of liability thereto be granted because the individual concerned is engaged in securing an education. The conclusion has been reached that exemption or postponement for such reasons are inadvisable. One reason is because only a comparatively small number of persons liable for such training and service would be affected thereby. They would be those either well-to-do in their own right or the sons of well-to-do parents whose financial condition enables them to pursue a college education. Consequently, any provision excusing such persons from military training and service or postponing their liability thereto until a more convenient time would of necessity be in the nature of class legislation. Moreover, the inconvenience likely to be experienced by such persons, if required to submit to universal law, would be negligible.

6. The agency for deciding claims—Sanction: The most stringent exemption laws will not effect universality of training and service unless means are provided for deciding claims for exemption justly and without undue delay. Much, therefore, depends on the agency for passing on such claims, the court which should have final decision in cases of disagreement and the sanction supporting the system. This agency should be composed of more than one individual, should have within its personnel both legal and military talent, and should be wholly under Federal control. Moreover, in order that undue delay will not ensue in the decision of claims, this agency should be one which can be duplicated in many places at the same time. It is believed that all these conditions would be fulfilled by a board composed of a United States commissioner, an assistant United States district attorney, and an officer of the United States Army. Boards so constituted could be convened in all parts of the country at the same time, and under existing law their number would be limited only by the number of United States commissioners now holding office. Such boards should finally decide all cases of exemption upon which its members are in unanimous agreement. In cases where such agreement is lacking, the proceedings should be certified to the judge of the United States district court in whose district the board was authorized to sit. The decision of this judge should be final in all cases.

The only sanction adequate for the support of the provisions of law relating to exemptions is imprisonment. In fact, this is the only effective sanction for enforcing any provision upon which universality of training and service depends.

7. Reimbursement of claimants: Claimants will seldom be put to any material expense or loss of time in presenting claims for exemption. For this reason, and also because claims for exemption should not be encouraged, the proposed laws provide that claimants shall receive only mileage at the rate of 4 cents per mile for the actual travel involved in presenting their claims.

—

(WCD 9876–20)

DRAFT OF AN ACT FOR PROVIDING A SYSTEM OF NATIONAL DEFENSE BASED UPON UNIVERSAL LIABILITY TO MILITARY TRAINING AND SERVICE, AND FOR OTHER PURPOSES.

Be it enacted, etc., That the land forces of the United States shall consist of the United States Army. All male citizens of the United States between the ages of 18 and 45 years, all males between the ages of 21 and 45 years who have legally declared their intentions to become citizens, and all males between the ages of 18 and 21 years whose parents have been naturalized shall be liable for military service in the United States Army, Navy, or Marine Corps, except as provided otherwise in this act, when called out by the President for military service in accordance with the provisions of this act; and from and after the date of any such call until such time as they shall be released from such service by competent authority all persons included in such call shall be subject to the Rules and Articles of War so far as they shall be applicable to persons whose permanent retention in the United States Army is not contemplated.

SEC. 2. Composition of the United States Army: The United States Army shall consist of oversea garrisons, the frontier forces, the training forces, the first reserves, the second reserves, the unorganized reserves, the brigade, division, Army corps, and Army Headquarters, with their detachments and troops, a General Staff Corps, an Adjutant General's Department, an Inspector General's Department, a Judge Advocate General's Department, a Quartermaster Corps, a Medical Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, the officers of the Bureau of Insular Affairs, the detached officers and chaplains, all organized as hereinafter provided, and the following as now authorized by law: The officers and enlisted men on the retired list; the additional officers; the professors, the Corps of Cadets, the general Army service detachment, and detachments of Cavalry, Field Artillery, and Engineers, and the band of the United States Military Academy; the post noncommissioned staff officers; the recruiting parties, the recruit-depot detachments, and unassigned recruits; the service-school detachments; the disciplinary guards; the disciplinary organizations; the Indian scouts; and such other officers and enlisted men as are now or may be hereafter provided by law.

SEC. 3. The United States Army shall include a permanent and a temporary personnel. The permanent personnel shall include officers, enlisted men, and civilians. The officers of the permanent personnel shall include all persons who, on the date of the passage of this act, hold commissions or appointments in the Regular Army and such other persons who shall, in accordance with the provisions of this act, be hereafter appointed or commissioned either permanently or provisionally in such personnel, and the temporary second lieutenants appointed pursuant to section 40 of this act: *Provided*, That the term "permanent" is employed in this act in connection with the personnel of the several Staff Corps and departments solely to distinguish the officers and enlisted men permanently belonging thereto and officers of the line detailed therein from reserve officers and noncommissioned officers and recruits temporarily serving therewith, and nothing in this act shall operate to increase the number of officers permanently commissioned in any Staff Corps or department.

The enlisted men shall include all persons who shall be serving an enlistment in the Regular Army on the date of the passage of this act and all persons who may hereafter enlist in the United States Army in accordance with the provisions of this act: *Provided*, That hereafter all enlistments in the United States Army shall be for a period of three years unless sooner discharged in accordance with the provisions of the existing law: *Provided further*, That commanders of divisional areas and coast artillery districts may, upon the recommendation of commanders of regiments, battalions, or equivalent units, authorize the enlistment and reenlistment for periods of one year unless sooner discharged, pursuant to existing law of selected men for service only in the training forces. The civilians shall include all persons other than permanent officers, reserve officers, enlisted men, reservists, and recruits, employed for duty with any headquarters or unit of the United States Army. The temporary personnel shall include reserve officers, reservists, and recruits. The reserve officers shall include all persons holding appointments in the Reserve Officers' Corps. The reservists shall include all persons liable to military service who have completed their prescribed period of training and service in the training forces, and all other persons liable to military service who are not liable to training and service in said forces. The recruits shall include all persons undergoing training and service in the training forces, who have not completed their prescribed periods of training and service therein. White and colored enlisted or enrolled men shall not be organized in or assigned to the same company, battalion, or regiment.

SEC. 4. The over-sea garrisons: The over-sea garrisons shall consist of such permanent commissioned officers, enlisted men, and civilians as shall be required for garrison duty outside the continental limits of the United States, and shall be organized as provided in this act into 3 division headquarters, 10 brigade headquarters, 3 Coast Artillery district headquarters, 29 regiments of Infantry, 5 regiments of Cavalry, 6 regiments of Field Artillery, 74 Coast Artillery company or equivalent units, 3 regiments of Engineers, 3 field signal battalions, 8 aero squadrons, 3 balloon companies, the Philippine Scouts, organized as now provided by law and such additional staff personnel, and such numbers of Engineer, ammunition, supply, and sanitary trains, or such portions of such trains, as the President may direct in accordance with the requirements of the service: *Provided*, That the President is hereby authorized to retain within the continental limits of the United States, until such time as in his discretion their services can be spared, and barracks or quarters therefor provided over seas, such number of units herein authorized as are not on the date of the passage of this act stationed beyond the continental limits of the United States.

SEC. 5. The frontier forces: The frontier forces shall consist of such permanent commissioned officers, enlisted men, and civilians as shall be required for frontier protection and expeditionary duty at all times, and shall be organized as provided in this act into 1 division headquarters, 3 brigade headquarters, 6 regiments of Infantry, 3 regiments of Cavalry, 2 regiments of Field Artillery, 47 Coast Artillery companies or equivalent units, 1 regiment of Engineers, 1 field signal battalion, and 2 aero squadrons, and such additional staff personnel, and such numbers of Engineer, ammunition, supply, and sanitary trains, or such portions of such trains, as the President may direct in accordance with the requirements of the service.

SEC. 6. The training forces: The training forces shall consist of such permanent commissioned officers, enlisted men, and civilians as shall be required to train and provide for the recruits called out annually for military training and service and, together with the recruits so called out, shall be organized as provided in this act into 16 division headquarters, 64 brigade headquarters, 6 Coast Artillery district headquarters, 144 regiments of Infantry, 32 regiments of Cavalry, 66 regiments of Field Artillery, 198 Coast Artillery company or equivalent units, 16 regiments of Engineers, 2 battalions of Mounted Engineers, 16 field signal battalions, 6 telegraph battalions, 2 field signal battalions, mounted, 28 aero squadrons, and 8 balloon companies, and such additional staff personnel, and such numbers of Engineer, ammunition, supply, and sanitary trains or such portions of such trains as the President may direct in accordance with the requirements of the service.

SEC. 7. The first reserves: The first reserves shall consist of such permanent commissioned officers, enlisted men, and civilians, and such reserve officers as shall be assigned thereto under regulations to be prescribed by the President, and of all these reservists, except as otherwise provided in this act, who, having completed their prescribed training and service with the training forces, are liable to military service in the first reserves in accordance with the provisions of this act, and they shall be organized as far as practicable into 16 Army Corps headquarters, 54 division headquarters, 224 brigade headquarters, 432 regiments of Infantry, 96 regiments of Cavalry, 198 regiments of Field Artillery, the Coast Artillery Reserve, with such personnel and organization as the President may prescribe, 48 regiments of Engineers, 6 mounted battalions of Engineers, 48 field signal battalions, 18 telegraph battalions, 6 field signal battalions, mounted, 84 aero squadrons, and 24 balloon companies, and such additional staff personnel and such Engineer, ammunition, supply, and sanitary trains as the President may direct: *Provided*, That until such time as the necessary number of trained reservists are available for service therein the President is hereby authorized to assign to the various units of the first reserves but only for service therein in time of actual or threatened hostilities, such number of unorganized reservists as in the discretion of the President shall be necessary to provide for the mobilization of said units at authorized strength in the event of actual or threatened hostilities: *Provided further*, That such unorganized reservists shall be so assigned by classes according to age beginning with the youngest; and notification of such assignment in the manner provided in this act for the notification of persons called out for military service shall be deemed good and sufficient notice to all persons so notified of their said assignment; and no person so assigned shall be required to be physically examined except in time of actual or threatened hostilities.

SEC. 8. The second reserves: The second reserves shall consist of such permanent commissioned officers, enlisted men, and civilians, and such reserve officers as may be assigned thereto under regulations to be

prescribed by the President, and of all reservists except as otherwise provided in this act, who, having completed their prescribed military service in the first reserves, are liable for service in the second reserves in accordance with the provisions of this act, and they shall be organized as far as practicable into 16 Army Corps headquarters, 54 division headquarters, 224 brigade headquarters, 432 regiments of Infantry, 96 regiments of Cavalry, 198 regiments of Field Artillery, the Coast Artillery Reserve, with such personnel and organization as the President may prescribe; 48 regiments of Engineers, 6 mounted battalions of Engineers, 48 field signal battalions, 6 field signal battalions mounted, 18 telegraph battalions, 84 aero squadrons, 24 balloon companies, and such additional staff personnel, and such Engineer, ammunition, supply, and sanitary trains as the President may direct.

SEC. 9. The unorganized reserves: The unorganized reserves shall consist of reserve officers and of all reservists, except as otherwise provided in this act, who have completed their prescribed period of service in the second reserves, and of all other persons liable to military service under the provisions of this act.

SEC. 10. Composition of brigades, divisions, etc.: The troops of the over-sea garrisons, the frontier forces, and the training forces shall at all times be organized as far as practicable into brigades and divisions, and the first reserves and the second reserves into brigades, divisions, and army corps, and in time of actual or threatened hostilities the President is hereby authorized to organize all or any number of such divisions and army corps into army corps or armies. The composition of the typical Infantry, Cavalry, and Field Artillery brigade, the typical Infantry and Cavalry division, and the typical army corps shall be as prescribed in the act of Congress approved June 3, 1916. The typical army shall consist of a headquarters and two or more army corps. The headquarters of a brigade, a division, an army corps, and an army shall consist of such permanent commissioned officers, enlisted men and civilians as the President may prescribe. Each Engineer, ammunition, supply, and sanitary train shall consist of such commissioned officers and enlisted men and shall be organized as the President may prescribe. Nothing herein contained, however, shall operate to prevent the President from changing the composition or organization of typical brigades, divisions, army corps, or armies, or from prescribing new and different organizations and personnel in lieu thereof as the efficiency of the service may require.

SEC. 11. General officers of the line: The general officers of the line of the permanent personnel shall consist of 22 major generals and 87 brigadier generals.

SEC. 12. The General Staff Corps: The General Staff Corps shall consist of 1 Chief of Staff, detailed from major generals of the line of the permanent personnel, who, while so serving, shall have the rank, pay, and allowances of a lieutenant general; 2 assistants to the Chief of Staff, who shall be general officers of the line; 28 colonels, one of whom shall be president of the Army War College; 13 lieutenant colonels; and 110 majors and captains; all to be detailed from the permanent commissioned personnel of the Army in accordance with existing law relative to selection and the provisions of this act relative to eligibility for detail, and to perform the duties specified in the organic act of Congress approved February 14, 1903, and at such places as the President may prescribe.

SEC. 13. The Adjutant General's Department: The permanent personnel of The Adjutant General's Department shall consist of The Adjutant General, with the rank of brigadier general; 7 adjutants general with the rank of colonel; 26 adjutants general with the rank of lieutenant colonel; and 103 adjutants general with the rank of major.

SEC. 14. The Inspector General's Department: The permanent personnel of the Inspector General's Department shall consist of 1 Inspector General with the rank of brigadier general; 4 inspectors general with the rank of colonel, 8 inspectors general with the rank of lieutenant colonel, 31 inspectors general with the rank of major.

SEC. 15. The Judge Advocate General's Department: The permanent personnel of the Judge Advocate General's Department shall consist of 1 Judge Advocate General with the rank of brigadier general, 4 judge advocates with the rank of colonel, 7 judge advocates with the rank of lieutenant colonel, 35 judge advocates with the rank of major, and such number of acting judge advocates as have been or may hereafter be authorized by law.

SEC. 16. The Quartermaster Corps: The permanent commissioned personnel of the Quartermaster Corps shall consist of one quartermaster general with the rank of major general; two assistants to the quartermaster general with the rank of brigadier general; 21 colonels; 53 lieutenant colonels; 127 majors; 269 captains; 1 first lieutenant, and 72 second lieutenants. The enlisted personnel shall consist of 183 quartermaster sergeants, senior grade; 1,256 quartermaster sergeants; 689 sergeants, first class; 5,441 sergeants; 1,314 corporals; 515 cooks; 4,880 privates, first class, including enlisted specialists; and 2,453 privates. The temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits not exceeding 2,800 as may be available for assignment thereto.

SEC. 17. The Medical Department: The Medical Department shall consist of one Surgeon General, who shall be a permanent officer with the rank of major general during the active service of the present incumbent of that office and thereafter with the rank of brigadier general, who shall be chief of said department; a Medical Corps; a Medical Reserve Corps within the limit of time now fixed by law; a Dental Corps; a Veterinary Corps; contract surgeons as now authorized by law; the Nurse Corps as now prescribed by law; an enlisted personnel, and a temporary personnel.

The permanent commissioned personnel of the Medical Corps shall consist of 48 colonels, 106 lieutenant colonels, 640 majors, 1,036 captains, and 1,102 first lieutenants, all appointed as now prescribed by law.

The permanent personnel of the Dental Corps shall consist of 500 dental surgeons. Dental surgeons shall have the rank, pay, and allowances of first lieutenants until they have completed five years' service. Dental surgeons of more than 9 but less than 19 years' service shall, subject to such examination as the President may prescribe, have the rank, pay, and allowances of captains. Dental surgeons of more than 19 years' service shall, subject to such examination as the President may prescribe, have the rank, pay, and allowances of majors.

There shall be 348 veterinarians and assistant veterinarians for duty with the over-sea garrisons, the frontier forces and the training forces at the rate of two such officers for each regiment of Cavalry, one for every three battalions of Field Artillery, and one for each battalion of Mounted Engineers and for duty with the Quartermaster Corps as inspectors of horses, mules, and meats, and the President is hereby authorized, by and with the advice and consent of the Senate, to appoint the additional number of assistant veterinarians authorized. Candidates for appointment as assistant veterinarians shall have the qualifications and shall pass the examinations now provided for by law with reference to rank, pay, and allowances; and the President is authorized to appoint such number of reserve veterinarians as may be required to tend public animals pertaining to the Quartermaster Corps as now prescribed by law.

The enlisted personnel of the Medical Department shall consist of 51 master hospital sergeants, 51 hospital sergeants, 1,081 sergeants, first class, 1,677 sergeants, 717 corporals, 921 cooks, 184 horseshoers, 184 saddlers, 184 farriers, 184 mechanics, 3,083 privates, first class, and 2,529 privates.

The temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits not exceeding 33,000 as may be available for assignment thereto.

SEC. 18. Corps of Engineers: The permanent commissioned personnel of the Corps of Engineers shall consist of 1 Chief of Engineers with the rank of brigadier general, 36 colonels, 43 lieutenant colonels, 98 majors, 296 captains, 306 first lieutenants, and 158 second lieutenants.

The enlisted personnel shall consist of 86 master engineers (senior grade), 256 master engineers (junior grade), 20 regimental sergeants major, 42 battalion sergeants major, 40 regimental supply sergeants, 3 battalion supply sergeants, 40 color sergeants, 20 sergeant buglers, 128 first sergeants, 374 sergeants (first class), 126 mess sergeants, 128 supply sergeants, 128 stable sergeants, 1,046 sergeants, 1,662 corporals, 134 horseshoers, 153 buglers, 125 saddlers, 397 cooks, 3,118 privates (first class), 2,236 privates, 564 wagoners, 1 band leader, 1 assistant band leader, 2 band sergeants, 4 band corporals, 2 musicians (first class), 4 musicians (second class), and 13 musicians (third class). So much of the commissioned and enlisted personnel enumerated in this section as may be required therefor shall, together with such number of recruits not exceeding 26,000 as may be available for assignment thereto, be organized into one Engineer band, 20 regiments, 40 battalions, and 2 mounted battalions of Engineers for service in the over-sea garrisons, the frontier forces, and the training forces, as hereinafter provided. Each regiment, battalion, mounted battalion, company (regimental), and mounted company of Engineers, and the Engineer band of the over-sea garrisons and frontier forces shall have the organization and the maximum personnel now provided by law. Each regiment, battalion, and mounted battalion of Engineers of the training forces shall have the organization and maximum personnel provided now by law. The permanent personnel of each company (regimental) of Engineers of the training forces shall consist of 1 captain, 2 first lieutenants, 1 second lieutenant, 1 first sergeant, three sergeants (first class) one mess sergeant, 1 supply sergeant, 1 stable sergeant, 8 sergeants, 12 corporals, 1 horseshoer, 1 bugler, 1 saddler, 3 cooks, and 24 privates (first class). Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 230, as may be available for assignment thereto.

The permanent personnel of each mounted Engineer company of the training forces shall consist of 1 captain, 2 first lieutenants, 1 second lieutenant, 2 master engineers (junior grade), 1 first sergeant, 2 sergeants (first class), 1 mess sergeant, 1 supply sergeant, 1 stable sergeant, 6 sergeants, 11 corporals, 2 horseshoers, 1 saddler, 2 cooks, 1 bugler, 2 wagoners, and 11 privates (first class). Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 180, as may be available for assignment thereto.

The permanent personnel of the Engineer band shall consist of 1 band leader, 1 assistant band leader, 1 first sergeant, 2 band sergeants, 4 band corporals, 2 musicians (first class), four musicians (second class), 13 musicians (third class), and 1 cook: *Provided*, That the enlisted force of the Corps of Engineers and the permanent officers and temporary personnel serving therewith shall constitute a part of the line of the Army.

Each regiment, battalion, mounted battalion, company (regimental), and mounted company of Engineers of the first and second reserves shall as far as practicable have the personnel and organization prescribed herein for like units of Engineers while serving as part of an over-sea garrison.

SEC. 19. The Ordnance Department: The permanent commissioned personnel of the Ordnance Department shall consist of 1 Chief of Ordnance with the rank of brigadier general, 13 colonels, 30 lieutenant colonels, 58 majors, 77 captains, and 65 first lieutenants: *Provided*, That hereafter the Secretary of War is authorized to detail not to exceed 100 lieutenants from the permanent commissioned personnel of the United States Army at large for duty as student officers in the establishments of the Ordnance Department for a period of two years, and the completion of the prescribed course of instruction shall constitute examination for detail in the Ordnance Department: *Provided further*, That vacancies which may occur in the commissioned personnel of the Ordnance Department shall be subject to the provisions of the act of Congress approved June 3, 1916, relating thereto.

The enlisted personnel of the Ordnance Department shall consist of 213 ordnance sergeants, 295 sergeants, 345 corporals, 1,025 privates, first class, and 293 privates.

The temporary personnel of the Ordnance Department shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 1,350, as may be available for assignment thereto.

SEC. 20. The Signal Corps: The permanent commissioned personnel of the Signal Corps shall consist of 1 Chief Signal Officer with the rank of brigadier general, 3 colonels, 8 lieutenant colonels, 47 majors, 94 captains, 302 first lieutenants; and the permanent commissioned personnel of the aviation section of the Signal Corps shall consist of 1 colonel, 1 lieutenant colonel, 48 majors, 144 captains, 209 first lieutenants, and 432 aviators, detailed or employed as such.

The enlisted personnel of the Signal Corps shall consist of 292 master signal electricians, 1,088 sergeants (first class), 1,178 sergeants, 1,832 corporals, 406 cooks, 96 horseshoers, 50 buglers, 2,313 privates (first class), and 2,473 privates.

The temporary personnel of the Signal Corps shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 14,400, as may be available for assignment thereto.

The President is hereby authorized to prescribe from time to time the personnel and organization of aero squadrons, field signal battalions, field signal battalions, mounted, and balloon companies of the over-sea garrisons, the frontier forces and the training forces, and so much of the permanent commissioned and enlisted personnel of the Signal Corps herein enumerated, including the commissioned personnel of the aviation section, as may be required therefor; and the recruits of the temporary personnel shall be organized into 36 aero squadrons, 11 balloon companies, 20 field signal battalions, 6 telegraph battalions, and 2 field signal battalions, mounted.

The personnel and organization of aero squadrons, field signal battalions, field signal battalions, mounted, and balloon companies of the first and second reserves shall be, as far as practicable, the same as the President shall prescribe for like units of an oversea garrison.

SEC. 21. Bureau of Insular Affairs of the War Department: Nothing in this act shall be construed to repeal existing laws relating to the organization of the Bureau of Insular Affairs of the War Department.

SEC. 22. Chaplains: The President is authorized to appoint, by and with the advice and consent of the Senate, chaplains in the permanent personnel of the United States Army at the rate of, not to exceed, including chaplains now in the service, one for each regiment of Cavalry, Infantry, Field Artillery, and Engineers, and one for each 15 companies or equivalent units of the Coast Artillery Corps in the over-sea garrisons, the frontier forces, and the training forces, with the pay and allowances now prescribed by law.

SEC. 23. Composition of Infantry units: Each Infantry regiment, battalion, headquarters company, machine-gun company, supply company, and company in battalion of the over-sea garrisons and frontier forces and the Porto Rico Regiment of Infantry shall have the organization and the maximum personnel now provided by law.

Each regiment of Infantry of the training forces shall consist of 1 colonel and 1 lieutenant colonel, both of the permanent personnel; 1 headquarters company, 1 machine-gun company, 1 supply company, and 12 Infantry companies organized into 3 battalions of 4 companies each.

Each battalion of the training forces shall consist of 1 major and 1 first lieutenant, mounted, both of the permanent personnel, and 4 companies.

The permanent personnel of each Infantry company in battalion of the training forces shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 mess sergeant, 1 supply sergeant, 8 sergeants, 8 corporals, 3 cooks, 1 bugler, 2 mechanics, and 5 privates, first class.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 200, as may be available for assignment thereto for military training and service.

The permanent personnel of each Infantry headquarters company of the training forces shall consist of 1 captain, mounted (regimental adjutant); 1 regimental sergeant major, mounted; 3 battalion sergeants major, mounted; 1 first sergeant (drum major), 1 sergeant bugler, 2 color sergeants, 1 mess sergeant, 1 supply sergeant, 1 stable sergeant, 1 sergeant, 2 cooks, 1 horseshoer, 1 band leader, 1 assistant band leader, 2 band sergeants, 4 band corporals, 4 privates, first class, and 3 privates.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 80, as may be available for assignment thereto for military training and service.

The permanent personnel of each Infantry machine-gun company of the training forces shall consist of 1 captain (mounted), 1 first lieutenant (mounted), 2 second lieutenants (mounted), 1 first sergeant (mounted), 1 mess sergeant (mounted), 1 supply sergeant (mounted), 1 stable sergeant (mounted), 1 horseshoer, 4 sergeants, 4 corporals, 2 cooks, 2 mechanics, 1 bugler, and 6 privates, first class.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 100, as may be available for assignment thereto for military training and service.

The permanent personnel of each Infantry supply company of the training forces shall consist of 1 captain (mounted), 1 second lieutenant (mounted), 3 regimental supply sergeants (mounted), 1 first sergeant (mounted), 1 mess sergeant, 1 stable sergeant (mounted), 1 corporal (mounted), 1 cook, 1 saddler, 1 horseshoer, and 27 wagoners.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 50, as may be available for assignment thereto for military training and service.

Each Infantry regiment, battalion, headquarters company, machine-gun company, supply company, and company in battalion of the First and Second Reserves shall as far as practicable have the organization and personnel equivalent in numbers and grades to that prescribed herein for like units of the over-sea garrisons.

Sec. 24. Composition of Cavalry units: Each Cavalry regiment, squadron, headquarters troop, machine-gun troop, supply troop, and troop in squadron of the over-sea garrisons and frontier forces shall have the organization and the maximum personnel now provided by law.

Each regiment of Cavalry of the training forces shall consist of one colonel, one lieutenant colonel, and one captain, all of the permanent personnel, one headquarters troop, one machine-gun troop, one supply troop, and 12 troops organized into three squadrons of four troops each.

Each squadron shall consist of one major and one first lieutenant, both of the permanent personnel, and four troops.

The permanent personnel of each troop in squadron of the training forces shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one mess sergeant, one supply sergeant, one stable sergeant, three sergeants, four corporals, two cooks, two horseshoers, one saddler, one bugler, and eight privates, first class.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 140, as may be available for assignment thereto for military training and service.

The permanent personnel of each headquarters troop of the training forces shall consist of one captain (regimental adjutant), one regimental sergeant major, three squadron sergeants major, one first sergeant (drum major), two color sergeants, one mess sergeant, one supply sergeant, one stable sergeant, one sergeant, two corporals, two cooks, two horseshoers, one saddler, seven privates, first class, one band leader, one assistant band leader, one sergeant bugler, two band sergeants, and four band corporals.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 115, as may be available for assignment thereto for military training and service.

The permanent personnel of each machine-gun troop of the training forces shall consist of one captain, one first lieutenant, two second lieutenants, one first sergeant, one mess sergeant, one supply sergeant, one stable sergeant, two horseshoers, four sergeants, four corporals, two cooks, two mechanics, one saddler, one bugler, and nine privates, first class.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 120, as may be available for assignment thereto for military training and services.

The permanent personnel of each supply troop of the training forces shall consist of one captain (regimental supply officer), two second lieutenants, three regimental supply sergeants, one first sergeant, one mess sergeant, one stable sergeant, two corporals, two cooks, two horseshoers, two saddlers, and 37 wagoners.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 70, as may be available for assignment thereto for military training and service.

Each Cavalry regiment, squadron, headquarters troop, machine-gun troop, supply troop, and troop in squadron of the first and second reserves shall, as far as practicable, have the organization and personnel equivalent in numbers and grades to that prescribed herein for like units of the over-sea garrisons.

SEC. 25. Composition of Field Artillery units: In time of peace the Field Artillery shall consist of regiments of Mountain Artillery, Light Artillery, Horse Artillery, and Heavy Artillery of field and siege types. In time of actual or threatened hostilities the President is authorized to organize from any available personnel such number of ammunition batteries and battalions, depot batteries and battalions, and such Artillery parks, with such numbers of grades and personnel and such organization as he may deem necessary. Each regiment of Field Artillery of the over-sea garrisons, frontier forces, and training forces shall consist of 1 colonel, 1 lieutenant colonel and 1 captain, headquarters company, 1 supply company, and such number of gun and howitzer battalions as the President may direct, and the President may in his discretion direct the assembling in the same regiment of gun and howitzer battalions of different calibers and classes. Each gun or howitzer battalion of two or three batteries, each headquarters company of a regiment of two or three battalions, each supply company of a regiment of two or three battalions, and each gun or howitzer battery of the over-sea garrisons or frontier forces shall have the organization and the maximum personnel now provided by law.

The permanent personnel of each 4.7-inch gun or 6-inch howitzer battery of the training forces shall consist of 1 captain, 2 first lieutenants, 2 second lieutenants, 1 first sergeant, 1 mess sergeant, 1 supply sergeant, 1 stable sergeant, 6 sergeants, 11 corporals, 1 chief mechanic, 3 mechanics, 1 bugler, 3 cooks, 1 saddler, 3 horseshoers, and 10 privates, first class.

Its temporary personnel shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 220, as may be available for assignment thereto for military training and service.

The permanent personnel of each 3-inch gun or 3.8-inch howitzer battery shall be the same as prescribed for a 4.7-inch gun battery, increased by the addition of 13 privates, first class, and that of each horse 3-inch gun or 3.8-inch howitzer battery shall be the same as prescribed for a 4.7-inch gun battery, increased by the addition of 25 privates, first class, and 4 privates. The maximum number of recruits that may be assigned to a 3-inch gun or 3.8-inch howitzer battery, either light or horse, shall be 255.

The permanent personnel of a headquarters company of a regiment of two battalions of the training forces shall consist of 1 captain, 1 first lieutenant, 1 regimental sergeant major, 2 battalion sergeants major, 1 first sergeant, 1 sergeant bugler, 2 color sergeants, 1 mess sergeant, 1 supply sergeant, 1 stable sergeant, 1 sergeant, 3 corporals, 1 horseshoer, 1 saddler, 1 mechanic, 1 bugler, 2 cooks, 5 privates, first class, 1 band leader, 1 assistant band leader, 2 band sergeants, and 4 band corporals.

When such regiment consists of 3 battalions there shall be added to the permanent personnel of the headquarters company 1 battalion sergeant major, 1 corporal, 1 horseshoer, 1 mechanic, and 1 cook.

The temporary personnel of a headquarters company shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 150 for a headquarters company of a 2-battalion regiment and not exceeding 135 for a headquarters company of a 3-battalion regiment, as may be available for assignment thereto.

The permanent personnel of each supply company of a regiment of 2 battalions of the training forces shall consist of 1 captain, 1 first lieutenant, 2 regimental supply sergeants, 1 first sergeant, 1 mess sergeant, 2 corporals, 2 cooks, 2 horseshoers, 2 saddlers, 2 privates, and 21 wagoners.

The permanent personnel of a supply company of a regiment of 3 battalions of the training forces shall consist of 1 captain, 1 first lieutenant, 1 second lieutenant, 3 regimental supply sergeants, 1 first sergeant, 1 mess sergeant, 2 corporals, 2 horseshoers, 2 saddlers, 1 cook, 5 wagoners (chauffeurs), and 3 privates.

The temporary personnel of a supply company of a Field Artillery regiment of the training forces shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 45 for a supply company of a two-battalion regiment and not exceeding 50 for a supply company of a three-battalion regiment, as may be available for assignment thereto.

The permanent personnel of each battalion of Field Artillery of the training forces shall consist of one major and one captain. It shall be composed of either two or three gun or howitzer batteries as the President may direct.

Each Field Artillery regiment, battalion, headquarters company, supply company, and gun or howitzer battery of the first and second reserves shall, as far as practicable, have the organization and personnel equivalent in numbers and grades to that prescribed herein for like units of the over-sea garrisons.

SEC. 26. Coast Artillery Corps: The permanent personnel of the Coast Artillery Corps shall consist of one chief of Coast Artillery, with the rank, pay, and allowances of a major general, 28 colonels, 28 lieutenant colonels, 85 majors, 423 captains, 423 first lieutenants, 423 second lieutenants, 31 sergeants major (senior grade), 64 sergeants major (junior grade), 62 master gunners, 41 master electricians, 72 engineers, 99 electrician sergeants (first class), 275 assistant engineers, 99 electrician sergeants (second class),106 firemen, 93 radio sergeants, 319 first sergeants, 319 supply sergeants, 319 mess sergeants, 2,552 sergeants, 3,828 corporals, 638 cooks, 638 mechanics, 242 buglers, 2,448 privates (first class), 7,349 privates, 20 band leaders, 20 assistant band leaders, 40 band sergeants, and 8 band corporals.

The temporary personnel of the Coast Artillery Corps shall consist of such reserve officers and noncommissioned officers as may be attached thereto and of such number of recruits, not exceeding 17,000, as may be available for assignment thereto.

So much of the permanent commissioned and enlisted personnel enumerated in this section as shall be required therefor, together with the recruits of the temporary personnel, shall be organized into such types of Coast Artillery units of the over-sea garrisons, the frontier

forces and the training forces with such organization and personnel as the President may direct: *Provided*, That the number of Coast Artillery bands organized in either the over-sea garrisons or the frontier forces or the training forces, shall not exceed one for every 15 company units or equivalent organizations actually organized.

The Coast Artillery units of the first and second reserves shall be organized in such types and numbers and with such organization and personnel as the President may prescribe.

SEC. 27. All existing laws pertaining to or affecting the United States Military Academy and civilian or military personnel on duty thereat in any capacity whatever, the officers and enlisted men on the retired list, the detached and additional officers under the act of Congress approved June 3, 1916, recruiting parties, recruit depots and unassigned recruits, service school detachments, United States disciplinary barracks guards, disciplinary organizations, the Philippine Scouts, and Indian Scouts shall continue and remain in force except such parts thereof as are in conflict with the provisions of this act.

SEC. 28. Original appointments to be provisional: Hereafter all original appointments of persons other than graduates of the United States Military Academy to permanent commissioned grade in the United States Army shall be provisional for a period of two years or temporary for a period of one year, at the close of which period such appointments shall be made permanent in the grade then held by the appointees if they shall have demonstrated, under regulations to be prescribed by the President, their suitability and moral, professional, and physical fitness for such permanent appointment, but should any appointee fail so to demonstrate his suitability and fitness his appointment shall terminate: *Provided*, That whenever any person holding a provisional or temporary appointment or commission in the permanent commissioned personnel of the United States Army shall have been reported by the commander of his regiment, separate battalion, or equivalent unit as not possessing the required degree of adaptability for the military service, or as having given evidence of traits of character or habits which serve to render his retention in the service undesirable, or as disqualified for service, physically or in character, through his own misconduct, and such report is approved by the commander of the divisional area in which such report originated, the President may at once revoke the provisional appointment or commission of such officer and discharge him from the service of the United States.

SEC. 29. Vacancies in the grades of general officers existing on the date of the passage of this act, or created by the provisions thereof, shall be filled as now provided by law: *Provided*, That when the number of colonels of the line is reduced below the number of regiments or equivalent units authorized for the line, the President, in making appointments to the grade of brigadier general, is hereby authorized to extend his selection below the grade of colonel of the line by a number of successive files in the line equal to the difference between such number of regiments or equivalent units and the actual number of such colonels.

The names of all officers in each grade in the Infantry, Cavalry, Field Artillery, and Coast Artillery Corps shall be arranged upon one list for said four arms combined, in the order of the seniority of the officers concerned, determined by length of commissioned service, computed as herein provided, and in like manner the names of all officers in each grade in each staff corps and department shall be arranged upon one list for each such corps and department. All officers who are commissioned or appointed in the permanent personnel of the said four arms combined, or in any staff corps or department, shall hereafter be promoted subject to such examinations as the President may prescribe upon completion of the following number of years of commissioned service, computed as herein provided, to wit: To the grade of first lieutenant after 4 years, and to the grade of captain after 9 years; and no officer shall be eligible for promotion to the grade of major until after he shall have had 19 years of such service, or to the grade of lieutenant colonel until after he shall have had 24 years of such service, or to the grade of colonel until after he shall have had 27 years of such service, but no officer shall be promoted to the grade of major, lieutenant colonel, or colonel when his promotion would operate to increase the number of officers in such grade more than 5 per cent in excess of the number authorized therefor by this act, and all promotions to the grades of major, lieutenant colonel, and colonel shall be made from officers in the next lower grade on the list of the four arms combined and from officers in the next lower grade on the list of the several staff corps and departments according to seniority: *Provided*, That the total number of officers authorized for the four arms combined or for any staff corps or department shall not be exceeded. In time of actual hostilities the President, by and with the advice and consent of the Senate, is hereby authorized to fill vacancies occurring in the commissioned personnel of the first and second reserves, by the promotion to reserve commissions of temporary or permanent officers, in accordance with their demonstrated ability in the field and without regard to grade or rank; and in time of actual or threatened hostilities the President alone is hereby authorized to fill vacancies occurring by the detachment of officers or otherwise in permanent commissioned grades in each Infantry or Cavalry division or Coast Artillery district in the over-sea garrisons, the frontier forces, and the training forces by the promotion to temporary commissions of officers serving therewith according to seniority as determined by said grade list for said four arms combined and by the grade lists for the several corps and department: *Provided further*, That chaplains and dental surgeons shall not be promoted above the grade of major.

In computing length of commissioned service for rank and promotion, credit shall be given as follows: One day's credit for each day's commissioned service in the Regular Army, the Volunteers, the Navy, and the Marine Corps, and in the case of officers of the Medical Corps, one day's credit for each day's service on the active list in the Medical Reserve Corps. One day's credit for each five days' commissioned service in the National Guard or Organized Militia not in the service of the United States, or as a noncommissioned officer in the Regular Army, or in the permanent personnel of the United States Army as a cadet officer, or in the senior division of the Reserve Officers' Training Corps, or in a cadet corps in a recognized school or college where a course in military training and instruction substantially equivalent to that prescribed for the senior division of the Reserve Officers' Training Corps was conducted, under the supervision of an officer of the Regular Army. Two days' credit for each five days' commissioned service in the National Guard or Organized Militia in the service of the United States.

In computing length of commissioned service for promotion, constructive credit shall be given as follows: To chaplains and to officers of the Medical Corps and Dental Corps, four years. To officers heretofore appointed in the permanent Staff Corps and departments whose original appointment in such corps or department was in the grade of captain, nine years: *Provided*, That such constructive service shall include any and all commissioned service prior to appointment to the grade of captain, except that nothing herein shall operate to deprive any officer of any credit for actual commissioned service in excess of nine years, to which he would otherwise be entitled.

To officers heretofore appointed in the permanent Staff Corps and departments whose original appointment in said Staff Corps or department was in the grade of major, 19 years: *Provided*, That such constructive service shall include any and all commissioned service prior to appointment as major, except that nothing herein shall operate to deprive any officer of any credit for actual commissioned service in excess of 19 years, to which he would otherwise have been entitled.

To officers retired and thereafter restored to the active list, such amount of constructive service as shall be necessary under the provisions of this section for them to have reached the grade to which restored on the active list: *Provided*, That such constructive service shall include all commissioned service prior to such restoration.

To graduates of the United States Military Academy as follows: To graduates of the classes of 1917 and 1918, such constructive service as shall be required to place them, respectively, for purpose of future promotion only immediately after the members of the classes of 1916 and 1917; to the class of 1919 and each succeeding class, two years' constructive service prior to graduation: *Provided*, That for the purpose of this section the classes of 1916 and 1917 shall be deemed to include only such members thereof as shall have not lost rank, files, or service for promotion, because of sentence of court-martial or failure to pass a prescribed examination for promotion.

To any officer who has heretofore lost files or who shall hereafter lose files or service for promotion by reason of a sentence of a court-martial or failure to pass a required examination for promotion, only such service for promotion as shall be required to render him eligible for promotion next after the officer who is his immediate senior on the lineal list of his arm or corps pursuant to such sentence or such failure to pass a required examination: *Provided*, That such service for promotion shall be in lieu of all other service therefor and shall be subject to change whenever it will be necessary to carry into effect any loss of files or service for promotion hereafter incurred by any officer by reason of a court-martial or failure to pass a required examination for promotion: *Provided further*, That whenever credit for service shall be given to carry into effect any sentence of a court-martial, or to fix the length of service for promotion of any officer in accordance with his failure to pass a required examination for promotion, and the credit so given shall, because of an increase in his arm or corps, credit such officer with less total service for promotion than he would have to his credit if such increase has not occurred, such officer shall be credited with such service for promotion as he would have had to his credit if such increase had not occurred: *Provided further*, That the constructive service above described is authorized for the purpose of regulating only rank and promotion, and for all other purposes length of service shall be determined, credited, and allowed, as now provided by law: *And provided further*, That the President is hereby authorized to delegate to the Secretary of War the duty of signing any or all commissions of persons appointed in the permanent commissioned personnel or the Reserve Officers' Training Corps of the United States Army or promoted therein.

SEC. 30. From and after the passage of this act the relative rank of officers of the same grade of the permanent personnel in any grade below that of brigadier general shall be determined by length of commissioned service for promotion, and of any two such officers of the same grade that one shall be the senior in rank who shall be entitled, in accordance with the provisions of this act, to the longer commissioned service for promotion: *Provided*, That where two or more such officers of the same grade shall have the same commissioned service for promotion, that one shall be the senior who shall have had the longest commissioned service in the Regular Army; and where two or more such officers shall have had the same length of commissioned service in the Regular Army, that one shall be regarded as the senior who was the senior in relative rank on the date of their original commission in the Regular Army.

SEC. 31. After the promotions resulting from the provisions of section 29 of this act shall have been made the names of all permanent officers of the Infantry, Cavalry, Field Artillery, and Coast Artillery in each grade shall be entered on one list for each such grade for rank and promotion, and the assignment of such officers in any one grade above that of first lieutenant to each of the said arms of the service shall, as nearly as may be practicable, be made in the ratio which the total number of officers authorized for such grade in all four of said arms combined bears to the total number of officers authorized for such grade in the arm to which assignment is made, and thereafter the President may detach officers from one arm and assign them to another as the interests of the service may require, and, subject only to the rules of seniority and the provisions of law regulating eligibility for detached service, may assign such officers to the command of such units and to such duties as the exigencies of the service may demand.

SEC. 32. Whenever the number of officers available for service in any grade in any arm or for detail in any grade in any staff corps or department or to the detached officers' list is less than the number prescribed for such grade in such arm, corps, or department, or for said list, officers of other grades may be assigned or detailed, subject to the rules of seniority, to perform the duties of the grade in the arm, corps, or department, or on said list in which the deficiency exists, but the total number of officers authorized for any arm or for said list shall not be exceeded and the total number of officers commissioned in any staff corps or department and the number of officers detailed therein shall not exceed the number of officers authorized for the permanent personnel of such corps or department.

SEC. 33. For a period of four years from the date of the passage of this act, and subject only to its provisions, the President is hereby authorized to detach any officer from his organization or corps and detail him in any staff corps or department or upon any other military duty which the interests of the service may require, and for like reasons to continue any officer now so detailed upon his present duty until the end of such period, but no officer so detailed or continued on such duty shall be allowed to continue on such detail or on such duty longer than four years after the date of the passage of this act, and four years after the date of the passage of this act no officer shall be detached from his organization or corps for duty in any staff corps or department unless during the preceding six years he shall have had at least two years' service with troops, and service with troops within the meaning of this section shall be held to include service with

any organization of the over-sea garrisons, the frontier forces, the training forces, the first reserves, or the second reserves: *Provided*, That redetails to the Ordnance Department may be made after one year's service with troops and redetails to the aviation section of the Signal Corps may be made without regard to service with troops.

SEC. 34. Hereafter, as far as practicable, officers for duty with the over-sea garrisons shall be detailed from those officers who volunteer for such duty: *Provided*, That the tour of duty with over-sea garrisons shall be for three years unless sooner relieved: *Provided further*, That any officer serving with an over-sea garrison may, at his own request if in good health, be detailed to serve therewith for the further period of one year: *Provided further*, That when the number of volunteers for service with the over-sea garrisons is not sufficient to meet the requirements of the service the number of additional officers required shall be detailed by roster: *And provided further*, That all officers and enlisted men serving with the over-sea garrisons shall be entitled to a 10 per cent and a 20 per cent increase of pay, respectively, from the date of leaving the continental limits of the United States to the date of return thereto.

SEC. 35. Retirement: Any officer on the active list holding a permanent commission or appointment in the United States Army who shall fail to pass any prescribed examination for promotion, or who shall have been reported by any officer senior to him duly authorized to make such report, or by his commanding officer as being not qualified to perform the duties of his then grade, shall, if such report is concurred in by the next higher military commander, be immediately ordered before a board, convened by the commander of the divisional area, or in case he shall have concurred in such report with respect to such officer then by higher authority, composed of five permanent officers, who shall be senior in rank to the officer whose competency is in question; and such board shall immediately inquire into and report, in the manner now prescribed for retiring boards, upon the competency and capacity of such officer to perform the duties of his then grade; and if such board shall report that such officer is not qualified to perform such duties and such report is approved by the President, such officer shall be immediately retired in accordance with the provisions of this section; and if such board shall report that such officer is qualified to perform such duties, he shall be continued on the active list; and any officer so retired shall be entitled to pay, except as herein otherwise provided, equal to 2½ per cent of the pay, including increase for length of service to which he was entitled at the time of his retirement, for every year or major fraction thereof that he shall have served as a commissioned officer in the service of the United States prior to retirement; but no officer so retired shall receive more than 75 per cent of such pay: *Provided*, That nothing herein shall operate to reduce the pay now provided by law of any officer now on the retired list: *Provided further*, That any officer holding a permanent commission or appointment in the United States Army who shall be retired for physical disability incurred in line of duty shall be retired with pay equal to 75 per cent of the pay, including increase for length of service which he was receiving at the time of his retirement: *Provided further*, That any officer who shall be found to be incapacitated because of physical disabilities not incurred in the line of duty shall be retired or wholly retired at the discretion of the President: *And provided further*, That any officer who has been or who shall subsequently be retired, and who is less than 64 years of age, shall be liable in time of peace to perform such military duty consistent with his rank, grade, and physical condition as the President may direct, and while employed on active duty by direction of the President such retired officer shall be entitled to the active pay and allowances provided by law for his grade. In time of war retired officers over the age of 64 years may, with their consent, be employed upon such duties as the President may direct.

SEC. 36. Divisional areas: The President is hereby authorized, immediately after the passage of this act, to divide the territory within the continental limits of the United States into 16 divisional areas. Each such area shall contain, as nearly as may be practicable, that proportion of the population liable to military service of the whole of said territory which the sum of the authorized maximum enlisted and enrolled strength of the units of the training forces to be stationed in such area and the enrolled naval contingent to be raised therein bears to the sum of the total authorized maximum enlisted and enrolled strength of the training forces and the total strength of all naval contingents to be raised within said territory: *Provided*, That the President may, in his discretion, change the limits or boundaries of such divisional areas at any time as changes in population or the interests of the service may require.

SEC. 37. The President is hereby authorized, immediately after the passage of this act, to group all Coast Artillery commands and units within the continental limits of the United States into such number of Coast Artillery districts, not exceeding six, as he may direct, and to assign a permanent line officer of appropriate rank, who, whenever practicable, shall be a general officer of the line, to the command of each divisional area and of the troops of the training forces other than those of the Coast Artillery stationed therein, and to assign a permanent line officer of appropriate rank, who, whenever practicable, shall be a general officer of the line, to the command of each Coast Artillery district: *Provided*, That the commander of a divisional area shall, in accordance with instructions from higher authority, make all original assignments of enrolled men to the Coast Artillery units and commands located within his district, but all other matters connected with the Coast Artillery units and commands shall, in time of peace, be under the control and direction of the commanders of Coast Artillery districts, subject to the control and direction of the War Department.

SEC. 38. The President is hereby authorized to station in each divisional area, as soon as practicable after the passage of this act, the proper proportion of available officers and enlisted men of the permanent personnel of the several arms, corps, and departments, and to cause the commanders of divisional areas to organize the permanent personnel so stationed in each such area into provisional training regiments, battalions, and schools of application, and to employ such portion of such personnel as may be required therefor upon any duties or work necessary or convenient for carrying the provisions of this act into effect: *Provided*, That, as far as may be practicable, such provisional training regiments, battalions, and schools of application shall be temporarily stationed on existing military reservations.

SEC. 39. The commander of each divisional area and each commander of each ovea-sea department is hereby authorized to convene, as soon as practicable after the passage of this act, such number of boards of officers, composed of permanent officers stationed within such area or department, as he may deem necessary or convenient for conducting the examinations, in accordance with regulations to be prescribed by the Secretary of War, of such persons resident within such area or stationed therein as may apply, as hereafter provided, for appointment to vacancies already existing or created by this act in the permanent commissioned personnel of the United States Army, and to prescribe at what place or places within such area such board shall meet for the transaction of the business for which appointed: *Provided*, That, as far as may be practicable and consistent with economy, such board shall be ordered to meet at such places as will require the least amount of travel on the part of the majority of the applicants to be examined.

SEC. 40. Any officer of the National Guard or Organized Militia or any enlisted man of the Regular Army or of the permanent personnel of the United States Army not over 40 years of age, or any other male citizen of the United States who is not over said age and who has had previous military training, service, or experience, may apply to the commander of the divisional area or to the commander of the oversea department in which he resides or is stationed for appointment in the permanent commissioned personnel of the United States Army and for authority to take the prescribed examination to determine his fitness for such appointment and for appointment as an officer candidate. The application of each such person shall be submitted upon a form approved by the Secretary of War, and a copy of such form shall be furnished without cost to any bona fide applicant by the postmaster at his station or place of residence, and each such application shall be accompanied by such affidavits, references, and vouchers with respect to the physical condition, moral character, age, and military record of the applicant as the Secretary of War may prescribe. Each such application, and its accompanying documents, which, together, shall indicate that the applicant is eligible for appointment in accordance with the provisions of this act, shall be referred by the commander of the divisional area or over-sea department to the board appointed to meet at the place within such area or department nearest to the residence or station of the applicant. Upon the receipt of each such application, that board shall, as soon thereafter as practicable, notify the applicant that he is authorized to take the prescribed examination and shall inform him in writing of the place and time appointed for such examination. At the time and place appointed, such board shall proceed to conduct the preliminary examination of such applicant in the manner prescribed by the Secretary of War, and upon the conclusion of such examination shall forward a report of its proceedings and findings in the case, together with its recommendation in the premises, direct to the commander of the divisional area or oversea department for his action. Whenever any applicant shall have been found by any such board to be not qualified for appointment in the permanent commissioned personnel of the United States Army, and such finding, after such further examination as the commander of the divisional area or over-sea department may deem advisable, shall have been approved by him such applicant shall be held to be ineligible for such appointment. Applicants who have been found by such boards to be qualified for such appointment shall, except as herein otherwise provided, when such finding has been approved by the commander of the divisional area or over-sea department, be ordered by him as officer-candidates to temporary duty in the divisional area or department in which resident or stationed with a training unit or at a school of application or with a unit of an over-sea garrison. Officer-candidates shall, from date of appointment as such to date of discharge or to date of appointment to the permanent commissioned personnel or in the Reserve Officers' Corps, as the case may be, receive $100 per month and the allowances of a second lieutenant, and during such periods all such officer-candidates shall be subject to the Rules and Articles of War so far as they may be applicable to persons whose permanent retention in the service is uncertain. As soon as practicable after each officer-candidate shall have completed four months' service and training with a provisional training regiment or battalion or in a school of application, or with a unit of the over-sea garrison, his qualifications with respect to military capacity, adaptability for the military service, character, and habits, as determined by his service in such unit or school shall be reported upon in accordance with regulations to be prescribed by the Secretary of War, by a board of permanent officers appointed by the commander of the divisional area or over-sea department in which such officer-candidate has been serving. Each such report shall contain a statement whether in the opinion of the board the officer-candidate reported upon is qualified for appointment in the permanent commissioned personnel of the United States Army, and, if so, a recommendation as to the arm, corps, or department in which he should be appointed and the grade therein in which he should be appointed. Whenever any such officer-candidate is so reported as not qualified for appointment in such permanent commissioned personnel, the board shall report whether he is qualified for appointment in the Reserve Officers' Corps, and, if so, in what arm, corps, or department and grade therein. Officer candidates who have been reported by such boards as not qualified for appointment in the permanent commissioned personnel of the United States Army, may, except as otherwise provided herein, be discharged forthwith by the commander of the divisional area, or over-sea department, or, with their consent, may be ordered by him to such further period of service with a training unit or in a school of application as he may deem necessary, and all officer-candidates so ordered shall be again reported upon in like manner by such boards upon the completion of such additional period of service.

The proceedings of such boards in the cases of all officer-candidates reported as qualified for appointment in either the permanent commissioned personnel or in the Reserve Officers' Corps shall be forwarded by the commander of the divisional area, or oversea department, with his recommendations in each case, to the War Department for the action of the President.

The President is hereby authorized, by and with the advice and consent of the Senate, to appoint officer-candidates who have been so reported by such boards as qualified for appointment in the permanent commissioned personnel of the United States Army to vacancies existing or created by this act in the grades of second lieutenant, first lieutenant, and captain, but no officer-candidate shall be so appointed to the grade of second lieutenant who is under 21 or over 27 years of age, or to the grade of first lieutenant who is under 27 or over 32 years of age, or to the grade of captain who is under 32 or over 40 years of age, except that no enlisted man of the Regular Army or of the permanent personnel of the United States Army shall be so appointed to the grade of captain and no such enlisted man who is less than 27 years of age shall be so appointed to the grade of first lieutenant and no such enlisted man who is over 27 years of age shall be so appointed to the grade of second lieutenant: *Provided*, That applicants for appointment other than officers of the National Guard or Organized Militia and enlisted men of the Regular Army or of the permanent personnel of the United States Army who have been reported by the boards appointed for their preliminary examinations as qualified for appointment in the

permanent commissioned personnel and who, pursuant to the provision of this act are eligible only for appointment as second lieutenants, shall, if such report is approved by the commander of the divisional area, or oversea department, be reported by him to the War Department, and the President alone is hereby authorized to immediately appoint persons so recommended to the grade of temporary second lieutenant in the permanent personnel, with pay at the rate of $100 per month and the allowances of a second lieutenant, for a period of one year. All temporary second lieutenants shall be assigned by the commander of the divisional area, or oversea department, to duty with a provisional training regiment at a school of application or with a unit of an oversea garrison, and upon the completion of 11 months of such duty shall be examined by a board of three permanent officers appointed by such commander. Such board shall report which of such temporary second lieutenants are qualified for permanent appointment as second lieutenants in the United States Army, and the names of all persons so reported shall be transmitted by the commander of the divisional area, or oversea department, together with his recommendations in each case, to the War Department for the action of the President.

The President, by and with the advice and consent of the Senate, is hereby authorized to appoint and commission during each calendar year, from among the temporary second lieutenants so reported as eligible therefor, such number of second lieutenants in the permanent personnel of the United States Army as will not exceed 20 per cent of the total number of temporary second lieutenants holding appointment as such during such year.

Any temporary second lieutenant not appointed in the permanent personnel pursuant to this section, may, with his consent, be reappointed a temporary second lieutenant for a further period of one year, and so on from year to year, or if he so elects and is eligible therefor may be appointed to membership in the Reserve Officers' Corps. Temporary second lieutenants shall take rank among themselves according to length of commissioned service computed in accordance with section 29 of this act and such temporary second lieutenants who have had no prior commissioned service shall take rank among themselves, according to lot, in a manner prescribed by the Secretary of War.

Enlisted men of the Regular Army or of the permanent personnel of the United States Army who fail of appointment as provisional second lieutenants shall be returned to their proper enlisted grades in their several organizations, and the time they shall have served as provisional second lieutenants shall be counted as part of their enlistment periods.

For the purposes of relative rank and future promotion only each such officer-candidate so appointed to the grade of first lieutenant shall be credited with four years' constructive commissioned service, and each such officer-candidate so appointed to the grade of captain shall be credited for said purposes only with nine years' constructive commissioned service: *Provided*, That such constructive service for the purpose only of determining relative rank shall be in addition to any and all previous actual commissioned service to which persons so appointed shall be entitled in accordance with the provisions of section 29 of this act.

The relative rank of all persons so appointed in each grade shall be in accordance with actual prior commissioned service determined in accordance with the provisions of section 29 of this act, and of any two such officers that one shall be the senior who shall have had the longer prior commissioned service; and where two or more such officers shall have had the same prior commissioned service they shall take rank among themselves according to age, the oldest to be the senior; and all such officers who shall have had no prior commissioned service shall take rank among themselves according to age, the oldest to be the senior, and where two or more such officers are of the same age their seniority among themselves shall be decided by lot, in accordance with regulations to be prescribed by the Secretary of War.

Any officer appointed pursuant to the provisions of this section shall be eligible for assignment at the discretion of the President to any vacancy in his grade existing or created by this act in the oversea garrisons, the frontier forces, or the training forces as the interests of the service may require: *Provided*, That nothing in this section shall operate to prevent the President from appointing graduates of the United States Military Academy or enlisted men to commissions in the permanent personnel as provided by existing law.

The President alone is hereby authorized to appoint officer-candidates reported as provided in this section as qualified for appointment in the Officers' Reserve Corps as officers in such corps, subject to the provisions of section 42 of this act.

SEC. 41. As soon as practicable after the passage of this act the President is hereby authorized to provide for the recruitment of the additional enlisted personnel required to bring the permanent personnel of the oversea garrisons, the frontier forces, and the training forces to their authorized strength and to utilize for this purpose such officers and enlisted men of the recruiting service and of the divisional areas as he may deem necessary therefor, and as soon as the necessary commissioned and enlisted permanent personnel shall have been obtained, he is further authorized to organize in each divisional area the permanent personnel of the units of the training forces which are to be maintained therein: *Provided*, That enlistments effected under the provisions of this section may be for one year, as provided in section 3 of this act.

SEC. 42. For the purpose of securing a reserve of officers available for service as temporary officers in the lower grades in the training personnel as line and staff officers in the first and second reserves and as officers of the several staff corps and departments, as officers at the various mobilization points and depots and as officers available for such other duties as the President may direct, there shall be organized under such regulations as the President may prescribe, a reserve officers' corps of the United States Army. Said corps shall consist of sections corresponding to the various arms and to the several staff corps and departments of the United States Army. Except as otherwise provided in this act, in officer of the Reserve Officers' Corps shall not, without his consent, be liable to active duty in time of peace, and whenever called out for service shall not, without his consent, be so called out in a lower grade than that held by him in said corps: *Provided*, That the Secretary of War may, in time of peace, order first lieutenants of the medical section of the Reserve Officrs' Corps, with their consent, to active duty in the service of the United States in such numbers as the public service may require and the funds appropriated may permit, and he may relieve them from such duty when their services are no longer necessary. While on such duty they shall receive the pay and allowances, including pay for periods of sickness and leaves of absence of permanent officers of corresponding grades and lengths of service on the active list.

All persons now carried as duly qualified and registered, pursuant to section 23 of the act of Congress approved January 21, 1903, and all persons appointed in the Officers' Reserve Corps pursuant to section 37 of the act of Congress approved June 3, 1916, shall, for a period of two years after the passage of this act, and without any further examination except a physical examination, be eligible for appointment in the Reserve Officers' Corps in the section corresponding to the arm, corps, or department in which they shall have been qualified or appointed, pursuant to the above-described laws: *Provided*, That no persons shall be appointed in the Reserve Officers' Corps in any grade above that of lieutenant colonel.

The President alone is hereby authorized to appoint and commission members of the Reserve Officers' Corps, but no person shall be appointed a member of said corps who is less than 19 years of age, and for a period of three years after the passage of this act no person shall be appointed in the grade of second lieutenant, first lieutenant, or captain therein who is more than 40 years of age, and no person, except a commissioned officer of the National Guard or Organized Militia, shall be appointed in the grade of major or lieutenant colonel therein who is more than 60 years of age, and no officer of the National Guard or Organized Militia shall be appointed in the grade of major or lieutenant colonel therein who is more than 63 years of age.

The commissions of all members of the Reserve Officers' Corps shall continue in full effect until terminated by death, promotion, resignation, or dismissal, but upon reaching the age of 64 years all reserve officers shall be permanently transferred to the unorganized reserves, and thereafter such officers shall not in time of peace be eligible for employment with units or organizations of the United States Army. In time of actual or threatened hostilities officers in the unorganized reserves may with their consent be assigned to such duty as the President may direct.

As soon as practicable after the preliminary organization of reserve units authorized in section 51 of this act shall have been effected the commander of each divisional area shall cause to be posted in a conspicuous place in each post office within such area the number of reserve officers of each grade in each arm, corps, and department required to fill the vacancies existing in each reserve unit within such divisional area. At any time within three months thereafter any officer of the National Guard or Organized Militia or any enlisted man of the Regular Army or of the permanent personnel of the United States Army, or any other male citizen of the United States of previous military service, training, or experience within the age limits prescribed in this act may apply to the commander of the divisional area in which he resides or is stationed for appointment in the Reserve Officers' Corps, subject to such examinations as the Secretary of War may prescribe. No such applications received after such three months' period shall have elapsed shall be considered, except in cases where the applicants concerned were, by unavoidable causes, prevented from making application within such period. All such applications shall be made upon a form approved by the Secretary of War, which form shall be furnished without cost to any bona fide applicant by the postmaster at his place of residence or station, and such application shall be accompanied by such affidavits, vouchers, and references relative to his age, character, and previous military record as the Secretary of War may prescribe. Each such application which, together with the documents accompanying same, shall indicate that the applicant is eligible for appointment in the Reserve Officers' Corps, shall be referred by the commander of the divisional area to that one of the examining boards convened pursuant to section 39 of this act for the examination of applicants for appointment in the permanent commissioned personnel whose place of meeting is nearest to the residence or station of the applicant. Upon the receipt of each such application the board shall, as soon as practicable, notify the applicant when and where to report for examination, and shall, at such time and place, proceed, under such regulations as the Secretary of War may prescribe, to determine whether the applicant is qualified physically, in general education, and in moral character for appointment in the Reserve Officers' Corps. Any officer of the National Guard or Organized Militia or enlisted man of the Regular Army or United States Army who is found by such board to be not qualified for appointment on account of physical disability or unsatisfactory military record in the National Guard or Organized Militia, or in moral character, shall, if such finding be approved by the commander of the divisional area, be rejected forthwith. Any officer of the National Guard or Organized Militia or enlisted man of the Regular Army or United States Army who is found by such board to be qualified physically and morally, and who has a satisfactory military record in the National Guard or Organized Militia or in the Regular Army or United States Army shall, if such report is approved by the commander of the divisional area, be reported to the War Department for the action of the President as eligible for appointment in the same grade as that held by him in the National Guard or Organized Militia and in the same arm of the service; and in the case of such enlisted men in such grades, within the limits of this section, as may be recommended by said board: *Provided*, That no officer of the National Guard or Organized Militia or such enlisted men shall be appointed in the Reserve Officers' Corps in any grade higher than that of lieutenant colonel, and any such officer who applies for appointment therein in a grade below that of colonel but higher than that held by him in the National Guard or Organized Militia, as the case may be; or in an arm, corps, or department other than that in which he was commissioned in the National Guard or Organized Militia, shall be required to undergo such further examination relative to his qualifications therefor as the Secretary of War may prescribe.

Any applicant for appointment in the Reserve Officers' Corps, other than an officer of the National Guard or Organized Militia, who is found by such board to be not qualified for such appointment because of physical disability, bad moral character, or defective general education, shall be discharged forthwith, and any such enlisted man shall be returned to his permanent organization, except that honorably discharged soldiers of the Regular Army of good character who are rejected because of defective general education, and any other male citizens of the United States rejected solely for the same reason, may be accepted as reserve noncommissioned officers. Applicants who pass the above-prescribed preliminary examination, including officers of the National Guard or Organized Militia who desire appointment in higher grades than those held by them in the National Guard or Organized Militia or in another arm of the service than those in which commissioned in the National Guard or Organized Militia, shall be further examined by the board with respect to their past military and civil record and their general capacity, aptitude, and qualifications for the military service. Upon the completion of each such examination the board shall report whether in its opinion the applicant is qualified for appointment in the Reserve Officers' Corps, and if so, will recommend the highest grade below that of colonel, and the arm, corps, or depart-

ment in which he should be appointed, and such report will include such facts determined by the examination relative to said applicant's civil and military record and such other information as the Secretary of War may prescribe.

The commander of the divisional area shall, as soon as practicable, forward all reports of such examinations which have received his approval to the War Department for the action of the President, and the President alone is authorized to appoint such applicants reported as qualified therefor to membership in the Reserve Officers' Corps, in accordance with the recommendations of the boards: *Provided*, That no officer of the National Guard or Organized Militia shall, without his consent, be appointed in any arm, corps, or department in any grade lower than that held by him in such arm, corps, or department in the National Guard or Organized Militia: *Provided further*, That after the initial appointments to the Reserve Officers' Corps shall have been made in accordance with this section, appointments to the Reserve Officers' Corps shall be made only from graduates of the Reserve Officers' Training Corps in accordance with existing law and from reservists who have completed the prescribed 11 months' continuous service with the training forces, except that any person eligible under the provisions of this section for appointment who was for unavoidable reasons unable to apply therefor within the period prescribed, shall be eligible for appointment in accordance with the provisions of this section: *And provided further*, That all members of the Reserve Officers' Corps and all enrolled reservists of all grades in all arms, corps, and departments shall, from the date upon which they shall have been called out for service in maneuvers or for training in time of peace or from the date upon which they shall have been called out for service in time of actual or threatened hostilities in accordance with the provisions of this act, until released from such service by competent authority, be subject to the Rules and Articles of War so far as they shall be applicable to persons who do not belong to the permanent personnel of the United States Army.

SEC. 43. Members of the Reserve Officers' Corps shall take rank next after all officers of like grades in the permanent personnel of the United States Army or in the Marine Corps when detached for service with said Army, and shall take rank among themselves in each grade according to date of appointment in such grade.

Officers of the Reserve Officers' Corps appointed on the same date shall take rank among themselves in each grade, as follows: First, officers of the National Guard; second, officers of the Organized Militia; third, enlisted men of the Regular Army or of the permanent personnel of the United States Army; fourth, all other officers so appointed.

Officers of the National Guard appointed on the same date to the same grade in the Reserve Officers' Corps shall take rank among themselves according to length of prior commissioned service in the National Guard and Organized Militia, and when two or more such officers shall have had the same such service, they shall take rank among themselves according to total length of enlisted and commissioned service in the National Guard and Organized Militia.

Officers of the Organized Militia appointed on the same date and the same grade in the Reserve Officers' Corps, shall take rank among themselves according to length of prior commissioned service in the Organized Militia, and when two or more such officers shall have had the same prior commissioned service they shall take rank among themselves according to total length of enlisted and commissioned service in the Organized Militia: *Provided*, That commissioned or enlisted service in the National Guard and Organized Militia in the service of the United States shall count double: *Provided further*, That when two or more officers of the National Guard or Organized Militia can not be graded with respect to rank, as above provided, they shall take rank among themselves in accordance with their relative rank in the National Guard or Organized Militia prior to appointment in the Reserve Officers' Corps. Enlisted men so appointed shall take rank among themselves according to length of service as noncommissioned officers, and those who shall have had no such service shall take rank among themselves according to age.

All other persons so appointed on the same date in same grade shall take rank among themselves according to age, the oldest to be the senior; and when two or more officers are of the same age, their seniority shall be decided by lot in a manner prescribed by the Secretary of War.

SEC. 44. Vacancies occurring in time of peace in any grade below that of colonel in the Reserve Officers' Corps shall be filled by the promotion, subject to such exceptions as the President may prescribe in regulations governing the promotion, examinations for promotion and assignment of reserve officers, of officers of said corps in the next lower grade in the reserve unit, corps, or department in which such vacancies occur: *Provided*, That officers of the Reserve Officers' Corps, if they so elect, may qualify for promotion and be promoted in the first or second reserves even though no vacancy exists in the next higher grade in their regiment, battalion, squadron, corps, or department, and when the number of officers in any grade in any unit, corps, or department of the first reserves exceeds the number authorized therefor, the commander of the divisional area may transfer such surplus officers to other organizations of the first reserves or to the second reserves or he may attach them to organizations in the first reserves.

In time of war, officers of the Reserve Officers' Corps may be promoted to any grade or rank in such corps in accordance with their efficiency as demonstrated in service in the field: *Provided*, That appointments to grades above that of colonel so made shall be made by and with the advice and consent of the Senate.

SEC. 45. Any member of the Reserve Officers' Corps assigned or attached to either the first or the second reserves who shall have been reported by his commanding officer, or by any other officer duly authorized to make such report, as not qualified to perform the duties of his then grade, shall, if such report is concurred in by the next higher military authority, be immediately ordered before a board composed of five reserve officers senior in rank to the officer so ordered, convened by the commander of the reserve area, or in case he shall have concurred in such report then by the next higher military authority, and such board shall immediately proceed to inquire into and report, in the manner now prescribed for retiring boards, upon the competency and capacity of such officer to perform the duties of his then grade, and if such board shall report that such officer is qualified to perform such duties he shall continue on the duty to which he was before assigned; and if such board shall report that such officer is not qualified to perform such duties and such report is approved by the President, such officer shall forthwith be transferred to the unorganized reserves and shall not again be eligible for assignment to duty with either the first or the second reserves: *Provided*, That any member of the Reserve Officers' Corps who shall have been convicted of any offense involving moral turpitude or which, in the opinion of the President, was unbecoming an officer and a gentleman shall be forthwith dismissed from the service and shall not be again eligible for appointment or enrollment in any branch of the United States Army: *Provided further*, That all members of the Reserve Officers' Corps, who are assigned to either the first or second reserves, shall, as soon as they reach the age of 64 years, be transferred to the unorganized reserves, and no reserve officer over the age of 64 shall in time of peace be eligible for assignment or attachment to either the first or second reserves.

SEC. 46. The President is hereby authorized, as soon as the necessary funds therefor shall have been appropriated, to cause such land to be acquired by lease or purchase, such buildings, target ranges, and other structures to be erected or leased and such military stores and equipment of all kinds, including reserve supplies, to be procured in each divisional area as shall be necessary for the examining, enlisting, enrolling, organizing, training, and equipping the troops of all arms and corps stationed in such area.

SEC. 47. Whenever in time of peace any parcel of land, other than that occupied by a dwelling house and its curtilage, shall be required for the use of the training forces or the first reserves during the prescribed annual maneuvers, and the owner or occupant thereof refuses to allow such parcel of land to be so used the President may, in his discretion, authorize such use of such land without the permission of the owner or occupant and direct that any damage caused thereto by such use shall be adjusted and settled as hereafter provided.

Whenever in time of peace any damage is caused to any private property by any troops of the United States Army engaged in the prescribed annual maneuvers, the President is hereby authorized to cause any claims resulting therefrom to be immediately adjusted and settled in accordance with the regulations to be prescribed by him, so far as appropriations will permit, by a board of officers appointed by the commander of the area in which such damage occurred.

SEC. 48. As soon as the President shall decide that the necessary training personnel has been organized and trained, the necessary ground acquired, the necessary structures erected, and the necessary military supplies and equipment provided in each divisional area, he is hereby authorized and empowered to call out for military training and service to serve in the United States Army in accordance with the provisions of this act, and to report for such service on the 1st day of November next thereafter, all persons liable to military service who have arrived or who will arrive at the age of 18 years during the year ending on the day next preceding such 1st day of November; and in each subsequent year ending on the 31st day of October all males liable to military service who arrive at the age of 18 years during such year shall likewise be called out to report for military training and service in the United States Army on the 1st day of November of that year, in accordance with the provisions of this act.

SEC. 49. Except as otherwise provided in this act, service in the United States Army in time of peace shall be for a period of 12 years, unless sooner discharged, the first 11 months of said period shall be in continuous training and service in the training forces, the next 4 years and 1 month shall be in the first reserves, and not more than one period of 15 days' active service in any calendar year for 2 years shall be required of any enrolled member of said reserves during his period of service therein in time of peace. The last 7 years of said 12-year period of service shall be in the second reserves, and reservists assigned thereto shall not be called out for active service in time of peace: *Provided*, That no reservist assigned to the first reserves shall be eligible for appointment in the reserve officers' corps unless he shall have served with his organization during all periods of active service prescribed therefor from the date of his assignment thereto to the date of his appointment in said corps: *Provided further*, That all persons who shall have been commissioned, appointed, enlisted, or enrolled in the United States Army at the outbreak of war or when war becomes imminent may be held to service therein during the continuance of war or until the President shall decide that war is no longer imminent, and this without regard to the periods for which such persons shall have been commissioned, appointed, enlisted, or enrolled: *And provided further*, That enrolled noncommissioned officers and enlisted specialists who have completed their 11 months' continuous active training and service may, with their consent, be retained with or attached to the training forces for further stipulated periods of training and service, and any enrolled man who has satisfactorily completed his 11 months' continuous training and service may be permitted to enlist in the permanent personnel in one of the arms or corps of the United States Army, and any reservist so enlisting shall, upon completion of his service under such or any subsequent enlistment, revert to the reserve status he would then occupy if he had not so enlisted.

SEC. 50. In time of peace the President may by proclamation call out for active service, in accordance with the provisions of this act, any class of persons liable for such service, and in time of actual or threatened hostilities he may likewise by proclamation call out for military service such classes of persons according to age, beginning with the youngest liable for such service, as shall be required for the national defense: *Provided*, That in time of peace no part of the training forces or of the first or second reserves shall be called out to execute the laws, suppress insurrection, or repel invasion without the authority of Congress first had and obtained, except in cases of actual or threatened invasion occurring while Congress is not in session, and then only when in the judgment of the President it would be dangerous to wait for Congress to assemble. A copy of such proclamation, duly posted in a conspicuous place in the post office of the place of residence or temporary abode of any person included in such call not less than 10 days prior to the date prescribed in said proclamation, for such person to report for said service, or any other public notification which the President may deem suitable, shall be deemed good and sufficient notice to such person of his liability under such call, and no personal service of any notice of any kind shall be required to bring such person within the provisions of this act: *Provided further*, That from and after the date upon which any person liable for military service has been duly called out therefor, in accordance with the provisions of this act, until such time as he shall have been duly discharged from such service, such person shall be subject to the Rules and Articles of War so far as they are applicable to persons whose permanent retention in the United States Army is not contemplated: *And provided further*, That in time of actual or threatened hostilities the President may accept the voluntary military services of any person not more than 64 years of age who is not included in any class called out for service.

SEC. 51. The President is hereby authorized to delegate to the commander of each divisional area the necessary authority to commence the organization, as soon as practicable after the passage of this act, of such units of the first reserves as are to be organized in such area; to subdivide such divisional area into three reserve areas; to subdivide each such reserve area into districts and subdistricts; to pre-

scribe the limits of each such reserve area, district, and subdistrict; to prescribe what units of the first reserves authorized for such divisional area shall be located in each such subdivision; and, subject, to the approval of the President, to assign a competent officer of the permanent personnel of the training forces in such area of appropriate rank to the command of each division, brigade, and regiment of the first and second reserves to be organized in such divisional area. Each officer so assigned shall, in time of peace, have reserve rank appropriate to the command to which appointed, but shall receive only the pay and allowances provided for his actual grade and rank in the permanent personnel. In time of war he shall have the rank, pay, and allowances appropriate to such command.

Each such commander of a reserve regiment shall, subject to such regulations as the President may prescribe and to the supervision of superior military authority, have full charge of all matters connected with the enrollment and records of all reserve officers and noncommissioned reservists belonging to his regiment; of all plans for drawing upon the unorganized reserves for the necessary personnel in the event of actual or threatened hostilities; of all matters connected with the mobilization of his regiment in peace or war or relating to its equipment or the training of its personnel: *Provided*, That each officer of the permanent personnel assigned to the command of a division, a brigade, or a regiment of the first or second reserves shall also be assigned or attached to a unit of the training forces, and in addition to his duties with the first or second reserves, he shall be required to perform such other duties in such unit of the training forces as the commander of the divisional area shall prescribe.

The organization, peace administration, and training of all units located in a reserve area, other than regiments and brigades, shall be conducted under the supervision of the commanders of reserve divisions, who shall be assisted in such duties by such other officers of the permanent personnel as may be designated therefor by the commander of the divisional area: *Provided*, That each reserve area, district, and subdistrict prescribed for the location and organization of a unit of the first reserves shall likewise be prescribed for the location and organization of a corresponding unit of the second reserves: *Provided further*, That the commander of each divisional area is hereby authorized to change the limits of reserve areas, districts, and subdistricts to conform to changes which may occur in the distribution of population liable to military service or to assign surplus reservists in one such subdivision to a reserve unit located in another.

SEC. 52. The commander of each divisional area when notified of the appointment or promotion thereof is hereby authorized to assign members of the Reserve Officers' Corps resident in such area to units of the first and second reserves located within such area and to such other duty appropriate to their rank and grade that may be consistent with the provisions of this act and with regulations prescribed pursuant thereto: *Provided*, That as far as their places of residence may render such action practicable, such reserve officers shall be assigned according to seniority in each grade to units of the first reserves and second reserves in the order named. Reserve officers so assigned shall in time of peace be liable for active service for not exceeding two weeks in any one year: *Provided further*, That such officers may with their consent be ordered to active duty for longer periods, and reserve officers and noncommissioned officer reservists who are candidates for promotion may be required to undergo such active service prior to promotion in excess of two weeks per year as the President may prescribe as necessary for their further military training: *Provided further*, That whenever during maneuvers in time of peace or in time of actual or threatened hostilities officers of the permanent personnel of the United States Army are detached from the organizations to which assigned for duty with the first or second reserves a corresponding number of reserve officers may be attached to the permanent personnel of the organizations from which such permanent officers were detached for temporary duty therein: *Provided further*, That subject to such regulations as the Secretary of War may prescribe, honorably discharged enlisted men of the Regular Army, the United States Army, and the National Guard or Organized Militia, and enlisted men of good character of the National Guard and Organized Militia may with their consent be enrolled as reserve noncommissioned officers and assigned to reserve organizations: *And provided further*, That whenever a reserve officer or an enrolled reservist changes his residence to a place at such distance from the location of the unit to which he is assigned as to render his further service therein undesirable he shall be detached from such unit and assigned or attached to another reserve unit located in the vicinity of his new place of residence, and it is hereby made the military duty, for failure to perform which the offender shall be subject to trial and punishment by a military tribunal in accordance with the Rules and Articles of War, of each reserve officer and enrolled reservist who shall change his place of residence to notify his immediate commanding officer prior to making such change.

SEC. 53. The pay and allowances of all permanent commissioned officers and enlisted men belonging to the personnel of any arm, corps, or department of the United States Army, or employed on any duty authorized by law, shall be the same as that now prescribed by law for like grades and arms in the Regular Army, except that in lieu of a money allowance for clothing to enlisted men on the active list the President is hereby authorized to prescribe the articles of clothing that shall be issued for the use of enlisted men in each grade in each arm and corps.

SEC. 54. The pay of all persons in the United States Army, other than the officers, enlisted men, and civilians of the permanent personnel, shall, except as otherwise provided in this act, in time of peace be one-third of the pay prescribed by law for like grades in the Regular Army. The allowances of all persons in the United States Army, other than those enumerated in the preceding section, shall at all times be the same as prescribed by law for like grades and arms in the Regular Army, except that in lieu of a money allowance of clothing to enlisted and enrolled men, the President is hereby authorized to prescribe the articles of clothing that shall be issued for the use of enlisted or enrolled men in each grade in each arm and branch of the service: *Provided*, That no person shall be entitled to the pay or allowances hereinbefore prescribed in this section except for such time as he shall have actually served on active service in time of peace pursuant to the orders of competent authority issued in accordance with the provisions of this act: *Provided further*, That in time of actual hostilities all persons in the United States Army shall be entitled to the pay now prescribed by law for like grades in the Regular Army.

SEC. 55. No person whomsoever shall be entitled to or given any money or other valuable thing whatsoever as bounty or as a fee or gratuity for enlisting, enrolling, accepting a commission in, or in any other manner entering the military service of the United States: *Provided*, That the provisions of this section shall not operate to prevent the payment of reenlistment pay or bonus for reenlisting in the permanent military establishment as provided by law.

SEC. 56. The following persons be, and they are hereby, excepted and made exempt from liability to military training and service in time of peace under the provisions of this act, to wit: Such as are rejected as totally physically or mentally unfit for military training and service; the only son liable to military training and service of a widow dependent upon his labor for support; the only son, liable to military training and service, of aged or infirm parent or parents dependent upon his labor for support: *Provided*, That when there are two or more sons of such aged or infirm parents liable upon the provisions of this act for military training and service, the father, or if he be dead, the mother, may elect which one of such sons shall be exempt; the only brother of children not 12 years of age dependent upon his labor for support: *Provided further*, That any person exempted from military training and service, in accordance with the provisions of this section, except when such exemption is based upon permanent total physical or mental unfitness therefor, shall be exempted for one year only, but such exemption, upon sufficient showing that one of the authorized bases therefor exists, may be again exempted for a further period of one year, and so on from year to year: *And provided further*, That any person who shall be exempted from liability to military training and service or who shall for any cause not have been duly registered, in accordance with the provisions of this act, shall, nevertheless, become liable to such military training and service with the class of recruits called out for such training and service on the first day of November next following the date on which his exemption shall have ceased or on which he shall have been duly registered, providing that he shall not become more than 24 years of age during such calendar year.

The following persons be, and they are hereby, excepted and made exempt from liability to perform military service under the provisions of this act in time of war or when war is imminent, and from liability to assignment to and service in the first or second reserves in time of peace, to wit: Such as are rejected as totally physically or mentally unfit for military service; also, first, the Vice President of the United States, the judges of the various courts of the United States, the Members of the House of Representatives and the Senate of the United States, the heads of the various executive departments of the United States, the United States district attorneys and their authorized assistants, the United States marshals and their authorized assistants and deputies, the United States commissioners, postmasters and assisant postmasters of all grades; second, the governors, the members of the legislatures, the heads of the various executive departments, and the judges of the various courts of the several States, Territories, and Districts; third, the only son of a widow dependent upon his labor for support, the only son of aged or infirm parent or parents dependent upon his labor for support: *Provided*, That when there are two or more such sons, the father, or, if he be dead, the mother, may elect which of such sons shall be exempt; the only brother of children under 12 years of age dependent upon his labor for support; the father of motherless children under 12 years of age dependent upon his labor for support; fourth, any person in Federal employ of the United States whose services are, in the discretion of the President, necessary for carrying out the provisions of this act. And no person, but such as are herein exempted, shall be exempt from liability to military service in time of war or when war is imminent. Such exemption shall continue only so long as such person shall remain totally physically or mentally exempt from military service, if such exemption is based on physical or mental unfitness, or only so long as such person shall hold such office or perform such service, if such exemption is based upon official position or service, or only so long as the condition of dependency exists, if such exemption is based upon a condition of dependency.

SEC. 57. No substitute shall be accepted in place of any person called out for military service pursuant to this act, and no such person shall be permitted to escape such service, or to be discharged therefrom, prior to the expiration of his term of service by the payment of money or any other valuable thing whatsoever, as consideration for his release from military service or liability thereto.

SEC. 58. Any person liable for military service under the provisions of this act, who shall be accepted and called out for such service under this act, and who shall under oath declare that he is conscientiously opposed to the bearing of arms and is prohibited from so doing by the tenets, rules, and articles of faith of any now existing religious denomination to which he belongs, and who shall prove by satisfactory evidence that his conduct and deportment have been uniformly consistent with such declaration, shall be employed on such duties, not involving the bearing of arms, as the Secretary of War may direct.

SEC. 59. Any person liable for military service under the provisions of this act, who, having been duly called out for military service, shall fail or neglect to report himself for such service at the time and place designated therefor, or who shall forcibly or otherwise resist or oppose such service, shall, if found to be physically qualified for military service, be punished as a court-martial may direct and shall be held to such military service in accordance with the provisions of this act.

SEC. 60. During the first year beginning after the passage of this act, the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents who have arrived, or shall arrive, at the ages of 18 to 21 years, both inclusive, during such calendar year, and all male citizens of the United States, and all males of foreign birth who have legally declared their intention to become citizens, who arrive at the ages of from 21 to 24 years, both inclusive, during such calendar year; second, all aliens residing or traveling within the territory of the United States over 18 and under 25 years of age.

SEC. 60. During the first year beginning after the passage of this act, the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents who have arrived, or shall arrive, at the ages of 18 to 21 years, both inclusive, during such calendar year, and all male citizens of the United States, and all males of foreign birth who have legally declared their intention to become citizens, who arrive at the ages of from 21 to 24 years, both inclusive, during such calendar year; second, all aliens residing or traveling within the territory of the United States over 18 and under 25 years of age.

During the second calendar year beginning after the passage of this act, the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents, who arrive at the age of 18 years during such calendar year; second, all unregistered male citizens of the United States and all unregistered males of foreign birth who have legally declared their intention to become citizens, who arrive at the ages of 21 to 30 years, both inclusive, during such calendar year; third, all unregistered aliens

residing or traveling within the jurisdiction of the United States who are over 18 and under 30 years of age; fourth, all persons liable to registration during the preceding year who, for any reason, have not been so registered.

During the third calendar year beginning after the passage of this act, the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents, who arrive at the age of 18 during such calendar year; second, all unregistered male citizens of the United States, and all unregistered males of foreign birth, who have legally declared their intention to become citizens, who arrive at the ages of 21 to 35 years, both inclusive, during such calendar year; third, all unregistered aliens residing or traveling within the jurisdiction of the United States who are over 18 and under 35 years of age; fourth, all persons liable to registration during any preceding year who have not for any cause been registered.

During the fourth calendar year beginning after the passage of this act, the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents, who arrive at the age of 18 years during such calendar year; second, all unregistered male citizens of the United States and all unregistered males of foreign birth, who have declared their intention to become citizens, who arrive at the ages of 21 to 40 years, both inclusive, during such calendar year; third, all unregistered aliens residing or traveling within the territory of the United States who are over 18 and under 41 years of age; fourth, all persons liable to registration during any preceding year who for any cause have not been registered.

During the fifth calendar year beginning after the passage of this act the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents who arrive at the age of 18 years during such calendar year; second, all unregistered male citizens of the United States and all unregistered males of foreign birth who have legally declared their intention to become citizens who arrive at the ages of 21 to 44 years, both inclusive, during such calendar year; third, all unregistered aliens residing or traveling in the jurisdiction of the United States who are over 18 and under 45 years of age; fourth, all persons liable to registration during any preceding year who for any cause have not been registered.

During the sixth year beginning after the passage of this act the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents who arrive at the age of 18 years during such calendar year; second, all unregistered aliens residing or traveling in the jurisdiction of the United States; third, all persons liable to registration during any preceding year who for any cause were not so registered.

During the seventh and each subsequent calendar year beginning after the passage of this act the following persons shall be liable to registration, to wit: First, all male citizens of the United States and all males of naturalized parents who arrive at the age of 18 years during such calendar year; second, all persons liable to registration who have not been previously registered: *Provided*, That in time of actual or threatened hostilities the President is hereby authorized to cause all or any class or classes of persons liable under the provisions of this section for registration to be registered during such year or years as he may designate, and this without regard to the year prescribed in this section for their registration. Failure to register during the year and period thereof so prescribed by the President shall subject the offender to the penalties provided in this act for the commission of a like offense in time of peace.

SEC. 61. The President is hereby authorized and empowered to designate annually such periods as he may deem necessary for the registration of such persons who under the provisions of this act are liable for registration during such calendar year, and it is hereby made the duty of each such person so liable for registration to appear personally during the period or periods so designated for his registration, at the post office nearest in point of actual distance to such person's residence or place of business or sojournment, or in the case of an alien traveling within the jurisdiction of the United States or of any State thereof, at a terminus on his route of travel, and then and there to submit to registration, and in case he is liable for military service under the provisions of this act to then and there declare whether he claims exemption from such military service, and if so, the facts upon which his claim is based.

SEC. 62. The President may, by proclamation duly posted in a conspicuous place in each post office not less than 10 days prior to the period designated for registration, and by such other means of public notification as he may deem necessary, give public notice of the provisions of this act and of the period or periods designated by him for registration in accordance with this act, and such posting of the President's proclamation in the post office at the place of residence or sojournment or terminus on the route of travel of any person liable for registration shall be deemed good and sufficient notice to such person of his liability under this act, and no personal notice of any kind to such person shall be required to bring him within the provisions of this act.

SEC. 63. It is hereby made the duty of each and every postmaster to register or cause to be registered, in duplicate, each and every person who presents himself for registration, upon forms approved by the Secretary of War, of suitable size and so printed and ruled that when the registration of any such person shall have been completed each of the duplicate registration cards relating to such person shall contain the following information with respect to each such person: First, full and correct name; second, age, date, and place of birth; third, citizenship; fourth, nationality; fifth, names and nationality of parents; sixth, names, ages, sex, and residence of dependents, if any; seventh, occupation or vocation; eighth, education; ninth, residence; tenth, post-office address; eleventh, whether or not he has had prior military service, and, if so, when, where, and in what organization or organizations; twelfth, whether or not he claims exemption from military service, and, if so, why; thirteenth, if not a citizen of the United States, whether he or, in case he is under 21 years of age, his parents have declared their intentions to become such in accordance with law; and each resident so registered shall be required to sign his name, if he can write, upon such cards, for future identification, and, if he can not write, that fact shall be stated in the space provided for his signature; and such other information as the President may prescribe.

SEC. 64. Each postmaster shall cause the registration cards of all persons registered by him or under his direction to be divided into two classes; the first class shall be known as the file of registered citizens, and shall include the registration cards of all persons liable for military service; the second class shall be known as the "file of registered aliens," and shall include the registration cards of all registered persons who are not citizens of the United States and who have not declared their intention under oath in accordance with law to become such. Each class of registration cards shall be filed separately and in accordance with regulations to be prescribed by the President, and in a manner that will admit of convenient and accurate reference to each card so filed.

SEC. 65. One card relating to each person registered in each post office shall be filed in the permanent records of such post office, and one card relating to each person so registered shall be forwarded without delay by the postmaster who registered, or caused such person to be registered, to the person designated to receive same by the commander of the divisional area in which such post office is located.

SEC. 66. The postmaster shall furnish each duly registered person who claims exemption from military service under the provisions of this act with a copy of the form provided for the proper presentation of such claims and with the number of blank forms for affidavits necessary for presenting his evidence in substantiation of such claim, and will, without charge to such person, administer oaths to witnesses testifying by affidavit with respect to such claim for exemption from liability for military service; and the postmaster will also inform such resident of the location of the office where such claim for exemption shall be filed.

SEC. 67. Any postmaster or assistant postmaster or any clerk employed in any post office, in carrying into effect the provisions of this act relative to registration, shall have authority to administer oaths to any persons attending to testify or depose in the course of any investigation as to any person's exemption from liability to military service or required to make affidavit under the provisions of this act: *Provided*, That nothing herein shall operate to prevent any other person lawfully authorized to administer oaths from administering oaths to such persons for such purposes.

SEC. 68. No person registered under the provisions of this act shall be entitled to any pay, allowances, fees, subsistence, or commutation therefor, or any monetary or other compensation or reimbursement whatever for time employed or expenses incurred in complying with the provisions of this act relative to registration, except as otherwise provided in this act.

SEC. 69. Any person liable for registration under this act who shall fail or neglect to present himself for registration at the place and during the period designated, or who shall forcibly or otherwise resist or oppose such registration, or who having duly presented himself or having been in any manner presented for registration shall fail, neglect, or refuse to answer fully, truthfully, and without equivocation any question asked him by the postmaster or his assistant, relative to such registration, shall, upon conviction, be punished by a fine of not less than $10 nor more than $200, and by imprisonment for not less than one month nor for more than one year, and shall be duly registered.

SEC. 70. Whenever any person liable for military service who is registered under the provisions of this act, or any alien who is so registered, shall change his place of residence or sojournment, he shall, within 10 days thereafter, fill out, sign, and file with the postmaster thereat and with the postmaster at his new place of residence or temporary abode the form provided for notifying such officials of such change.

SEC. 71. Each and every postmaster shall, upon receipt of notification of change of residence or place of sojournment, after making or causing to be made the proper notation upon the registration card in his post office of the person concerned, forward said registration card direct to the postmaster at the new place of residence or sojournment of the person concerned and shall forward the notification of change of residence to the officer designated by the commander of the divisional area in which such post office is located to receive same.

SEC. 72. Any person duly registered under the provisions of this act, and any postmaster who shall, unless prevented by causes beyond his control, fail or neglect to comply with the provisions of this act relative to notification of changes of residence or place of sojournment, shall, upon conviction, be punished by a fine of not less than $10 nor more than $200, and by imprisonment for not less than one month nor for more than one year.

SEC. 73. All claims for exemption from military service under the provisions of this act shall be stated upon the form provided for such purpose, which shall be known as the form for presentation of claim for exemption from military service, and each such claim shall be supported by affidavits of reputable persons, and each such affidavit shall be upon the form provided for that purpose, which shall be known as the form for affidavit with respect to claim for exemption from military service; and each such claim shall be presented within one month after the expiration of the period of registration, designated by the President for the registration of the claimant, to the United States commissioner whose office is located nearest in point of distance to the place of residence of such claimant, and such United States commissioner, together with an assistant United States district attorney designated by the district attorney of the district in which such commissioner's office is located, and an officer of the United States Army designated by the military commander of the divisional area in which such commissioner's office is located, are hereby declared to constitute a board with full powers to examine into, pass upon, and finally decide all claims for exemption from military service presented to it in accordance with the provisions of this act, and in the performance of this duty such board shall decide all claims strictly in accordance with the provisions of this act, and it is hereby made the duty of such board, carefully and without undue delay, to examine into the merits of each claim presented, and such board is hereby authorized to avail itself of existing legal provisions to secure such additional testimony bearing upon such claim as it may deem necessary for the proper determination of any question of fact that may be raised in connection with such claim: *Provided*, That in case the members of such board find themselves unable to come to an agreement upon any question of either law or fact bearing upon the decision of any claim, such claim, together with all papers in the case and a brief statement of the question or questions upon which the board is unable to agree, shall be sent by such board direct to the judge of the United States judicial district in which such board is sitting, and such judge shall finally decide the question or questions in issue, and also finally decide such claim: *Provided further*, That each such claimant whose claim has been decided in his favor shall be furnished by such board, or when his claim be decided by a district judge by such judge, with a certificate of exemption from military service, which certificate shall contain the name and address of such claimant and his personal description, the date of the termination of such exemption, and shall bear his signature for purposes of identification, and shall recite with respect to such claimant the same in-

formation prescribed in section 63 of this act for the registration of persons liable to registration, and in addition thereto shall state that claimant is exempt from military service under the provisions of the act and the reason or reasons which bring such claimant under such provisions: *And provided further*, That each claimant for exemption from military service and training or from military service shall receive 4 cents per mile for each mile actually traveled by him from his place of residence to the place of meeting of the exemption board and returning thence to his home, and he shall be entitled to no further commutation, reimbursement, or compensation whatsoever.

SEC. 74. Each person duly registered under the provisions of this act, and each person not so registered who is, nevertheless, liable for military service, shall, when called into such service pursuant to this act, be physically examined under the direction of the commanding officer of the divisional area within which such person resides, and at such place within such area as such area commander shall prescribe, and at such time as such area commander, acting in accordance with the direction of the President, shall prescribe, by such officer of the Medical Corps or other physician, as such area commander shall designate or employ, to conduct such physical examination at such time and place: *Provided*, That as far as practicable the places in each military district shall be selected for the purpose of effecting the greatest possible economy of travel and the least possible inconvenience to the persons whose physical examinations are to be conducted thereat: *Provided further*, That notice of the place and time prescribed pursuant to this section for the physical examination of any person liable thereto shall be given in the manner provided in this act for notice of liability to registration, or in any other way which the President may deem necessary, and no personal notice of any kind shall be required to bring any person liable to physical examination within the provisions of this act relative to physical examinations.

SEC. 75. Any person liable for military service under this act who shall duly present himself for physical examination at the time and place designated, and who shall then and there submit himself to such examination, and answer fully, truthfully, and without equivocation each and every question lawfully asked him relative to such examination, shall, upon the completion of his physical examination, be paid 4 cents per mile for each mile and major fraction thereof that he shall have actually traveled from his place of residence or sojournment to the place designated for his physical examination and will have to travel from thence to his place of residence or sojournment.

SEC. 76. Any person liable for military service under this act who shall fail or neglect to present himself for physical examination at the time and place appointed, or who shall, forcibly or otherwise, resist or oppose such physical examination, or who, having duly presented himself or having been presented in any manner, for physical examination, shall fail, neglect, or refuse to answer fully, truthfully, and without equivocation any question relative to such examination asked him by any officer or other person engaged in making such examination, shall, upon conviction, be punished by a fine of not less than $10 nor more than $200 and by imprisonment for not less than one month nor for more than one year, and shall be physically examined.

SEC. 77. Any person who shall leave his place of residence or sojournment with intent to avoid registration, physical examination, or military service shall, upon conviction, be deemed guilty of failing to present himself for registration, physical examination, or military service, as the case may be, and punished accordingly: *Provided*, That all persons charged with leaving their place of residence or temporary abode, with intent to avoid military training or service, shall be tried by military tribunals.

SEC. 78. Any person charged with the duty of carrying into effect any of the provisions of this act who shall receive from any person whomsoever any money or other valuable thing or consideration, or agree, directly or indirectly, to receive the same to his own or another's use as consideration for making or being party to the making of a false or incorrect registration, physical examination, enlistment, enrollment, or muster, or any false or incorrect report or return relative to any registration, physical examination, enlistment, enrollment, or muster, shall, upon conviction, if not subject to military law, be punished by a fine of not less than $100 nor more than $1,000 and by imprisonment for not less than three months nor for more than one year.

SEC. 79. Any person who shall make or be a party to the making of any false registration, physical examination, or muster or enrollment of any person, shall, if not subject to military law, upon conviction, be punished by a fine of not less than $100 nor more than $500 and by imprisonment for not less than three months nor for more than one year.

SEC. 80. Any person who shall advise, counsel, aid, or assist any other person in violating any of the provisions of this act, or who shall threaten, obstruct, or assault any person lawfully engaged in carrying out any of the provisions of this act, or who, having knowledge of any violation or intended violation of any of the provisions of this act, fails or neglects to inform without delay the proper authorities of such violation or intended violation shall, upon conviction, be punished by a fine of not less than $10 nor more than $200 and by imprisonment for not less than one month nor for more than one year; and any person who shall connive, conspire, combine, or agree with any other person or persons to commit any of the offenses prescribed in this section shall, upon conviction, be deemed guilty of the completed offense and punished as a principal.

SEC. 81. Any person who, acting for himself or for one or more other persons or for a corporation, shall give employment to any person who, being liable for military service and having been duly called out for same, has not completed the prescribed service in the training forces or been furloughed to the reserves, or who, being liable for registration or physical examination, has not duly submitted thereto shall, upon conviction, be punished by a fine of not less than $10 nor more than $200 and by imprisonment for not less than one month nor for more than three months.

SEC. 82. In time of actual or threatened hostilities any sentence of imprisonment or portion of such sentence imposed by any court for any offense not involving moral turpitude upon any person liable for military service, which shall be unexecuted on the date of enrollment of such person in the military service, shall be executed under the military authorities. In time of peace any such sentence shall be executed under the civil authorities, and the person so punished, if liable to military service and not over 24 years of age when such sentence shall have been executed, shall be liable for military service and training with the class of recruits called out to report therefor on the 1st day of November next following the execution of his sentence.

SEC. 83. Any person whomsoever who knowingly shall under oath make any false or misleading statement, either orally or in writing, in connection with any claim for exemption from military service under this act shall, upon conviction, be deemed guilty of perjury and punished accordingly.

SEC. 84. Any person whomsoever who shall knowingly procure or cause to be made any false or misleading statement under oath in connection with any claim for exemption from military service under this act shall, upon conviction, be deemed guilty of subornation of perjury and punished accordingly.

SEC. 85. One-half of any fine adjudged against any person for violation of any provision of this act shall be paid to any person or persons who shall have furnished the information which resulted in the conviction of the person so fined, and one-half of any such fine shall be covered into the Treasury of the United States.

SEC. 86. It shall be lawful at any time for any person authorized by the laws of the United States or of any State, Territory, or District, to make arrests, to arrest summarily and place in the custody of the proper United States officials for examination or trial any person whom such person authorized to make arrests has reasonable grounds for believing has violated any of the provisions of this act, and, in time of war or when war is imminent, all persons in the naval and military service of the United States are hereby clothed with like authority to make such arrests.

SEC. 87. Nothing in this act shall operate to deprive any permanent enlisted men in the United States Army of any of the rights or privileges respecting retirement or pension which are now provided by law for enlisted men of the Regular Army, or to deprive any permanent officer of the United States Army of any of the rights or privileges respecting pensions which are now provided by law for officers of the Regular Army, but no person in the United States Army other than the permanent officers and enlisted men described in section 3 of this act shall be entitled to retirement, and no person in the United States Army other than such permanent officers and enlisted men shall be entitled to pensions except for physical disabilities incurred in line of duty while employed on active duty pursuant to the orders of competent authority or while, pursuant to such orders, proceeding from their homes to posts of duty and thence to their homes.

SEC. 88. That section 35 of the act of Congress approved March 4, 1909, Criminal Code, is amended to read as follows:

Whoever shall make or cause to be made, or present or cause to be presented, for payment or approval, to or by any person or officer in the civil, military, or naval service of the United States, any claim upon or against the Government of the United States, or any department or officer thereof, knowing such claim to be false, fictitious, or fraudulent; or whoever, for the purpose of obtaining or aiding to obtain the payment or approval of such claim, shall make or use, or cause to be made or used, any false bill, receipt, voucher, roll, account, claim, certificate, affidavit, or deposition knowing the same to contain any fraudulent or fictitious statement or entry; or whoever shall enter into any agreement, combination, or conspiracy to defraud the Government of the United States, or any department or officer thereof, by obtaining or aiding to obtain the payment or allowance of any false or fraudulent claim; or whoever, having charge, possession, custody, or control of any money or other public property used or to be used in the military or naval service, with intent to defraud the United States or willfully to conceal such money or other property, shall deliver or cause to be delivered, to any other person having authority to receive the same, any amount of such money or other property less than that for which he received a certificate or took a receipt; or whoever, being authorized to make or deliver any certificate, voucher, receipt, or other paper certifying the receipt of arms, ammunition, provisions, clothing, or other property so used or to be used, shall make or deliver the same to any other person without full knowledge of the truth of the facts stated therein and with intent to defraud the United States, shall be fined not more than $5,000, or imprisoned not more than five years, or both. And the issue to or the placing in the custody or possession of any officer, soldier, sailor, or other person called into or employed in the military or naval service of the United States, of any arms, equipments, ammunition, clothes, military stores, or other public property, shall not be held to vest in any such officer, soldier, sailor, or other person, any title whatsoever as against the United States to such arms, equipments, ammunition, clothing, military stores, or other public property. And whoever shall knowingly purchase or receive in pledge for any obligation or indebtedness from any soldier, officer, sailor, or other person called into or employed in the military or naval service, any arms, equipments, ammunition, clothes, military stores, or other public property, whether furnished to the soldier, sailor, officer, or person, under a clothing allowance or otherwise, such soldier, sailor, officer, or other person not having the lawful right to pledge or sell the same, shall be fined not more than $500 and imprisoned not more than two years.

SEC. 89. The Secretary of War is hereby authorized to prescribe all regulations and forms and to designate or prescribe all persons necessary or convenient for carrying out the provisions of this act in all cases in which authority to prescribe such regulations or forms or to designate such persons is not by the provisions of this act delegated to another person.

SEC. 90. All commissioned officers in the Regular Army shall be included in the permanent commissioned personnel of the United States Army, and the inclusion of any such officer therein shall not operate to reduce his rank or the pay and allowances to which he as an officer in the Regular Army was entitled on the date of the passage of this act.

SEC. 91. All provisions of the act of Congress approved June 3, 1916, relating to the Officers' Reserve Corps, the training camps for selected civilians, the National Guard, the composition of the militia, and all laws and parts of laws in conflict with the provisions of this act are hereby repealed: *Provided*, That members of the Reserve Officers' Training Corps shall be eligible for appointment in the Reserve Officers' Corps under the conditions provided in the act of Congress approved June 3, 1916, relative to eligibility to appointment in the Officers' Reserve Corps: *Provided further*, That from and after five years after the passage of this act no part of any appropriation for the raising, equipping, arming, paying, supplying, training, sheltering, subsisting, or transporting of troops shall be used for equipping, arming, paying, supplying, training, sheltering, or transporting any person who is not commissioned, enlisted, appointed, enrolled, or employed in the United States Army, the Reserve Officers' Training Corps, or the militia of the Hawaiian Islands or Porto Rico: *And provided further*, That nothing herein shall operate to release or relieve any State, Territory, or District, or corporation or natural person, from any accountability, responsibility, liability, or indebtedness to the United States for any money or moneys or any property whatsoever which shall have been

or may hereafter be intrusted to any such State, Territory, or District, or to any such corporation or natural person, and until such time as all such accountability, responsibility, liability, and indebtedness shall have been finally settled according to law, all existing laws and parts of laws relating to such settlements shall remain in full force and effect.

—

[War College Division 9832–1.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, December 9, 1916.

MEMORANDUM FOR THE CHIEF OF STAFF.

Subject: Statement of a proper military policy for the United States.

1. In a memorandum from the Chief of Staff of October 31, 1916 (WCD 9832–1), it was directed that the War College Division make a study of a proper military policy for the United States and recommend—

"(a) What changes, if any, in the numbers recommended in the policy report should now be made.

"(b) What changes, if any, in the total amount of training recommended in the policy report should be made in view of the lessons of the present war.

"(c) What changes, if any, should be made in the system of obtaining the men needed for training in peace and service in war; that is, whether the Nation should continue to rely on the volunteer system for obtaining our military forces, or should substitute therefor an equitable system of universal training in peace and service in war.

"(d) If considered necessary to recommend a change in our present system, recommendation will be made as to what system, considering all elements of our military problem, will prove most advantageous to the Nation."

A subsequent memorandum, dated December 2, 1916 (WCD 9832–4), directed that the preparation of the report be given precedence over all other work upon which the General Staff might be engaged.

II.

(a) *Numbers now required by a proper military policy for the United States.*

1. Paragraph 5 of the "Statement of a Proper Military Policy for the United States" (WCD 9053–90) says:

"Control of the sea having been once gained by our adversary or adversaries, there is nothing to prevent them from dispatching an over-sea expedition against us. In order to form an idea of the mobile force we should have ready to resist it, an estimate must first be made of the approximate number of troops that other nations might reasonably be expected to transport and of the time required to land them on our coasts.

"The number of thoroughly trained and organized troops an enemy can bring in the first and succeeding expeditions under such an assumption is a function of—

"(b) The size of the enemy's army; and

"(c) The number, size, and speed of the vessels of the enemy's merchant marine that can be used as transports."

Based on the above, the conditions existing in August, 1914, were shown to be as in the following table:

Preparedness of the Great Powers for over-sea expeditions.

Nation.	Strength of Army.	Tonnage available of ships with capacity over [1]—			First expedition, using 50 per cent of tonnage given.		Second expedition, using 75 per cent of tonnage given.		Time needed to—	
		3,000 tons.	2,000 tons.	1,000 tons.	Men.	Animals.	Men.	Animals.	Load and cross ocean with first expedition.	Return, load, and recross with second expedition.
									Days.	*Days.*
Austria-Hungary	4,320,000	.....	762,750	.....	72,000	14,000	108,000	21,600	20.7	40.4
France	5,000,000	.....	1,705,931	.....	160,931	32,186	243,295	48,279	15.8	30.0
Germany	5,000,000	3,569,962	4,018,185	.....	[2] 387,000	[2] 81,270	[2] 440,000	[2] 94,600	15.8	30.8
Great Britain	[3] 695,000	13,000,000	.....	.....	170,000	90,000	.....	.....	14.0	27.0
Italy	2,600,000	.....	1,065,321	.....	91,000	13,650	136,000	20,475	18.3	35.0
Japan	2,212,000	.....	.....	[4] 1,013,985	95,745	24,416	142,622	36,623	22.5	41.0
Russia	5,000,000	.....	428,019	.....	37,630	7,940	66,444	11,918	20.5	40.0

[1] 50 per cent has been assumed as the figure representing the amount of shipping in or within call of home ports at outbreak of war.
[2] Using no ships less than 3,000 tons.
[3] 240,500 territorials.
[4] Japanese field regulations indicate the intention to use steamers of 1,000 tons; for this reason and because of the large amount of steamers between 10 and 12 knots speed, all Japanese steamers over 10 knots speed and 1,000 tons gross have been considered.

NOTE.—The allowance prescribed in our Field Service Regulations of 3 tons per man and 8 tons per animal for ships over 5,000 tons and 4 tons per man and 10 tons per animal for vessels under 5,000 tons has been used in estimating the capacity of ships, except where the regulations of any country prescribe a different allowance. These allowances include rations, water, forage, etc., for the voyage and a margin for 3 months' reserve supplies. The tonnage allowance covers men, animals, and all accessories, and is sufficient to provide for vehicles (including guns). Fighting power is the result of organization, training, and equipment backed by the resources of the country. Available shipping is a matter of commercial statistics.

2. All of the nations listed in the table are involved in the present great war. Necessarily both their military and naval strengths are much different to-day from what they were when the statement of a proper military policy for the United States was prepared. The allied nations have control of the seas, and the contest has developed into a war of armed nations having all their military resources engaged.

The changes that affect the present study are really limited to two countries, namely, Great Britain and Japan. In the former the strength of the army in 1914 was 695,000. This includes some 240,500 territorials. The tonnage available in ships was 13,000,000 and greatly exceeded the amount required for the 170,000 troops and 90,000 animals then available for an expeditionary force. Now, as then, Great Britain is the one power capable of promptly securing control of the seas. Since the opening of the present war Great Britain has been organizing her resources and expanding her army and navy. The number of her trained and organized troops at present in France and England is about 3,000,000 men. Moreover, she has adopted universal liability to service with certain limitations. It is not at all probable that Great Britain after the present war will revert to the volunteer system. The change made during the present stress is apt to be permanent. Judging the present by the history of the past, the United States must consider this development of Great Britain's military resources in forming a proper military policy.

In the case of Japan the greatest change is in her capacity for transferring troops. Her merchant marine has developed very largely since the outbreak of the war. Two divisions have been added to her army, making its total strength in excess of two and a quarter millions. The number of men that can now be transported by Japan in a first expedition is in excess of the 95,745 listed in the above table. Just how much greater it is can not be determined until the full strength of Japan's merchant marine is learned. Considering nations singly, this increase is not of much importance, since Great Britain's resources have so increased as to overshadow all other changes. The numbers needed by the United States for national defense, based on the military and naval strengths of Great Britain, will be more than sufficient to prepare against attacks by other powers considered singly.

3. As stated above, Great Britain has in the neighborhood of 3,000,000 trained and organized troops on duty in France and England. The exact amount of merchant marine now available for transporting them is unknown. The best information indicates, however, that her shipyards have been crowded, and, although a large amount of tonnage has been destroyed since 1914, that added has been sufficient to make up for the losses. Lloyd's returns show that during the calendar year 1915 Great Britain had a net loss of 11,151 tons, and that building operations during the current year are on a large scale. Japan expects to increase her tonnage by 189,450 during 1916 and by 464,370 during 1816–1918. (Commerce Reports, July 22, 1916.) Assuming that 13,000,000 tons are still available and that half of this could be assembled, and calculating as in the table above, the first expedition might consist of 1,000,000 men and 300,000 animals. The second expedition could carry 1,500,000 men and 450,000 animals.

4. By similar methods it can be shown that Japan, once in control of the Pacific, could transport an army of 100,000 men to our Pacific coast within 15 days and 150,000 additional men 45 days later.

5. Great Britain and Japan are allies and bound by treaty to assist each other under certain conditions. If these two countries unite against the United States, the total hostile force that could be landed on our shores within 45 days of the opening of war, if unopposed by our Navy, would be 2,750,000.

6. The numbers arrived at are deduced as in the former study:

(a) The size of the enemy's army.

(b) The number, size, and speed of the vessels of the enemy's merchant marine.

But the attempt to convoy across the Atlantic a million men in a single expedition is most improbable even by a nation in firm possession of the seas and with resources as vast as those of Great Britain. She has the trained men and more than the necessary ships, but the magnitude and difficulties of the task are so great as to make the undertaking unlikely. However, if in control of the seas, the accumulation of such a hostile force on our shores or borders would be merely a matter of successive expeditions that would require a longer time than a single one. The study of September, 1915 (WCD 9053–90), assumed that hostile expeditions would land on our coasts where they might be attacked before a second expedition could arrive. The numbers necessary for a proper military policy were based largely on this supposition. But the present war has brought developments that require further consideration. Our northern neighbor has become a military power.

Canada has a population of about 5,000,000 men and great material resources. Since the present war began she has established large munition factories, and has voted 500,000 men as her quota for carrying on the present war. Of these numbers 160,000 had been sent to Europe last spring. Unless it is assumed that Great Britain will never become the enemy of the United States, account must be taken of the possibility that she might send her expeditionary forces to Canada, where, reinforced by Canadian troops and sustained by great

military resources, an invasion of the United States could be organized from friendly territory. Canada will have at the end of the present war a considerable number of seasoned soldiers. It is evident that a hostile force might be concentrated by the allied powers on our northern frontier. This force could be built up to practically any desired strength, admitting that the United States has been driven from the high seas.

7. Clausewitz enunciates the following principle:

"Superiority in numbers is the most general principle of victory. * * * The greatest possible number of troops should be brought into the action at the decisive point. * * * The strength at a decisive point depends on absolute strength of the army and on skill in using it. * * * The first rule, therefore, is to enter the field with an army as strong as possible."

Commenting in 1908 upon these statements, Col. Maude, the British military expert, says:

"Owing to freedom from invasion and the conditions which arise in our colonial wars, we have not yet in England arrived at the great appreciation of the value of superior numbers in war and still adhere to the idea of an army 'just big enough' which Clausewitz so unsparingly ridiculed."

That Clausewitz had good reason for his ridicule of the idea of an army "just big enough" was illustrated by the fate of the British force which was thrown into Belgium to resist the advance of the Germans at the opening of the present war. It is advisable that the United States should not make the mistake of underestimating the numbers that are necessary for full preparedness.

8. Since 1914, changes in armament have added greatly to the fighting power of troops. Some of these well-known changes are:

(a) The increase in the number of guns per thousand of infantry.

(b) The greatly increased calibers of artillery used with mobile forces.

(c) The immense increase in the numbers of machine guns per thousand men.

(d) The great development of aeronautics.

The total numbers necessary to repel possible invasion of our country are studied on the assumption that our armament is as good and numerous as that of the enemy. If this assumption is false, then increased numbers will be required.

9. The time element involved is very problematical. The size and character of the expedition and the facilities for loading and unloading would affect it materially. Assuming, as in the previous study, a two months' delay granted by our Navy, and allowing for a decisive superiority, our system should be able to furnish, in round numbers, 1,500,000 trained and organized mobile troops at the outbreak of war and 1,500,000 additional 90 days thereafter. Moreover, there would be subsequently required reserves of at least 1,000,000 to make up the wastage.

A reasonable insurance against attack requires, therefore, that the United States should have available:

At the outbreak of war, 1,500,000 trained and organized soldiers; three months afterwards, additional 1,500,000; reserves, 1,000,000.

III.

(b) *Amount of training necessary.*

After careful consideration the War College Division adheres to the opinion expressed in the "Statement of a proper military policy for the United States" (Sept., 1915), that "12 months' intensive training is the minimum that will prepare troops for war service." In more definite terms this was stated as 150 hours per month for 12 months as the very least required.

To recapitulate, 1,500,000 should be prepared to take the field immediately on the outbreak of war and an additional 1,500,000 should have had sufficient previous military training to enable them to meet a trained enemy within three months. Within four months a million reserves should also be available.

IV.

(c) *System of obtaining the men needed.*

1. In answer to question (c) it is recommended that no further reliance be placed upon the so-called volunteer system. It can not under the most favorable circumstances produce anything like the number of men required for the national defense. It is undemocratic, unreliable, inefficient, and extravagant. It is undemocratic because it shifts the burden of national defense from the shoulders of the many, where it rightfully belongs, to the shoulders of the few, whose financial condition in life or whose patriotism impels them to offer themselves to accept the risks and hardships of war. Furthermore, instead of unifying our people to the extent where all individuals are willing to undergo sacrifice for the national good, it affords great opportunity for the selfish and nonpatriotic to stay at home in time of war and to fatten on the adversity of the Nation and on the necessities of the families of better men who have volunteered for the country's defense. In this way great fortunes were built up during our Civil War.

2. It is unreliable, as all history teaches us. It has never in times of great national stress in this or any other country been able to provide the number of men needed for the emergency. It has been tried and discarded by all of the other great nations of the world and today the United States and China are the only nations of size upon the globe which rely upon volunteers for the defense of national existence.

Even Great Britain, from whom we derived most of our fundamental laws and many of our traditions, and who at the beginning of the present great war still adhered to the voluntary system, has since been forced to resort to compulsory service. Our own history is replete with instances of the failure of the volunteer system. It failed us in the Revolutionary War, and it was only by the material aid of France that we gained our independence. It failed us in the War of 1812–1814, when it had to be bolstered up with drastic draft laws. It failed the Confederacy early in the Civil War, and the first Confederate Congress at its first session ordained the draft. It failed the Federal Government in the Civil War. By the end of 1862 volunteering and consequently recruiting in the North had practically ceased, and in order to continue the war Congress was obliged to enact a draft law, which received the approval of the President on March 3, 1863. This law was amended and made more comprehensive by the act of February 24, 1864. In view of what history teaches and of what is known of world armies and armament to-day it may be stated, without fear of successful contradiction, that considering only man power no prolonged war, either offensive or defensive in character, can be carried on under the so-called volunteer system.

3. The system is inefficient, because under it we must wait for war to come before preparing our defense. We must wait for the emergency before beginning to raise, organize, equip, and train the vast armies which war with any first-class power or coalition of powers would render necessary. Forces so raised lack all the essential attributes of modern armies. The men lack not only the mechanical and technical training necessary for them to function properly in the military machine, but they are entirely lacking in that mental attitude called discipline which can only come from long and continuous military training. The officers hastily appointed are more often than not no better prepared than the men they are supposed to train and lead in battle. They are ignorant of the simplest military matters and have no definite ideas as to their duties generally. They are equally ignorant with respect to those measures necessary for safeguarding the lives and comfort of the men intrusted to their charge. Nonpreparedness with respect to supplies and munitions of war has always existed where the voluntary system is in vogue. This must necessarily be the case, because the volunteer system is so uncertain and unreliable in its results that it furnishes no advance data upon which computation of material can be based. Moreover, a nation that is so shortsighted with respect to its man power can not be expected to look far into the future with respect to munitions and supplies.

4. The volunteer system makes for national extravagance in that it forces the Government to enter the labor market as a supplicant and to compete with prices there obtaining. Out of this system grow bounties to recruits, a most iniquitous means of stimulating enlistments and one which places a premium upon desertion and repeating with its necessary concomitant of fraudulent enlistment.

5. It is therefore without apology that the recommendation is made that this system, which has ever been a failure from every possible angle, be discarded and a modern system of national defense erected in its stead. The time has come when this country, unless it intends to avoid war at any cost, must resort to universal liability to military training and service.

6. The term "universal liability to military training and service" is used because the term "compulsory military training and service" so frequently heard in discussions relative to our national defense seems not to be applicable in a case such as ours. With us the people rule, and if universal liability to military training and service were ordained it would mean only that the people as a whole have through their representatives recognized the duty of the individual to prepare himself to defend his country and to defend it in case of need.

7. The system recommended would, of course, within a few years provide the number of trained men deemed necessary for our reasonable security. Moreover, it would be democratic, reliable, efficient, and economical.

(a) It would be democratic because under it the burden of national defense would fall equally upon all citizens without regard to class, and none could escape training or service by reason of wealth or position. It would make it impossible for any man or group of men to trade upon the Nation's necessities in time of war. This is because practically every family would have a representative in the forces called out for defense and would realize that any action detrimental to the Nation's interest would directly affect them personally. Public opinion would do the rest.

(b) The system would be reliable because it would produce each year the number of men necessary to be trained and would make it certain that in time of war the requisite number of trained and organized defenders would be forthcoming without delay.

(c) It would be efficient because it would enable us to prepare adequately for war before war comes. Moreover, the knowledge as to number of men which could be relied upon to respond to the call to arms would enable those charged with the duty to plan intelligently for our defense. The uncertainty in respect to the number of men that would volunteer for service in case of need under our present system renders the formulation of plans for defense almost an impossibility. It is believed that if an equitable system based upon the principle of universal liability to military training and service is formulated and placed in successful operation, our military strength in a few years would be such as practically to render us immune from attack.

(d) The system proposed would be economical. It would be based upon the recognition by the people of the duty of the individual to render personal service. Therefore, in carrying it into effect, the Government would not have to compete in the labor market. A soldier would expect but little pay in addition to his housing, subsistence, clothing, and medical attendance. Bounties and subsidies for personal service would be unknown.

8. What has been said applies, of course, only to the advantages which would result to the country from the standpoint of national defense. However, the system possesses other advantages.

9. It would have a distinct economical value, in that it would make for better citizenship and greater national efficiency. This is because military training directly tends to the mental, moral, and physical improvement of the individual so trained. The moral training results from the inculcation of high standards of honor and a love of country, the mental from the concentration of thought and alertness of mind, which must be developed before other military training is practicable; the physical from the sanitary surroundings, the regular routine with respect to eating and sleeping and from the constant exercises which form so much a part of military training and which are designed to increase the stamina of the individual as well as to train thoroughly all organs and muscles. The frequent medical inspections which would of necessity be made would discover incipient diseases in time to provide for their correction.

10. The young man thus trained and imbued with true discipline and self-reliance would be endowed with an increased capacity to carry on his life's work. It is a matter of common knowledge that in the countries of continental Europe preference for employment is usually given to those who have had the advantages of military training. This is because the man who has had military training is able, other things being equal, to do more and better work than his untrained neighbor. His military training has made him reliable and trustworthy; his

employer knows that he will carry out instructions and that his initiative, developed in the Army, can be relied upon in emergencies.

11. A system whereby young men from every station in life are trained together without class distinction, except that which may be earned by sheer ability and attention to duty, must tend toward the welding of our people into a more homogeneous Nation.

The individual who, after completing his military training, becomes an employer of labor is in a better position to meet his employees on common ground. Employees who have passed through the same crucible are less likely to look with distrust upon their former comrade in arms for whom they work. In other words, the intimate association and exchange of ideas which must occur among men undergoing military training would result in an understanding based upon mutual respect, which would be likely to continue throughout the lives of the men concerned.

V.

(d) The most advantageous military system.

1. In answer to question (d) it may be stated that a radical change in our military system must be made if we are to provide a proper scheme of defense for this country.

It is therefore recommended that the present antiquated military system of the United States be abandoned and that in its place a modern, scientific military organization along the following lines be established:

(a) Universal liability to military service in war and universal liability to military training in time of peace.

(b) The Army of the United States should consist of the Regular Army and the National Army.

The Regular Army should consist of such organizations of professional soldiers as may be necessary to garrison the outlying possessions of the United States, to furnish the training cadre for the National Army and for such other duties as may be required.

The National Army should consist of the permanent cadre detailed from the Regular Army and of all citizens undergoing training and all those who have been trained and passed to the reserve.

The reserve should also include properly qualified officers and noncommissioned officers, who may be appointed as provided in the act of June 3, 1916, or from qualified officers and noncommissioned officers of the National Guard, or from members of the National Army who have completed the prescribed one year's training therein. Provision should be made so that, under such regulations as the President may prescribe, reserve officers and noncommissioned officers may, with their consent, be employed on active duty in connection with the training of the National Army.

2. The national army should be organized into divisions, Coast Artillery districts, and suitable recruiting areas.

3. Trained men furloughed each year from the National Army should be used as follows in the event of war:

(a) To bring organizations up to war strength of trained men.

(b) To form reserve organizations.

(c) To replace losses.

4. Reservists may be called out for such periods as may be necessary in order to maintain a correct organization and provide the necessary training of reserve units.

—

EXTRACT COPY FROM THE STATEMENT OF MAJ. GEN. HUGH L. SCOTT, CHIEF OF STAFF, UNITED STATES ARMY, TO THE MILITARY COMMITTEE OF THE SENATE DECEMBER 19, 1916.

The CHAIRMAN. Gen. Scott, you are Chief of Staff of the Army?

Gen. SCOTT. Yes, sir.

The CHAIRMAN. We have under consideration, General, the several bills that have been suggested for the purpose of carrying into effect universal military training in this country, and we would like to hear from you in your own way on the subject of universal military training.

* * * * * * *

Gen. Scott, in presenting the views of the General Staff, continued with reference to the length of time necessary to train a soldier as follows:

I wish here to refer to the question of the very wide-spread, almost universal, misconception in this country of the time it takes to discipline and train the individual soldier and the organization of which he is an element, as I believe this misconception is the foundation of all our trouble. I realize that until this misconception is replaced by a correct conception of the question on the part of the people the executive and legislative branches of the Government can do but little toward effecting a real solution of our military problem.

To men trained in the military service this misconception is very difficult to understand, as they well know, especially if they have had any experience in war or have any knowledge of military history, that only disciplined soldiers, other things being equal, can win battles when opposed to disciplined soldiers.

In the belief that soldiers can be quickly disciplined and trained and armies improvised, we not only run counter to the consensus of military opinion and practice of practically all the other great nations of the world, but we run counter to our own experience as a nation in war as well. The time required for the training of armies depends largely on the presence or absence of trained officers and noncommissioned officers. If there be a corps of trained officers and noncommissioned officers and a tested organization of higher units, with trained leaders and staff officers, the problem of training is largely limited to the training of the private soldier. This has been satisfactorily accomplished in Europe, as is being demonstrated in the present war, by giving the soldiers in time of peace two years of intensive training with the colors and additional training of approximately two months in the reserve.

If we are to defeat the highly trained and spendidly disciplined armies of our possible enemies, our own forces, when called upon for battle, should have training and discipline at least equal to that of our opponent. While we have splendid material for soldiers, for us to claim that the average American youth can be trained and disciplined in less time than the average English, French, German, or Japanese youth argues a decided lack of understanding on the part of our people of the progress and character of the English, French, German, or Japanese people. All that we can hope for and confidently claim is that, given equal intensive training as to time, under equally favorable conditions as to officers and noncommissioned officers for instructors and leaders, our soldiers will be prepared to assure, in war, the success of our armies.

Under their systems of intensive training, other nations require of each soldier approximately eight or nine hours' daily work in theoretical and practical instruction, this instruction, in case of the European nations, continued for two years in the case of Austria-Hungary, Germany, Italy, Montenegro, and Serbia, and for three years in the case of France, Russia, and Turkey. The question can be better understood when it is stated in the total number of hours' training given in the active army of the two leading military nations—France and Germany. France, under her new law of 1913, requires three instead of two years' service with the colors, which gives a total of 7,650 hours' training to the troops of all arms in the active army, plus seven weeks' training in the reserve, or a total of 8,014 hours for all arms. Germany trains the cavalry and horse artillery for three years, giving 8,100 hours' training in the active army, plus eight weeks' reserve training, or 8,532 hours for these two branches of the service. Germany gives 5,400 hours' training in the active army to her field artillery, infantry, and engineers, plus eight weeks' training in the reserve, or 5,832 hours' total training to these branches of the service.

In our Regular Service, due to the necessity of depending on volunteer enlistments, we barely require in three years' service with the colors the same number of hours of theoretical and practical instruction that an army in which universal and compulsory service exists obtains in two years.

If we accept as our standard of training and discipline the high standard accepted by France, for all branches of the service, or the somewhat lower standard accepted by Germany, we will meet any opponent on practically equal terms, providing that the quality of our instructors and leaders is up to the standard of our opponents. If we adopt a lower standard of training, we must, of course, lessen directly the fighting efficiency of our troops.

It should be obvious that troops trained for only one year in time of peace will have to be given additional training in time of war before they can, in equal numbers, oppose troops with the high standard of training and discipline that is given in two years in time of peace, and that if we adopt such a standard, we will have to make up for our deficiency in training and discipline by decided superiority in numbers.

The General Staff in its statement of a proper military policy placed itself in accord with the consensus of the military opinion of the world when it took the position that two years' training with the colors is the time required to discipline and train the individual soldier and the organization of which he is an element. It was entirely in accord with the experience of the present European war when it held that 12 months' training, of 150 hours per month, is the minimum length of time of actual training considered necessary to prepare troops for war service. Twelve months, in my judgment, is the minimum time in which you can expect, under a system of intensive training, to make a reasonably useful soldier for the battle field out of the average young American who is physically fitted to perform military service. No experienced military man will, of course, claim that soldiers trained for this period are as well disciplined and hence as good soldiers as those who have had an additional year of intensive training and discipline. Soldiers who have received six months' training in foreign armies are, as a rule, permitted, on the outbreak of war, to go with their organizations, forming as they do only a small percentage, approximately 20 per cent, of the total number in these organizations when they are raised from the reserve to war strength. The latest information is to the effect that in the English Army they are now giving 11 months training to all soldiers before they are allowed to go in the advanced trenches—that is, 11 months' training in time of war, which is of course more valuable than the same number of months in time of peace, as men who know they are going into battle are more readily disciplined than men who feel they may never come into action, as is the case with soldiers trained in time of peace.

It is believed that the necessity for training and discipline can be readily understood by any nonmilitary man in view of what is occurring now in Europe when it is understood to what destructive agencies the soldiers are subjected in modern battle, even those soldiers who have the protection of carefully constructed trenches.

In the battles of the present war, as a prelude to an assault, the soldiers on the defensive are subjected to a continuous and extraordinarily heavy artillery fire for from 48 to 72 hours as a rule before the assault is attempted. Shells varying in diameter from 3 to 12 inches burst continuously in and around the occupied trenches. In addition to these shells from the artillery which level parapets, destroy head cover and deep shelter, and the wire entanglements in front of the trenches, trench mortars fired from the enemy's trench at short range drop with great accuracy in the occupied trenches, aerial torpedoes containing heavy bursting charges of high explosives. Combined with this form of attack, when the wind is favorable, may be launched a gas attack to further demoralize the defense, and occasionally where the opposing trenches are close together the use of liquid flame is also employed. When all this has failed—and every day in the present war it fails to drive out the disciplined soldiers on either side defending the trenches—the main infantry assault is launched, during which the defenders of the trench are further subjected to rifle and machine-gun fire, the hand grenade and the bayonet, while the artillery supporting the attack by slightly changing the elevation cuts off by its curtain of fire the arrival of needed reinforcements from the rear.

I mention these conditions under which troops acting on the defensive and sheltered to the greatest possible extent by carefully constructed trenches from the fire of the enemy, to show that a higher standard of training and discipline is required for troops assigned to a prepared defensive position than was popularly considered necessary previous to the present war. It will be easily understood that it takes an even higher order of discipline and training to develop troops that are capable of delivering a sustained assault on an entrenched position, as these troops, in addition to being subjected to the disintegrating influences mentioned above from the fire of the defenders, have to leave shelter of their trenches and cross the open space separating them from the enemy's trenches in order to deliver a successful assault. Such attacking troops must be prepared to withstand heavy losses while engaged in this operation as the assault is extremely murderous, due to the fire of rifles and machine guns and artillery in the hands of the defending troops, which make terrible havoc in the ranks of the unprotected assaulting troops.

It is for the purpose of developing troops that have the discipline and training necessary to successfully deliver such continuous assaults

that most of the European nations require a minimum of two years intensive training in peace, with additional training in the reserve for soldiers who are to compose their armies.

If France and Germany, with the excellent material these countries have for soldiers, and with the splendid corps of officers and noncommissioned officers they possess for the training and discipline of this material, can not develop troops needed for the varied operations of war in less than two years with the colors, in time of peace, it should be obvious that it can not be done in less time. It should also be obvious that the period of training prescribed for the units of the National Guard in section 92—192 hours annually—is utterly inadequate to prepare this force for war service.

It should also be plain from what I have said above that the conditions of modern war do not afford time to train an army after war becomes imminent. Not only must material be secured, but personnel must be trained and disciplined before military operations can be undertaken with any hope of success.

Another misconception which exists very generally throughout the Nation is in regard to the number of troops the United States will need in case of war with a first-class power. In my hearing last year before your committe I stated that, in my judgment, the country needed from one to two million fully trained men, and that, in my opinion, the only way to obtain them was through a law requiring universal military training and service.

The General Staff in its statement of a proper military policy, based on the conditions existing at the outbreak of the war in Europe, gave as its opinion that our system should be able to furnish 500,000 fully trained and organized mobile troops at the outbreak of war, and to have at least 500,000 more available within 90 days thereafter. The former force was to be composed of the Regular Army and its reserve, in which the soldiers would receive two years of thorough training; the second 500,000 was to be composed of the citizen forces, which were to be given nine months' training in peace and three months' additional training on the outbreak of war. In its report the General Staff pointed out that two hostile expeditions alone would provide a force large enough to cope with our 1,000,000 mobile troops, and, consequently, that we must at the outbreak of hostilities provide a system to raise and train, in addition, at least, 500,000 troops to replace the losses and wastage in personnel incident to the war. These numbers given above were based on the strength of the nations involved in the European war at the outbreak of hostilities, August 1, 1914. In view of the changes that have taken place since the outbreak of the war, in the increase in the belligerent forces, I have caused the question to be restudied by the War College Division of the General Staff. The conclusion of the War College Division, which is concurred in by the remainder of the War Department General Staff, is that our system should be able now to furnish in round numbers 1,500,000 trained and organized troops at the outbreak of war, and 1,500,000 additional in 90 days thereafter.

Senator BRADY. You mean as soon as it can be done?

Gen. SCOTT. Yes, sir.

The CHAIRMAN. You do not mean to keep an army of that many?

Gen. SCOTT. No, sir; but a reserve able to furnish these men and get them together.

Senator THOMAS. What you mean is, if emergency should require, we ought to be prepared to produce just that thing?

Gen. SCOTT. Yes, sir. We think they should be a citizen force. This is due to the fact that one of the powers involved in the war and whose territory extends the whole length of our northern frontier has increased its army from a relatively small force to a strength approximating that of the other great European powers. The navy of this power absolutely controls the sea, and its merchant marine is sufficient in extent to transport without delay over 1,000,000 soldiers with the necessary equipment for such an army. Due to the fact that our northern neighbor is largely an island empire, a great portion of any trained force it may possess can be spared for use in a distant theater of operations because, being an island empire, the control of the sea gives it practical immunity from invasion where troops would have to be transported across the sea. It should be pointed out, also, that our northern neighbor is in alliance with a powerful oriental nation—another island empire—and for the same reason, when acting in alliance with a power which has control of the sea, has ability to send its army of two and one-quarter million to any part of the world without danger of invasion. I think a mere statement of these facts makes it clear that at present we are practically defenseless before the veteran armies of our northern neighbor and could easily be crushed by the existing coalition of these island empires (WCD 9832–1).

I have said enough, by way of illustration only, to make it clear that if we were menaced by one of these powers alone, having lost control of the sea, we would need more troops for defensive purposes than have entered into the popular conception of our military problem heretofore.

In determining, however, the number we need there are some other factors which must be given brief consideration. A factor which has in the past played a part in protecting us from recent aggression by any of the great nations of Europe, in spite of our comparatively defenseless condition, is the rough equilibrium of forces maintained on the continent of Europe—the so-called balance of power.

In Europe, just prior to August 1, 1914, so close was this equilibrium that no part of the enormous force controlled by each of the two groups of great powers in alliance was available for action outside of Europe. It was this fact, the danger of executive action, and the disturbances of the equilibrium which would have resulted from it which prevented the great powers from stopping the Balkan wars of 1912, in spite of the fact that they were all anxious to do so.

When the European war is over, there will still be two groups of powers, two groups of forces acting upon each other. It may be that the losses due to the war will be so equally distributed that the same close balance existing just previous to August 1, 1914, will be maintained. It is, however, possible that of the two groups the combined forces of one will be superior to the combined forces of the other. This will permit the superior group to hold the inferior group in balance with only a portion of its force and will enable it to hold the remainder ready for action outside of Europe.

That a large force of troops can be spared from Europe to fight a campaign in a theater of operations remote from that Continent in spite of the rough equilibrium of force constantly maintained there is well illustrated by the fact that Russia was able to send approximately 1,000,000 soldiers from European Russia over a single-track railroad to fight the Manchurian campaign of 1903–1905, against her present ally—Japan. Had better transportation facilities been available this force undoubtedly could have been considerably increased.

TABLE I.—*Estimate of cost of the Military Establishment as it would ultimately be under the national defense act after fifth increment has been added to the Regular Army and the National Guard.*

[Regular Army and National Guard are shown at minimum strength.]

(A) FIRST COST OF SUPPLIES AND ADDITIONAL CONSTRUCTION REQUIRED.

	1 Strength.	First cost of supplies. 2 All supplies, including necessary reserve supplies.	First cost of supplies. 3 All supplies, exclusive of necessary reserve supplies.	Cost of additional construction required. 4 If permanent type.	Cost of additional construction required. 5 If cantonment type.
(a) Regular Army (including $2,200 in oversea garrisons)	224,628	$191,362,000	$119,918,000	$102,320,000	$6,020,000
(b) Regular Army Reserve (overhead cost included in Regular Army)	86,000	27,393,000	27,393,000	.....	.....
(c) National Guard (including Corps Field Artillery)	428,572	443,019,000	182,180,000	.....	.....
(d) National Guard Reserve (overhead cost included in National Guard)	158,000	40,640,000	40,640,000	.....	.....
(e) National Guard animals (in excess of those authorized in national-defense act, June 3, 1916)	.....	40,200,000	40,200,000	.....	.....
(f) Volunteers required immediately on outbreak of war	685,000	565,125,000	260,300,000	.....	.....
(g) Volunteers required within 3 months after outbreak of war	1,500,000	1,237,500,000	570,000,000	.....	.....
(h) Additional armament and ammunition required for fortifications	.....	82,252,457	41,707,457	.....	.....
(i) Total (including strength of oversea garrisons, 82,200)	3,082,200	2,627,491,457	1,282,338,457	102,320,000	6,020,000
(k) Deduct:					
(1) Value of supplies in use and in store, material under manufacture and unused appropriations		155,472,000	155,472,000	.....	.....
(2) Value of supplies for (a) to (f) that can be obtained in open market in great quantities at any time and that are not required in time of peace		111,870,000	109,228,000	.....	.....
(3) Value of supplies for (g) that can be obtained within 3 months		569,250,000	262,260,000	.....	.....
Total to be deducted		836,592,000	526,960,000	.....	.....
(l) Amount required, based on present prices		1,790,899,457	755,378,457	102,320,000	6,020,000
(m) Amount required, based on prices prior to European war (estimated at 20 per cent less than present prices)		1,432,719,566	584,302,766	81,856,766	4,816,000

(n) First cost with complete reserve supplies and permanent construction, based on peace prices	$1,514,575,566
(o) First cost with complete reserve supplies and cantonment construction, based on peace prices	1,437,535,566

(B) ANNUAL COST OF MAINTENANCE.

	Strength.	Pay.	All costs except pay.	Total costs.	Per capita cost.
Regular Army, including overseas garrisons	224,628	$73,508,000	$122,306,000	$195,814,000	$872.00
National Guard	428,572	29,770,000	73,000,000	102,770,000	240.00

TABLE II.—*Estimate of cost of the military establishment recommended by the War College Division, General Staff, on National Army Plan, January, 1917.*

(A) FIRST COST OF SUPPLIES AND ADDITIONAL CONSTRUCTION REQUIRED.

	First cost of supplies.		Cost of additional construction.	
	1	2	3	4
	All supplies, including necessary reserve supplies.	All supplies, exclusive of necessary reserve supplies.	If permanent type.	If cantonment type.
(a) Oversea garrisons	$57,922,518	$28,093,423	$35,259,600	$2,069,700
(b) Frontier force	18,920,040	9,176,219	.....	.....
(c) Training forces	469,487,089	227,243,921	484,111,467	26,453,121
(d) First reserves	1,324,077,318	692,339,319	31,320,000	8,485,082
(e) Second reserves	1,324,077,318	692,339,319	31,320,000	8,485,082
(f) Permanent personnel not included above (staff departments, detached officers, dentists, recruiting service, schools, disciplinary units, education, depots, hospitals, etc.)	6,271,056	6,271,056	.....	.....
(g) Additional armament and ammunition required for fortifications	82,252,457	41,707,457	.....	.....
(h) Total	3,283,007,796	1,697,170,714	582,011,067	45,492,985
(i) Deduct:				
(a) Value of supplies in use and in store, material under manufacture and unused appropriations	155,472,101	155,472,101	.....	.....
(2) Value of supplies for (d) that can be obtained in open market in great quantities at any time, including animals and vehicles, motor or animal drawn	184,364,734	178,074,379	.....	.....
(3) Value of supplies for (e) that can be obtained within 3 months	610,399,644	310,605,926	.....	.....
Total to be deducted	950,236,479	644,152,406	.....	.....
(k) Amount required, based on present prices	2,332,771,317	1,053,018,308	582,011,067	45,492,985
(l) Amount required, based on prices prior to European war (estimated at 20 per cent less than present prices)	1,866,217,054	842,414,647	465,608,853	36,394,388

Deducting $193,794,535 worth of reserve supplies at peace prices not required for training forces the following results:

(m) First cost with complete reserves and permanent construction $2,138,031,372

(n) First cost with complete reserves and cantonment construction 1,708,816,907

(B) ANNUAL COST OF MAINTENANCE.

	1	2	3	4	5
	Strength.	Pay.	All cost except pay and maintenance of construction.	Total cost except maintenance of construction.	Per capita.
Training force:					
Permanent personnel	148,850	$80,616,148	$51,626,968	.....	.....
Temporary personnel (recruits)	475,000	26,125,000	168,191,080	.....	.....
Total training force	623,850	106,741,148	219,818,048	$326,559,196	$523.00
Trained reservists	3,000,000	.....	.....	.....	.....

TABLE II.—*Estimate of cost of the military establishment recommended by the War College Division, General Staff, on National Army Plan, January, 1917*—Contd.

(B) ANNUAL COST OF MAINTENANCE—continued.

	1	2	3	4	5
	Strength.	Pay.	All cost except pay and maintenance of construction.	Total cost except maintenance of construction.	Per capita.
Permanent personnel not included above (staff departments, detached officers, dentists, recruiting, service schools, disciplinary units, education, depots, hospitals, etc.)	21,186	$11,022,170	$3,011,374	$17,033,544	$804.00
Fixed overhead charges not otherwise accounted for	.....	.....	5,000,000	5,000,000	.....
Transport service	.....	.....	2,079,796	2,079,796	.....
Reserve Officers' Training Corps	.....	.....	5,000,000	5,000,000	.....
Registration, physical examination and exemptions	.....	.....	5,448,127	5,448,127	.....
Total	3,771,023	156,693,047	296,709,175	453,402,222	.....
Add for maintenance of permanent construction				7,803,102	.....
To be appropriated if permanent construction is maintained				461,205,324	122.30
Or add for maintenance of cantonment construction				3,700,789	.....
To be appropriated if cantonment construction is maintained				457,103,011	121.21

(C) COST OF REPEATING SEASON FOR RESERVISTS.

	Number repeating.	Per capita.	Total cost.	Per cent of cost of whole Military Establishment.
At end of second year of training	405,000	$19.67	$7,966,350	1.75
Subsequent years	770,500	19.67	15,155,735	3.32

(D) ORGANIZED MILITIA, ESTIMATED COST.

Allotment to the several States in aid of Organized Militia (for five years only to cover transition period) $7,000,000

TABLE III.—*Comparison of cost of maintenance and effective strength under the national defense act and the proposed national army plan.*

	National defense act, Army.	Proposed plan.
Trained and partially trained soldiers available for war after either system is in full operation	[1] 1,137,200	[2] 3,296,023
Annual cost	$339,548,000.00	[3]$472,258,746.00
Per capita cost	$298.58	$143.28

[1] Includes 826,572 National Guard and other partially trained troops. The number given is the total number. This number may or may not be forthcoming under the volunteer system.

[2] This number does not include 475,000 recruits undergoing training nor does it include the trained reservists who have completed their service in the organized reserves. The number given is the number of troops in organized units, all of whom have had a minimum of 11 months' intensive training. In addition to this initial training, 2,229,500 of these reservists will have had two repeating seasons of two weeks each. Under this plan the total number of trained soldiers will ultimately include all able-bodied male citizens over 18 years of age.

[3] Includes cost of repeating seasons and also the annual cost of maintenance of 475,000 recruits undergoing training. This number of recruits is not included in the strength shown in this column of the table because they are only partially trained.

TABLE IV.

	Major generals.	Brigadier generals.	Colonels.	Lieutenant colonels.	Majors.	Captains.	First lieutenants.	Second lieutenants.	Chaplains.	Total commissioned.	Superintendent Nurse Corps.	Nurses.	Regimental sergeants major.	Regimental supply sergeants.	Battalion and squadron sergeants major.

Horse Breeding in the United States.

EXTENSION OF REMARKS

OF

HON. GEORGE W. LOFT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. LOFT. Mr. Speaker, with the entire country throbbing in response to the national appeal for preparedness and the ablest minds engaged in formulating plans for the production of an increased Army and Navy for the adequate protection of our people, it is fitting that something should be said about the horse, without which no army is possible.

When the truth of the great world's war shall have been spread upon the pages of history, it will be found that this useful animal has played his part quite as gallantly as has man. In a contest in which every known method of warfare has been employed, the tide of battle has been turned on many a hard-fought field by a dashing cavalry charge or a withering artillery fire from an unexpected quarter. It was the horse that furnished the motive power for these maneuvers, and the stouter hearted and swifter the horse the greater chance there was for the success of the attack.

Those who are familiar with the history of the horse in Europe and the part he has played in connection with the development of continental armies have been at a loss to account for the apparent lack of interest on the part of this Government in connection with a work of such tremendous importance. Possessing more than 21,000,000 head of horses at the time the last census was taken, and with no thought of war, we have been indifferent to our position in time of trouble. The fact that the great proportion of these 21,000,000 head were heavy horses, utterly unfit for army service, which calls for a quick, active type of animal, meant nothing to the unthinking, and it was only when the agents of the allies invaded our shores about two years ago and inaugurated a purchasing campaign, which has already approached the million mark for horses and mules combined, that an element in the Nation awoke to the gravity of the situation and sounded their warning.

It has been said by some that there is no cause for alarm, and that there is still an abundant supply of army horses in the United States. It is further contended that we could well afford to part company with some of those that have been sold because of their mediocrity. If we are to take the testimony of those that have been commissioned to make purchases of the most desirable Cavalry type as a guide, we must come to the conclusion that there is a decided scarcity of animals fit to horse our Cavalry in the same manner as France, England, Germany, Austria-Hungary, and Russia equipped theirs at the commencement of hostilities, these countries having for a great many years bred a type of horse for this particular purpose.

With little or no control exercised by the Federal authorities over this work until recently, it stands to reason that our progress in the production of a horse suitable for the Army, which, after all, is a horse of the general-purpose type, has been circumscribed. Beyond the rearing of heavy draft types, such as the Percheron, Clydesdale, Shire, and Belgian, the developing of the trotter, which up to date is our only purely home-bred type, and the preservation of the thoroughbred family, whose history carries back through centuries in England, to the Arabian desert, our horse-breeding activities have been in the main aimless and purposeless to the extremest degree.

Not so abroad, where in some countries plans were laid for the production of army horses at the close of the Napoleonic wars. Austro-Hungary, which to-day has the most extensive studs under governmental supervision, and whose assistance in horsing Germany's cavalry has been a tremendous asset in a campaign of aggression waged by that nation, is the oldest of the European countries in the formulation of a well-defined plan which had for its beginning the crossing of the blooded horse on the native mare.

Since that time the work has been carried on under the watchful eyes of experts, until to-day the horses of Austro-Hungary are famed the world over. The number of horses in their stud exceed those of France and Germany, extensive as they are, the latest reports showing 4,400 stallions doing service throughout the Empire. France boasts of 4,200 head, of

which the major portion are thoroughbred and half-bred. Germany has for the past 30 years actively followed the example of her neighbors in army-horse production; and some of her studs, notably that at Trakenen, in Prussia, presided over by Baron Von Oetingen, and formerly by Count Lehndorff (who was considered the world's greatest authority on horse breeding at the time of his death), is a model of its kind. Some idea of its extent may be derived from the fact that the Russians in their initial drive into Prussia captured no less than 20,000 mares that were a portion of this vast nursery. The cable dispatches said at the time that the loss was regarded as exceptionally severe, as it had taken many years to breed or acquire by purchase mares of the type required by the Government.

There is another stud in the German Empire that is famous also. This is located at Graditz. Its purpose is to establish through the test of racing what stallions are worthy of going to Trakenen. They must show their worth before they are adjudged fit to occupy a place in that famous establishment. Russia has kept pace with her sister countries, and for the past 15 years has been the chief bidder for our best trotting stallions, no figure stopping them when a desirable animal is wanted. They have bought thoroughbred stallions in the United States also, but England has furnished the bulk of the pure blood that has been incorporated into their common-horse product. It will readily be understood that these superb mares acquired in Prussia are now a treasured portion of the Czar's great stud.

England, through this period of evolution in horse breeding, particularly that of the army horse, has occupied a rather unique position inasmuch as while she has not maintained any governmental breeding studs she has furnished the bulk of the blood which has leavened the entire lump; the thoroughbreds which were developed on her race courses and which possessed those qualities which other countries wanted to inject into their stock having been developed by upward of 200 years of hard-fought competition. Only the pure gold came from the crucible, and as the result of these trials which called for stoutness of heart, fleetness of foot, and soundness of limb England assumed an importance in the horse-breeding world she herself scarcely estimated or appreciated until the war broke out. It was then that she was able, because of racing and its allied sport of hunting, to furnish her cavalry with 100,000 mounts. Later on other horses for her cavalry and artillery came from Canada and Australia, where the thoroughbred had long had a following. These countries supplied a great many mounts of top quality. It was fortuitous that the two sports to which she is most devoted should have been so molded by destiny as to furnish the very type of horse the occasion demanded.

It was to be expected that Great Britain, with her recent experiences in mind, would endeavor to stop the breach in her armor, and the timely and princely gift of one of her best known racing men, Col. William Hall Walker, member of Parliament, paved the way for the launching of the enterprise when in December last he donated his fast thoroughbred stud to the nation. This collection of stallions and brood mares, which had been valued at $1,000,000 before the war began and which were to have been sold at auction, have become the nucleus of England's breeding establishment, and it is safe to predict that from this time forward the best thoroughbred horses which England develops will not be sold to foreign lands but will go into the governmental service. If this course is followed, it will not take long to rival the establishments of France, Germany, Austria-Hungary, and Russia.

When the German Government paid British sportsmen $125,000 for Ard Patrick and $65,000 for Galtee More, both winners of the Epsom Derby, the fact was widely commented on. The announcement that they had been bought to mate with cold-blooded mares in order to improve the general-purpose horse of Germany, and that their services could be had for a trifle by farmers and horse breeders in general, was illuminating. It served to show how thoroughly the plans of the Empire had been laid for a future supply of horses that would hold their own with the best in the world. These horses and others acquired from time to time had the bone, size, disposition, and conformation which the Germans wished to breed into their horses, and they never stopped to question the price when they found desirable specimens in the male line.

Realizing that England has developed the excellence of her horses through racing, continental countries inaugurated policies which were so liberally endowed and subsidized that there was every encouragement for the production of the best individual and for the perpetuation of the best strains of blood. The strongest rivalries developed as a consequence and horses from different countries met in contests that were open to the world. We find Austrian, German, and French bred and owned thoroughbreds winning English turf classics. Prizes of great value for which only horses bred and owned in the country promoting the contest were eligible was a part of the plan. It was thus that horse breeding was stimulated on the Continent until at the outbreak of the war the production of good horses was reckoned second to no other feature of the economic life of practically overy other country save England, whose condition has already been touched upon.

It will be enlightening to review the status of horse breeding in our own country while Europe has been perfecting a policy which challenges the admiration of the world. Outside of Kentucky, California, Tennessee, Virginia, Missouri, and certain portions of New York, New Jersey, Pennsylvania, Maryland, and Texas, where thoroughbreds and trotters were bred systematically with a view to the development of the types for racing purposes alone, there was no effort made to produce a horse that would endure, and whatever breeding was indulged in by the country at large was as a rule along haphazard lines. Reference is not now being made to the production of heavy horses, for be it said to the credit of those who are interested in the various draft breeds they have done their best to establish a type and reproduce it. The same is true of a district in Vermont, where several conscientious breeders are doing their utmost to preserve the Morgan with his many desirable attributes.

It was the farmer and horse breeder that fell in between the heavy and light horse types that created chaos and was responsible for the multitude of nondescripts with which the country is burdened. The mongrel stallion, oftentimes unsound and vicious, which was patronized because he was cheap, has left his blighting impress on a large portion of our common horses. Heavy and light mares were bred indiscriminately to any kind of a sire, and it has been truly said that the horses in many sections of the Union to-day do not compare for general excellence with those that were to be found at the close of the Civil War, when the breeders of the country appeared to conduct their venture with some degree of intelligence. Whether it was because there were fewer breeds at that time and therefore fewer opportunities to err is a matter of discussion.

Lack of education in scientific horse breeding is the chief reason for our present condition. It would have been well if our Governments, Federal and State, had acquainted our farmers and horse breeders with the results of experiments of other countries. We could not tell what had been accomplished at home except in individual instances where some breeder had set out with a definite purpose, such as actuated the late C. J. Hamlin, of Buffalo, who said that he would breed trotters that were not only fast but had beauty of form as well. Mr. Hamlin was imbued with a desire to produce a type of horse that would be unique, and it is on record that he succeeded. What Mr. Hamlin did can be accomplished by others. His idea was type first, last, and all the time, and to it he clung tenaciously.

The horse shows and county fairs which are held in the autumn after the crops have been garnered should be the very best possible mediums in the prosecution of this work. Let each State designate days when lectures will be given by experts, and if these talks are accompanied by lantern slides illustrating the type of animal under discussion, whether it be thoroughbred, half-bred, standard bred, hackney, or draft horse, so much the better. Breeders will carry away with them the rudiments of an education along lines which will make for progress. They will find a fascination in the work and the old clan will have to take a back seat. The poultry, sheep, and cattle experts have made tremendous headway through the employment of this kind of publicity. Those who hear competent lecturers discourse on the breeding of good horses will find their interest in the show-ring competitions increased a thousandfold, and with the living, breathing prize winners present to represent type the lesson will be driven home with additional force.

There was a time when the average farmer was content to run his business on the same lines as his father had followed. Rotation of crops and the raising of pure-bred live stock for the double purpose of land enrichment and an addition to their bank account was something that was unknown. Then came the progressive who farmed on scientific principles, built silos, underdrained his land, and subscribed for the best journals devoted to agriculture that he could find. Pure-bred cattle, sheep, and swine took the place of the grades in communities peopled by such men, and mortgages were raised and holdings bettered as a consequence. During this march of progress the horse alone has failed to keep pace with the Nation's advance. Is it not high time that something was done for him? The Canadians, our progressive neighbors to the north, are up and doing in this connection. They have a Federal breeding bureau, and

in response to appeals of clubs of 50 or more members they will send stallions into any district, making a contract with the organization calling for the proper care of the horse and a guaranty that only a moderate fee will be charged for his services. Only pure-bred horses are sent out, and there is a rigid annual inspection, as no blemished or unsound horse is allowed to stand for mares. With an eye to the future preparedness of the country, there is a discount of 40 per cent to all those that will breed to thoroughbred sires. This colony is patterning after European countries in the plan for securing the best type of cavalry remount.

We find the Canadians keenly alive to a situation which has been discussed extensively in the newspapers of the United States—the shortage of breeding stock and the advisability of placing an embargo on the shipment of mares of the proper type to throw army remounts. The records in both countries show that over 50 per cent of some shipments which have been made to the countries of the entente allies have been mares. There is no denying that some of them were not regular breeders or were otherwise undesirable, but there is also ever present the fact that very many of them were just the sort we could not spare, and Canadian authorities are finding fault with some of those intrusted with making purchases because they passed geldings in hard flesh from regular work and insisted on the purchase of sleek brood mares which should be left at home to reproduce themselves. As the life of the horse at the front is but a few days at best, and the gelding would serve the purpose quite as well, and in some instances better, than the mare, it is regrettable that so many females have been sold. It is a matter that has already been called to the attention of the proper authorities in this country by some of our most distinguished officers in the Army, and no doubt the situation will be dealt with at the proper time.

It was in 1913 that this Government undertook the scientific production of horses for army purposes and an appropriation of $50,000 was made by Congress, the work being entrusted to the animal husbandry branch of the Department of Agriculture. Mr. August Belmont, of New York, donated the noted thoroughbred sires Octagon and Henry of Navarre, the gift being made to the War Department, which in turn transferred them to the Department of Agriculture. In the veins of these horses flowed the best racing blood of two continents. The Government established breeding stations in Virginia, Vermont, and Colorado, that at Front Royal, in the first-named State, being chief. Desirable sires, mostly thoroughbred, but some of trotting and saddle blood, were installed to the number of 41 at the various stations, and the project, while restricted, began work under encouraging auspices. Some of these sires were given the Government by patriotic citizens, who followed Mr. Belmont's lead, and some were purchased in the open market by Government experts, who frequently called upon civilians to aid them in making selections. The system in vogue has been to send these horses into communities where the mares that would suit the individual horse were the most plentiful, and the bulk of the work to date has been confined to Virginia, West Virginia, and Maryland, the territory nearest Front Royal, which last season had 18 horses out of a total of 37, the curtailment from the initial number of 41 being due to the cut in the annual appropriation from $50,000 to $30,000. The station in Vermont has been exclusively for Morgans, while Colorado has been largely devoted to the trotter and saddle horse.

As the result of continental experiments have clearly indicated that the thoroughbred is the horse par excellence for this particular purpose, it is not surprising to find that a majority of the horses at the chief station are of pure blood.

Before undertaking the work some of the best experts in the Government service visited Europe and saw what had been done there, and it was the result of their research which confirmed the Government of this country in its belief that the quickening influence of the thoroughbred would be all important in the evolution of the type of horse that would be serviceable in peace and an element of power and efficiency in time of war. The curtailment in the annual appropriation has naturally taken away much of the enthusiasm on the part of those having the prosecution of the work in hand. Some idea of the difference in the way the industry is being conducted here and abroad may be gleaned from a comparison of the figure devoted for the purpose in the United States and Russia, for example. In 1914 our appropriation was $30,000, while in the same year the Russian Government expended $4,000,000, and this splendid sum was augmented by an additional million, a gift of the Czar. France and Germany each spent almost as much, so that our pittance is incredibly small, and it is astonishing that we have accomplished anything, measuring by European standards.

The records on file in the Bureau of Animal Husbandry show that there were in all breeding stations of the Federal Government in 1913, 41 stallions to which 1,557 mares were bred. In 1914 there were 43 stallions to which 2,013 mares were sent. The appropriation had been reduced from $50,000 to $40,000, and with another cut of $10,000 in sight for 1915 it became imperative to reduce the number of horses. The records for 1915 show that 37 horses were bred to more than 2,000 mares, an average of about 55 mares to a horse, as against 47 in 1914 and 38 in 1913. These figures tell their own story, and it will be to our everlasting discredit if something is not done to put this work on an enduring basis either through a greatly increased appropriation under Federal control or by a thoroughly comprehensive plan in the various States along the lines laid down in Canada or by the breeding bureau of the jockey club, which has for years had a large number of thoroughbred horses in the stud in the various counties of the Empire State, and also by the Kentucky State Racing Commission which has within the past few months adopted a plan for the general improvement of the horses in the blue-grass region, and already have donated a dozen or more representative thoroughbred sires for the purpose. Perhaps a combination of the two plans could be arranged, but this is something which could be decided after mature consideration by the ablest students of the problem this country affords.

It has also been urged in certain quarters that the farmers and horse breeders of the country at large would breed the horses if the maximum figure now paid for 3-year-olds in the autumn were increased from $175, where it now stands—this sum including the $25 service which the Government obligates to refund in case of a purchase when the mare has been bred to one of its stallions—to a figure where a profit would be assured. The breeders of the East maintain that they can not produce well-nourished 3-year-olds for less than $250, and that they are lost when it comes to the matter of competing with the breeders of the Texas Panhandle or other districts where animals run on the range throughout the year. Mr. Frank K. Sturgis, who is the head of the breeding bureau of the jockey club, maintains that the well-furnished eastern 3-year-old is cheaper at $250 than the range animal at $175, because the former having been grown and developed on grain will come to hand and be serviceable much more quickly, and the Government will thus save the item of extra keep during the process of hardening.

In connection with the range proposition an idea has been exploited calling for the placing of mares on land owned by the Government in Oklahoma, the dams and their progeny running the range while the stallions would be housed in inexpensive but practical quarters and under the care of competent men. Those who advocate this plan, and there are several Army officers who think it feasible, maintain that the present figure for horse production as represented by the $175 maximum could be beaten. No doubt statistics covering this point are available, and their presentation would go far toward solving one of the most vital problems of the day. Experimental figures could be gleaned no doubt from other quarters, and with all of the facts on hand the Government could proceed intelligently toward the perfection of a policy of horse breeding that would be compatible with the advancement shown by the United States in every other form of endeavor.

Maj. Gen. Hugh L. Scott, Chief of Staff, is on record as saying that the service in time of peace will need 2,000 head annually. This was under the conditions existing before the call for preparedness electrified the country. How many more thousands shall be necessary the future alone must determine. The wastage in time of war is startling. We have no records available as to the number of horses killed in the European conflict, but some idea of the rate at which they are being eliminated may be gathered by reference to statistics in connection with the Army of the Potomac during the Civil War. These records show that there were 36 Cavalry regiments whose effective strength varied during the six months from April to October between 10,000 and 14,000 men. This body of Cavalry required the following remounts: May, 5,673; June, 6,827; July, 4,716; August, 5,499; September, 5,829; and October, 7,336, indicating a loss of 2½ horses a man, or a ratio of 5 horses per annum. The Secretary of War in commenting on this showing said:

> If a similar state of affairs existed throughout all our Cavalry its 233 regiments would require 435,000 horses annually.

There is a feature in connection with the destruction of these millions of horses in Europe which affects this country tremendously. The United States and Argentina will be called upon to supply the bulk of the breeding stock which must be

secured by continental countries to replace those which have been destroyed, and it behooves us to be ready when opportunity knocks at our door. More and better horses should be the slogan of every public-spirited citizen, and every aid should be given the movement for their production, whether it be under governmental auspices or the result of concerted action on the part of those who are familiar with the problem and are ready to work out a solution.

War with Germany.

EXTENSION OF REMARKS
OF
HON. EDWARD W. POU,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. POU. Mr. Speaker, under the general leave to print I shall print in the RECORD the following very interesting letter:

RALEIGH, N. C., *March 1, 1917.*

Hon. E. W. POU,
Washington, D. C.

DEAR MR. POU: I now regard war with Germany an absolute certainty, and I write to suggest a few points which I think should have the immediate consideration of the Government. They are:

First. I think Congress should carefully avoid passing any resolution which would limit our Government's freedom of action in the future. No resolution ought to be passed stating that we go to war only for certain purposes and would stop when these purposes should be accomplished. No one can tell what is before us or how we should act during the coming months, and we should preserve our absolute freedom of action until the time for decision should arrive, and we should then only decide that point. I regard this as highly important, for three months after war begins we may find it desirable to enter into an agreement with the allies which might not now receive the unanimous approval of the American people. I think that we should from the very beginning cooperate with the allies fully, and I think very soon an out-and-out alliance will be both desirable and practicable.

Second. We can not give the allies any immediate assistance with men and probably not much with the Navy. But we can help them with money and supplies, and these are what they most need. I think the American Government should arrange to buy from the allies large amounts of their bonds, the proceeds to be used in carrying on the war. I would like to see the United States Government buy $5,000,000,000 worth of bonds from the allies. We should take their bonds at the current price, which yield about 7 per cent, guarantee them by the United States Government, and so guaranteed offer them for sale to our people. They would be sold at a heavy premium, and the difference between the price paid for by our Government and the price they were sold for should be turned into the Treasury and held as an amortization fund to take care of any bonds which possibly might be defaulted. These bonds will be the best investments ever issued by any Government, would be eagerly sought after, and the possession of these bonds would unify our people in sustaining the Government. They would also be a means in producing a fraternity between us and our allies.

Third. We should allow our allies to open recruiting offices in the United States, and any American who consents to enlist in the army of any one of our allies should be considered an American soldier on special detail. He should be paid and pensioned by the United States Government and treated in all respects as an American soldier. Arrangements can be made in the country in whose army he should fight to pay him the current pay of that country's soldiers and the United States would pay that country the amount disbursed, and the difference between the pay of our soldiers and the foreign soldiers could be paid by our Government to such person as the soldier should designate or the pay be held for his credit. Under this arrangement many Americans would join the English and Canadian troops because of speaking a common language. Many Italians and Greeks would join the Italian and the Venizelistos Greek armies. The men that would accept this arrangement would be zealous, enthusiastic men who would impart their enthusiasm to the allies. They would be the vanguard of the American Army and the promise of millions of men coming, if necessary.

Fourth. We should consent in similar manner for mechanics, engineers, chemists, munition manufacturers and workers, and other members of the great industrial army to volunteer in like manner for either military or nonmilitary duty in Russia. Russia needs just these sorts of men, and they should be allowed to go and be treated as men in the military service of the United States detailed for services in Russia, and be paid for their services by a similar arrangement as that provided for in the preceding paragraph.

Fifth. Small as it is, I think the greater part of our Army should be sent to Europe. The moral effect would be great. Our allies would feel enthusiastic, and neutral nations would likewise feel the impulse. And our Navy should be used, of course, first to protect our shores, but every ship not needed for that purpose should be put at the service of the common cause.

Sixth. We should begin the recruiting of an army of not less than 1,000,000 men to be sent across if necessary, but they will probably never be required to leave our shores. Now that the war has been forced upon us it would be disastrous if it should end without a complete and decisive defeat of Germany. Germany has become the outlaw of nations and a common danger to all because of her efficiency and moral insanity. The world should not stop until the last scene in Wagner's Gotterdämmerung has been fully rendered, and in this rendition we should take our full part.

Seventh. Congress should not minimize the danger. Germany is still a powerful nation. The war may not be child's play on our part. We should not risk being left single handed, as we were in 1814. We must do our part in unison with the allies, and we must very soon make common cause and enter into an open alliance with them, but such alliance just now is impracticable.

Eighth. Congress by appropriate resolution should recommend and advise the people of the United States to give liberally and quickly to the relief of the wounded and sufferers in the allied countries. This will have a double effect. It would help our allies and show a sympathy that they will appreciate greatly. And, second, it would stimulate an enthusiasm among our people. The best way to stimulate a man's enthusiasm is to get him to do something or give something. These suggestions may seem cheap at first, but I will predict that the more you consider it the more you will see in it.

Ninth. We should have a fair and friendly understanding with Japan. She is a great nation. She is acting white, and we will do the yellow thing if we do not treat her white. This principle should be carried to its logical conclusion, and it will result in a permanent peace in the Pacific.

Tenth. I think President Wilson should make the war national and avoid any appearance of partisanship. Republicans and Progressives should be represented in the Cabinet, and the Republican leaders should be asked to cooperate in supporting the war. And the new Cabinet should be in intellectual and executive ability equal to Lincoln's Cabinet and to Cleveland's first Cabinet and Roosevelt's Cabinet appointed in 1905.

With much respect and best wishes, I am,
Yours, truly,

——— ———.

Telephone Operators.

EXTENSION OF REMARKS
OF
HON. THOMAS W. MILLER,
OF DELAWARE,
IN THE HOUSE OF REPRESENTATIVES,
Sunday, March 4 (legislative day of Saturday, March 3), 1917.

Mr. MILLER of Delaware. Mr. Speaker, House resolution 490, which the Chair has recognized me to present, is the last piece of legislation to be acted upon by the House of Representatives in the Sixty-fourth Congress. For the Committee on Accounts, which directed me to report this resolution, and for the Members interested in this just measure, I desire to thank the Speaker for recognizing me, and thereby making it possible for this small but just measure to be passed in the last three minutes of the life of the present Congress.

Although this resolution was of a privileged character, by reason of its being reported from the Committee on Accounts, its proponents have not pushed it at a time when a controversy upon it on the floor might have embarrassed public business of more importance. The resolution has been before the House during midnight sessions twice in the past week, but was withheld for final action for the reason just stated.

The facts in connection with the resolution can be stated briefly. The local Capitol telephone exchange handles far more calls and has a larger force of operators employed than other local exchanges and, it is safe to say, more than exchanges found in the cities or towns from which come a majority of the Members of Congress. There are, besides the chief operator, 17 employees, as follows: Thirteen regular operators; two night operators, who are men; one for the use of the Superintendent of the Capitol; and one substitute. All are women except the two noted. The operators, which this resolution will continue, have been employed since the commencement of the first session of this Congress. The work of the Capitol exchange has been so exacting that it has not been possible to arrange for proper vacation periods for the women employees, and as the result a number of them have been forced to absent themselves on account of illness. It must be remembered that the termination of the long session of Congress is never a certainty, and consequently it is impossible for rest periods to be arranged. For instance, in the present Congress we have been in session since December, 1915, continually, with the exception of 10 weeks last fall, when the campaign was on, but in spite of this the work of the Capitol telephone exchange did not let up enough to permit vacations to be given to all the employees. The work of the exchange is exacting and nerve racking, because of the great number of calls that must be handled instantly, in order that the public business of the country may be attended to. Besides 435 Members of the House and the 96 Members of the Senate, there are the various officers of the Senate and House and their committees. We all know the character of service we demand and expect, and it is good business to keep these experienced operators in the service rather than endeavor to break in raw operators when Congress convenes next time. The adoption of the resolution will place the exchange in a position to give adequate rest periods to their employees, which means a return in service rendered.

Prohibition.

EXTENSION OF REMARKS
OF
HON. MARTIN A. MORRISON,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. MORRISON. Mr. Speaker, on April 22, 1908, the Democracy of the ninth congressional district of Indiana adopted a platform in which they undertook to declare the whole duty of the Federal Government in relation to intoxicating liquors and the evils resulting from its use for beverage purposes. They recognized the division of powers under our dual form of government and that all general police power is vested in the several States; that the Congress exercises in the District of Columbia the general police power exercised elsewhere by the States; and that the Congress exercises, always and everywhere, exclusive and plenary power over interstate and foreign commerce. They believed in this wise distribution of the powers of government and were unwilling to disregard or violate it. The convention on that day—April 22, 1908—gave to me my first nomination for Representative in the Congress and adopted a platform containing three planks in relation to intoxicating liquors. They declared for three principles:

First. The exclusion of intoxicating liquors from the United States mails.

Second. The exclusion of intoxicating liquors from interstate and foreign commerce.

Third. Prohibition for the District of Columbia.

I have been four times nominated and elected on platforms containing these three declarations. I have adhered to the platform and voted at every opportunity for such pending proposition as most nearly approached the principles to which my party had pledged me as its candidate.

Prior Congresses had enacted statutes regulating the interstate shipment of intoxicating liquors. They were more restrictive than was generally known. I call attention to the following laws then in force:

SEC. 238. Any officer, agent, or employee of any railroad company, express company, or other common carrier, who shall knowingly deliver or cause to be delivered to any person other than the person to whom it has been consigned, unless upon the written order in each instance of the bona fide consignee, or to any fictitious person, or to any person under a fictitious name, any spirituous, vinous, malted, fermented, or other intoxicating liquor of any kind which has been shipped from one State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, into any other State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, or from any foreign country into any State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, shall be fined not more than $5,000, or imprisoned not more than two years, or both.

SEC. 239. Any railroad company, express company, or other common carrier, or any other person who, in connection with the transportation of any spirituous, vinous, malted, fermented, or other intoxicating liquor of any kind from one State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, into any other State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, or from any foreign country into any State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, shall collect the purchase price or any part thereof before, on, or after delivery from the consignee, or from any other person, or shall in any manner act as the agent of the buyer or seller of any such liquor, for the purpose of buying or selling or completing the sale thereof, saving only in the actual transportation and delivery of the same, shall be fined not more than $5,000.

SEC. 240. Whoever shall knowingly ship or cause to be shipped from one State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, into any other State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, or from any foreign country into any State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, any package of or package containing any spirituous, vinous, malted, fermented, or other intoxicating liquor of any kind, unless such package be so labeled on the outside cover as to plainly show the name of the consignee, the nature of its contents, and the quantity contained therein, shall be fined not more than $5,000; and such liquor shall be forfeited to the United States, and may be seized and condemned by like proceedings as those provided by law for the seizure and forfeiture of property imported into the United States contrary to law.

Approved March 4, 1909.

On March 4, 1909, just before my term of office began, an act of Congress was approved, excluding intoxicating liquors from the United States mails, thus making one platform declaration an accomplished fact.

On March 1, 1913, a Federal statute commonly known as the Webb-Kenyon law became effective, having received two-thirds of the votes of each House of the Congress to pass it over the veto of President Taft. I voted for this bill when it passed the House, and also when it was passed by the House over the President's veto.

The Webb-Kenyon law is as follows:

An act divesting intoxicating liquors of their interstate character in certain cases.

Be it enacted, etc., That the shipment or transportation, in any manner or by any means whatsoever, of any spirituous, vinous, malted, fermented, or other intoxicating liquor of any kind, from one State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, into any other State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, or from any foreign country into any State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, which said spirituous, vinous, malted, fermented, or other intoxicating liquor is intended, by any person interested therein, to be received, possessed, sold, or in any manner used, either in the original package or otherwise, in violation of any law of such State, Territory, or District of the United States, or place noncontiguous to but subject to the jurisdiction thereof, is hereby prohibited.

On March 3, 1917, the President approved the bill carrying appropriations for the Post Office Department, and for other purposes. This bill carried, as a rider, certain provisions prohibiting the transmission through the United States mails of advertisements of intoxicating liquors and certain other printed matter relating to such liquors, to which was attached a rider, commonly known as the "Reed amendment," prohibiting the importation of intoxicating liquors into a State in which the manufacture or sale of such liquors for beverage purposes is prohibited by law. This new law is identical in principle with a second plank of the platform of the Democracy of the ninth Indiana district, but is not as comprehensive as the platform declaration. It is, however, the most drastic and far-reaching Federal statute yet enacted in relation to intoxicating liquors. The provisions above referred to are as follows:

SEC. 5. That no letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement of spirituous, vinous, malted, fermented, or other intoxicating liquors of any kind, or containing a solicitation of an order or orders for said liquors, or any of them, shall be deposited in or carried by the mails of the United States, or be delivered by any postmaster or letter carrier, when addressed or directed to any person, firm, corporation, or association, or other addressee, at any place or point in any State or Territory of the United States at which it is by the law in force in the State or Territory at that time unlawful to advertise or solicit orders for such liquors, or any of them, respectively.

If the publisher of any newspaper or other publication or the agent of such publisher, or if any dealer in such liquors or his agent, shall knowingly deposit or cause to be deposited, or shall knowingly send or cause to be sent, anything to be conveyed or delivered by mail in violation of the provisions of this section, or shall knowingly deliver or cause to be delivered by mail anything herein forbidden to be carried by mail, shall be fined not more than $1,000 or imprisoned not more than six months, or both; and for any subsequent offense shall be imprisoned not more than one year. Any person violating any provision of this section may be tried and punished, either in the district in which the unlawful matter or publication was mailed or to which it was carried by mail for delivery, according to direction thereon, or in which it was caused to be delivered by mail to the person to whom it was addressed. Whoever shall order, purchase, or cause intoxicating liquors to be transported in interstate commerce, except for scientific, sacramental, medicinal, and mechanical purposes, into any State or Territory the laws of which State or Territory prohibit the manufacture or sale therein of intoxicating liquors for beverage purposes shall be punished as aforesaid: *Provided,* That nothing herein shall authorize the shipment of liquor into any State contrary to the laws of such State: *Provided further,* That the Postmaster General is hereby authorized and directed to make public from time to time in suitable bulletins or public notices the names of States in which it is unlawful to advertise or solicit orders for such liquors.

I voted for this bill at every stage.

On March 4, 1917, the President approved an act commonly referred to as the District of Columbia dry bill. It provides prohibition for the District of Columbia. Its general scope may be fairly judged by the following portion of section 1 of the act:

An act to prevent the manufacture and sale of alcoholic liquors in the District of Columbia, and for other purposes.

Be it enacted, etc., That on and after the 1st day of November, A. D. 1917, no person or persons, or any house, company, association, club, or corporation, his, its, or their agents, officers, clerks, or servants, directly or indirectly, shall, in the District of Columbia, manufacture for sale or gift, import for sale or gift, sell, offer for sale, keep for sale, traffic in, barter, export, ship out of the District of Columbia, or exchange for goods or merchandise, or solicit or receive orders for the purchase of, any alcoholic or other prohibited liquors for beverage purposes or for any other than scientific, medicinal, pharmaceutical, mechanical, sacramental, or other nonbeverage purposes.

Wherever the term "alcoholic liquors" is used in this act it shall be deemed to include whisky, brandy, rum, gin, wine, ale, porter, beer, cordials, hard or fermented cider, alcoholic bitters, ethyl alcohol, all malt liquors, and all other alcoholic liquors.

This bill has several weak points at which it is confidently expected that the Sixty-fifth Congress will strengthen it. It is not certain that either the Webb-Kenyon law or the Reed amendment will serve to give needed strength to the new law for the District of Columbia. If not, this defect will quite certainly be cured by the new Congress. I voted for this bill at every stage.

Aside from the weak spots to which I have referred the Dis-

trict of Columbia dry law has crystallized into permanent Federal law the third and last temperance plank of the platform of the Democracy of the ninth district of Indiana.

I have referred to the legislation that has actually been accomplished. Strangely enough, it has aroused but a small fraction of the public interest that has been systematically created in behalf of a variable and indefinable propaganda proposed in 11 distinct forms, but always under the name and title of "national prohibition." This multiform proposition was introduced into the House of Representatives in the Sixty-third Congress in its first 10 forms by Hon. Richmond Pearson Hobson, then a Representative from the State of Alabama, and is popularly known in any and all of its forms as "the Hobson resolution."

Since the retirement of Capt. Hobson this series of proposed amendments to the Federal Constitution has been under the control of certain national officers of the Antisaloon League, located at Washington, D. C. They are professional lobbyists and are usually referred to as "the congressional lobby."

During the Sixty-third Congress the power of the congressional lobby became supreme in both Houses of the Congress. In the Sixty-fourth Congress it wrote into the District dry bill its confessed weaknesses and resisted all attempts to correct its defects. It had arranged for a special rule in the House of Representatives to bring the Hobson resolution up for consideration and action. Like a "bolt from the blue" the Reed amendment defied the almightiness of the congressional lobby and passed the Senate before the lobby could get its machine into effective adverse action. The lobby followed the Reed amendment to the House and fought it there, but the spell was broken. The Members of the House rejoiced at their newly discovered power to think and act for themselves and passed the Reed amendment by a vote of 3 to 1.

This episode constrained the lobby to abandon the special rule for the consideration of the Hobson resolution. No student of the temperance question ever thought that he believed in the Hobson resolution as a temperance proposition. Its only strength lay in the political reign of terror established and maintained by the lobby that, for reasons of its own, had determined irrevocably to commit the temperance forces of America to the Hobson resolution as the permanent basis of their plan of campaign.

The Reed amendment had tempted the Congress to defy the lobby; the Members asserted their old-time independence and had won. The reign of terror was over and the lobby faced a Congress that dared to ask a reason for the action demanded at its hands. It thus came about that the Hobson resolution has not been brought out for consideration, discussion, or vote in the Sixty-fourth Congress, and will not be.

I therefore desire at this time to recall the exact legislative history and situation in relation to this subject and submit my views as to the action that would, in my opinion, be most perfectly in harmony with correct principles, most effective in practice and easiest of administration.

On the 10th day of December, 1913—in the Sixty-third Congress—Capt. Richmond P. Hobson introduced as one of the 10 forms of the so-called Hobson resolution, House joint resolution 168. It was the one that attracted widest attention and to it were practically all of the tidal wave of written and printed indorsements that reached the Congress addressed. It was—omitting the formal parts—in these words:

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof are forever prohibited.

SEC. 2. Congress shall have power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts, and shall have power to enforce this article by all needful legislation.

It is one of the unfathomable mysteries of current history how this proposed amendment to the Federal Constitution came to be popularly regarded as providing for "national prohibition."

Aside from certain individuals who were early advocates of Federal action the idea of national prohibition is traceable directly to the Women's Christian Temperance Union and the National Prohibition Party, both of which have been active national organizations for more than 40 years. The fundamental principles of these two organizations are substantially identical and include the prohibition by law of the manufacture, importation, transportation, sale, barter, or exchange of alcoholic beverages, or any other form of traffic therein. In popular parlance, the word "prohibition" includes and means just that and all of that.

No student of the temperance question and of the Hobson resolution can for a moment regard the Hobson resolution as being entitled to be referred to as "national prohibition."

Section 1 of the resolution relates to sale, manufacture, transportation, importation, and exportation of intoxicating liquors for beverage purposes. For the purpose of these remarks I shall assume that the expression "intoxicating beverages" is identical with the expression "intoxicating liquors for beverage purposes," although I by no means assert such identity of meaning. In the Hobson resolution the intoxicating beverages referred to are manifestly intoxicating alcoholic liquors to be used for beverage purposes.

Section 1 prohibits the manufacture of intoxicating beverages for sale, but does not prohibit the manufacture of intoxicating liquors to be used for beverage purposes. The manufacture of intoxicating liquors for use, for gift, for barter, or for exchange for anything of value other than money is not made unlawful. It is not made unlawful for one to furnish the equipment, appliances, and labor for the manufacture of intoxicating beverages on the shares for a fixed quantity of a given commodity, or even for an agreed money consideration. In no such case would the transaction be a sale.

There is not a State in the Union in the laws of which the prohibition, restraint, or control of intoxicating liquors is limited to sales. Every such statute contains at least the equivalent of the words "sell, barter, or give away."

On January 11, 1915, Senator SHEPPARD introduced in the Senate a proposed amendment to House bill 19422, then pending in the Senate, which is popularly known as his amendment for prohibition in the District of Columbia. In line 3 of section 1 this proposed amendment contains the words "manufacture, barter, sell, or give away," showing that its author was familiar with the invariable practice in the drafting of liquor laws.

On December 7, 1915, Senator SHEPPARD introduced in the Senate, Senate bill 1082, popularly regarded as a bill to establish prohibition in and for the District of Columbia. As it passed the Senate and came to the House this bill has at least one fatal defect, in that it permits importation of intoxicating beverages for personal use. It is by no means certain that it prohibits the giving away of intoxicating beverages, but the following language in lines 1, 2, and 3 on page 2 of the bill show that the author of the bill had not yet forgotten all he had formerly learned as to the language necessary to be used in statutes dealing with intoxicating liquors, to wit, "sell, offer for sale, keep for sale, traffic in, export, ship out of the District of Columbia, or exchange for goods or merchandise."

The law recently enacted by the General Assembly of the State of Indiana makes it "unlawful for any person to manufacture, sell, barter, exchange, give away, furnish, or otherwise dispose of any intoxicating liquor, or to keep any intoxicating liquor with the intent to sell, barter, exchange, give away, furnish, or otherwise dispose of the same, except as in this (said) act provided."

The attempt to prohibit, restrain, or control intoxicating liquors by a law the provisions of which are in all respects limited to mere sales has never been made in any legislative body, State or National, in any case except in the case of the Hobson resolution as introduced by Capt. Hobson in the Sixty-third Congress, and as reintroduced by a Senator and two Representatives in the Sixty-fourth Congress. How it was possible for any legislator or reformer to conceive of such a proposition is itself inconceivable.

The provisions of section 1, relating to transportation, importation, and exportation, are subject to the same fatal limitation, which is for practical purposes a nullification. In the later forms of the resolution the word "exportation" is transposed, so that it is now freed from such limitation.

Section 1 is scrupulously limited to the one object of abolishing the licensed saloon, aside from the provision against exportation. It is "antisaloon," but religiously guards against the suspicion of being "antialcohol." It rejects the saloon as the conventional means of competition and distribution of liquors to retail purchasers, but by necessary implication approves the manufacture, transportation, importation, exportation, gift, barter, and exchange of intoxicating liquors to be used for beverage purposes. It does not even deny to one who is equipped and skilled the right to manufacture intoxicating liquors for wages or other direct money consideration, knowing that they are to be used exclusively for beverage purposes. Manifestly, if the Hobson resolution provides for "national prohibition," such provision must be found in section 2. It certainly is not in section 1.

Section 2 gives express constitutional sanction to the manufacture, sale, importation, and transportation of intoxicating liquors for each of six separate and several uses therein specifically enumerated. It closes by giving to the Congress power to enforce the provisions of the resolution by all needful legislation.

The more a student reads the Hobson resolution the more his wonder grows as to how its provisions could have been conceived

and as to how anyone could have conceived the idea of referring to it as "national prohibition."

House joint resolution 168 recognizes seven distinct uses of alcoholic liquors. Six of them it expressly approves and legalizes, making the resolution six-sevenths permissive and but one-seventh prohibitive, but it prohibits the seventh use only to a slight degree. In considering alcoholic liquors in their effect upon our public health and morals, they must be viewed in seven aspects or particulars, to wit, manufacture, importation, transportation, sale, gift, barter or exchange, and use. For practical purposes, the Hobson resolution prohibits only the sale of beverage liquors, and by silence and necessary implication approves and legalizes manufacture, importation, transportation, gift, barter or exchange, and use. It is manifest, therefore, that the Hobson resolution is prohibitive only as to one-seventh of one-seventh, or one forty-ninth, of the liquor business, and is permissive as to all the residue. It is prohibitive of slightly more than 2 per cent of the business and permissive as to slightly less than 98 per cent of the business; and yet the lobby has the effrontery to refer to it as "national prohibition."

In the light of the Webb-Kenyon law and the Reed amendment, which is now law, the Hobson resolution clearly appears to be what it has always in fact been, a devilishly ingenious device, wittingly or unwittingly contrived, to save for a decade or perhaps a generation the imperiled and nefarious business of the distillers and brewers.

Mr. MORRISON. Mr. Speaker, it is often said that "the obvious is the last thing to be seen and the first to be forgotten." I find a perfect illustration of this truth in the current history in the Congress of the Hobson resolution, now referred to as the Sheppard resolution in the Senate and as the Webb resolution, or the Smith resolution, pending in the House.

When he first read its provisions every student of the temperance question in America recognized at once that the proposed amendment to the Federal Constitution is not a genuine temperance measure in any sense, much less is it a prohibition measure. Professional reformers on the pay roll of the congressional lobby in charge of the resolution persistently refer to it as "national prohibition." So perniciously active have they been in their campaign of misinformation that thousands of earnest temperance workers have been led to assume that it provides for national prohibition of the manufacture, transportation, importation, exportation, gift, sale, barter, exchange, or other traffic in intoxicating alcoholic liquors. Of course, no one who has any knowledge of its language can deceive himself into such an opinion, and yet those who know the truth are liable to be swept along by the full tide of persistent public misrepresentation until they begin to assume what they actually know to be untrue.

The proponents of the Hobson resolution justify their claim to its right to be called "national prohibition" by the fact that far down beneath its mass of distractive and subtractive words and phrases is found the word "prohibited." It would be as logical to assert that every horsefly is by force of its very name a horse. If a few more words had been added to the first section of the Hobson resolution, they would have completely nullified each other and no subject matter whatever would have been left within its purview.

It is probable that there was a time when the members of the congressional lobby and the friends of the distillers and brewers held diametrically opposite views as to the best legislative remedy for the evils of intemperance. They stood back to back and started to walk away from each other, both in deadly earnest and with sincere purpose of adverse advocacy and action. They became leaders of the two extreme organized temperance activities of the country, and are generally so recognized to-day. One party is now regarded as the champion of the cause of temperance, and the other is universally assumed to be the relentless foe of the cause, and yet so far have these two forces traveled back to back that they have met each other face to face. To-day they stand on common ground, believe in a common legislative creed, and are working hand in glove for the accomplishment of a common purpose. They are a beautiful and touching example of "two souls with but a single thought, two hearts that beat as one."

So far as the Hobson resolution is concerned, the apparent contest between these two contending parties has descended into a "friendly suit" or a sham battle. Both sides desire to be well rid of the licensed saloon, but neither side is willing to permit the abolition of the licensed saloon to include in its sweep the destruction of alcohol itself.

There is a small but respectable group of total abstainers who believe that it is the consumption of alcohol by men that has wrought such frightful disaster to men, women, and children, and to civilization itself. They regard the sale of alcohol by a licensed dealer in a legalized dramshop as an efficient instrumentality for bringing the producer and consumer into convenient business relations, but that it is still the manufacture and use of alcohol that bring sorrow and misery into the world. They believe that alcohol, together with all its agents and instrumentalities, should be banished beyond the pale of the law. As might have been expected, both parties to this perennial sham battle have turned their batteries upon this small but respectable group of strictly nonprofessional, nonprofit-sharing temperance workers. Here, again, the hostile forces occupy common ground and wage a common battle, and it is the only real fighting in which they are now engaged.

In the Literary Digest of March 27, 1915, I find that Mr. T. M. Gilmore, publisher of Bonfort's Wine and Spirit Circular, and who is recognized as authority among the makers of wet goods, used this language.

> This so-called prohibition movement is not prohibition at all, and the millions behind it do not intend to be prohibited, but it is a mighty protest, a blind striking out, and the object aimed at is the saloon.
> The saloon is doomed, and liquors must seek new channels.
> To save the business, we must let go of the saloon.

In the National Enquirer of August 31, 1916, I find a quotation from Mr. Gilmore's paper, Bonfort's Wine and Spirit Circular, in these words:

> The modern saloon has been getting worse instead of better. It has been dragged in the gutter; it has been made the cat's-paw for other forms of vice; it has succumbed to the viciousness of gambling; and it has allowed itself to become allied with the social evil.

Mr. W. H. Austin, secretary of the Wisconsin Brewers' Association, delivered an address before a legislative committee in that State. In that same issue of the National Enquirer I find the following quotation from his address:

> The retail liquor dealers are not worthy of consideration. They are bums and beggars and are not fit to associate with yellow dogs. They go on a drunk and blow in their money every time they get a few hundred dollars and then complain about the high price of beer.

I might multiply such quotations, but every student of the temperance question knows that the distillers and brewers are anxious to be rid of the licensed saloon, which long since became much more a means of competition than a medium of distribution. It is too expensive and the distillers and brewers have been hunting for some effective organization of reformers that would help them let loose of the licensed saloon without incurring the wrath of the bartenders and bar flies, who might undertake to drag down the distillers and brewers with them. They must have been as greatly amazed as delighted when they found the Hobson resolution and the congressional lobby.

The more secret attitude of the distillers is fairly well understood, while the entirely manifest and indisputable attitude of the congressional lobby, with its sacred and unalterable Hobson resolution, has strangely escaped the attention of many sincere, earnest, money-contributing adherents of the organization.

The language of the resolution leaves no room for doubt. The right to make, transport, barter, exchange, traffic otherwise than for a money consideration, to have, to use, and to give away intoxicating liquors for beverage purposes is guarded as tenderly as a mother guards her only child. It seeks to write into the Federal Constitution the doctrine of home manufacture—now outlawed by Federal statute—and the doctrine of "personal liberty" to make, to possess, and to use alcoholic liquors for beverage purposes, an ancient doctrine which finds no support in our present Federal Constitution.

In the light of this manifest truth it requires no superhuman wisdom to discover why the apparent opponents of the Hobson resolution exercised more than one-half the energy and industry required to procure a House committee report on the Hobson resolution in the Sixty-third Congress and a special rule for its consideration. The supreme purpose of the distillers and brewers was to commit the temperance workers of America to the language of the Hobson resolution as the basis for their permanent plan of campaign. It is a pathetic fact that they seem to have succeeded in their sly, selfish, and devilish scheme. If they have, from now on until the plan shall be abandoned the friends of alcohol can not lose.

It is impossible to overestimate the advantage which the distillers and brewers are to reap as their share of the spoils of the bloodless victory which these contending forces have agreed mutually to win each over the other.

They know that there is to-day a dependable public sentiment in this country in favor of effective temperance legislation sufficient to enact and enforce organic and statutory laws for the complete destruction of all liquors available for beverage purposes. They know that such destruction can be averted only by capturing, controlling, and misguiding the organized temperance workers of the country.

They know also that the lawlessness of the licensed saloon is largely responsible for the present attitude of the public mind toward alcohol, and that the abolition of the saloon, with alcohol left unscathed, would take from the temperance forces their most valuable asset and effective weapon. If the distillers and brewers can eliminate the saloon, which no man defends, and force the temperance workers into the appearance of assailing "personal liberty" and "the sanctity of the home," which everyone stands ready to defend, the possibility of a successful legislative campaign against alcohol for beverage purposes will have been postponed at least beyond the life of this generation. Indeed, the leaders of the so-called "dry" organizations frankly declare that the "antialcohol fight" is to be waged solely on the basis of "voluntary persuasion," and thereby hangs a tale.

The enemies of alcohol are plainly notified that they are soon to be compelled to turn back to the old days of oratorical crusaders, declaiming portions of "Ten Nights in a Barroom," and begging men to sign the pledge and wear the blue ribbon. Incidentally, of course, the new program will furnish constant demand and liberal compensation for professional reformers and public entertainers until they shall die of old age on the pay roll.

Capt. Hobson never seeks to mislead the public. He believes religiously in his own resolution. He believes that every man ought to have the right to make, have, and use intoxicating liquor within "the sanctity of his own home." He is opposed to "sumptuary legislation." He favors "individual liberty" and stands for the inherent and inalienable right of every man to drink intoxicating alcoholic liquors. Of these seductive but unsound doctrines he is the ablest and most influential of modern advocates. All other professional reformers are to him as mere understudies to their star and chief.

On the evening of December 10, 1915, Capt. Hobson delivered an address in advocacy of his resolution in Tomlinson Hall, Indianapolis, Ind. It was the culmination of a State-wide rally by the local representatives of the congressional lobby. One of my constituents had asked him to read his resolution to the audience. I had asserted that he could not be induced to do that. And he was not. In lieu of such reading he gave a clear statement of its purport and purpose in these words:

Now, what is the proposition we bring to you? I wish each one of you would make it a point to read for yourself the proposed amendment to the Constitution of the United States. If you will read it, you will find there is not a word in that amendment that would prohibit a man from drinking liquor. There is no desire to have the Federal Government try to coerce the individual in what he does with himself—eat, drink, and wear; no desire to have any sumptuary legislation; no desire to have the Federal Government invade any man's individual liberty—not at all. There is no word in the amendment that would prohibit a citizen from having intoxicating liquor in his home. We do not wish the Federal Government to be placed in the attitude of invading the sanctity of the home. You will find the language very plain and very simple. It provides that the Constitution shall prohibit the sale, manufacture for sale, of intoxicating liquors for beverage purposes. Sale is a transaction between citizens. It is a matter of your own affair as to what you shal' drink. You have an inherent right to drink, but not to sell, liquor.

The churches of America have long been deceived and controlled by the congressional lobby. Happily, the Methodist Episcopal Church has established its own news and research department of the board of temperance (prohibition and public morals) in the city of Washington, with Hon. Deets Pickett as research secretary and Hon. Clarence True Wilson, D. D., as general secretary.

I do not claim to have inside information as to what the Methodist representatives think of the congressional lobby, but I know the facts and assume that Mr. Pickett and Mr. Wilson have learned the facts. I know, therefore, that these gentlemen must have quietly broken with the lobby, and must now stand for a genuine temperance proposition as against the Hobson resolution.

Recently the Methodist board issued a bulletin in which it quoted certain decisions of the courts to show that in all temperance legislation "the evil to be remedied is the use of intoxicating liquors as a beverage." This is a clear disavowal of the declaration by the author of the Hobson resolution, that a man has a right to make, to have, to use, and to serve intoxicating liquors within "the sanctity of his own home"; that a man has the inherent right to drink liquors, and should be permitted to make, import, transport, barter, exchange, or use intoxicating liquors, being denied only the right to pass title thereto for a direct money consideration. The quotations from decisions of the courts contained in the Methodist bulletin just referred to were as follows:

West Virginia *v.* Adams Express Co. (C. C. A.), 219 Fed., 794, the court said (p. 796):

"In trying to comprehend the legislative purpose in prohibition statutes it is important to remember that the ultimate end sought in prohibition legislation is not the prevention or restriction of the mere sale of intoxicants, but the prevention of their consumption as a beverage. The sale being the most usual and obvious means by which drinking is accomplished, legislation is more often directed against sales. But it is upon the recognized evil of individual consumption as a beverage that the right of a State under its police power rests to enact prohibitive legislation."

Southern Express Co. *v.* Whittle (Ala.), 69 Sou. Rep., 652, the court (p. 656), said:

"The object and purpose of all our laws governing the subject of intoxicating liquors is to promote temperance and prevent drunkenness. * * * The evil to be remedied is the use of intoxicating liquors as a beverage. * * * Carl's Case, 87 Ala., 17; 6 South, 118; 4 L. R. A., 133 Am. St. Rep., 20. Freund, in his work on the Police Power, at section 204, thus amplifies the idea expressed in our cases above quoted:

"'It is certainly the more conservative view to look upon the control of the liquor traffic as a means of protecting the community from crime and the financial burdens of pauperism; but it is also clear that the police power, resting upon this incontestable ground, is turned into a power to protect the weak individual from his own weakness, into a power to prevent the wasteful expenditure of money and time, and finally into a power to impose upon the minority the sentiments or prejudices of the majority of the community, as to what is morally right and 'good.'"

Crowley *v.* Christensen (37 U. S., 86), Mr. Justice Field, speaking for the court (p. 90), said:

"It is urged that as the liquors are used as a beverage, an injury following them, if taken in excess, is voluntarily inflicted, and is confined to the party offending, their sales should be without restrictions, the contention being that what a man shall drink, equally with what he shall eat, is not properly matter for legislation.

"There is in this position an assumption of a fact which does not exist, that when the liquors are taken in excess the injuries are confined to the party offending. The injury, it is true, first falls upon him in his health, which the habit undermines; in his morals, which it weakens, and in the self-abasement which it creates. But as it leads to neglect of business and waste of property and general demoralization, it affects those who are immediately connected with and dependent upon him."

State *v.* Phillips (Miss.) (67 Sou. Rep., 651), the court said:

"If the object of this prohibition of the sale of intoxicating liquors is not to prevent, as far as may be, the drinking of such liquors, then it is difficult to justify the laws prohibiting the sale. Of course, the typical public saloon is demoralizing, but there would be no practical difficulties in the way of so regulating the saloon as to minimize all of the evils which flow from the saloon except the evils which flow from the drinking of intoxicating beverages. If it is not a menace to the health, morals, welfare, and peace of the public for men and women to drink alcoholic liquors, it would seem that the public could have no interest in prohibiting the sale. The ultimate purpose and end of prohibition is to prevent the use of liquors as a beverage. This ultimate end is bridged step by step, and when the preponderate and prevailing morality of the Nation believes that the public welfare demands the final step, the way will be found to accomplish the end."

Ex parte Crane (Idaho) (151 Pac., 1006), the court said (p. 1010):

"Still it must be admitted that, if the possession of such liquor 'can by no possibility injure or affect the health, morals, or safety of the public,' the sale is equally harmless; for it only transfers the possession from one person to another. The fact is that the harm consists neither in the possession nor sale, but in the consumption of it. That is the evil which the people of Idaho, acting through the legislation, are trying to eradicate; and since it will not require any elucidation to show that, if the citizen may be prohibited from having liquor in his possession, he can be prohibited from drinking it, because of necessity no one can drink that which he has not in his possession."

When the Reed amendment came from the Senate to the House, the congressional lobby followed it to the House and set in motion its vast and powerful machinery to defeat its passage in the House. The Methodist board fought for its passage with all its power. It was currently rumored at the time that the Methodist board had broken completely with the congressional lobby and threatened to recommend that the church refuse longer to permit the lobby to use the pulpits of the Methodist Church to solicit its five-year subscriptions in aid of "national prohibition." I have no knowledge of the truth of the situation, but sincerely trust that the rumor is true. I am sure that the Methodist board has learned the truth. If it shall once disclose the truth, other churches will also be undeceived and the long reign of deception and terror established and maintained by the congressional lobby over the churches and public men of the country will come to an end.

On October 14, 1913, Hon. Eugene W. Chafin, as the last nominee of the Prohibition Party for the Presidency, was its recognized leader and spokesman. On that day and in that capacity he delivered an address at Chicago, which was published in full in the Vindicator, the then official organ of the Prohibition Party, in its issue of October 24, 1913.

In his address he read a copy of the Hobson resolution and denounced it in strong and cutting terms. Among other things, he said:

Of all the foolish and impossible schemes devised to destroy the liquor traffic, this is certainly the worst. Every minute of time and every dollar expended on this scheme is criminally wasted.

Such an amendment as that would perpetuate the liquor traffic forever in this country and each home could be a saloon.

Hon. J. Frank Hanly, ex-governor of Indiana, as the last nominee of the Prohibition Party for the Presidency, is now its official head and representative. He is editor in chief of the National Enquirer, which is now the official national organ of that party. He is a man of great ability, is perhaps the most powerful public speaker the Republican Party in Indiana has produced in this generation, and has more courage than any

other professional reformer now before the country. Indeed, his courage sometimes leads him dangerously near to an open breach with the congressional lobby. His one weak spot is the fact that he remained in the soap-box primary, or secret caucus, organized in Washington City on July 10, 1915, to seal the lips of temperance workers who were known to be unwilling to advocate the Hobson resolution. That robbed him of a portion of his intellectual independence and moral courage. He still has more than any other man of his profession, and is rendering services of tremendous value to the cause of temperance. He is not, however, completely courageous. If he were, he would write in his editorials what he knows down in the bottom of his heart, to wit, that the Hobson resolution is a trick and a cheat, a delusion and a snare. He regards himself as in honor constrained from doing that. He compromises with his conscience by writing editorials made up of well-balanced sentences in perfectly good English, in the first half of which he condemns the Hobson resolution, and in the second half he condemns all Members of Congress who do not give to the resolution blind but enthusiastic and boisterous support. In spite of the trick he permitted the lobby to play upon him, he is easily the biggest, bravest and best of them all.

In the edition of the National Enquirer of December 28, 1916, Mr. Hanley, in a signed editorial, pointed out some (but not all) of the weaknesses of the Hobson resolution. So far as it relates to such defects, it was in these words:

THE SENATE RESOLUTION.

Two resolutions for the submission of an amendment to the Federal Constitution to the several States for their ratification and providing for national prohibition, have been favorably reported for passage at this, the last, session of the present Congress, one in the House, the other in the Senate.

The House resolution was reported for passage by a vote of 12 to 7, the Senate resolution by a vote of 13 to 3.

The House resolution provides:

"SECTION 1. That the sale, manufacture for sale, transportation for sale, and importation for sale of intoxicating liquors for beverage purposes in the United States and all territories subject to the jurisdiction thereof, and exportation thereof, are forever prohibited.

"SEC. 2. That the Congress and the States shall have power independently or concurrently to enforce this article by all needful legislation."

The Senate resolution is as follows:

"SECTION 1. The sale, manufacture, or transportation of intoxicating liquors within, the importation thereof into, and exportation thereof from the United States and all territories subject to the jurisdiction thereof for beverage purposes are hereby prohibited.

"SEC. 2. The Congress shall have power to enforce this article by all appropriate legislation. This article shall not be construed to abridge the power of the several States to enforce State prohibitory laws."

Most persons are probably unaware of the difference between the two, yet their provisions are so radically divergent as to mark the difference between makeshift and permanent action, between expediency and principle.

In a word, the amendment is aimed, not at the giving away or at the use of alcohol as a beverage, nor at its manufacture, transportation, exportation, or importation for use as a beverage, but at its sale—at the object of gain for which the traffic is conducted.

In every instance where prosecution were had for the violation of the amendment, the onus of proving that the manufacture, the transportation, the exportation, or the importation was for the purpose of sale—and of proving it beyond a reasonable doubt—would be upon the Government. Conviction, save in the clearest cases, would be difficult and often impossible.

Abuses would spring up under it until further amendment of the Constitution would become necessary.

Such further amendment would be difficult—more difficult then than now—because of the failure of the amendment previously made, and the new amendment when made, if effective, would have to be substantially in the language of the Senate resolution.

The Senate resolution, as will be seen upon reading it, inhibits the manufacture, the sale, the transportation, the exportation, and the importation of alcohol for beverage purposes.

If adopted, it would end the traffic and also end the use of alcohol as a beverage.

The House amendment, as will be seen by reading it, provides only for the inhibition of the sale of alcohol as a beverage and of its manufacture, transportation, exportation, and importation for sale to be used as such.

Under its provisions, should it be submitted and adopted, it would not be unlawful to manufacture alcohol to be used as a beverage except where manufactured for sale; or to transport it to be used as a beverage, except where transported for sale; or to export it to be used as a beverage, except where exported for sale; or to import it to be used as a beverage, except where imported for sale.

Under it alcohol to be used as a beverage could be manufactured, transported, exported, and imported in any quantity, if given away.

ANY man or any individual whatsoever could manufacture it for beverage purposes for his own use or for that of his neighbors or his friends, providing he was not manufacturing it for sale.

Under it private stills could be lawfully set up and alcohol manufactured for use as a beverage in any quantity, providing it was not manufactured for sale.

Any number of individuals could confederate together for the manufacture of alcohol for their own use or to be given away to their neighbors or only at the traffic in alcohol—in the money gain involved—but at the use of alcohol as a beverage.

The ultimate purpose of every advocate of prohibition who is at all sincere, is and must necessarily be, not alone the prohibition of the commerce in alcohol for beverage purposes, but the inhibition of its use as well. Alcohol distilled in a private cellar for the personal use of the maker, or the use of his neighbors or his friends, when used as a beverage is quite as deadly in its results as alcohol purchased in the regular commercial way. There must be an end to both the commerce and the use if real emancipation from its injuries and its wrongs are to be had. This can not be accomplished under the House resolution, but it can be accomplished under the Senate resolution.

The only ground upon which the House resolution can be defended is upon the ground of expediency. It is not based upon principle. It will not attain the ultimate end desired. Even its friends and sponsors admit this.

The amendment of the Federal Constitution is a slow process and a grave and serious matter, and the amendment submitted prohibiting the liquor traffic should be the expression of the last and highest word in prohibition legislation. It should be so phrased as to be effective when made, so that the fight for constitutional action would be closed and the struggle therefor ended with its adoption.

The vote for the Senate resolution, in the Senate Committee, of 13 to 3 was so decisive—greater in proportion than the vote for the House resolution in the House Committee—as to raise a serious doubt as to whether the House resolution would actually receive a greater vote in either the House or the Senate, than the Senate resolution would receive.

For these reasons and others, which may not be named in the space of a single editorial, we believe the friends of real prohibition—those who desire to see the use of alcohol as a beverage ended in the Nation—should rally to the support of the Senate resolution, and by word of mouth, by the public press, and by letter and telegram urge upon both the House and the Senate its submission.

The Senate Committee has led the way. When it leads to ground so high and certain, the friends of prohibition should not fear to follow.

On January 1, 1917, Hon. William A. Brubaker, of Chicago, wrote to the editor in chief a splendid letter, which appears in full in the National Enquirer, under date of January 11, 1917. It is published in these words:

BRUBAKER HITS HOBSON MEASURE—SAYS IT WOULD PUT RECOGNITION OF "PERSONAL-LIBERTY" DOCTRINE IN CONSTITUTION.

CHICAGO, *January 1, 1917.*

Hon. J. FRANK HANLY,
Editor National Enquirer, Indianapolis, Ind.

DEAR MR. HANLY: I have just read your excellent editorial in the Enquirer of the 28th ultimo on the Senate resolution. It is admirable, with one exception. You say, "We would favor it (the Hobson amendment) now if it were the best and highest form of prohibition attainable."

But your splendid logic in the preceding paragraphs ought to convince any candid mind that were the Hobson bill placed in the Constitution our condition would be worse than it is now, because, as you clearly show, it would put the liquor in the homes of the people more widely than now, a larger number of children would become familiar with its use, and we would soon have a larger crop of drunkards therefrom.

You also show, and truthfully, that cooperative breweries and distilleries could be established and liquor transported from one end of the land to the other if for personal use. You further show that the enforcement would be exceedingly difficult because the burden of proof of supposed violations would be upon the Government.

There is another phase of the matter that must not be overlooked. Let us suppose that the Hobson amendment is in the Constitution. Under its provisions I have a legal right to make liquor for my personal use, as your editorial truthfully declares. But it is a principle of law that whatever I may legally do by myself I may legally do conjointly with others. I join with a hundred thousand stockholders for the establishment of a cooperative brewery in Topeka, Kans. The State officials bring action against us under the prohibitory laws of Kansas. But we appeal to our constitutional rights, guaranteed to us in the Hobson amendment, and carry the case to the Supreme Court of the United States. And that court will, of course, decide that no State law or constitution can contravene the Constitution of the United States. Result: the practical nullification of every local, county, and State prohibitory law from one end of the land to the other. Any man who wants liquor may purchase stock in a cooperative brewery or distillery or join a club for the importation of whisky from Scotland, champagne from France, and beer from Bavaria. And the last state of the temperance cause will be worse than the first.

More than all this even: The last argument of the liquor men, as you know, is "personal liberty." The Hobson amendment recognizes such right and places a recognition thereof in the Constitution of the United States. To dislodge it from there will require a struggle of from 50 to 100 years. Of all the schemes proposed for the removal of the curse of drink, the Hobson bill is, far and away, the most iniquitous and diabolical.

I trust that you will devote your great abilities and the influence of your great paper not only to the support of the Senate resolution, but to the defeat of the Hobson bill, because it is worse even than our present license system.

With kind regards and best wishes, I am,

Cordially, yours,

WM. A. BRUBAKER,
6114 Greenwood Avenue, Chicago.

In the same issue of the National Enquirer, the editor in chief published a signed editorial in these words:

A JUST CRITICISM.

Among Mr. Brubaker's criticisms of the House resolution for the amendment of the Federal Constitution prohibiting the liquor traffic there is one, which is peculiarly forceful and eminently just. He puts it well:

"The last argument of the liquor men, as you know, is 'personal liberty.' The Hobson amendment recognizes such right and places a recognition thereof in the Constitution of the United States."

The doctrine of "personal liberty" is one which the temperance people are constantly compelled to meet. It can be met and is met daily. We believe it better that any amendment submitted should *squarely face the personal-liberty* argument instead of giving it recognition and *embedding it in the Constitution.*

This, to us, is one of the strongest reasons why the Senate resolution should be submitted instead of the House amendment. The battle must ultimately be fought out on this line. Why not rise to the occasion now, meet the issue squarely, and fight it out?

We are not only opposed to the gainful or commercial traffic in alcohol; *we are opposed to its use as a beverage.* The House resolution meets in an imperfect way half our desire. The Senate resolution

meets it all. Once submitted and ratified, it will require no apology and no subsequent amendment. It will stand the test of time and square itself with the years. The fight should be made for it and not for the House measure.

I am heartily glad that this great lawyer realizes the incalculable advantage which alcohol is to derive from the writing of the Hobson resolution into the Federal Constitution. I am taking the liberty of indicating in the several quotations I am using such italics as will be helpful in calling attention to particular parts thereof. I ask as careful second consideration of this sentence from the editorial just read:

We believe it better that any amendment submitted should squarely face the personal-liberty argument instead of giving it recognition and imbedding it in the Constitution.

It is manifest that Mr. Hanly agrees, with the attorneys of the distillers and brewers, that the Hobson resolution gives constitutional recognition to the doctrine of "alcoholic personal liberty" and "embeds in the Federal Constitution" by necessary implication the doctrine of the inherent right of man to drink, and therefore to make and have, intoxicating liquors.

Little wonder that the friends of intoxicating liquors are willing to exchange the expensive, uncontrollable, and unpopular licensed saloon for a constitutional guaranty of the right to make, to have, and to use intoxicating liquors for beverage purposes. In the good old days of Blackstone every man's house was his castle. In the still better days that are to come every man's house will also be his distillery. And men are drawing princely salaries out of the earnings of the friends of temperance for their part in this legislative horseplay that would be comic if it were not so sadly tragic.

On the morning of January 8, 1917, there came to the desks of the Members of this House sealed letters and accompanying circulars, issued in behalf of an official National Temperance Council, composed of the official leaders of all well-known temperance societies "and other organizations of social uplift." It came as in the nature of sealed sailing orders from this strictly unofficial body to the chosen representatives of a hundred millions of free and self-governing Americans. The letter announced that this supreme council has unanimously indorsed the Hobson resolution and determined that it shall be left for "moral suasion" to deal with the "personal use" of intoxicating liquors. The following language taken from the circular referred to is more explicit, to wit:

Whether a man who, on his own motion, buys liquors at a distance shall drink them at his own home is left in the realm of moral suasion.

This doctrine is the vital cord that unites the Liquor League and the Antisaloon League into a oneness of vitality and activity like unto that of the Siamese twins.

The first sentence of this circular is illuminating and almost brutally frank. Any minister of the gospel that is deceived thereby is not wise, nor would it be possible by any means or process to put him wise. It reads as follows:

Prohibition is simply no license made more effective by wider application.

That will be startling news to nonprofessional temperance workers. They understand local option in a license State to mean "simply no license," but they have long believed that prohibition is a vastly broader, deeper, and more drastic remedy.

In West Virginia and other serious-minded States the leaders of temperance organizations regard prohibition as an "antialcohol" legislative program. They have not learned that prohibition is exclusively "antisaloon," "simply no license," and that the promised "antialcohol" crusade must rest solely upon oratory and "voluntary persuasion."

If the congressional lobby is to be permitted to continue to exhibit the brazen effrontery of referring to the Hobson resolution as "national prohibition," West Virginia will be compelled to find a new name for its legislative policy. It might be designated as "State abolition." Some new name must be adopted to indicate that it is not a fake and a fraud.

It is evident that professional temperance reformers have decided to hasten the final victory of the legislative campaign for "national prohibition" by writing a new definition that excludes from its very terms every element of the program that has not received the cordial indorsement of the distillers and brewers. Under this definition of terms the advocates of "national prohibition" may easily win complete and final victory with the prayers and ill-concealed assistance of the champions of alcohol. The end of the fight for "prohibition" is in sight, won by the adroit process of defining it to be an "antisaloon" legislative program as distinguished from a nonlegislative "antialcohol" campaign, to be based solely on fervid oratory and signing the pledge.

The conclusion I have just reached is not a guess or an inference. It is a fact, plainly set forth in this circular in these words:

And the writer thinks that after every antisaloon victory there should be an antialcohol campaign of voluntary persuasion.

It is manifest that temperance programs may be defined and redefined, may begin and end, but that the professional reformer, like the brook, goes on forever. We can not lose him.

The religious press of the country stand unitedly behind the Hobson resolution. It has not been an easy task for them. It has required great will power and much devilish ingenuity. They have chafed under the difficulties and embarrassments of their self-imposed necessities and limitations. Some days ago the daily press carried a story that the Senate Committee on the Judiciary had reported a substitute for the Hobson resolution, which is antialcohol as well as antisaloon. It brought happy relief to the pent-up convictions of many able and conscientious editorial writers. One of the strongest and bravest of them immediately wrote into his editorial columns his personal convictions on the temperance question. In his edition of January 4, 1917, under the caption, "No loopholes in prohibition," this editor published an editorial, both indorsing the Senate substitute and demolishing completely the Hobson resolution. I quote from it the more pertinent portion, to wit:

The only effective enforcement of prohibitory laws in any State has always been and always must be on the principle that drinkable liquors, wherever found, are in and of themselves contraband, and may be destroyed by officers of the law upon discovery without need of paltering over intricate doubts in law. And citizens who are determined to deliver this Nation from the handicap of the drinking habit can not be content to put in the hands of the Federal Government any less formidable weapons than have proved necessary in the dry States.

The friends of prohibition therefore should hasten to impress on Congress that they want the Senate form of amendment passed, not the House form. The latter is an inheritance from the sophomoric statesmanship of Richard P. Hobson, who unfortunately had the leadership of the temperance wing in the lower House of Congress when the question of national prohibition was up before. But Mr. Hobson has now gone his way to other occupations, and his overshrewd idea that nominal prohibition could be more easily secured if there was opened through it an obvious loophole for evasion, will hardly appeal longer to those who have seen thoroughgoing and decisive prohibition win its tremendous victories in the past autumn.

Even if a lax and apparent suppression of the liquor traffic business could be more quickly accomplished, discreet tactics would prefer to wait a little longer for really efficient results. And just now the temper of the country indicates that it will adopt the real thing sooner than a half-way measure. It is doubtless to Senator SHEPPARD, of Texas, the temperance leader of the Senate, that the better formula of the upper House is owing, and it will be no misplaced confidence which induces the prohibition forces of the country to trust in him as the wisest and broadest of their champions in Congress.

The language I have just quoted illustrates three facts well known to every man who has been long in public life:

First. That editors of the religious and moral uplift press of the country sometimes catch a true vision of the meaning and merits of pending legislation.

Second. That they have no power to discern the true inwardness of legislative activities in the Congress.

Third. That they are incapable of discovering the attitude of public men toward the fundamental principles involved in the legislative propositions they have in charge, however clearly they may state and restate their opinions and purposes. For that reason, they often do unconscious injustice to many public men.

It is probable that the injustice unwittingly done to a public man in the last sentence of the foregoing editorial was directly responsible for a news item published in the Indiana Daily Times, 11 days later, in its issue of January 15, 1917. It is unfortunate that a public man should be compelled to spend so much of his time issuing formal disclaimers and denials to correct inaccurate and misleading editorials in the religious press. The news item referred to is as follows:

SHEPPARD CLAIMS ENOUGH VOTES FOR HIS DRY MEASURE—WORDING OF RESOLUTION FOR CONGRESS TO CONSIDER CAUSING DELAY.

WASHINGTON, *January 15.*

After a careful canvass of the Senate, Senator SHEPPARD, of Texas, announced to-day the prohibitionists have sufficient strength to force consideration at any time of his resolution proposing a nation-wide prohibition amendment to the Constitution. This will be done at this session, he declared, just as soon as the prohibitionists agree on the language of the resolution. The Senate Judiciary Committee has reported the resolution with an amendment designed to make prohibition "air tight" throughout the country by prohibiting the sale, manufacture, and the importation of alcohol. Senator SHEPPARD says he believes the amendment is against the resolution's chance of passage, because it makes it too drastic for acceptance in some of the liberal parts of the country. He declares he will lead a fight to strike out the committee amendment and restore the original language, or its equivalent, to the measure.

In explaining his position on the prohibition question, Senator SHEPPARD says: "I am not a prohibitionist in a strict sense of the word. I am fighting the liquor traffic. I am against the saloon. I am not in any sense aiming to prevent the personal use of alcoholic beverages. I am opposed to the committee amendment which prevents the manufacture and importation of alcohol. I think it goes so far that it is doubtful whether the country would accept it. For instance, it would prevent a farmer from having a little hard cider. I don't think we care to go as far as that. That is too much of an invasion of personal liberty."

Senator SHEPPARD'S resolution requires a two-thirds vote in both Houses. Prohibitionists claim to have the necessary number and wet leaders admit they will come dangerously near it.

Lest anyone shall fear that the friends of alcohol are likely to suffer by being unequally yoked with unbelievers in the joint enterprise of securing the adoption of the Hobson resolution, I call attention to one outstanding, indisputable fact.

In the parlance of professional reformers, who believe that "prohibition" is simply "no license," territory in which there is no licensed saloon is called "dry." In that sense of the term more than 86 per cent of all the counties in the United States have been made "dry." Less than 14 per cent remain "wet." In the meantime there has been no substantial decrease in the production of alcoholic liquors in the United States, no appreciable decrease in its total consumption, and no calculable decrease in its per capita consumption. One who has studied arithmetic "as far as the rule of three" may easily calculate the full result of the complete success of this "antisaloon" program. The total final diminution of the production and consumption of alcohol that is to be is to the total diminution that already has been as 100 is to 86. Of a truth the cause of prohibition can not stand many such victories, but the champions of alcoholic personal liberty can survive an endless series of such defeats.

If the proponents and the pretended opponents of the Hobson resolution are out of harmony on any material question, I have not discovered that fact.

In the Sixty-third Congress they cooperated to procure a report of the Hobson resolution by the House Committee on the Judiciary, and also to procure a special rule from the House Committee on Rules for its consideration.

They all regard the temperance workers of the country as irrevocably committed to the Hobson resolution as the basis of its permanent plan of campaign, and would regard any change of the plan as a breach of good faith.

They all desire to destroy the licensed saloon, without destroying the right to manufacture, procure, possess, and use alcoholic liquors for beverage purposes.

They are all opposed to "sumptuary legislation."

They agreed that "prohibition means simply no license."

They agree that the legislative program of the temperance forces should be limited to "antisaloon" legislation, and should in no event include "antialcoholic" tendencies.

They all agree that, in the language of the National Temperance Council, "whether a man who, on his own motion, buys liquors at a distance shall drink them at his own home is left in the realm of moral suasion."

They agree that, after the "antisaloon" victory has been won, a new "antialcohol" crusade may safely be started, based exclusively on "voluntary persuasion."

They agree that the Government has no right to dictate to the citizen what he shall eat, drink, or wear.

They all dote upon the "sanctity of the home" and resent its invasion by prohibition or other excise laws.

They all agree that an antialcohol legislative program involves a violation of the sacred principle of personal liberty.

They all agree that a man has, in the language of Capt. Hobson, the "inherent right to drink, but not to sell, liquor."

They are all impatient to write into the fundamental law of the land the language of the Hobson resolution, which will, in the language I have quoted from the editorial of ex-Gov. and Presidential Nominee Hanly, "give recognition" to the principle of alcoholic "personal liberty" and "embed in the Constitution" of the United States a perpetual guaranty of the sacred, inherent, inestimable, inalienable, and inviolable right of the citizen to make, to procure, to possess, and to use intoxicating liquors for personal beverage purposes, as an expression of the genial spirit of genuine hospitality or as an aid to domestic conviviality.

The allied armies of the two belligerent powers lie over against each other in true modern fashion. Their first-line trenches are sinuous, but run in parallel lines, and so close together that the soldiers are able easily to swap tobacco and yarns across the neutral zone.

I marvel that these hostile armies have not before this time mutually wrested from each other the dual victory for which they jointly strive. Why not end the struggle by writing these seductive, deceptive, and disastrous political and moral heresies into the Federal Constitution by unanimous consent?

I know of but one body of men whose influence is effectively adverse. I have in mind that same comparatively small but entirely respectable group of total abstainers who still believe that it is the use, and not merely the licensed sale, of alcohol that is vicious. They are in fighting condition. They have enlisted during the war. They are encamped on a near-by hill equidistant from the contiguous and overlapping camps of the two belligerents, whence they may observe the mysterious movements of both.

Daily this small group draws forth upon itself the gunfire of both hostile camps. Indeed, this is the only genuine fire that issues from either trench. The members of this small group are content, however, to maintain their present position, to remain steadfast, unmoved, and immovable under constant fire. They accept their daily punishment as one of the fortunes of war and are inspired and sustained by an unfaltering faith that the time shall yet come when all men, ministers of the Gospel as well as laymen, will again "endure sound doctrine," when the temperance workers of the land will be ready to "see the obvious," when manifest and vital truth will get a hearing, and when untruth will be unhorsed and shorn of its present leadership and well-nigh irresistible power. As long as this their present courage shall abide with them, these men will continue to fight the good fight and to keep the faith.

Every Member of the Congress knows now that the Hobson resolution was designed and framed with scrupulous care for the purpose of preserving to the citizen the sacred and inalienable right to import liquors from beyond State lines for beverage use and for all purposes other than the maintenance of the licensed saloon; and yet every student of the temperance question knows that the prevention of interstate shipment is the first step toward effective temperance reform. The people of the ninth Indiana district knew that long before April 22, 1908, and have never wavered in their judgment and demands.

Four times I have been nominated and elected on a platform declaring for prohibition in the District of Columbia and for the exclusion of intoxicating alcoholic liquors from interstate and foreign commerce. On these propositions there has never been any division of sentiment among temperance workers. Indeed, the word "prohibition" includes both propositions. The man who does not favor both propositions may be a reformer of some character or in some degree, but it is certain that he does not stand for prohibition. A reformer who is willing to go no further than the distillers and brewers in a temperance legislative program is not a genuine, thoroughgoing prohibitionist. He may be of an uncertain degree of wetness, but he certainly is not "dry."

The Prohibition Party has always included in the prohibition it favored the exclusion of intoxicating beverages from interstate commerce; so has the Women's Christian Temperance Union.

Hon. Eugene W. Chafin, presidential nominee of the Prohibition Party in 1912, expressly so declared. In an editorial in the National Enquirer, official organ of the Prohibition Party, on December 28, 1916, Hon. J. Frank Hanly, editor of the National Enquirer, and last nominee of the Prohibition Party for President, declared in favor of barring alcoholic beverages from all shipments, State or interstate.

If any temperance organization has declared for prohibition in the District of Columbia or elsewhere and for the right of interstate shipment of alcoholic beverages, I have not learned of that fact.

On December 21, 1914, the Anti-Saloon League in a signed letter mailed to the Members of this House expressly pledged the "organized prohibition and temperance forces" of the country to support a bill to exclude from interstate commerce all shipments of intoxicating liquors for beverage purposes.

In May, 1916, the Methodist Episcopal Church, in general conference assembled, adopted a declaration in these words:

> We urge upon the Federal Congress the immediate passage of laws prohibiting all interstate commerce in intoxicating liquors and forbidding the use of the United States mails both to liquor shipments and to liquor advertisements.

The Amethyst is the official temperance organ of the General Assembly of the Presbyterian Church. In its issue of September, 1916, the attitude of that church on the temperance question was declared to be "antialcohol," and to call for "the absolute prohibition of the manufacture, importation, sale, and transportation of alcoholic beverages in all forms."

These two express declarations by religious bodies are typical of all declarations by churches and religious boards or official assemblies.

On July 9, 1915, the Antisaloon League of America was holding a national convention at Atlantic City, N. J. On that day the national board of trustees of the league unanimously adopted a declaration in these words:

> We believe that the Congress of the United States should bar all intoxicating beverages from interstate commerce.

On July 19, 1915, Rev. Edwin C. Dinwiddie, legislative superintendent of the Antisaloon League of America, expressly declared the attitude of the league in these words:

> Our organization is in favor of a law which will deny to intoxicating liquors the facilities of interstate commerce.

Section 1 of resolution 168 clearly expresses the views of no student of the temperance question, and yet, except as to

exportation of liquors, it has remained unchanged in all the subsequent forms of the resolution that have been introduced in the Senate and House of Representatives.

It was manifest that under resolution 168 no State officer or court would have jurisdiction to enforce liquor laws, nor would the legislatures of the States be able to enact legislation for the enforcement thereof. In order to appear to meet this objection, on June 9, 1914, Capt. Hobson introduced in the House, House joint resolution 277, being his ninth form of the Hobson resolution, in the following language (omitting formal parts), to wit:

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof, and exportation for sale thereof are forever prohibited.

SEC. 2. The Congress, or the States within their respective jurisdictions, shall have power to enforce this article by all needful legislation.

In this and subsequent forms of the resolution section 1 contains an unlimited and unqualified prohibition of the exportation of intoxicating liquors, being otherwise identical with resolution 168. Section 2 is amended to provide that the Congress, or the States within their respective jurisdictions, shall have power to enforce section 1 by all needful legislation.

This amendment was rejected by those who were unwilling to divest the States of their general police power over intoxicating liquors for the manifest reason that it was in the alternative and the slightest exercise of power by the Congress would preclude the exercise of any power by the States.

On December 22, 1914, the congressional lobby procured the adoption of a special rule by the House of Representatives for the consideration of House joint resolution 168. On that morning each Member of the House received in his morning mail official orders for the day, informing him that the vote was really to be taken on resolution 277. When the House had adopted the special rule it was rumored that the vote was not to be taken on resolution 168 nor on resolution 277, but on a new resolution, the provisions of which would not be disclosed until the general debate was closed. As a result, the day was used up in an oratorical contest and a contest in declamation. No Member who was intending to vote as directed by the congressional lobby could give reasons for the vote he was about to cast, because he had neither knowledge nor means of knowledge of its provisions. The rumor was true, and Capt. Hobson, after the close of the debate, disclosed and offered as an amendment the provisions that were actually voted upon.

Seven days later, on December 29, 1914, Capt. Hobson introduced House joint resolution 394, being the provision voted for in the House on December 22, 1914, as an amendment to resolution 277. House joint resolution 394 is in the following words:

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof, and exportation thereof, are forever prohibited.

SEC. 2. The Congress or the States shall have power independently or concurrently to enforce this article by all needful legislation.

It will be noted that section 1 remains unchanged, but that section 2 is amended in two particulars, the words "within their respective jurisdictions" are stricken out, after the word "States." The reason assigned by the proponents of the resolution for this change is more absurd, if possible, than is the resolution itself. It was feared that these words would restrict the legislature of each State to the control of distilleries, breweries, and intoxicating liquors within such State. That is clearly true. The lobby desired to hold out the hope that the legislature of any dry State was to be given power to control distilleries, breweries, and intoxicating liquors in all the wet States. As they expressed it, they desired to "enable the farmers of Kansas to make New York City dry." Under the present internal-revenue laws a Federal officer carries a key to every distillery and brewery. The lobby held out the hope that the purity squad of each State in the Union might also carry a key to each distillery and brewery wherever located in any State, in order to make certain that liquors were not being made to be sold to be used for beverage purposes. Of course, the suggestion was ridiculous and the omission of the words referred to did not tend to confer extra territorial jurisdiction on the legislature of any State.

The second amendment consisted of the insertion of the words "independently or concurrently," after the word "power." This was said to enable the Congress and the legislatures of the 48 States of the Union to concur in the enactment of needful legislation for the enforcement of section 1. When one remembers that the Senate and House of Representatives find great difficulty in enacting concurrent legislation, one realizes that agreement between the Congress and 48 State legislatures would not be a matter of one chance in forty-nine, but rather of no chance in a million.

But the amendment left unchanged the language which conferred legislative power upon the Congress and the several States in the alternative. The resolution—House joint resolution 394—still left the provision clear that any action by the Congress, weak or strong, effective or ineffective, based on section 2 would be exclusive of all State action on the subject matter and divest the States of all power. This construction of resolution 394 is now conceded to be correct, and the chairman of the House Committee on the Judiciary has vainly sought to avoid this objection by introducing the Hobson resolution in the Sixty-fourth Congress in a slightly amended form.

In the Sixty-fourth Congress, Senator SHEPPARD, of Texas, introduced the Hobson resolution as Senate joint resolution 55, the gentleman from North Carolina [Mr. WEBB] introduced it as House joint resolution 84, and the gentleman from Idaho [Mr. SMITH] introduced it as House joint resolution 85. Senate joint resolution 55 and House joint resolution 85 are identical with House joint resolution 394, as already set forth. House joint resolution 84 is in identical words with House joint resolution 394, except that in the first line of section 2, after the word "Congress," the word "or" is stricken out and the word "and" is inserted in lieu thereof. This simple amendment is said to confer upon the Congress and upon the legislatures of the several States the power concurrently or equally and independently to enforce the provisions of section 1 by all needful legislation.

If this article were to be construed alone this contention might be plausible, but the whole Constitution would still be construed together in ascertaining the meaning and legal effect of this new amendment. Thus construing the language, it can not be fairly said to vest in the Congress and the legislatures of the 48 States complete, equal, concurrent, and independent jurisdiction and powers.

This construction is negatived by the inherent and radical difference between the jurisdiction and powers that would even then be vested in the Federal Government and in the several States. Each State would still have its present general police power and under it could limit, control, or prohibit all manufacture, intrastate transportation, sale, gift, barter, possession, or use of intoxicating liquors. The Congress would have only the power conferred by the Hobson amendment, aside from its present plenary power over interstate and foreign commerce. The Congress has now full power to prohibit all interstate commerce in and all importation and exportation of intoxicating liquors. It is certain that the Hobson amendment would take away none of such power. The Congress has now in the several States no power over manufacture (except in the administration of the internal-revenue laws), sale, barter, gift, possession, or use of intoxicating liquors. The Hobson amendment purports to confer slightly more than 2 per cent of prohibitive power over a subject matter that is, so far as the power of the Congress is concerned, slightly less than 98 per cent legalized and immune from adverse legislative action.

It is contended that the Hobson amendment would give full, equal, concurrent, and independent jurisdiction to the Congress and to the legislatures of the several States, not only over manufacture and sale of intoxicating liquors, but also over interstate commerce therein and over importation and exportation thereof. Of course, if it confers equal, concurrent, and independent jurisdiction and power on the Congress and the legislatures of the States over any part of the subject matter of the amendment it does over all; but it is inconceivable that it is intended to confer such equal, concurrent, and independent jurisdiction and power over manufacture, transportation, importation, or exportation. It is inherently impossible for such power to be exercised if one could conceive of it as being undeniably vested.

It is thoughtlessly asserted by the proponents of the Hobson resolution that the Congress and the legislatures of the several States are now vested with much identical power, which they daily exercise concurrently, equally, and independently, without any conflict. The cases they cite do not tend to sustain their contention.

They cite the fact that a bootlegger commits an offense against both a State and a Federal statute and is punishable under each independently. That is true, but the Congress and the State legislature are not vested with and do not exercise power over the same subject matter. The Congress penalizes him for selling without paying a Federal special tax. The State penalizes him for violation of a statute enacted in the exercise of the general police power of the State.

They say that one who violently resists a United States marshal is subject to double prosecution. He is, but not in the exercise of identical jurisdiction by the Congress and the State.

The Federal statute penalizes him for assailing the rightful sovereignty of the Federal Government as represented by its proper officer. The State punished him for a breach of the peace. A counterfeiter of money may be prosecuted independently under a Federal and under a State statute, but the Congress and the State legislature do not exercise an identical jurisdiction. The Federal statute punishes him for desecrating a coin of the United States. The State punishes him for a fraud upon her people.

The courts have made it clear that the powers which the Federal Government has, the State has not, and the powers which the State has, the Federal Government has not. In the case of the United States *v.* Cruikshank et al. (92 U. S., 542, 550, and 551) Chief Justice Waite wrote the opinion of the court. He cited the cases of the man resisting a United States marshal and of the counterfeiter as cases in which the same act might be a violation of both a Federal and a State law, but denies the possession of identical jurisdiction and power by State and Federal Governments. He said in part:

> The government thus established and defined is to some extent a government of the States in their political capacity. It is also, for certain purposes, a government of the people. Its powers are limited in number, but not in degree. Within the scope of its powers, as enumerated and defined, it is supreme and above the States; but beyond, it has no existence (p. 550).
>
> The people of the United States resident within any State are subject to two governments—one State, and the other National—but there is no conflict between the two. *The powers which one possesses, the other does not* (p. 550).

If the contention that the Congress and the legislatures of the several States are thus vested with concurrent and independent jurisdiction and powers fails at any point, it fails at all points. That a power is incapable of concurrent or independent exercise by the Federal Government and the several States is a strong argument against a construction that declares such power to be vested in both Governments. In the case of Rhodes *v.* Iowa (170 U. S., 412, 422) the opinion of the court was written by Chief Justice White. It was contended that the State had the power to prohibit the interstate shipment of intoxicating liquors into the State. The court held that the State has no such power. That case was decided before the passage of the Webb-Kenyon law, but the latter act does not affect the principle involved, since under it the Federal statute and not the State statute makes importation into a State in certain cases unlawful. The court, in illustrating the impossibility of the exercise of such power by a State over interstate commerce, used these words:

> If the construction claimed be upheld, it would be in the power of each State to compel every interstate-commerce train to stop before crossing its borders and discharge its freight, lest by crossing the line it might carry within the State merchandise of the character named covered by the inhibitions of a State statute.

This illustration applies as well to the concurrent or independent control by 48 States and the Federal Government over importation or exportation. It is inconceivable that the legal effect of the Hobson resolution would be to vest in the Federal Government and in the several States equal, concurrent, and independent jurisdiction over manufacture, sale, transportation, importation, and exportation of intoxicating liquors. Such power would be at utter variance with the principles of our present dual form of government and would be inherently and inescapably incapable of concurrent or independent exercise by the Federal and State Governments.

What new power does the Hobson resolution purport to give to the Federal Government? It now has plenary power over interstate transportation, importation, and exportation and can be given no new power over these subjects. It has no power over manufacture, intrastate transportation, sale, gift, barter, possession or use of intoxicating liquors. The Hobson resolution purports to give to the Federal Government control over sale, manufacture for sale, and intrastate transportation for sale of intoxicating liquors to be used for beverage purposes. As already shown, this is a 2 per cent prohibitive power over a business 98 per cent legalized beyond the power of the Congress.

What new power does the Hobson resolution purport to give to the States? Each State has now plenary power over manufacture, intrastate transportation, sale, gift, barter, possession, and use of intoxicating liquors. The Hobson resolution purports to give to the State a 2 per cent prohibitive power over interstate commerce and importation, and full concurrent and independent control over all exportation. State control of exportation may be dismissed as a legislative joke. The State does not need the 2 per cent control over interstate shipment. Under the Webb-Kenyon law and the Reed amendment, a State may have the full present benefit of complete protection against interstate shipment by exercising its own undisputed power over manufacture, sale, possession, and use of intoxicating liquors within its own borders. Clearly, the Hobson resolution can promise no benefit to anyone other than the hoped-for prolongation of the business of the distillers and brewers who prefer a proposition that is 2 per cent prohibitive and 98 per cent permissive to the bone-dry laws that the States are now passing and the Congress has made incapable of evasion.

The Hobson resolution is permissive in so large degree and prohibitive in so small degree that no Government can effectively administer its prohibitive element without establishing and exercising complete control over all intoxicating liquors for all purposes all the time. To assert that the Federal Government and the 48 State governments can establish and maintain such control concurrently is idle; to assert that they can establish and maintain such control independently and simultaneously is absurd. The Federal Government must retain exclusive control of importation, exportation, and interstate shipment. If the States are to exercise any control over manufacture, sale, intrastate shipment, gift, barter, possession, and use of intoxicating liquors, the control by each State must be complete, unlimited, and exclusive within its own borders. The proponents of the Hobson resolution admit this necessity inherent in the nature of the case, but assert that the Hobson resolution by necessary implication gives to the Federal Government the power its language expressly withholds, to wit, complete and exclusive control of all intoxicating liquors for all purposes all the time. If that be true, House joint resolution 84 is identical in legal effect with House joint resolution 168, and the change in phraseology is effective only to procure by deception the votes of those who desire to retain in the several States their full present police powers.

On December 17, 1914, I introduced House joint resolution 389. It is a proposed amendment to the Constitution of the United States and is intended to exclude all liquors from interstate commerce, compelling each State to bear full responsibility for all liquors made or used within its borders. It is in these words:

> SECTION 1. The importation of any spirituous, vinous, malted, fermented, or other intoxicating liquors into any State of the United States, or into the District of Columbia, or into the Territory of Alaska, from any other State, District, Territory, country, place, or region, domestic or foreign, is forever prohibited.
>
> SEC. 2. It shall be the duty of the Congress from time to time to enact appropriate legislation for the effective enforcement of the provisions of this article.

On December 22, 1914, when the Hobson resolution was under consideration in the House, I offered resolution 389 as a substitute for the Hobson resolution. Forty-one of us voted for the substitute. A majority of the Members believed in the substitute, but only a small minority were willing to brave the wrath of the congressional lobby, whose leaders sat in the galleries of the House directing its every movement and cracking their whips over the Members of the House like the ringmasters of a two-ring circus.

On the first day of the Sixty-fourth Congress, December 6, 1915, I introduced House joint resolution 20, in the identical language of House joint resolution 389. On the same day I introduced H. R. 394, which is a proposed statute involving the same principle on which House joint resolution 20 is based. It is as follows:

> A bill to prohibit the importation of intoxicating liquors into any State of the United States, or into the District of Columbia, or into the Territory of Alaska.
>
> *Be it enacted, etc.*, That the importation of any spirituous, vinous, malted, fermented, or other intoxicating liquors into any State of the United States, or into the District of Columbia, or into the Territory of Alaska from any other State, District, Territory, country, place, or region, domestic or foreign, is hereby prohibited.
>
> SEC. 2. That if any such intoxicating liquors shall at any time be imported into any State of the United States, or into the District of Columbia, or into the Territory of Alaska from any other State, District, Territory, country, place, or region, domestic or foreign, all right, title, interest, or claim of the importer thereof shall then and there and thereby become at once forfeited, shall wholly terminate, and be null and void as against the importer thereof and as against all persons claiming of, by, from, through, or under such importer, directly or indirectly, immediately or remotely.
>
> SEC. 3. That the word "importer" as used in this act shall be construed and deemed to include all persons who shall so import intoxicating liquors into any State of the United States, or into the District of Columbia, or into the Territory of Alaska, or cause the same to be so imported, or shall aid in the importation thereof, or shall abet any person or persons in the importation thereof.
>
> SEC. 4. That the word "person" as used in this act shall be construed and deemed to include individuals, firms, copartnerships, joint-stock companies, corporations, and all other persons, natural or artificial.

The House committees did not report out either the resolution or the bill, and no action was taken thereon. The congressional lobby was hostile to them both.

On December 22, 1916, I introduced House joint resolution 327, in the following language:

> SECTION 1. That the manufacture, transportation, importation, sale, barter, exchange, gift, or other disposition of intoxicating liquors for beverage purposes in the United States and all territory subject to the jurisdiction thereof, and the exportation thereof, are forever prohibited.

SEC. 2. That the several States within their respective jurisdictions shall have power to enact all needful legislation for the enforcement of so much of section 1 hereof as relates to the manufacture, intrastate transportation, sale, barter, exchange, gift, or other disposition of intoxicating liquors; and it shall be the duty of the Congress to enact all needful legislation for the enforcement of all other provisions of said section 1.

SEC. 3. That this article shall not be deemed or construed to affect any power now vested in the several States in relation to intoxicating liquors for other than beverage purposes.

This resolution is limited to liquors for beverage purposes, but embraces the entire subject matter. House joint resolution 20 is limited to the prohibition of interstate shipment, but applies to all intoxicating liquors for all purposes. House joint resolution 20 is my first choice. If, however, it shall be finally decided to limit the amendment to the Federal Constitution to liquors for beverage purposes, House joint resolution 327 is the most desirable form. It covers the entire subject matter but avoids all conflicts between Federal and State jurisdictions and powers.

I trust that the Sixty-fifth Congress will make a wise choice of such resolution as it may submit to the States for ratification. My term of service is now ended and I have done my duty as I have seen it after diligent and persistent investigation and consideration. The Sixty-fourth Congress has done much for the cause of temperance. I fully expect the Sixty-fifth Congress to complete the entire legislative reform.

A review of recent legislative history and of the laws now in force makes the Hobson resolution read like a shrewd device of the distillers and brewers, and makes the latest literature issued by the professional reformers stationed here in Washington look like a brief prepared by capable and resourceful lawyers to safeguard the interests of the liquor league.

If it be true, as I have reason to hope, that the Methodist Board has learned the truth as to the attitude of the professional reformers toward genuine temperance legislation, and is almost ready to reveal the truth to the church at large, the beginning of the end is at hand. The great Methodist Church once undeceived will undeceive the other churches. The churches will lift the terrific pressure they have brought to bear upon the Congress in behalf of the Hobson resolution, which they will then know to be a cheat and a trick, a sham and a fraud. That will enable Senators and Representatives to think in a straight line and to enact into law their own deliberate judgment and enlightened conscience. In such circumstances the Sixty-fifth Congress may be safely trusted to find the true and final solution of the liquor problem so far as the Federal Government is concerned.

The Widow of Gen. Funston—The Proposed Pension a Deserved Tribute to the Memory of a Man to Whom America Owes Much.

EXTENSION OF REMARKS
OF
HON. GUY T. HELVERING,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

On the bill (S. 8316) granting a pension to Edith Blankart Funston, widow of the late Maj. Gen. Frederick Funston.

Mr. HELVERING. Mr. Speaker, the bill for which I asked consideration during the closing hours of the session is one which proposes to pay to Edith Blankart Funston, widow of the late Gen. Funston, $100 per month in lieu of the pension to which she is entitled by law.

It is almost needless for me to refer to the debt which this country of ours owes to Gen. Funston. Both in public and private life he served it well, and when he passed away it was at a time when he was concluding a work which reflected the greatest possible credit upon him as soldier, man, and patriot.

Reference has heretofore been made to the injustice done to Gen. Funston in the delay of his deserved promotion. It is to his credit that no word of complaint was ever heard from him and no criticism was ever offered with his consent. He continued to work faithfully in that sphere of usefulness which he loved best, and when his opportunity came at Vera Cruz he gave to the country a conception of his real worth. He had won national fame in the Philippines, had demonstrated in those fateful days in San Francisco his ability to master a most difficult situation without delay and with clarity of judgment, but it was at Vera Cruz that he first demonstrated to us that here was our ideal of the American soldier—the man in command who knew how to uphold American rights and American ideals without the needless shedding of blood.

In recognition of the splendid services rendered at Vera Cruz, the President selected this faithful soldier to take supreme command of our Army operations along the border, and in the trying days of the last six months he has given to us further proof of his ability to rise to every emergency and to guide his movements with a brain which has been responsible for no mistakes in these days, as far as our knowledge goes.

But to-day the Nation can not make its appreciation known to the hero who sleeps on the western shore. But that appreciation is none the less due from us, and to-day we have an opportunity to demonstrate it, in a minor degree at least, by voting for an increase of pension for the sorrowing loved one of our departed soldier. Nothing that is within our power to do can remedy her loss, but it is within our power, and in my opinion it should be our duty, to do what we can to provide for the widow and the children of this man who so faithfully served his country and who died while engaged in that work. The amount carried in the bill is modest, but it has to be in order to be in line with precedent, but the amount will not be so much valued by the loved ones of Gen. Funston as will the knowledge that the Congress of the Nation can pause long enough in these stirring and anxious days to show its appreciation of the one they so well loved.

Omnibus Public-Buildings Bill.

SPEECH
OF
HON. MICHAEL K. REILLY,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 17, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 18994) to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of certain public buildings, etc.

Mr. REILLY. Mr. Chairman, I voted against the rule that made the pending bill in order and I intend to vote against the bill on its final passage.

My opposition to the pending measure is not the result of a conviction on my part that it is a pork-barrel proposition, neither am I opposing it because the committee having in charge the framing of the bill has not treated my district fairly. I have no complaint to make against the treatment that my district has received at the hands of the committee that framed the said bill.

I am opposed to the passage of an omnibus public-buildings bill at the present session of Congress because of the large deficit that the United States Treasury is confronted with to-day.

Mr. Chairman, I can not see my way clear to support a public-buildings bill carrying appropriations of more than $30,000,000 at a time when the Ways and Means Committee of this House is racking its brains to find articles upon which to levy taxes, in order to provide the necessary revenue to finance our preparedness program.

Notwithstanding the fact that last session of Congress the income-tax rates were increased and an inheritance tax provided, the Treasury deficit is increasing as the result of the enormous and extraordinary appropriations made and to be made during the Sixty-fourth Congress for the national defense.

Two years ago the Navy and Army appropriation bills carried about $250,000,000; the first session of the Sixty-fourth Congress provided almost $600,000,000 for Army and Navy, and it is a safe prediction that the present session will provide more than $700,000,000 for the same purpose, a sum larger than the total expenditures of the Government in all its fields of activity a quarter of a century ago.

I am not opposed to the policy of erecting public buildings in the various cities and towns of the country where postal receipts are large enough to warrant such an investment by the Government, but I am opposed to the policy of the present bill and of the precedng post-office bills passed by Congress which provide for the erection of costly public buildings in villages of a few hundred inhabitants of meager postal receipts, where the postal facilities are well taken care of at the present time in rented buildings.

There are many villages and cities that have been given public buildings in the past and are slated for public buildings in this bill that are not entitled to Government buildings, and the

erection of every such building means large additional expenditures on the part of the Government wholly unjustified, especially at this time, in view of the present financial condition of the Treasury.

The bill under consideration carries two projects from my district—post-office sites for the cities of Two Rivers and Menasha. I might say in passing that both of these cities have postal receipts far in excess of the majority of the villages and cities provided for in the pending measure.

In answering the gentleman from Pennsylvania [Mr. MOORE] I desire to state that I will not feel obligated when this bill is read under the five-minute rule to rise in my place on this floor and ask to have the two items that concern my district stricken from the bill.

In the first session of the Sixty-second Congress I introduced a bill for a public building at Two Rivers, Wis., and in the first session of the Sixty-fourth Congress I introduced a like bill for a public building at Menasha, Wis. These two bills were introduced before the preparedness propaganda was inaugurated and before any large expenditures for the national defense were made and at a time when the United States Treasury knew nothing of a deficit. Both of these cities are entitled to public buildings from the standpoint of postal receipts and also from the standpoint of present postal facilities were the financial condition of the Government at the present time such as to permit of increased expenditures for the erection of public buildings.

I am not opposed to the policy of constructing public buildings in cities having postal receipts sufficient to warrant such expenditures on the part of the National Government, as are the receipts of the two cities in my district that have items in this bill. My opposition is to the idea of passing a public-buildings bill at this session of Congress, because the appropriations for the national defense have exhausted and more than exhausted the revenues of the Government. However, if it should be declared to be the policy of this House that a public-buildings bill shall be passed at this session, regardless of the condition of the Treasury, then I assume that the claims of the two cities in my district for sites for public buildings will receive the same consideration at the hands of this committee that the claims of every other village and city mentioned in the bill will receive. The citizens of Menasha and Two Rivers do not ask any special favors at the hands of this committee, all that they ask is that if it is to be the policy of this Congress to pass a public-buildings bill at this time, their claims be given due consideration by the committee.

If such is not to be the course of procedure, then this measure could well be denominated a pork proposition, because each Congressman would have been offered two sites or a building and site as a bribe to support the bill. A refusal to support the bill would mean no consideration for any public-building proposition in the Congressman's district, without regard to the merits of the proposition. I do not believe that the committee having in charge this bill will adopt any such rule, and I am satisfied that this House would strongly disapprove of such a line of action.

About a year ago the citizens of Ripon, Wis., a city that I am proud to say is located within my district, startled the country by petitioning Congress to divert funds appropriated for a public building in that city to the more urgent needs of the national defense. This commendable action upon the part of the citizens of Ripon was not due to a belief on their part that their city was not entitled to a public building, but because of a desire to make a sacrifice by deferring to some future time the adornment of their city with a public building, in order that the Government might have the use of such funds for the more pressing needs of the national defense.

Such action on the part of the citizens of Ripon, Wis., was most commendable and worthy of emulation by other communities throughout the country that are to-day clamoring for public buildings regardless of the condition of the National Treasury.

I am pleased to state that it is my judgment that the citizens of Two Rivers and Menasha are equally patriotic with the citizens of Ripon, and I make this statement because since the enactment of legislation providing for increased expenditures for the national defense there has been practically no insistence by the citizens of these two cities for the passage of their public-buildings bills, and I believe I will voice the sentiment of the patriotic citizens of Two Rivers and Menasha when I cast my vote against the pending measure. The citizens of these two cities are just as patriotic as the citizens of Ripon, Wis., and they are perfectly willing to await a more favorable condition of the Public Treasury before asking and urging Congress to provide their cities with public buildings.

Suggestions for Boll Weevil Districts.

EXTENSION OF REMARKS
OF
HON. WILLIAM B. OLIVER,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a letter, which I am writing to the probate judges throughout my district, conveying information which I trust may be of real service to the farmers of the district.

The ravages of the boll weevil make it absolutely necessary that the acreage heretofore devoted to cotton be largely reduced, and food crops substituted therefor which promise the surest and most profitable returns.

The letter follows herewith:

MY DEAR JUDGE: The destructive influence of weevil infestation and the heavy additional losses sustained by our farmers from the floods of last summer make the existing situation in our district a most serious one. It strongly calls for hearty cooperation by everyone to the end that all possible aid and encouragement may be extended our farmers in the solution of the grave problems now confronting them.

I have been impressed with the splendid educational campaign carried on throughout the district by some of our practical farmers and business men, and in which special emphasis has been laid on the planting of peanuts, soy and velvet beans.

The value of these crops has been fully demonstrated in other sections, including many counties in our own State, and the Agricultural Department is prepared to furnish for free distribution informing bulletins on these subjects. These bulletins are now being sent out by me to all farmers who have expressed in any way an interest in receiving them. In the next few days a liberal supply will be sent you, with the request that you distribute the same from your office.

The local farm demonstration agents will be specially instructed by the Agricultural Department to keep in close touch with the farmers in their territory, so that they may give information on these and other crops. Additional experts will be detailed for such purpose if needed.

A very high market throughout the year is certainly assured for all products of the farm, and the outlook for the present year is promising, if our farmers can only arrange for properly financing their business at this time. In this connection, it is gratifying to note that in many counties the oil mills, banks, and merchants are selling seed to the farmers at cost on time.

The attached letters on the growing of the peanut, soy and velvet beans will prove, I hope, informing and helpful to our farmers. A liberal supply of these will be sent you, and I will greatly appreciate your handing them to callers at your office who may be interested.

Those who contemplate planting soy or velvet beans are urged to send at once their names to the county farm demonstrator, giving the amount of seed they expect to plant, so that I can secure for them the necessary inoculating material. The Agricultural Department has promised me to supply the same in reasonable quantities to individual planters.

Please give publicity to this letter and kindly inform me of any suggestions that may occur to you looking to any further service on my part.

Yours, sincerely, W. B. OLIVER.

(Anyone desiring bulletins will please write me or apply to the probate judge of his county for the same.)

Below is an interesting letter on soy and velvet beans from Mr. Glenn Foster, a successful planter and cattle raiser at Tuscaloosa, Ala.:

JANUARY 16, 1917.

Hon. W. B. OLIVER, M. C.,
Washington, D. C.

DEAR SIR: I am in receipt of your letter to-day in which you ask for our experience with the 15 acres of velvet beans and also our opinion on a soy-bean crop.

We planted 15 acres in corn and velvet beans, planting two rows of corn 4½ feet apart and one row of velvet beans. In July, if you remember, there was an excessive rainfall. This damaged the corn crop very materially, about one-third of it being blown down. From this field we gathered 350 bushels of corn, leaving fully one-third of it in the field. We picked out at least 1 ton of the velvet beans for seed.

On October 1 we turned in on this plot 137 head of pigs and shoats and 11 calves or yearlings. The shoats then averaged about 75 pounds. On December 22 we sold 60 head of them, then averaging 156½ pounds. Beginning the 1st of December we fed a ration of 2 pounds of corn and 1½ pounds of cottonseed meal daily to these hogs.

After shipping the 60 head of hogs there were enough of the beans left in the field to carry the balance of the young pigs and sows until planting time, but we turned in 31 head of cows and 6 calves, which have been kept in good condition since with just a little soy-bean hay fed to them at night.

I consider the nitrogen and humus added to the soil by the velvet bean equal to a fertilizer value of $10 per acre.

About June 15 we planted some 7 acres in mamouth yellow soy beans, following our oat crop. I consider this hay much more valuable than the pea-vine hay, for which this stock can be carried through the winter in a good condition without any other feed, and as a fertilizer it exceeds the velvet beans and cowpeas.

These soy beans were inoculated by a culture furnished us by the Government through Mr. R. C. Lett, farm demonstrator. I believe that when the soy bean is first planted that it should be inoculated, and considering the fact that this does cost $1 per acre, it is money

well spent. I intend to follow our oat crop this year with the soy beans, and believe that with a good stand it should produce 3 tons of hay per acre.

I would advise all Southern farmers to plant at least a part of their hay crop in soy beans, as it is a money-making crop as well as a fine soil builder.

I hope that these few points will be instructive to you on these legumes.

With best regards, I remain,

Yours, very truly,

GLENN FOSTER.

Mr. John A. Rogers, a successful farmer of my district, has devoted much time to the study of the peanut crop, and below will be found an instructive letter from him, together with other letters, which he has supplied me, from farmers and business men of Enterprise, Ala.

PEANUTS AND PROSPERITY.

GAINESVILLE, ALA., *December, 1916.*

MY DEAR FRIEND: The year just passing has been the hardest year on farmers in the history of Alabama. Many of us had our crops swept away by floods in the rivers. The crops on the uplands were almost a total failure. If we are discouraged, we have lost enough to take the heart out of us, and if we still have hope, we should give thanks to the great and good God for our unconquerable souls.

I believe, as firmly as I trust in His mercies, that the future holds greater happiness and more prosperity for us than we have ever enjoyed.

Heretofore we depended upon cotton for all our money, money for food and clothing, mules, corn, and meat. The boll-weevil has destroyed this dependence, but the demand for food caused by the great war enables us to substitute a crop surer than cotton even before the advent of the weevil, and more profitable than cotton ever was.

The peanut as a money-maker has all other crops badly distanced. Under the old way of handling peanuts more care and pains were required than we were accustomed to as farmers, but under the present system, where they can be loaded in bulk and unsacked in car lots at our nearest railroad station and sold like cotton seed, nothing that we have ever planted will pay us half as well.

I have made a thorough investigation of peanuts and I see farms on lands like ours, without fertilizer, averaging 70 bushels of peanuts to the acre.

I find that after the peanuts are planted one man and a pair of mules with a cultivator can easily work 50 acres in peanuts; that this is being done right here in Alabama within 100 miles of us; we have the same soil, the same climate, and we are the same people; why can't we do it? We can. I am so helped up over the prospect that I am going to have planted 2,000 acres. Well, you may say, I can't do like Rogers. Then plant 100 or 50 or 5 acres. You will make just as much in proportion. You say, I haven't any goobers to plant. Have you any cotton seed? They are just as high as peanuts. You say, I can't get any peanuts to plant. You can. Go to those in your neighborhood who know you and tell them that you want to plant 5, 10, or 20 acres in peanuts. Say to them, I've been here all the time and propose to stay. You can get help.

We have now the chance of our lives to make a killing. Any man who plants 200 acres in peanuts, and sells 100 acres on a contract that will net him the other hundred acres clear, is almost sure to clean up $5,000.

Look into this thing. Go over to Pike County where they are making peanuts and come back converted.

Wishing for you and yours every good thing in this good world,

I am, your friend,

JNO. A. ROGERS.

—

ENTERPRISE, ALA., *December 2, 1916.*

DEAR SIR: Your inquiry relative to my peanut farming received.

Replying, wish to say that I only had 8 acres solid to peanuts, which were planted in the runner variety.

I planted about the 15th of April after the land had been flat broke in January. I laid off the land with a middle buster and went on the bed between the furrows and the peanuts from 12 to 14 inches in the drill. I harrowed these peanuts twice and then barred them off with a common turnplow. Sided them up with a small scrape and scooter, and after about two weeks swept the middles up with a large scrape and that laid them by.

This 8 acres yielded me 62½ bushels to the acre, and I marketed them for from $70 to $76 a ton. I also got about 6 tons of hay off the 8 acres of land.

I intend planting a larger acreage in peanuts next year.

Yours, truly,

CHARLIE DOZIER.

—

ENTERPRISE, ALA., *December 6, 1916.*

DEAR SIR: Answering your inquiry of this date, I wish to say that I think the peanut is a good money crop for the farmers to plant in sections where the soil is of a sandy loam type.

Our farmers who planted peanuts this year have been uniformly successful and have made money. We believe that it would be a good idea for any section infested with boll weevils to plant a considerable acreage in peanuts, and would unhesitatingly recommend the running variety.

Yours, truly,

J. L. WARREN,
Cashier First National Bank of Enterprise.

—

ENTERPRISE, ALA., *December 2, 1916.*

DEAR SIR: Answering your inquiry in regard to my peanut crop for this year, will say that about the 15th of April I planted 19 acres in the runner variety of peanuts, and did not fertilize them at all.

The yield of peanuts and hay from the 19 acres was 906 bushels and 8 pounds of peanuts and 502 bales of hay.

I broke my land flat and laid it off with a middle buster and opened the bed between with a Cole dropper; ran a spring-tooth harrow over them twice, and one furrow with a scrape. With three days hoeing with two hands laid them by.

Trusting that this will be of some service to you and to those it may concern, I am,

Yours, truly,

J. M. JOHNSON.

CLINTONVILLE, ALA., *December 12, 1916.*

DEAR SIR: Your inquiry as to results obtained on my farms this year planting peanuts received. Replying, wish to say that they have been very satisfactory, and I expect to plant an even larger acreage next year.

One thing that I think should be emphasized in connection with advice as to cultivation and varieties of peanuts is this: No one should make the mistake of planting the Spanish peanuts. It takes a good farmer to grow Spanish peanuts, whereas an ordinary farm hand can cultivate the runner peanuts just as successfully as he can cotton.

Trusting that this will be of some service, I am,

Yours, truly,

J. J. DUNNAVANT.

—

ENTERPRISE, ALA., *November 27, 1916.*

DEAR SIR: Answering your inquiry of recent date relative to the peanut industry in this section, wish to say that we consider that peanuts have saved the day, as it were, in this section, since, under the most favorable weather conditions, we can not hope to grow more than half a crop of cotton under boll-weevil conditions. The farmers in this section planted mostly the running varieties of peanuts, and although the White Spanish will bring a little better price on the market, the difference in yield, however, will more than offset this difference in price. As advancing merchants, we had rather advance money and merchandise to a man to grow peanuts than cotton under weevil conditions.

Yours, very truly,

A. R. MOSLEY,
Secretary and Treasurer Mosley-Hutchinson Mercantile Co.

Mr. Killebrew, of Newton, Ala., makes the following suggestions for planting peanuts:

First. Break the land flat with a two-horse plow.

Second. Lay off the rows when time to plant in April with 5-inch straight shovel, 18 to 24 inches apart, marking the next row with a marker so as to get rows equal distance apart.

Third. Drop the peanuts with a dropper (either in hull or shelled) 4 to 6 inches apart in the rows.

Fourth. Cultivate as soon as grass begins to come up with harrow, preferably with peg tooth, commonly called "Little Joe." Harrow on the bed, not on the rows. Some have a habit of taking out the middle tooth and then put the mule row and cultivate. This is not best.

Fifth. Plow with a small scooter and small scrape, one furrow to the row.

Sixth. Last plow with small shovel and large scrape, one furrow to the row.

Hoeing does not pay; will make more peanuts not to hoe them at all. All the work that is required to make the Spanish in this section is three furrows to the row.

Peanuts planted as directed on light sandy land in this section, without fertilizer, produce from 35 to 75 bushels to acre.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. ELIJAH C. HUTCHINSON,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. HUTCHINSON. Mr. Speaker, In voting for the measure to-day, giving our President authority to take whatever action necessary for the protection of the lives of American citizens when in lawful pursuits, and our ships when sailing the high seas in accordance with international laws, I believe that my action will receive the approval of the people I represent.

I come from the fourth district of New Jersey, part of which was the landing place of Washington and his faithful army when they crossed the Delaware River on that memorable December night. The spirit that prompted those Continental soldiers to make such sacrifices and be willing to give up their lives that the independence of the country might be established still prevails on and about those famous battle grounds of Princeton and Trenton.

Those patriots did not war for selfish motives, but they entered that great conflict realizing what suffering and hardships they would have to endure so that future generations would have a country, offering to any man the right to worship according to the dictates of his own conscience, and a freedom from bondage the world had long sought.

In a cause of that kind they were certain of victory, and with that victory there came into being a Republic that has never ceased to protect the lives and property of its citizens wherever travel found them.

The path of our country has not always been smooth, but when trouble arose we were always fortunate in having in control of the affairs of state men capable of leading us through the storm to safety.

The European war that has been raging for more than two years has brought about many changes, and to-day we find ourselves facing a new crisis. One of those nations engaged in that war has served notice to the world, forbidding neutral shipping to enter certain zones under penalty of seizure or destruction.

This is in direct violation of international law, and as a result our citizens hesitate to travel or send their ships and merchandise through the restricted zone without some assurance of protection from this Government.

It is for the protection of those lives and this property that our President asks authority to use necessary measures that the world might know that America stands ready to guarantee to her citizens the right of protection, whatever the cost may be.

I stand for the settling of our differences direct with the nation that has made this action necessary, and am opposed to an alliance with any nation or nations to accomplish this purpose.

America must be big enough to protect her own interest, and while I am willing to do everything in my power to prevent war, yet our national honor must be preserved, no matter how great the sacrifice.

Hon. Alfred G. Allen.

EXTENSION OF REMARKS
OF
HON. CLAUDE KITCHIN,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. KITCHIN. Mr. Speaker, although the time is most limited when the House must by the mandate of the Constitution adjourn, I can not refrain from putting into the RECORD the estimate of Hon. ALFRED G. ALLEN contained in a telegram received from Mr. Joseph A. Clark, secretary of the Democratic executive committee of Hamilton County, Ohio. It fully comports with the estimate of the wisdom, ability, patriotism, and character of our distinguished colleague formed by me and by the entire membership of this House, irrespective of party:

To-day we lose our most able Representative. Six years ago we confided in him. He has represented us ably and honorably. No cause for regret, but much to be proud of. He has been a credit to his district and his party in our Nation's most trying time. He has been calm and clear, and as a true American he has stood behind Woodrow Wilson, the greatest and noblest figure that has ever stood in the forefront of our Nation's life. To-day America needs big men like ALLEN. It is to be hoped that his voluntary retirement will be temporary.

Relating to the Tampico Expedition and the Charleston, S. C., Dry Dock.

EXTENSION OF REMARKS
OF
HON. LEMUEL P. PADGETT,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. PADGETT. Mr. Speaker, I avail myself of the privilege to extend my remarks in the RECORD, not for the purpose of making a speech, but for the purpose of placing in the RECORD an interview with Admiral Mayo relative to the discussions in the press relative to Tampico.

This interview is from one who knows whereof he speaks; who was present, participating, and it is proper the people should have the benefit of his statements.

Many erroneous statements have been made and false impressions created. Much unjust criticism has been indulged in, and it seems to me simple justice demands that the public should have the benefit of the information contained in his statement. And I make it a part of my remarks.

"TAMPICO INCIDENT."

[By George Creel.]

Out of the so-called "Tampico incident" have come charges that shame the United States before the world. The Nation stands accused of cowardice and desertion; a Secretary of the Navy with bungling, treachery, and gross deceit.

Admiral H. T. Mayo was in command of the American naval forces at Tampico. The entire "incident" centered around him. He is, therefore, the one man able to speak with authority and to pass accurately upon the truth or the falsity of the charges. Listen to his testimony:

"It is misrepresentation to say that American citizens in Tampico were deserted in an hour of imminent danger.

"It is distorting facts to say that Americans, robbed of the protection of their own flag, were forced to seek refuge under the colors of a foreign power.

"It is not true that the Tampico affair was marked by gross bungling. The fact that close to 3,000 Americans were taken out of the city, without loss of life or destruction of property, is a result that ought to speak for itself.

"I have no interest in parties or political controversies, but I have a very deep interest in the honor of the United States, the pride of the American Navy. It is this honor and this pride that I am glad to defend against aspersion and misrepresentation."

The interview, held on the deck of the *Yankton* in Hampton Roads, is the first word from Admiral Mayo. His lips have been locked in obedience to the immemorial law of the Navy that officers may not speak or write publicly without permission. This permission was given to him by Secretary Daniels as the result of a widespread insistence that the "one man who knew" should be allowed to give all the facts in the case.

The letter from the Secretary to Admiral Mayo was not an order, however. It contained the simple statement that the people were entitled to the truth about Tampico, and that Admiral Mayo, unless disinclined, should feel at perfect liberty to tell his story without fear or favor.

One glance at Admiral Mayo brings the inescapable conviction that neither fear nor favor would ever play a part in the expression of his views. Simplicity, courage, and independence are written in every line of his strong face.

"It is my pleasure to comply with the suggestion of the Secretary," he said. "Confusion is a bad thing when the good name of the country is at stake."

For five hours we sat in the cabin of the *Yankton*, for Admiral Mayo persisted in referring to his reports and records in substantiation of every statement, and the narrative that follows is a painstaking chronicle of the Tampico incident from beginning to end.

"I went to Tampico first in December, 1913," he commenced. "Admiral Fletcher had been there before me for some time, once taking off 600 Americans and keeping them on his ships until all danger was thought to have passed. By February, 1914, the situation at Tampico had become so entirely normal that he decided to concentrate most of our forces at Vera Cruz. But early in March the rebels gathered around Tampico in some force, and so I was sent back, and took my position in the river in front of the town (6 miles up from the coast).

"From March 6 until April 5 very little happened, but on the latter date the Federal troops, moving out to attack the revolutionists, were thrown back on Tampico, suffering a rather decisive defeat. Down the river, at Donna Cecilia and Arbol Grand, the revolutionists also won; and as a consequence of these activities, the protection of foreign life and property became an acute problem.

"In addition to our own ships at Tampico, there were also present the English cruiser *Hermione*, the German cruiser *Dresden*, and later the French cruiser *Des Cartes*. We held a conference and drew up a joint communication addressed to the commanders of the Federal and rebel forces in which we set forth the rights of neutrals and noncombatants. This statement delivered, all of us set to work arranging to gather in our citizens if Tampico was attacked.

"I had to send twice to Donna Cecilia and Arbol Grande before I could get the women and children, the second time issuing a virtual command. From Tampico itself they were taken only when rebel attack appeared imminent. The English and German commanders adopted similar courses, and, starting April 10, every ship was soon filled with refugees.

"On April 9, at noon, I learned that the crew of the *Dolphin's* whaleboat had been arrested by the Huerta officials, and I sent on shore at once. Some of our sailors had been arrested on shore, while others had been dragged from the boat itself, although it carried the American flag at bow and stern. A colonel coming upon the scene ordered their instant release, but not before they had been marched up the street as prisoners.

"Gen. Zaragoza, in command, hastened to express his regret, declaring it the unauthorized act of an ignorant, irresponsible subordinate. He was a fine, honorable gentleman, and our relations were always pleasant, but the circumstances made it impossible to accept his personal explanation and private apology. Insult and humiliation had been public, and I felt that reparation must be equally public if American rights were to be respected at all. In plain words I told him that the officer who made the arrest must be punished, and that the flag of the United States must be saluted. As a matter of course, Gen. Zaragoza had to refer the affair to Mexico City, and I gave him until April 12.

"Let me say this right here," Admiral Mayo straightened up in his chair and pushed the reports aside, "I was not put in the position of having done that of which my Government did not approve. Admiral Fletcher, my ranking officer, the Secretary of the Navy, and the President of the United States were quick to give me assurances of support and approval.

"As you can imagine," he continued, "there was considerable excitement. On the 10th attack by the Carranzistas appearing imminent, the *Des Moines* and the *Chester* brought out about 600 Americans and put them on the battleships just off the bar. My force at the time consisted of the *Dolphin*, *Des Moines*, *Chester*, *San Francisco*—all fairly light-draft vessels—the battleships *Minnesota* and *Connecticut*, the transport *Hancock*, the hospital ship *Solace*, and the collier *Cyclops*.

"On April 12 the matter of the salute went out of my hands into that of the State Department, and I only knew of it thereafter by wireless or when Huerta's statements were referred to me directly for refutation.

"On April 13 I learned that Admiral Badger, at the head of the Atlantic squadron, had been ordered to leave Hampton Roads for Tampico.

"On April 14 Federal reenforcements had arrived and the whole situation had improved to such a degree that I brought all the refugees in from the battleships and landed them in Tampico again. The rebels abandoned their attack on the city and withdrew, business was resumed, and conditions appeared perfectly normal. On April 20, in the evening, I received a wireless from Admiral Fletcher stating that Secretary Daniels had ordered me to Vera Cruz with all my ships except the *Des Moines*, which was to remain at Tampico."

"Just a moment right there, Admiral Mayo," I interrupted. "I went through the files at the Navy Department very carefully and this is what I found:

"April 14. Rebels abandoned attack on Tampico and withdrew. Rebels seemed to have retired from vicinity of Tampico. The 600 refugees on board naval ships there were returned to their homes, business resumed, and conditions there again appear normal.

"April 17. Admiral Mayo reports all quiet.
"April 18. Admiral Mayo reports situation unchanged.
"April 19. No new developments at Tampico or Vera Cruz.
"April 20. No report on Tampico at all.

"All of these reports came from Admiral Fletcher at Vera Cruz," I said as I finished reading. "Are they correct?"

"Absolutely," he replied. "You see, not until later did I ever hold direct communication with Washington, but reported throughout to Admiral Fletcher at Vera Cruz."

"Then at the time Secretary Daniels issued the order on April 20, he had every reason to believe that affairs at Tampico were normal and that they had been normal since April 14?"

"That is the case, if by normal you mean what had existed for quite awhile."

This is the point of importance. The whole Tampico lie is based upon the suppression of Admiral Mayo's reports between April 13 and April 20, thus conveying the false impression that the excitement of April 10 had continued from day to day without cessation.

"Now, let me run over Secretary Daniels's explanations of the order," I continued, producing the various bulletins of the Navy Department. "To sum up, this was the situation on April 20 as Washington saw it: As a result of Huerta's refusal to give up the demanded salute, decisive action was decided upon. Not unconnected with Huerta's policy of deceit and delay was the fact that the German steamer *Ypiranga*, loaded with arms and munitions for the Huerta forces, was approaching Vera Cruz. To prevent this delivery, and to punish Huerta for his insolence, the seizure of the customhouse at Vera Cruz was ordered.

"Now, *then*, under Admiral Fletcher at Vera Cruz were the battleships *Florida* and *Utah* and the transport *Prairie*. The dreadnaughts, unable to enter the harbor and compelled to lie out at sea, could afford slight protection to landing parties. Under Mayo at Tampico, however, were light-draft vessels fitted for that very purpose. The military advisers of Secretary Daniels, therefore, suggested that Mayo and the light-draft vessels be ordered to Vera Cruz; and this was done. Not only did the reports show Tampico quiet, with all conditions normal, but Admiral Badger, with the full Atlantic Squadron, was due in Tampico on the evening of April 21. What do you think of that explanation?" I asked.

"What any honest man must think of it," Admiral Mayo replied. "It is simple, straightforward, and convincing. Now let me go from there. In the first place Admiral Fletcher was in full charge on the Mexican coast. From the first, Secretary Daniels had put large faith in his intelligence and discretion, recognizing that his presence on the ground gave him the most complete view; hence things must be handled by him. Admiral Fletcher treated me in like manner. So when I received the orders to go to Vera Cruz, I sent for Mr. Miller, the American consul at Tampico, to make a final survey of the local situation. I did not then know that the seizure of the Vera Cruz customhouse had been ordered, and as a consequence considered everything from the standpoint of Tampico alone.

"Mr. Miller protested strenuously against my departure. All was quiet, to be sure; but there was the ever-present anti-American feeling that had to be guarded against. I concluded that it was not safe to leave Tampico and communicated the consul's protest and my own opinion to Admiral Fletcher."

"The charge has been made," I said, "and is now being made repeatedly, that both you and Consul Miller sent bitter protests to Secretary Daniels, and that he ignored them. Is this true?"

"It is absolutely untrue. I have since learned that it was not until Admiral Fletcher filed his report in May that the Navy Department ever knew that a protest had been made. It was my judgment that I should remain at Tampico. I put this judgment up to Admiral Fletcher, my ranking officer, and he approved. Radio communication was difficult, however; and as his answer had not arrived by 7 o'clock on the morning of April 21, I arranged to start down the river. Just before passing out of the jetties, about 10.30 a. m., I received a wireless from Admiral Fletcher approving my recommendation and telling me to retain the *Connecticut, Dolphin, Des Moines, Cyclops,* and *Solace* to look out for American and foreign lives until other provision is made; also giving me my first information that he had been ordered to seize the customhouse at Vera Cruz. I sent word back that I was outside and would remain outside for further orders or developments."

"How far were you from Tampico?"

"About 6 miles. Well, later in the morning Admiral Fletcher asked me to expedite the *Chester* and the *San Francisco*, and I sent them promptly. Then I learned that Admiral Badger and Admiral Fletcher, consulting by wireless, had agreed that the battleships of the Atlantic Fleet should change their course from Tampico to Vera Cruz, letting the three divisions of destroyers come on to me."

"What was happening in Tampico,," I asked.

"Nothing very serious. The day of the 21st passed off quietly enough, but that night after the Mexicans knew of the fighting in Vera Cruz, there were some anti-American demonstrations that the Federal troops put down quickly. It was during these demonstrations that Capt. Koehler, of the German cruiser *Dresden*, went to Gen. Zaragoza and demanded that he stop the demonstration and that he protect the Americans. He, with some of his officers, escorted some American ladies and children to the boat landing and took them off to the *Dresden*.

"I received so many alarming reports during the night of the 21st and 22d that I decided to go up the river on the morning of the 22d and bring out the Americans. What I had been guarding against was any appearance of hostile action that might occasion a general outbreak, but the pressure put upon me was too strong to be resisted.

"You see, the problem was not merely the protection of Americans in Tampico alone, for the foreign population was scattered all through the oil region and among ranches far in the interior. Early on the morning of April 22 I sent a message to Capt. Doughty, of the British cruiser *Hermione*, telling him of my intent, and asking him to inform Gen. Zaragoza that I was coming in for the sole purpose of taking out American citizens.

"Capt. Doughty at once made a request that my plan should be changed. He pointed out that it was not only Americans who were concerned, but also English, German, French, and Spanish. He did not doubt my ability to handle the Tampico situation, but he did fear for the safety of all foreigners in the city and in the interior. One shot from my guns, one clash between my men and the Federal forces, and a fire would be lighted that would spread far faster than any relief expedition could hope to follow. What he suggested was that I should remain outside and permit him to collect all Americans quietly and slowly, and then send them out to me.

"It struck me as a good idea, and I advised Admiral Fletcher as follows:

"'Arranged as last resort to go in this morning to bring out Americans. Felt almost sure such action would precipitate hostilities. British captain when informed of my purpose requested me for the sake of all foreigners not to come in, but that he would send Americans out, to which I agreed.'

"For three days this work of rescue went on. Over 2,100 Americans were taken out.

"So that is how the lie started that the United States deserted its citizens and forced them to seek refuge under the British flag?" I said.

"Exactly. For three days the work of rescue went on. We took out about 3,000 Americans, dividing up among the ships as best we could. I chartered one steamer and also had sent me two transports, the *Hancock* and the *Dixie*, and two Ward Line steamers. I sent about 2,100 Americans to Galveston in these vessels and the *Connecticut* and some colliers and destroyers. Also later sent a large number to New Orleans.

"Were any lives lost, Admiral Mayo?" I asked.

"Not a single life."

"Any property destroyed?"

"None, except losses incident to the rebel attack. Surely such results ought to constitute a sufficient answer to misrepresentations and aspersions," he exclaimed with intense earnestness. "No bloodshed, no destruction. It would have been easy for me to have smashed Tampico into bits with my guns. Not only did I have the battleship *Connecticut*, the *Des Moines*, and the *Dolphin*, but early on the morning of the 22d, the three divisions of destroyers from Admiral Badger's fleet came up. You never saw a more beautiful sight than the swift approach as they came up to the river's mouth in line.

"But it would have meant war and burning and killing, and what I was after was the protection of American lives and property. It was a trying situation. Lots of times it was hard for me to exercise self-restraint, but I realized that the lives of thousands hung on that very self-restraint. I think the results justified my course.

"More than anything else I resent the way they are hitting at Secretary Daniels over my shoulder. I know little of politics. I care less. I believe that Mr. Daniels's whole effort is to increase the efficiency of the Navy, and that his acts have been what he deemed for the interest of the Navy and the country. Certainly no Secretary of the Navy within the past 40 years has worked harder to acquaint himself with naval details, and I believe that to-day he knows more about the Navy than any other Secretary the country has had."

At this moment the long line of dreadnaughts came steaming into Hampton Roads, back from target practice.

"How were the scores?" I asked.

"Good," he exclaimed. "Last year there was a 40 per cent improvement in marksmanship. This year we will show a 20 per cent improvement over last. I think I am safe in saying that we can do as well as any nation at long-range shooting. And yet it is hard to pick up a paper or a magazine without finding some mean fling at the Navy for its gunnery."

"Going back to Tampico for a moment," I said, "there's another point I want cleared up. It is claimed that there was intense dissatisfaction among the refugees while on board your ships."

"That's exaggeration," he answered. "As I told you, about 2,000 were sent to Galveston. Along about May 3 some who were on the ships wanted to go back to Tampico. I refused to let them. The Mexicans believed there was war with the United States. The rebels were attacking again, and the capture of the town was liable to happen any day. English, French, and German ships were crowded with their refugees, and in no case was permission being given to land. I talked the whole matter over with the Americans, and at the close of the conference, they agreed that my position was wise and proper."

"How did they feel about intervention, Admiral Mayo?"

"Well," he said, "never mind my personal opinion, here is what Mr. Miller, the American consul, thought about it." Thumbing over the pages of his report, he found the following message from the official who has been charged with being most bitter over the attitude of President Wilson:

"'A war of American intervention would be a great calamity. All other nations will stand to reap all the advantages. Whatever the result might be, our country would bear all the expense and reap the crop of resulting hatred and vengeance. Americans will be unable for many years to work in the outlying districts in the oil fields and other parts of Mexico.'

"Tampico fell on May 13," he continued. "I sailed up the river on the 14th, and had a conference with Gen. Gonzales concerning the rights of foreign citizens. All saloons were closed and everything was quiet and orderly. As a result of our very satisfactory interview, Americans came in and conditions gradually returned to normal. That, sir, is the whole story of the Tampico incident."

So much for the testimony of Admiral Mayo. Now for the story of Admiral Fletcher. I found him in Washington in the office of the general board, a man of few words, steady of eye, and fairly oozing a sense of competency.

"When I got the order to seize the customhouse at Vera Cruz," he said, "I had the two dreadnaughts, *Florida* and *Utah*, and the transport *Prairie*.

"Admiral Badger, in command of the Atlantic squadron, and headed for Tampico, was about 200 miles away. Getting in touch with him by wireless, I gave it as my opinion that Vera Cruz was now the center of operations, and suggested that he change his destination from Tampico to Vera Cruz.

"He approved. Dispatching his three divisions of destroyers to Tampico he came to Vera Cruz with his battleships.

"Admiral Mayo, after receiving orders to leave Tampico, advised me that he thought it best to remain, and backed up his own opinion with a protest from the American consul. I sent back word approving his recommendation, and directed him to retain the *Connecticut, Dolphin, Des Moines, Cyclops,* and *Solace* for the protection of American and foreign lives."

"Did you take up these matters with Secretary Daniels?" I asked.

"I immediately informed the department of my action in directing ships to remain at Tampico to protect Americans and foreigners and this met with the approval of the department," he replied. "The expected order to seize the customhouse came at 8 o'clock on the morning of April 21. The German steamer *Ypiranga*, loaded with arms for the Huerta government, was only a few hours away. A norther was blowing up that looked like it might preclude landing. So I decided on instant action, without waiting either for Admiral Badger or the *Chester* and *San Francisco*.

"At 11.30 a landing party took possession of the customhouse, and an hour later the *Ypiranga* steamed up to find that she must either deliver cargo into our hands or else leave port.

"At 9 o'clock that night the *Chester* and *San Francisco* came into the harbor, and we landed their battalions of seamen and marines. Shortly after midnight Admiral Badger arrived, and he sent on shore the seamen and marine battalions from the *Arkansas, New Hampshire, South Carolina, Michigan,* and *New Jersey.*

"During the day of the 22d the *Hancock, Louisiana, Minnesota,* and *Michigan* came up and landed forces. I had a force of 6,000 bluejackets on shore, and by noon the town was entirely under our control, with order restored."

"Tell me, Admiral Fletcher," I asked, "is it true that you received an order to destroy no buildings, and that it was because of the protection that this order gave to snipers that you suffered the loss of 19 lives?"

"No. My one order was to seize the customhouse at Vera Cruz. A bombardment at that time was out of the question, because there were treaties and noncombatants to be considered and the time element did not permit of delay. The *Chester* and *San Francisco* and *Prairie,* lying in close, fired only on the buildings that harbored snipers."

I desire also to avail myself of this opportunity to place in the RECORD some facts which I think should be known.

In the CONGRESSIONAL RECORD of March 3, 1917, page 4918, appears a statement of Senator TILLMAN, chairman of the Senate Committee on Naval Affairs. Among the statements of the distinguished Senator from South Carolina appears the following:

It will be noticed, however, that the House, although it has been laboring on the bill since December, sent such a loosely drawn and defective bill that its conferees could not but accept nearly all the Senate amendments. I grew tired of writing "H. R.," which means "House recedes."

It may be answered that it is true the Senate placed in the bill an amendment for $150,000,000 for the same purposes for which I introduced an amendment in the House when the bill was under consideration, and which was objected to on a point of order and was not in order under the rules of the House. I cheerfully acknowledge and express my appreciation of the action of the Senate in putting into the bill this item which I had suggested.

It is further true that owing to the changed conditions which followed the development of the German situation after the House had passed the naval bill and while it was pending before the Senate the Secretary of the Navy sent to the Senate Naval Committee many supplemental estimates for additional appropriations. These being, in my opinion, proper, I agreed to them, and they remained in the bill. It occurs to me a little singular that the Senator would place amendments in the bill and have the Senate adopt them and then grow tired of the House agreeing to the same. It may be noted, however, the Senate did not strike out or disagree to the provisions inserted by the House. The amendments of the Senate were almost entirely supplemental matters.

The distinguished and patriotic Senator discusses at length the Senate amendment authorizing an expenditure of $1,085,000, and making a present appropriation of $750,000 for lengthening the dry dock at Charleston, S. C., and, among other things, says:

The chairman of the House Committee on Naval Affairs, himself from Tennessee, is opposed to it bitterly, seemingly with unnecessary vindictiveness. My conscience would not let me defeat the whole bill, as I believe I could have done, for the sake of this one item.

The chairman of the House committee seemed willing, and I believe would rather have seen the bill defeated than to allow the item for the lengthening of the Charleston Dry Dock to stay in. He is welcome to all the glory he can get out of it. I do not accuse him of lack of patriotism, nor do I accuse him of insincerity, but I do accuse him of a stubbornness and narrowness with which no statesman in a time of national necessity like this should be afflicted. My conscience is clear, because I fought for what I know was right, and owing to my sense of patriotism, knowing the country needed a naval bill so badly, I did not endanger its passage for the sake of that item.

It may be interesting as well as elucidating to give some information about this matter, so that readers may form their own conclusions. At the last session of Congress this same item was placed in the bill as a Senate amendment and the House conferees were unwilling for lack of information to agree to it, and it was eliminated. At that time I stated to the Senator that we would authorize the appointment of a commission of naval officers to thoroughly investigate and report upon it.

The Secretary of the Navy appointed a commission composed of some of the most able and distinguished officers of the Navy, as follows:

J. M. Helm, rear admiral, United States Navy, senior member of commission; W. L. Capps, Chief Constructor United States Navy, member; H. H. Rousseau, civil engineer, United States Navy, member; G. W. McElroy, captain, United States Navy, member; C. L. Hussey, commander, United States Navy, member.

This commission visited Charleston and made an inspection and reported, and I shall copy verbatim the portion of the report bearing on the subject. It is as follows:

Referring to the tabular list of vessels contained in paragraph 26, it will be noted that in 1921 the total number of effective vessels in the Navy will be 412, exclusive of tugs, vessels unservicable for military purposes, converted yachts, and other miscellaneous craft. Of these 412 vessels 93 per cent can be docked in the dry dock at the Charleston Navy Yard. In fact, only 29 of these 412 vessels will have dimensions which would preclude their using the dry dock now in existence. Referring also to the list of dry docks given in paragraph 20, it will be seen that the dry dock at Charleston is one of those docks which can accommodate all vessels of the Navy up to and including the U. S. S. *Utah.* It may also be noted that it is one of four dry docks possessed by the Navy and situated on the continental coast line of the United States which carries 34 feet of water over the dock sill at mean high tide. This depth over the sill, however, can not be utilized to its full extent, since the distance of the floor of the dock below the dock sill is insufficient to permit an adequate height of keel blocks when the vessel just clears the dock sill. It may be well to note, in this connection, that in any comparison as to capacity of dry docks by statement of depth of water which can be carried over the dock sill, the basis of measurement for depth over the sill is taken from mean high water, whereas in stating the limiting depths of water in the channel approaches and anchorage areas of harbors the basis of measurement is mean low water. Thus, at Charleston, when the water over the dock sill is given as 34 feet, the depth of water in the 30-foot channel approaches would, under the same conditions, be 35.2 feet, 5.2 feet being the average tidal range from low to high water at Charleston.

Now, as to lengthening the existing dry dock at Charleston to accommodate battle cruisers, a suggestion which has been made at various times in the past. These vessels are 874 feet in length over all. Their draft at full-load displacement is 34 feet. To provide an adequate depth of channel and area of turning basin to accommodate vessels of this size would involve expenditures for dredging alone, including first cost and maintenance, which would hardly be justified unless it was definitely decided to develop this yard as one of the first class, capable of accommodating the largest vessels now contemplated. While the depth over the sill of the Charleston dock at normal high water is 34 feet, the distance of the floor of the dock below the dock sill is such, as already stated, that a vessel can not be properly docked when drawing as much as 34 feet. In fact, 32 feet would probably be a reasonable maximum. In a damaged condition vessels of the battle-cruiser class could easily reach a draft, forward or aft, of more than 40 feet. It must, therefore, be evident that the Charleston Dock, even though lengthened to accommodate a battle cruiser, under unusual conditions of moderately light draft, would have insufficient depth of water over the sill and in the channel approaches to accommodate such vessels under normal deep-load conditions. Under damaged conditions, involving unusual draft, the situation would be even more serious. It is this last condition, the docking of a damaged vessel, which is of especially serious consequence in time of war. Therefore it seems undesirable at this time to provide for the lengthening of the dock merely to accommodate these vessels under peace conditions. Moreover, questions of area and depth of turning basin opposite the dock would have to be considered. The problem of affording docking facilities for vessels of the battle cruiser and possibly larger classes at Charleston is inseparably associated with the final determination of whether or not Charleston should be developed as a first-class naval station, and this problem, as already stated, is necessarily dependent upon further examination of channel and harbor conditions and the entire South Atlantic-Gulf of Mexico-Caribbean situation.

Later on in the report, in making specific its recommendations, the commission says:

Lengthening of dry dock at Charleston not recommended at this time for reasons given.

Acting upon this report, I could not in good conscience agree to an expenditure of $1,085,000 to lengthen the Charleston dry dock when it was not recommended by the commission. Yea, more; when the commission made an adverse recommendation and stated reasons and conditions which it seems to me would address the intelligence of any fair-minded man.

If this was my own money and I was contemplating engaging in the enterprise, and not possessing myself the necessary technical knowledge and information and I should appoint a board of experts possessing ability and technical knowledge and they made the report as above indicated, I would not disregard that report on the spur of the moment and invest my own money.

I confess I am somewhat old-fashioned in my notions. Yes, I may even be an old fogy, but I believe I should be as considerate in spending the public money as I would be in spending my own.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. H. STANLEY BENEDICT,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. BENEDICT. Mr. Speaker, I am unalterably opposed to this resolution as it now reads, because I believe it is the last step toward war, and I am firmly convinced that the great masses of our people do not want war.

Armed neutrality was the keynote of the President's message delivered to us last Monday before a joint session of the House and Senate, but the element of neutrality is wholly lacking in this bill. No provision whatever is made for preserving even the neutrality which we as a Nation have heretofore maintained. Our very first defensive act will destroy our neutrality unless

prior to its commission we issue a distinct pronouncement to all nations that we intend to remain neutral under all circumstances, but that we propose to enforce our neutral rights by force of arms, if need be, against all nations alike. The first shot fired by a merchant vessel, armed under the provisions of this bill, will immediately involve us in war.

This resolution permits the arming of ships carrying arms and ammunition to belligerents, which act in itself is equivalent to a declaration of war, and allies us with the side to which the goods are consigned. The rejection of the amendment to prohibit arming vessels carrying arms and ammunition to belligerents makes it clearly evident that it is the intention to arm such vessels. Not one of you will deny that this is equivalent to declaring war. A merchant vessel loaded with firearms for a warring nation and equipped by the United States Government with defensive guns manned by our gunners can not possibly be considered neutral in any sense. Does any Member think it right to sacrifice American lives and American ships for the sole purpose of forcing the safe delivery of more guns and more ammunition to the warring nations of Europe with which to continue their frightful destruction of human life? I can not conscientiously, nor will I deliberately, vote to plunge the millions of our people into bloody warfare, burden the country with war debts for years to come, and retard the advancement of our Nation simply to maintain the channels of commerce open to those few who, at the cost of the many, are profiting by the terrible conflict in Europe.

None, so far as I know, are clamoring for this action but the commercial interests whose enormous profits from sale of war supplies have been cut off. These interests are now crying for the Government to protect them while they continue taking toll from this awful slaughter. In truth, for the sake of the almighty dollar we have long been an active party to this frightful carnage by furnishing the arms and munitions to keep it going. It is now demanded that the National Government protect this traffic and, with all its power and even at the cost of millions of lives, compel the continuance of this lucrative trade. Furthermore, by this bill it is proposed to set aside $25,000,000 of the people's money with which the United States Government will insure the ships and cargoes of those who are profiting from the misfortune of Europe. Unwilling to assume the risk themselves, but anxious to secure the great profits, these interests call upon the Government to insure them against loss in their hazardous trade.

Those who are most vitally concerned, the rank and file of the public whose lives will be sacrificed and whose homes will be broken, and who must carry the bulk of the burden of war debt have not urged this action but have, wherever opportunity afforded, voiced their determined opposition to war. Most wars are waged for commercial advantage and the present one is not different from the others. The public is rapidly coming to realize this and the great masses who must do the fighting and bear the burdens have come to know that there is nothing for them to gain but everything to lose. I will not vote to force the great masses of the people to give their all for commercial conquest and the enrichment of a few.

It is easy to inflame the public mind with cries of "patriotism," "loyalty," "stand by the country," and "uphold its honor" and by covering up the real situation mislead the public into believing that a crisis has arisen calling for the utmost patriotism. The President, in his message, informed us very clearly that—

> The situation is substantially the same that it was when I addressed you on the 3d of February, except for the tying up of our shipping in our own ports because of the unwillingness of our shipowners to risk their vessels at sea without insurance or adequate protection.

This, gentlemen, is the crux of the whole situation. Our lucrative business of supplying the warring nations of Europe has been interfered with, and we are now expected to plunge the entire country into bloody warfare to force the continuance of this business. No present infringement of the rights of humanity is urged in support of immediate action. Sordid gain seems to be the sole incentive. The very commercial interests that are clamoring the loudest for Government protection are those who are exhausting every source of food supply here by selling at enormous profits to foreign markets, thereby mercilessly increasing the high cost of living to a condition well-nigh unbearable and causing want and suffering throughout our own country, as witness the bread riots in New York.

I am neither pro-German nor pro-ally, but American through and through, and will not assist in throwing my country into war on either side. This is real Americanism; this is sincere, honest neutrality. I am heartily in favor of real armed neutrality, not a so-called neutrality that aligns us with either one side or the other, much less deliberately throws us into war against one of the sides. This resolution has been characterized very generally as one providing for armed neutrality for our country, and in this respect has misled the general public. As a matter of fact, it has not a single element of neutrality in it. The United States has thus far stood as the greatest of neutral nations and the strongest advocate of human rights. Shall we now depart from this exalted position by deliberately and voluntarily joining this bloody warfare and thus lose forever the greatest opportunity for advancing human rights that ever came to any nation? America, in the wisdom of Providence, was founded for a great purpose. It is the hope of the oppressed and the refuge of all liberty-loving people. Once we are drawn into European controversies we will lose forever our security and independence and must ever thereafter be a party to every conflict there. We will then be fighting to maintain the oppression of monarchies.

There is no denying that we have suffered sufficient provocation for war. Both Great Britain and Germany have given us ample justification in this present conflict for going to war against either or both of them. Great Britain has blockaded the North Sea and most effectually cut off our trade with Germany and many of the neutral nations. She has seized and rifled our mails; she has taken our vessels and impressed them into service. Two of our vessels, the *Carib* and *Evelyn*, entering the North Sea, which is a part of the high seas upon which all countries have a perfect right to go unmolested, were sent to the bottom by mines laid by Great Britain, with loss of American lives in both cases. The closing of the North Sea to our commerce was a flagrant violation of our rights. We should have taken a definite stand then, and notified Great Britain that unless all the ports of the world were left open to us we would not supply her with munitions or money. Likewise Germany has declared a war zone around Great Britain, warning us that our ships of commerce enter it at their peril, which is an unwarranted interference with our commercial rights. She has sunk ships upon which American commerce and American citizens were being lawfully transported. Any one of these acts of both belligerents would have been sufficient provocation for a declaration of war if we had so desired. But in the language of George Washington, "We may choose peace or war, as our interests, guided by justice, shall counsel." Having chosen peace, under all the circumstances above given, why such sudden haste now to plunge into war when no new cause has arisen to justify it? Furthermore, why should we declare war on one of the offending parties only? Where is our policy of "strict accountability"?

The adoption of real armed neutrality would permit us to maintain our position as the greatest neutral nation of the world and would leave us at the conclusion of the European conflict in a position to accomplish for humanity a great service. Whereas, if we become involved in this conflict, we are but the least of a number of bloody combatants without definite purpose and with no hope of service to humanity. The policy of real armed neutrality is the course adopted heretofore by neutral nations during the great wars of Europe. This resolution does not establish real armed neutrality, and the course we are following is not strictly neutral. It is significant to note that not a single other neutral nation has joined our country in the position we have taken toward the belligerent powers. It is rather a reflection on our neutral policy that all other neutral nations have succeeded in maintaining their neutrality even despite the fact that some of them are in the very midst of the war zone.

I ask you who really favor war, what good can possibly come of it? Do you expect to retrieve any of the losses by adding to them a thousandfold? Can any of you possibly believe that we can maintain the freedom of the seas while this conflict rages? What can you hope for the future of our country once she is involved in the interminable controversies of Europe? Washington's inquiry in his farewell address is unanswerable, "Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

What will the results be to our country if we engage in war? Thousands of young men will be taken from peaceful and honorable callings to kill and be killed on the battle field or to be returned with broken bodies as charges upon the public. Homes will be wrecked throughout the entire land, mothers and wives will be bereft of loved ones, and countless little children will be left unprotected. The destruction of youth would set our country back for decades. To wage a war in the manner of the present conflict would require an expenditure of billions of dollars. Our country would be burdened with excessive taxation and our children would stagger under the legacy of bonded indebtedness which we would leave them. Industrial progress would be paralyzed and the useful arts and sciences wholly neglected. The whole moral tone of the Nation would be degraded. All of this

for what purpose? Simply to pile up profits on merchandise shipped to the warring nations.

Furthermore, it is manifestly unfair to the whole country and to the President for Congress to throw this entire matter on the shoulders of one man, the President, and require him to struggle with it alone. You should assist with advice, counsel, and encouragement, not go home and leave all to the President. Congress has always remained in session heretofore during such trying times as these.

It is not the duty of Congress to weigh the merits of the two sides engaged in the European conflict, but to squarely face the real issue presented by this resolution—do the American people want war? Let no Member who is opposed to war deceive himself in voting for this resolution. Its passage inevitably means war. I yield to no man in loyalty to my country and in patriotism for its rights, and would fight in its defense as quickly as anyone. Therefore do not misunderstand me in this respect and do not classify me as one who does not believe in adequate preparedness. Courage and patriotism do not consist in following blindly a call to arms without reason. In such times of public excitement as these the moral coward is certain to follow the crowd and avoid unpopular comment. I believe the highest patriotism at this time consists in compelling strict armed neutrality in its fullest sense.

One Hundred Best Anti-Socialist Books.

EXTENSION OF REMARKS

OF

HON. MICHAEL E. BURKE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. BURKE. Mr. Speaker, under the order granting general permission to Members of Congress to extend their remarks in the RECORD for a period of 10 calendar days I hereby incorporate as a part of my remarks the following list of 100 best anti-Socialist books. This compilation was made by J. B. Barnhill, editor of the American Anti-Socialist:

THE GREATEST THINKERS UNEQUIVOCALLY CONDEMN SOCIALISM AND ITS REIGN OF REGIMENTATION.

The gravest and most instructive fact revealed to us by this grand spectacle of civilization is the danger, the insurmountable evil, of absolute power in any form. (Guizot.)

SOCIALISM DESTROYS LIBERTY.

Personal liberty and private property rose together; they developed together, and they now stand or fall together. (W. S. Lilly.)

If the employees of all these different enterprises (roads, railways, banks, great joint-stock companies, public charities, municipal corporations, and local boards) were appointed and paid by the Government and looked to the Government for every rise in life, not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. (J. S. Mill.)

THE DEADLY LOGIC OF SOCIALISM.

What is everybody's business is nobody's business. What is everybody's profit is nobody's profit. What is everybody's loss is nobody's loss; therefore if the Government loses hundreds of millions no one has lost anything. (J. B. Barnhill.)

Socialistic legislation restricts the liberty of the citizen in two ways: First, by lessening that portion of his earnings which he can spend as he pleases, and, secondly, by augmenting that portion taken from him to be spent as public agents please. (Herbert Spencer.)

Under socialism you can not be born without the State's consent: It would be possible for the State to guarantee employment at ample wages to all who are born; but if it does this it is bound in self-protection to provide that no person shall be born without its consent. (John Stuart Mill.)

SOCIALISM PRESENTS A PROGRAM OF PROGRESSIVE DEGENERATION.

Equal reward is incompatible with efficiency. (Hirsch.)

Were we directed from Washington when to sow and when to reap, we should soon want bread. (Jefferson.)

The people who, in their corporate capacity, abolish the natural relation between merits and benefits will presently be abolished themselves. (Spencer.)

THE LITANIES OF LIBERTY.

That government is best which governs least.

Liberty—not the daughter but the mother of order.

No history is copious enough to record the evils that have ensued upon the denial of liberty. (Greville McDonald.)

Other liberties are held under Government, but the liberty of opinion keeps Governments themselves in due subjection to their duties. (Lord Erskine.)

THE WORSHIP OF POWER, THE MOST FATAL FORM OF IDOLATRY, MAN'S MOST INVETERATE INFATUATION.

It is a universal tradition, founded on universal experience, that man is corrupted by power. (J. Stuart Mill.)

The crimes of history may be summed up in the words "abuse of power." The teaching of history is that power is always abused. (J. Stuart Blackie.)

THE ETERNAL CONFLICT BETWEEN LIBERTY AND POWER.

There absolutely exist under socialism no means by which public resistance to official aggression can be organized. (Hirsch.)

The love of power and the love of liberty are in eternal antagonism. Where there is least liberty the passion for power is the most ardent and unscrupulous. (J. S. Mill.)

UNDER SOCIALISM THE INDIVIDUAL WITHERS AND THE STATE IS MORE AND MORE.

I do verily believe that a single consolidated government would become the most corrupt government on the earth. (Jefferson.)

Where everything is done through the bureaucracy, nothing to which the bureaucracy is adverse can be done at all. (J. S. Mill.)

THE 100 BEST ANTISOCIALIST BOOKS.

THE BEST DEBATES ON SOCIALISM.

(The letter S. stands for the word "socialism.")

Bradlaugh-Hyndman: Will S. Benefit the People?
Bax-Bradlaugh: Will S. Benefit the People?
Tichenor-Antisocialist Debate, including Dictionary of Socialist Delusions. 63 pp.
Belloc-McDonald: S. Leads to Servile State.
De Leon-Berry: Trust Issue or Capitalism *v.* S.
Land Question: Spencer, Levy, Flurscheim, etc.
Debate on Value: Levy, Shaw, Bax, Hyndman.
Bax-Levy: Socialism *v.* Individualism.
Individualism and Land Question: Levy, etc.
Gompers-Hillquitt: Unionism *v.* Socialism.
Hirsch-Bennett: Would S. Reduce the Wealth Received by the Majority of the People? 73 pp.
De Leon-Carmody: Individualism *v.* S.
Bradlaugh-Besant: Socialism—For and Against.

The foregoing debates and the following pamphlets are particularly helpful to those whose duty it may be to point out the dangers and fallacies of socialism:

Failures of S. Twenty-four historical illustrations.
S. an Actual Experiment (and a great failure).
An Apology for (Commercial) Liberty. Mackay.
Things Seen and Things Not Seen. Bastiat.
S. Indicted by Balfour, Philpotts, Swift, etc.
Berger Attacks Small Farmers and Sweatbox for S.
Eleven Blind Leaders. "How Will S. Come?"
Debate on Limitation of Wealth. Devney et al.
Money Problem and Panics. Clay, Robins.
Inheritance Tax *v.* Public Reserve. Norris, etc.
New Jersey Socialist Unity Conference.
Outcome of Individualism. Arraigns S. Levy.
Individualism. Attacks S. Legis. Pollard.
Individualism; the Ideal of Democracy. Hodgkiss.

THE BEST PAPER-BACK BOOKS.

Exposure of S. Three addresses and a debate. Hirsch. Unanswerable. Incomparably brilliant and effective.

On Liberty. J. S. Mill. John Milton and John Mill are names to conjure with when the sovereignty of the individual is threatened. This book is the magna charta of individualism.

The Man *v.* The State. Spencer. Contains the famous chapters "The coming slavery," "The sins of legislators," "The great political superstition," etc.

Social Statics. Spencer. Has "The duty of the State," "The limit of State duty," etc.

Political Socialism—Would it Fail in Success? Crawford. This book by a brother of the late United States Senator C. I. Crawford, is easily the ablest and most helpful exposure of socialism that has appeared in United States. 118 pp.

The Social and Economic Problem. Michael Flurscheim. In this, the swan song of this veteran radical, who had fought for his principles in three continents, the reader will find the land and money problems treated in a very interesting and thorough manner. The author's large work, "The Clue to the Economic Labyrinth," is now out of print. This work contains all that the author wished to preserve of the earlier work. 277 pp.

Socialism: Its Fallacies and Dangers. Millar.
Limitation: Solution of Economic Problem. Devney.
Impossible Vagaries of S. (R. Larmour, Rw. veteran.)
Fallacies of S. Plainly Stated. Beanland.
Short Studies in Economic Subjects. Levy.
Essays and Addresses. Max Hirsch.
S. an Incubus on the Labor Movement. Sullivan.
Problems and Perils of S. (Strachey.) "S. would deteriorate character and lessen product."
Pages from Socialist History. Tcherkesoff.
Berger's Hit and Misses in Congress. De Leon.
The Rights of Minorities. G. Jellinek. 40 pp.
The Land, the People, and the State. Sir G. Parker.
Socialism Not the Best Remedy. Cailie.

THE BEST CLOTH-BOUND BOOKS.

Where S. Failed. Cosme Colony, etc. Graham.
The Servile State (Socialism). Belloc.
Marx & Close of His System. Bohm Bawerk.
Anti-Socialist Speakers' Handbook (British).
S. Exposed. British writers. 400 pp.
Facts Against S. 3 vols. (British.)
Capitalist's View of S. B. P. Blood. 237 pp.
Orthocratic State. On true functions of government.
Science of Society. Deep, original. Andrews.
Socialism: Its Perils (Fallacies, etc.). Cooper.
The Cause of Business Depressions. Bilgram & Levy. Defending competition the authors contend that the present economic discord can be traced to the Government's unreasonable control of currency. 565 pp.
Pictures of the Socialistic Future. Richter.
Province of the State. Attacks S. R. K. Wilson.
Orthodox S. in New Zealand. Le Rossignol & Stewart.
Orthodox S.: a Criticism. Dr. J. E. Le Rossignol.
Instead of S. (Daniel). S. Rejected. Samuelson. 340 pp.
Challenge of Facts. Reply to S. W. G. Sumner.
Plain Examination of S. (G. Simonson).
S. and Social Movement. Sombart. 216 pp.
Outlines of Railway Economics. D. Knoop.
Economic Liberalism. H. Levy. 124 pp.
Socialism: Promise or Menace. Hillquitt-Ryan.
Marxism *v.* Socialism. Real Democracy.
Road to Freedom and Beyond. J. & E. Wedgwood.

Why I Oppose S. Leading men. Comp. by Silvin.
Critical Exam. of S. (W. H. Mallock.)
Case Against S. Armory of Facts and Figures.
S. in Local Government. The S. State. Gonner.
The Railways and the State. F. W. Pim.
State Railway Muddle in Australia. E. A. Pratt.
Case Against Rw. Nationalization. E. A. Pratt.
English S. of To-day. Arnold-Foster. 246 pp.
Liberty and Progress. What is S.? Scotsburn.
Social Wrongs: a Practical Remedy. Swansson.
Social Service. Post. Defends competition.
Game of Life. B. Hall. Points out S. errors.
Collectivism. Leroy-Beaulieu. 343 pp. "To those who talk loosely of Socialism as at least a tendency in the right direction and as the necessary step of progress or evolution, the clear thinking of this book may be strongly recommended." Probably the most searching analysis of the various Socialistic schemes.
Socialism. Robt. Flint. 512 pp. Profound but eminently readable. One of the great intellectual achievements on this subject.
Socialism: A Critical Analysis. O. D. Skelton. 329 pp. Has the best English bibliography. A supreme achievement in power of exposition, dissection and rebuttal. Probably the ablest recent attack on socialism.
Contemporary Socialism. Rae. Competent critics call this book the best English textbook on the subject. While keenly criticising socialism the author does justice to the Socialist point of view. Good index. The book displays a masterly comprehension of the whole economic situation.
Collectivism and the Socialism of the Liberal School. A. Naquet. Eloquent, keenly analytical. "Socialism would bring about the stagnation and retrogression of the human race."
The Quintessence of Socialism. Schaffle. Friends and foes of socialism regard this as the best brief, scientific, exposition of socialism.
The Impossibility of Social Democracy. Schaffle. 419 pp. The author gives the grounds of his conviction that the program of the Socialists is incapable of practical application.
The New Socialism. Stoddart. Critical, impartial, judicial. Exhibits the manifold contradictions of Socialist teaching respecting the questions of a free press, compensation, rewards of labor, expropriation and the family.
The Essentials of Socialism. Cross. A fairly satisfactory introduction to the subject. Impartial.
The Menace of Socialism. Wilson. 520 pp. Fresh, vigorous, and practical. Full of quotable sentences. The author exhibits no little accumen in his analysis of Socialist proposals and in his defense of private enterprise, private property, and private capital. "There is nothing which the Socialists fear so much as a peasant proprietary. The tenacious hold of the small owner on the soil can not be shaken by Socialism."
British Socialism. Barker. 522 pp. Very useful to those who wish to know the practical suggestions deduced from Socialist theories.
Socialistic Fallacies. Yves Guyot. 343 pp.
Principles of Social Economy. Guyot. 305 pp. The author appears in his most brilliant form in this book. Incomparably clear and effective in discussing the true functions of the State.
Economic Prejudices. Guyot. 176 pp. An exposure of Socialistic fallacies. "Socialism—that is, the State substituting itself for individual liberty, and growing to be the most terrible of tyrants."
In addition to the foregoing list of the 100 best anti-Socialist books, the student will find the following very helpful:
The New Social Democracy. Harley. Shows the declining influence of Karl Marx.
The Pattern Nation. Wrixon. Especially valuable to half-hearted and short-sighted supporters of Socialism. The author thinks that the delusive experience of semi-Socialism will be such that the people, when it comes to a crisis and the final choice between freedom and Socialism, will choose freedom. If they do not, then the result will be a decline of civilization.
Australian Socialism. St. Ledger. 365 pp. Shows the farmer to be the foe of Socialism.
Present-day Socialism and the Problem of the Unemployed. Raine. The author says: "The replies which I give to Socialist questions have actually been employed by myself in arguments."
The Superstition Called Socialism. Tunzelman.
Adam Smith. McPherson. Good for beginners.
Wealth of Nations. This work by its teachings has given employment to millions.
Essays on Questions of the Day. Goldwin Smith.
Conflict bet. Individualism & Collec. Eliot.
Uncle Sam, Banker: 1910–1940. Fulton.
Principles of Property. Kinnear. Views of Vanoc.
Liberty, Equality, Fraternity. Stephen.
The Complete Works of Herbert Spencer.
Open Review. Arthur Kitson, editor. The bound volume of this magazine, in its 560 pages, has many articles of unique interest and value.
The Society of To-morrow. Molinari.
The Nation as a Business Firm. Mallock.
Sociology Applied to Politics. J. B. Crozier.
Our Economic Troubles and Way Out. W. H. Berry.
Syndicalism and Labor. Clay. Liberty and Authority.
Man *v.* State. With American Notes. Spencer.
Failure of Mod. Soc. H. A. Wilson.
Sociology and Modern Progress. T. N. Carver.
Critique of S. Adams. Instead of a Book. Tucker.
Progress from Experience. Hyde. Very original.
The State and the Individual. W. S. McKechnie.
Psychology of Socialism. Le Bon.
Wealth *v.* Commonwealth. Lloyd.
Spencer's Synthetic Philos. (Intro. to Justice.)
Physics and Politics. W. Bagehote.
Publishers report the following out of print:
Last Days Ruskin Cooperative Colony.
The Duties of the State. David Dudley Field.
Plea for Liberty: An Argument against Socialism and Socialistic Legislation. H. Spencer et al.
Law in a Free State. Wordsworth Donisthorpe.
Individualism: A System of Politics. Donisthorpe.
Salvation by legislation. Pomeroy.
Socialism: Notes on a Political Tour. Sir H. Wrixon.
E. Burke: Apostle of Justice and Liberty. Finest passages.
Socialism Means Slavery for Workers. Scullin.
Studies in Economic Questions. T. Mackay.
Political Problems; Rocks Ahead; Literary and Social Judgments. All three by W. R. Greg.
Free Trade in Capital or Free Competition in Supply of Capital. A. E. Hake and O. E. Wesslau.
Involuntary Idleness. Bilgram. Few left.
Socialistic and Communistic Fragments. W. B. Greene.
Social Wealth; Economic Equities, etc. J. K. Ingalls.
Voluntary Socialism. Tandy. Attacks Collectivism.
History of American Socialisms. Very full. Noyes.
The Sphere and Duties of Government. W. V. Humboldt.
False Hopes. Goldwin Smith. Author's best style.
Democracy *v.* Socialism. Max Hirsch's masterpiece.
The Tyranny of Socialism. Guyot's masterpiece.
Value. Criticism of Polit. Econ. & S. Armsden.
Gospel of S. Hector McPherson. Pamphlet.
Literature of Political Economy. J. R. McCulloch.
Guide to Study of Political Economy. Cossa.
Dictionary of Political Economy. McLeod.
Communism in America. H. A. James.
Handbook of Social Economy. E. About.
Industrial History of Free Nations. J. R. McCulloch.

THE CREED OF LIBERTY OF THE AMERICAN ANTI-SOCIALIST OF WASHINGTON, D. C.

[John Basil Barnhill, editor.]

Civilization will perish unless able men are allowed a free hand.
Mcnopoly means the death, competition the life, of civilization.
Socialism would terminate in the slavery of the masses and in an official aristocracy of government functionaries.
This is the true formula of freedom: Where the people fear the Government you have tyranny; where the Government fears the people you have liberty.
Socialists ask for "all the power," forgetting that answer, "Get thee behind me, Satan," on the only occasion when "all the power" was ever offered to anyone.
Labor has learned the bitter lesson that State employees are held guilty of treason if they resort to the weapon of the strike. In other words, labor has learned that socialism is its deadliest foe.
The universal experience of mankind is that private enterprise, private property, and private profit are the indispensable bases of a free society and of an advancing civilization. Socialism rejects these three factors of progress.

Notice of Intention to Contest.

EXTENSION OF REMARKS

OF

HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. BRITT. Mr. Speaker, under the leave to print granted me by the House, I insert a notice served by me upon the Hon. Zebulon Weaver, contesting his right to a seat in the House of Representatives of the Sixty-fifth Congress, the substance of which, in my opinion, is of sufficient importance to entitle it to a place in the RECORD.

The notice is as follows:

NOTICE OF INTENTION TO CONTEST.

UNITED STATES OF AMERICA.

Tenth congressional district of North Carolina.

JAMES J. BRITT, contestant, *v.* ZEBULON WEAVER, contestee.

To the Hon. ZEBULON WEAVER:

You are hereby notified that it is the intention of the undersigned contestant, James J. Britt, to contest your right to a seat in the Sixty-fifth Congress of the United States from the tenth congressional district of North Carolina, on the following grounds, to wit:

I.

That the said tenth congressional district is composed of 13 counties, namely, Buncombe, Henderson, Haywood, Transylvania, Polk, Rutherford, McDowell, Jackson, Macon, Swain, Cherokee, Clay, and Graham; that at the congressional election held in said district on November 7, 1916, you were the candidate of the Democratic Party and the contestant was the candidate of the Republican Party for a seat in the Sixty-fifth Congress; that the total vote cast for you in said district at said election was 17,995, and the total vote cast for the contestant in said district at said election was 18,008, giving to the said contestant, James J. Britt, a majority of 13 votes in said district, and thereby electing him to the said position.

II.

That the abstracts of returns of the votes cast in all the counties of said district, except the county of Buncombe, as made by the county canvassing boards in said counties and filed with the register of deeds thereof, and by him transmitted to the Secretary of State, in pursuance of section 4354 of the revisal of North Carolina, showed that a total of 13,670 votes had been cast for you in said counties, and that a total of 13,971 votes had been cast for the contestant, James J. Britt, in the said counties of said district other than Buncombe County.

III.

That in the said county of Buncombe, in said district, at the said election held on November 7, and at the close of the voting therein in each precinct, the registrar and judges of election, hereinafter called the precinct boards, in each of the 28 precincts in said county, as provided by section 4347 of the said revisal, opened all the ballot boxes, including the box for Representative in Congress, and counted, entered, and cer-

tified the number of ballots therein, and found that as to the vote for Representative in Congress the respective votes cast for yourself and the said contestant, James J. Britt, were as follows:

Precinct.	Britt.	Weaver.
Asheville:		
No. 1	119	180
No. 2	128	133
No. 3	258	339
No. 4	163	305
No. 5	148	159
No. 6	162	304
Avery's Creek	59	55
Beaverdam	195	178
Biltmore	136	218
Black Mountain	242	236
Fairview	160	147
Flat Creek	162	73
French Broad	112	115
Haw Creek	69	72
Hazel	45	73
Upper Hominy:		
No. 1	139	125
No. 2	92	156
Lower Hominy	90	147
Ivy:		
No. 1	190	99
No. 2	83	80
Leicester:		
No. 1	202	217
No. 2	121	104
Limestone	100	102
Reems Creek	273	206
Sandy Mush:		
No. 1	61	31
No. 2	101	46
Swannanoa	191	138
West Asheville	246	287
Total	4,037	4,325

Making a total of 4,325 votes cast for you and a total of 4,037 votes cast for the said contestant, James J. Britt, giving you a majority of 288 in the said county of Buncombe, or 13 less than the said majority of 301 received by the said contestant in the 12 counties of said district other than Buncombe County, and resulting in giving a majority of 13 votes to the said contestant, James J. Britt, in the said district, thereby electing him a member of the Sixty-fifth Congress.

IV.

That in each and every voting precinct in the said county of Buncombe all of said ballots were counted and the results hereof entered in written tally sheets, said tally sheets bearing the title of all offices voted for, including the title Representative in Congress, together with your name and the name of the said contestant, James J. Britt, with the respective numbers of ballots cast for each at said precinct placed opposite his name, the same being certified and signed by the said precinct board, in the form and with the results hereinafter set forth.

V.

That in pursuance of section 4348 of said revisal the said precinct boards in each of the 28 precincts in the said county of Buncombe, at the close of said election, and when the said ballots had been counted, entered, and certified, as hereinbefore set out, appointed one of their number, a Democratic member being appointed in each and every instance, to attend the meeting of the board of county canvassers as a member thereof, and the said precinct board delivered to the said member so appointed the "original return or statement of the result of the election" in the precinct from which he was appointed; that in all of said precincts, except three, to wit, Asheville No. 1, West Asheville, and Sandy Mush No. 1, the papers sent as such "return or statement" were printed forms signed by each member of the precinct boards, the said forms containing the title of the said office, the names of the candidates therefor, and the respective numbers of votes cast for each, as shown by and copied from the said original tally sheets, and in the said precincts of Asheville No. 1, West Asheville, and Sandy Mush No. 1, the said original tally sheets were sent as the "original return or statement," no copies of the said printed blank form for such returns being immediately available.

VI.

That the said "original returns or statements," consisting of the original tally sheets, duly made, certified and singed by the precinct boards and delivered to the Buncombe County board of canvassers from the precincts of Asheville No. 1, West Asheville, and Sandy Mush No. 1, "were the original returns or statements" required by section 4348 of the said revisal, no specific printed form therefor being required by the said statute.

VII.

That pursuant to section 4348 of said revisal, the said members of the 28 precinct boards in Buncombe County who were chosen members of the Buncombe County board of canvassers, all of said members being Democrats, and members of the political party to which you belong, met on the second day after the said election, to wit, on Thursday, November 9, as the law requires, at the courthouse of the said Buncombe County, and the said members did then and there, in pursuance of said statute, duly organize as the Buncombe County board of canvassers by electing B. L. Lyda, one of their number, as chairman, and G. H. Grindstaff, one of their number, as clerk, and the said board did then and there, pursuant to section 4350 of the said revisal take up as their first official act the counting, canvassing, and determining of the congressional vote cast in said county, and proceeded to count, canvass, and judicially determine the said returns.

VIII.

That the said board of canvassers did then and there count, canvass, and determine the vote for Congress cast at the said election on November 7 in the following manner, to wit: The said board had before it all the original, formal returns from each of the 28 precincts of Buncombe County, with the exception of the precincts of Asheville No. 1, West Asheville, and Sandy Mush No. 1, and from these three said precincts the said board had before it, and for its consideration and use, the original tally sheets made by the precinct boards in these several precincts, the said tally sheets containing the names of the different offices to be voted for, the names of the candidates therefor, and opposite the names of said candidates the number of votes cast, respectively, for each of them, the said tally sheets from these said three precincts containing all the facts, data, and information contained in the said returns made on the said printed forms, the tally sheets in such cases containing the facts and figures from which the said formal returns are made; that the absence of formal returns from the said precincts and the presence of returns on tally sheets was fully and clearly made known to said board, was discussed and clearly understood by them, and it was agreed and understood that the said tally sheets were to be used in lieu of the said formal returns, which decision and understanding was unanimous with said board, and no objection whatever was made thereto; that the said board of county canvassers, being thus organized and having before it what it had determined to be the lawful returns from all the 28 precincts of Buncombe County, did then and there proceed to count, canvass, and determine the congressional vote in said county in the following manner, to wit: The chairman of the said board would call the name of each precinct and the number of votes cast for the said Zebulon Weaver and the number of votes cast for the said James J. Britt; the clerk of said board would then repeat the number of votes reported for each of the said candidates as called by the said chairman, and R. C. Roberts, who had been called upon to keep a tally sheet on behalf of the Republicans, and who had the same report of the vote before him, verified the vote as called by the clerk of the said board by answering "check"; the clerk would then say, "Is there any objection?" No objection whatever was made to the vote from any one of the 28 precincts, and the counting, canvassing, and determining of the said congressional vote was proceeded with in this manner until each and all of the 28 precincts of Buncombe County had been duly called and entered on the tally sheet, or table, provided for that purpose; that when the returns from the said precincts had been thus duly called, verified, and recorded, they were tabulated on an adding machine, which had been provided for that purpose, and the total vote placed at the foot of the columns, the result being that the said Zebulon Weaver had received in said county 4,325 votes and the said James J. Britt, 4,037 votes, giving the said Zebulon Weaver a majority of 288 votes in the said county; no objection whatever being made to the said figures as indicating the true result of the vote cast for the said Zebulon Weaver and the said James J. Britt; that the said returns from which the said count was made was by the said board deemed proper and sufficient, and the said board did, after completing the count of the congressional vote, proceed to count, canvass, and determine the vote for electors for President of the United States, for State and county offices, and for and against the constitutional amendments, all of said returns being made in the same form and manner, and being of like validity, thereby demonstrating that the said board deemed said returns legal, proper, and sufficient for all purposes whatsoever.

IX.

That the said Buncombe County board of canvassers did, by the said acts set forth in the preceding paragraph, count, canvass, and determine the votes cast for you and for the said James J. Britt for Member of the Sixty-fifth Congress at the election held on November 7, 1916, as required by section 4349 of said revisal, requiring that the said board shall on the second day after the election open, canvass, and judicially determine the returns, stating the number of legal ballots cast in each precinct for each candidate, the name of each person voted for, and the number of votes given to each person for the different offices, and shall sign the same, except that the said board "did not sign the same."

X.

That thereupon it became the duty of the said Buncombe County board of canvassers to sign the said ascertained returns, showing the respective votes for you and for the contestant, James J. Britt, in Buncombe County as being, respectively, 4,325 and 4,037, and it furthermore became the duty of the said Buncombe County board of canvassers, as required by section 4351 of said revisal, to make an abstract of said votes, showing the number of votes cast, respectively, for you and the said contestant, and it became the duty of the said B. L. Lyda, chairman, as required by section 4352 of said revisal, to make and sign two abstracts, showing said congressional vote as therein stated, one of which the said statute requires to be delivered to the chairman of the county board of elections, one filed with the register of deeds of Buncombe County, to be registered in his said office, and under section 4353 of said revisal it became the duty of the register of deeds of Buncombe County to certify to the secretary of state of North Carolina the votes cast, respectively, for you and for the contestant, James J. Britt.

XI.

That the said board and its chairman, instead of proceeding with the performance of their duties, as stated in the preceding section, failed, neglected, and refused to make any abstract whatever, showing the respective votes for you and the said contestant, James J. Britt, to be 4,325 and 4,037, but the said board, after prolonged and unnecessary delay, did on November 17, 1916, file with the office of register of deeds of Buncombe County what purported to be an abstract of said votes, claiming to give you 4,053 votes and to the said contestant, James J. Britt, 4,043 votes, thereby making it to appear that you had a majority in Buncombe County of 310 votes, or a vote of 9 in excess of the contestant's majority in the other counties composing the said district, which purported abstract was untrue, inaccurate, and unlawful in that it did not show the true result of the vote cast, respectively, for you and for the said contestant at the election of November 7, the said vote being for you 4,325 and for the contestant 4,037, giving you a majority of 288 in said county, instead of 4,053 for you and 4,043 for the contestant, James J. Britt, giving you a majority of 310 in Buncombe County, as falsely represented in the said abstract filed with the register of deeds in Buncombe County on November 17, 1916.

XII.

That by section 32 of chapter 101 of the Laws of North Carolina of 1915, entitled "An act to provide for primary elections," it is provided that "opposite the name of each candidate on the general ticket to be voted at the general election shall be a small square, and a vote for any candidate shall be indicated by making a cross mark, thus (X) in such square"; and by section 28 of the same act it is made the duty of the State board of elections, in the preparation of ballots for the general election, to prepare one official ballot for each political party for all State and district officers, and to distribute such ballots to the several county boards of elections in such time that they will be received at

least 10 days before the date of the general election, whereupon the several boards of county elections shall distribute such ballots to the several registrars and judges of election in their respective counties, so that they will be received at least three days before the date of the general election; and accordingly the ballots were prepared and distributed for the congressional election in the said tenth congressional district, containing, respectively, as candidates for Congress the names of Zebulon Weaver, Democrat, and the name of the contestant, James J. Britt, Republican, each of the said tickets bearing the inscription, "To vote this ticket, make a cross mark in the square," and no other kind of ballot was used or permitted to be used in the said election for Representative in Congress in the said district on November 7, 1916.

XIII.

That relying upon this express provision of the North Carolina State law, requiring that all general ballots shall be marked; upon the publicly expressed opinion of the attorney general of the State, interpreting this particular portion of the law to require congressional ballots to be marked; upon the public requirements of the State board of elections that they should be marked; upon the holding of D. S. Elias, the campaign manager of the said contestee, Zebulon Weaver, and upon his public declaration that such ballots should be marked; and, furthermore, upon the fact that he actually required them to be marked before being sent to the poll holders, the said contestant, James J. Britt, advised and instructed his friends throughout the said district that all ballots cast for him should have a cross mark placed in the square at the left of his name, otherwise they would be held as invalid, thrown out of the box, and not counted; and that all such ballots placed in the ballot boxes for the contestant, James J. Britt, were accordingly thrown out and not counted.

XIV.

That in order to be assured of the construction of the said law of the State of North Carolina, requiring all ballots voted at the general election to be marked, as hereinbefore described, the said contestant, James J. Britt, through the persons managing his campaign for Congress, called upon the State board of elections for a definite and final construction of the said act on the point whether said ballots should be marked, whereupon the said contestant, James J. Britt, was advised by the said State board of elections that all such ballots must be marked, as will appear from a letter of the said board, attached hereto and marked "Exhibit No. 1," and from the affidavit of A. B. Freemont, Esq., a member of the said board of elections, which affidavit is hereto attached, marked "Exhibit No. 2."

XV.

That in each of the five precincts in Buncombe County, hereinafter mentioned, from which the said county board of canvassers received and accepted "amended and supplemental returns," the question whether unmarked ballots found in the ballot boxes in said precincts should be counted or thrown out was fully discussed by the said precinct boards before counting the ballots at such precinct, and in each and all of the said five precincts the said boards unanimously decided and agreed that such unmarked ballots were not lawful and should not be counted, and all unmarked ballots found in the congressional boxes in said precincts were thrown out, not counted, not returned, and not replaced in said ballot boxes, it being understood and agreed that such ballots could have no legal effect whatever, and, in fact, were no ballots at all.

XVI.

That when it was ascertained that the number of votes cast for you and the number cast for the said contestant had resulted in the election to Congress of the said contestant, James J. Britt, by a majority of 13, as set forth in section 3 of this notice, the said canvassing board of Buncombe County, without any motion or request from anybody, adjourned from that day, November 9, 1916, until the following Thursday, November 16, and the chairman of the said board refused to hear the attorney of the contestant make a motion that the said board proceed on said day, November 9, to certify, return, and proclaim the congressional vote of said county as they had then and there found it to be; that in the week which followed November 9 it was openly declared that your friends and supporters expected to demand, and would demand, that when said board reassembled it should go behind the returns, recanvass the congressional vote in Buncombe County, and include therein ballots which had been put in the boxes at said election without having the cross mark thereon as prescribed by law, all of which said ballots had been thrown out and not counted by the judges of election in the various precincts of said county and by them held not to be legal ballots, and by them destroyed; that when the said board reconvened on November 16 the said contestant, James J. Britt, appeared before the said board and insisted that the congressional vote as theretofore canvassed by them in Buncombe County be certified, returned, and proclaimed as the true vote cast, and that they not go behind the returns and not recanvass the vote of that county for that position as found by said board on November 9, but that if they should so determine to make a further canvass of said vote, that the contestant be given an opportunity to show that if the unmarked ballots cast in that county for that position should all be counted the contestant would still have a majority over his opponent in the said district, and would thereby be elected as a Representative in Congress; that the said chairman assured the contestant in open meeting that he should have a fair hearing, a fair count, and an opportunity to present his side of the case to the said board; that at this stage a member of the board submitted a motion in writing to receive and consider, as "amended and supplemental returns" certain papers from 5 of the 28 precincts of said county in which certain alleged unmarked ballots were said to have been cast for you at that election, while no such pretended "amended and supplemental returns" were made from any of the other 23 precincts in said county, although in some of the other said precincts there had been ballots thrown out in the official count on the ground that they did not contain the required cross mark; that the effect of this said motion would have been, if carried, to elect you to said position, while if all the ballots cast in said county without cross marks thereon had been counted the effect would have been to elect the said contestant, James J. Britt, to that position; that this motion was earnestly opposed by the contestant and his attorneys; that at one time the contestant inquired of one of the members of said board who had made said "amended and supplemental returns" and who had himself offered to make a statement in regard thereto, at whose instance the said so-called "amended and supplemental returns" had been made, whereupon the chairman of the board, on objection of counsel for Zebulon Weaver, refused to permit contestant to ascertain that fact; that at contestant's request the said board adjourned to enable the contestant and his attorneys to examine these so-called "amended and supplemental returns" and to determine upon the proper course to pursue in relation thereto with a view of protecting the rights of the said contestant, the said adjournment being had until 4 o'clock p. m. of that day.

XVII.

That before said board reassembled at 4 p. m. on that day, November 16, this contestant began an action to compel the performance of the duties of said board and its chairman, to wit, to cause to be filed with the register of deeds abstracts showing the vote for contestant in said county to be 4,037 and that of yourself to be 4,325; and in said action, on said November 16, procured from a judge of the superior court of said State an alternative writ of mandamus requiring said board to "announce, certify, return, and proclaim, in accordance with law, the conclusions and findings so made by you on Thursday, November 9, 1916, to wit, the result of said election for said position (Congressman) in said county, and that you do and perform all the other requirements of law which it is your duty to do after making such findings of said election, or that you show cause to the contrary on the 20th day of November," a copy of the record in said action being filed with this notice as an exhibit and a part thereof and marked as "Exhibit 3."

XVIII.

That the said writ was served on said board when it reassembled at 4 p. m. on November 16, whereupon it adjourned until the next day, when the chairman announced that it would take no further action on the congressional matter until it had received further instructions, meaning, as this contestant understood, further instructions from the court on the return day of said writ; and, proceeding on this understanding, as said board well knew, contestant and his counsel withdrew from the place of meeting of said board. About dark of that day, and without notice to this contestant, said board caused to be filed in the office of the register of deeds of said county abstracts showing the respective votes for contestant and yourself in said county as 4,043 and 4,353, and one of these abstracts was sent by the register of deeds to the secretary of state, and was by him presented to the State board of canvassers, who, on the basis thereof, ascertained the total vote for contestant in the district as 18,014, and for yourself 18,023, resulting in the election of yourself by 9 votes; and thereupon a certificate of such purported election was given to you by the secretary of state and a commission was issued to you by the governor of the State, certifying your appointment as a representative of the State in said Congress from said district.

XIX.

That during the sessions of said county board of canvassers its chairman and others of its members, and the said board as a whole, although a body charged with judicial functions, were in frequent and open consultation and private conference with representatives of the party to which you belong, especially with J. W. Haynes, then chairman of the Democratic county executive committee in said county; and during the sessions of said board B. L. Lyda, chairman, actually left his chair as presiding officer and went aside on several occasions in private conference with said Haynes, and on Saturday, November 11, said board actually met in secret session with said Haynes behind locked doors and refused admittance to their place of meeting to persons belonging to contestant's party, as will appear from reference to the affidavit of D. W. Hill, page 80 of the record of said mandamus action, as to this secret meeting.

XX.

That the said abstracts on which your certification of election is based, except as to the six precincts hereinafter mentioned, stated the votes for contestant and you, respectively, as being the same as shown in the list of precincts and the votes therein contained in section 3 of this notice, which list gives 4,325 for you and 4,037 for contestant in said county; that the said six precincts and the respective votes therein, as shown in said list in section 3 of this notice, are the following:

Precinct.	Britt.	Weaver.
Asheville:		
No. 2	128	133
No. 6	162	304
Hazel	45	73
Lower Hominy	90	147
West Asheville	246	287
Asheville, No. 4	163	305
Total	834	1,249

That in the said abstracts on which your said certificate of election is based the votes in said precincts are given as follows:

Precinct	Britt.	Adding.	Weaver.	Adding.
Asheville:				
No. 2	129	1	138	5
No. 6	164	2	311	7
Hazel	46	1	77	4
Lower Hominy	90	0	153	6
West Asheville	242	2	292	5
Asheville, No. 4	163	0	306	1
Total		6		28

Thereby adding 6 to contestant's vote and 28 to your vote in said county, thereby overcoming contestant's actual majority of 13 in said district by 9 votes, the correct statement of said vote in said county being 4,037 for contestant and 4,325 for yourself.

XXI.

That the said 27 votes were added to your vote and 6 to contestant's vote in the first five precincts named in the following manner: Papers called "amended and supplemental returns," all made subsequent to the 7th day of November, 1916, were revised by said board, stating that ballots were cast in said precincts without the cross mark, and that the respective numbers of such ballots for the respective candidates were the numbers set out in the preceding section in the columns headed "Adding."

XXII.

That in precinct Asheville No. 4, as contestant is informed and believes, the printed return made November 7, 1916, was first filled in as showing the vote for you to be 306, but at the meeting of the board on November 9, it was unanimously agreed that this was incorrect and that the tally sheet showed such vote to be only 305, and accordingly there was made then and there on said printed return, by the clerk of the county board of canvassers, and without objection from any source, a memorandum, in connection with said figures "306," "changed to 305," which was the vote for you in the said precinct on the basis of which, as contestant avers, your vote in the county was ascertained on November 9, by the said county board, to be 4,325; but notwithstanding this agreed official correction, said abstracts stated the figures incorrectly as 306.

XXIII.

That after the precinct boards in all the 28 precincts of said Buncombe County had counted the ballots on November 7, the date of the election, and had performed their other duties, as set forth in sections 3, 4, and 5, of this notice, each of said precinct boards then and there adjourned, and no one of said boards ever met subsequent to said November 7, 1916, except that of West Asheville, which adjourned from November 7 to November 8, when it reconvened for the purpose of signing the original formal returns, but took no action whatever as to any "amended and supplemental returns," or as to changing the number of congressional votes previously counted and agreed upon.

XXIV.

That the precinct board in each of said 28 precincts was composed of a registrar, a Democrat; and one judge, a Democrat; and one judge, a Republican.

XXV.

That the said "amended and supplemental returns" mentioned in section 21 of this notice were in no case, except from one precinct, Hazel, signed by the Republican member of the precinct board, but merely by the two Democratic members thereof; the said supplemental returns from Hazel being signed by the registrar—a Democrat—but not by the Democratic judge; that it was signed by C. D. Miller, the Republican judge, but immediately after his signature, on said supplemental return appears the following memorandum, in his handwriting, "I can not remember only one unmarked ballot, and that was for Britt, C. D. M."; thereby nullifying the statement above his signature that in that precinct there were four unmarked ballots for you.

XXVI.

That the Republican member of the said precinct boards, except C. D. Miller, was not consulted or conferred with or given notice in regard to the making of any of the said supplemental returns.

XXVII.

That this contestant is advised that as a matter of law said supplemental returns were nullities; that if they had been made by all of the members of the precinct boards in meetings duly assembled they would have been nullities, as said boards ceased to exist and were functi officio when they had performed their duties as set out in said sections 3, 4, and 5; and certainly no two individuals who formerly were members of such boards, without calling in the other member to meet with them, had any authority to make such supplemental returns; and this contestant is further advised and maintains, as a matter of law, that whether or not such supplemental returns were proper or could in any way or at any time be lawfully made, yet the additional ballots thereby reported—27 for you and 6 for the contestant—not having the cross mark, were not legal ballots and should not have been considered such by the said county board.

XXVIII.

That without waiving the positions taken in the next preceding section, this contestant further avers: That the county board of canvassers took no steps to secure similar or any other supplemental returns from any of the other 23 precincts in said county.

XXIX.

That the contestant on November 17 appealed to said board to get reports from the other precincts showing the unmarked ballots therein, as well as from said five precincts, although he then contended, as he now contends, that no unmarked ballots should have been considered, but said board refused to procure information from said other precincts as to the unmarked ballots therein.

XXX.

That in the county of Buncombe 27 unlawful ballots, to wit, so-called unmarked ballots, which ballots had not been legally cast, were unlawfully returned and counted for you; that is to say, in Asheville No. 2, 5 votes; in Asheville No. 6, 7 votes; in Hazel, 4 votes; in Lower Hominy, 6 votes; in West Asheville, 5 votes, by which said unlawful ballots, and by them only, you were given a certificate of election.

XXXI.

That although the Buncombe County board of canvassers received and accepted "amended and supplemental returns" so as to give you the benefit of 27 unmarked ballots claimed to have been found in the boxes bearing your name, nevertheless it refused, failed, and neglected to have made and to accept "amended and supplemental returns" whereby 15 unmarked ballots placed in ballot boxes for the contestant should be received and counted; that is to say, they refused to count and return unmarked ballots cast in Asheville No. 1, 2 votes; in Beaverdam, 5 votes; in Swannanoa, 1 vote; in Biltmore, 1 vote; in Hazel, 1 vote; and in Leicester No. 1, 3 votes, making a total of 15 votes, which said votes, had they been returned and counted as were like votes for you, they would have duly elected me to the position of Representative in Congress, and would have shown that you were not so elected.

XXXII.

That the alternative writ of mandamus, returnable on November 20, coming on to be heard by his honor W. J. Adams, judge, the matter was decided by him on November 27: In his judgment he held "as a matter of law, that the county board had no legal right 'to go behind the precinct returns,' in canvassing and determining the vote." He also held that "They (the county board) had power also, in the exercise of a limited legal discretion, to accept or reject papers tendered as returns, the ultimate object being to ascertain the true returns." He refused to decide whether the acceptance of the supplemental returns by the board was "going behind the returns," saying, "Whether all the unmarked ballots in the county should have been accepted or rejected is not presented here as a question of morals or of law." This judgment was affirmed by the Supreme Court of North Carolina, a copy of whose opinion is attached as an exhibit. In this opinion the supreme court says that the supplemental returns should not have been received if, as contestant contended, the precinct boards had not been reconvened to make them.

XXXIII.

That the chairman of your congressional committee, D. S. Elias, acting as your manager and as the chairman of the county board of elections of Buncombe County, in distributing the congressional ballots in said district, sent such ballots to the poll holders in the various precincts already marked for voting as if prepared by the voter, thereby directing, instructing, and requiring that said ballots be so marked, and, in fact, making such ballots unofficial and unlawful by this addition thereto.

XXXIV.

That, as the contestant is informed and believes, the said D. S. Elias, your manager, and chairman of the Buncombe County Board of Elections, in preparing the congressional ballots for distribution, in connection with other ballots for the various offices voted for at said election, while said combination of tickets purported to contain but one of each sort, the said attached group, nevertheless, did always or usually contain two of your tickets fastened closely together thereby rendering it easy for a single voter to place two of such ballots in the ballot boxes.

XXXV.

That notwithstanding it was the duty of the county boards of election, under section 28 of chapter 101, laws 1915, to distribute the congressional ballots "to the several registrars and judges of election in their respective counties," said ballots were not, as contestant is informed and believes, fairly and impartially distributed, in that the friends of and workers for contestant were not able to get ballots in sufficient number and were not able to get them as soon as were your friends, and throughout the district, as contestant is informed and believes, tactics such as are indicated by the following letter were pursued by your political friends. D. S. Elias, when said letter was written, was chairman of the county board of elections of Buncombe County and also chairman of the Democratic congressional executive committee in said tenth district of North Carolina, and said ballots were given to the friends and partisans of said Weaver and opportunities given them to mark the same for distribution to voters, while the same treatment was not accorded this contestant and his supporters and like opportunities were not given them. The letter is as follows:

OFFICE OF THE COUNTY BOARD OF ELECTIONS,
Buncombe County, Asheville, N. C., October 30, 1916.

Mr. W. F. EDWARDS,
Chairman Board of Elections, Hendersonville, N. C.

DEAR SIR: Our distinguished friend, "Bo" Freeman, raises the question about distributing the ballots, and says in his opinion we should give a third of the ballots to the Republican judge, one-third to the Democratic judge, and one-third to the registrar. There is no law to substantiate him in this. The law says the ballots shall be distributed to the several registrars and judges of election in each county.

In order that no question shall arise hereafter, in distributing the ballots here, I am going to make up a package of one-third of the ballots, address it to the Republican judge; one-third and address it to the Democratic judge; and one-third to the Democratic registrar; then wrap the three packages in one package and deliver the whole to the Democratic registrar. He will then become my agent for the distribution of the ballots, and on election morning will open them all up and give each one his package, but they will then be in the election booth. In this way the Republicans will not get hold of the ballots until the day of the election.

I am marking all of the Zebulon Weaver ballots before they are distributed and hope you will see same is done in Henderson County. This will eliminate any possibility of a vote being cast which is not properly marked. Our Republican brethren can mark theirs on election day when they get them.

I have thoroughly gone into the law on all these points and know that I am safe. Mr. M. L. Shipman asked me to write you about these matters in order that you might give these questions consideration.

With very best wishes, I am,

Yours, very truly, (Signed) D. S. ELIAS, *Chairman.*

XXXVI.

That the sole ground upon which you rely for your title to the said seat in Congress is the 27 so-called unmarked ballots, which the Buncombe County board of canvassers received on so-called "amended and supplemental" reports, which so-called "amended and supplemental" reports were not made by the said precinct boards in a body convened for that purpose, but were made individually by members of said board, which so-called "amended and supplemental" reports were for that reason unlawful, the Supreme Court of North Carolina having held in this case that such reports should not have been received if such precinct boards had not officially reconvened to make them, which admittedly they had not, and notwithstanding this fact, and in the face of the decision of said court, the North Carolina State board of canvassers did, on the 19th day of December, 1916, so count said unlawful ballots, based upon said unlawful returns, and on the apparent majority of votes thereby given you did give you a certificate of election.

XXXVII.

That notwithstanding the fact that chapter No. 101 of the Public Laws of North Carolina, of 1915, requires all ballots at a general election to be delivered to the precinct poll holders not less than three days before said election, your congressional chairman, D. S. Elias, gave instructions in an official letter, addressed to W. F. Edwards, chairman of the county board of elections of Henderson County, advising the said Edwards that he, the said Elias, would send such tickets to the various precinct poll holders so as to reach the Democratic registrars on'y, and so as to deprive the Republican judges of election from receiving such tickets until the said election day, and then only in the election booth, said instructions having the effect to deprive my supporters of an opportunity to get such ballots until the day of election, thereby hindering and delaying them, and in many instances depriving them of the right to vote at all.

XXXVIII.

That, as the contestant is informed and believes, in the 13 counties comprising said district a large number of persons were permitted to cast their ballots for you without having paid their poll taxes on or before the 1st day of May, 1916, as required by law.

XXXIX.

That in the 13 counties in said district, as the contestant is informed and believes, a large number of persons were permitted to cast their ballots for you without having been residents of the State, county, and precinct for the time required by law, namely, residents of the State for two years, of the county for six months, and of the voting precinct or ward for four months.

XL.

That in the 13 counties of said congressional district, as the contestant is informed and believes, a large number of persons were permitted to cast their ballots for you without registering, as required by law.

XLI.

That in the 13 counties of said congressional district a large number of persons were permitted to cast their ballots for you without having attained the age required by law, namely, the age of 21 years.

XLII.

That in the 13 counties of said district a large number of unmarked ballots were unlawfully counted for you.

XLIII.

That the contestant is informed and believes that in the 13 counties comprising the said congressional district a large number of unmarked ballots bearing his name and intended for him were placed in the ballot boxes, but were thrown out and not counted, while similar unmarked ballots found in said ballot boxes were counted for you.

XLIV.

That in the 13 counties comprising said congressional district, as the contestant is informed and believes, a large number of voters were induced to vote for you by bribery and intimidation.

JAMES J. BRITT,
Contestant.

_____,
_____,
Attorneys for Contestant.

CITY OF WASHINGTON, *District of Columbia:*

Personally appeared before me, the undersigned, notary public in and for the District of Columbia, James J. Britt, who, being by me duly sworn, says that he is the contestant in the above case, and that he has read the foregoing notice and knows the contents thereof, and that the matters and things stated herein are believed by him to be true to the best of his knowledge, information, and belief.

JAMES J. BRITT.

Sworn to and subscribed before me this the 13th day of January, A. D. 1917.

_____,
Notary Public.

Omnibus River and Harbor Bills.

Four omnibus river and harbor bills during the Sixty-third and Sixty-fourth Congresses, aggregating $170,000,000, were either defeated, modified, or passed with a final saving to the Federal Treasury of $86,000,000, or practically one-half of the total amount.

An omnibus public-buildings bill for $38,000,000 was also held in committee and defeated.

Omnibus bills are products of a mutual trading system fundamentally indefensible and vicious in character. Supported by lobbies urging local projects, demanding support of wasteful items in exchange for needed public improvements, such bills are a public scandal that in good conscience must be defeated and a businesslike method of legislation substituted. Responsibility fixed for enormous river and harbor extravagance.

EXTENSION OF REMARKS

OF

HON. JAMES A. FREAR,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. FREAR. Mr. Speaker, when war clouds cast their shadows over the civilized world and our own country is discovered on the borders of the storm, it is of minor importance to direct attention to reckless waste of Government money ostensibly for "public" improvements. The subject, however, is of vital importance to those who pay the bills and is an unconscionable wrong at this particular time.

Representatives vigorously rail over the appointment of a new clerk, or of several clerks required to perform extra work placed upon some department. Statesmen in Congress protest vigorously over any increase of wages of underpaid Government employees who receive the same rate that was fixed a half century ago, yet these same statesmen are strangely silent in their opposition, or vigorously active in securing their share, when a "pork" bill is under discussion.

A distinguished Senator aptly called one of such bills "a humbug and a steal." That was many years ago. If true, then it is true now, and I desire briefly to call attention to many millions saved to the public Treasury by defeat of some of these bills, while others carrying scores of millions have passed another body practically unchallenged, and let me also direct attention to others that threaten to pass if an extra session of the Sixty-fifth Congress is called by the President.

Congress has heretofore appropriated $898,543,252 for river and harbor improvements. (See Rept. of Chief of Engineers, 1916, p. 33.) This enormous amount of money, reaching practically $900,000,000, has been disbursed by or is under the control of the Chief of Engineers of the Army, whose mandate is law and supreme. Probably more than one-half of this great sum of money can be demonstrated to have been wasted so far as any demands of commerce, present or prospective, are shown. That is a moderate statement compared with estimates of waste made by those familiar with the present lack of system. If substantially true, responsibility should be fixed and conditions remedied.

In debate on the last river and harbor bill for 1917, I quote briefly from a colloquy found in the speech of Chairman SPARKMAN, of January 22, inserted by him in the RECORD of February 20, as follows:

Mr. SPARKMAN. I know he [Mr. FREAR] does not intend to misstate facts; I am sure he is above that, but the trouble is, my friend has not the time to look into these things as he would like. * * *

Mr. FREAR. But is not the statement absolutely accurate and just as stated? (Minority report.)

Mr. SPARKMAN. I think not entirely. I think it can be read either way.

Mr. FREAR. There was no such intention, I assure you.

This colloquy arose over a statement contained in my minority report of 30 pages (Rept. 1289, Pt. 2, 64th Cong., 2d sess.), wherein numerous objections to the 1917 river and harbor bill were set forth, meriting the bill's defeat. During debate, the majority members of the committee were challenged to point out any misstatement of fact contained in that report. Whatever difference exists in judgment as to the bill, that report on its statement of facts was not successfully attacked in a single material particular. The colloquy is inserted to furnish public testimony from the distinguished chairman of the committee in reference to my sincerity of purpose.

During debates covering several weeks, counting four river and harbor bills, a flood-control bill, and a public-building bill, aggregating $260,000,000, I attacked scores of items in the different bills, but the generous and able chairman of the Rivers and Harbors Committee says he is sure I am above intentional misstatement of facts. That is offered at the outset of my remarks to indicate my own purpose. We may differ in conclusions but nothing is gained by any misstating of facts, and I have endeavored to correctly present them.

Briefly let me state the saving to the Federal Treasury resulting from opposition to these scandalous omnibus so-called "pork-barrel" measures during the Sixty-third and Sixty-fourth Congresses, and show that Congress is not alone chargeable with responsibility for the enormous waste which has occurred.

Two out of four of these bills have been squarely defeated during the last four years, with an ultimate saving to the Federal Treasury of $47,000,000, while no legitimate waterway in the country, it is safe to say, has been neglected. If neglect has occurred, the responsibility lies at the doors of the Chief of Engineers, who had unlimited authority in the allotment and expenditure of $50,000,000 covered by two substitute bills in 1914 and 1915, in addition to $43,000,000 specifically appropriated in 1916. Much of this large sum appropriated, aggregating $93,000,000, has been wasted on chimerical schemes approved by Engineers but not related to commercial needs, present or prospective. Congress and the country has had full measure of Army Engineer rule and omnibus legislation and should be ready to adopt an intelligent businesslike system of handling our national waterway problem. Few European governments have been able to show efficiency on inland waterways, according to good authorities and students of the subject, whose opinions were quoted in Report 254, Part 2, Sixty-fourth Congress, first session, which I filed against the $43,000,000 bill of 1916. Where efficiency has been obtained abroad, the Government has had complete control of competing railway rates and the work of improvement has been conducted by a high-class board on a plan looking to commercial needs and a wise expenditure of public funds. None of these important conditions are found in our own clumsy legislative and loose administrative methods. We work by guess and we are mighty poor guessers, according to results.

First, what has been accomplished by agitation against these "pork barrels"?

In 1914 protest was made in the House against the passage of the river and harbor bill for that year. Although such bills had previously been put through without criticism, project after project was discussed in 1914 in the House, in order to expose the haphazard, happy-go-lucky method of preparing and passing omnibus waterway bills and administering funds. Members interested in one or more of the three hundred and odd projects contained in the average bill ridiculed opposition and eulogized Army engineers whose approvals were cited in defense of bad, worthless, and wasteful projects disclosed throughout the bill. A roll call could not be secured in the House on the 1914 bill, but in the Senate the fight was continued by the ablest waterway expert in Congress, Senator Burton, who had revolted against the growing extravagance and waste evidenced by such bills. With Senator KENYON and other Senators, the defeat of the 1914 bill, then carrying over $53,000,000, was finally secured, and a substitute amount of $20,000,000 was turned over to Army engineers for allotment to the different projects in proportion to their immediate needs.

All efforts of river and harbor waterway lobbies to create back fires against Members, according to established practice, and all assaults on Senator Burton, because of his protest against the wasteful measure, fell harmless, and a river and harbor bill was defeated for the first time in many years.

Profiting by the 1914 experience, the 1915 river and harbor bill did not reach the altitudinous estimates demanded by the waterway lobby, which asks $50,000,000 annually and considers itself the especial guardian for such bills.

The 1915 bill eliminated new projects contained in the bill of the year before, and was shrunk down to $38,000,000, including, however, scores of wasteful old projects, many of which again were exposed in the House. Although unsuccessful in defeating the bill in the House, it was subjected to merciless ridicule and denunciation upon reaching the Senate, and finally a $25,000,000 substitute was passed by Congress, to be placed in the hands of Army engineers, who were also permitted to transfer $5,000,000 from projects where not needed, and were instructed by law to reexamine certain specified, questionable projects, with such other projects as might be found wasteful and not worthy of approval, and to report back to Congress their findings.

In other words, the Chief of Engineers was urged to clear away or modify existing projects that had become recognized monuments to waste. That bill set forth specifically the following projects for reexamination:

Inland waterway from Norfolk to Beaufort, N. C.; Coosa River, Ala.; San Lucia Inlet, Fla.; Brazos River, Tex.; Red River, Ark.; Ouachita River, Ark.; Arkansas River, Ark.; Tennessee River, Ala.; Fox River, Wis.; and Missouri River, Mo.

All of the above were specifically named in the law for reexamination. The law further provided as follows:

And the Chief of Engineers is directed to make a report upon any other projects, river or harbor, the further improvement of which, under present conditions, is undesirable, or in which modification of the plans on projects should be made.

This was a pointed suggestion to modify or abandon a $10,000,000 scandalous Trinity River project proposed by engineers to be liquidated by artesian wells, or the Oklawaha River, on which $98,000 has been expended, with a large part of $141,000 more for cutting hyacinth, in order to secure 1,760 tons of actual commerce in 1916. Army engineers now recommend $733,000 more for this stream, which certainly needs reexamination and investigation. The upper Mississippi returns a pitiable showing in actual commerce for $28,000,000 in appropriations heretofore asked by engineers. Then there are the Tennessee, Cumberland, Coosa, and Black Warrior, every one of which has absorbed millions upon millions of Government dollars in fruitless efforts to resuscitate a small fraction of their old-time commerce. Then the Big Sandy, which cost the Government $350 per ton in 1913 for an insignificant actual freight floated on the river, together with scores of other projects needing reexamination, including Cold Spring Harbor, Absecon Inlet, Raccoon Creek, the Scuppernong, North East River, the Peedee, little and big, the Santee, Wateree, and Congaree, the last three of which have absorbed a million and a quarter without results; the Altamaha, Oconee, Ocmulgee, the Flint, and any number of shallow, useless canals known as inland waterways. All these are among many other old projects with questionable reputations that engineers always recommend for generous appropriations and that needed reexaminations. Under the law they should be modified or abandoned if based on commercial needs.

The law calling for such reexaminations was deliberately passed by Congress and was a direction to the Chief of Engineers that could not be misunderstood; yet in effect the law was ignored by the official to whom it was directed, and not one single project of importance, no matter how objectionable its character, has been dropped from the list. Army engineers generally recommend these wasteful projects in the beginning, and, however patent the waste disclosed by official reports, they refuse to admit any mistaken judgment by recommending abandonment. The reason will more fully appear hereafter when discussing the fundamental weakness of our waterway legislation.

In order to show the character of the two allotments made by Army engineers of $20,000,000 in 1914 and $30,000,000 in 1915, provided in the substitute bills, I annex a statement wherein it is demonstrated that practically one-half of the $50,000,000 total was given by the Chief of Engineers to a dozen projects out of nearly 300 items carried in the separate bills. All the actual commerce floated on the entire 12 projects is so insignificant in character that it is hard to understand how Congress has permitted itself to be so long deceived. A dozen harbors are named, any one of which has a much larger commerce than the 12 inland waterways combined, and they are cited in this connection because they afford a fair commentary on the judgment and discretion shown by Army engineers when dealing with our waterway question. At the risk of disarranging my argument, I present at this point the wasteful allotments by the Chief of Engineers of the 1914 and 1915 substitute bills, aggregating $50,000,000; and remember these bills originally reached a total of over $92,000,000 as recommended by the Chief of Engineers and in committees but were cut down by the Senate, which prepared the substitute bills that passed Congress and thereby saved $47,000,000 to the taxpayers in 1914 and 1915.

The $50,000,000, including the $5,000,000 transfers, was by law turned over to Army engineers for allotment, and out of 240 projects given specific amounts the following was awarded to an even dozen waterway projects:

Engineers' allotment, 1914 and 1915, of $47,536,000, and the 1916 bill.

Rivers.	1914, twenty million.	1915, thirty million.	Total Sixty-third Congress.	1916, House bill, $39,608,410.
Mississippi	$5,250,000	$5,815,000	$11,065,000	$8,320,000
Missouri	950,000	1,100,000	2,050,000	1,750,000
Ohio [1]	1,769,000	3,915,000	5,684,000	5,509,000
Tennessee	223,000	501,000	724,000	944,000
Cumberland	210,000	378,000	588,000	710,000
Ouachita	300,000	136,000	436,000	499,000
Aransas Pass	470,000	180,000	650,000	100,000
Sabine Pass	240,000	100,000	340,000	590,000
Brazos	230,000	240,000	470,000	390,000
Black Warrior	768,000	48,000	816,000	.....
Cape Fear	185,000	323,000	508,000	218,501
Beaufort Canal	.....	400,000	400,000	1,000,000
Total	10,595,000	13,136,000	23,731,000	20,030,501

[1] The Ohio River was also given $3,200,000 in the 1915 sundry civil bill.

Of between two and three hundred projects given the remaining 50 per cent from the 1914 and 1915 allotments about one-half were trafficless rivers which have a combined actual commerce less than the waterway tonnage of Buffalo or Boston or Cleveland or Philadelphia, or other lake and ocean harbors. The 12 rivers received $23,731,000 in 1914 and 1915, or about 50 per cent of the total during the Sixty-third Congress.

Over $250,000,000 has been spent on these 12 river and canal projects by the Government in an effort to resuscitate a lost commerce. Deducting floatable timber and sand that floated a half century ago in larger quantities than to-day and do not require expensive waterways, several of these projects are reported to have floated in 1913 approximately as follows:

	Tons.
Upper Mississippi (average upper Mississippi haul 26 miles, or less than 7,000 tons average continuous haul)	170,000
Lower Mississippi (excluding coal)	200,000
Ohio (95 per cent coal), average haul 26 miles, or 50,000 tons average continuous haul	2,000,000
Tennessee (includes on Tennessee 78,000 tons coal hauled 16 miles)	200,000
Tombigbee and Warrior (includes on Warrior 32,000 tons coal, distance not stated), average	56,000
Beaufort Canal	65,000
Cumberland	53,000
Missouri	24,000
Hennepin Canal	11,850
Muscle Shoals Canal	5,887
Red River	1,694

Aside from soft coal, as near as can be estimated, the average haul was from 30 to 100 miles on the various rivers. The same coal is repeatedly recounted.

THE SAID RIVERS RECEIVE 50 PER CENT OF EVERY BILL.

During 1914, 1915, and 1916 approximately one-half of the entire amount given to all waterways was for these few river and canal projects. The balance was divided among about 270 or more projects, of which 20 genuine waterways disclosed 1913 traffic as follows:

10 ocean harbors.	Tons.	10 lake harbors.	Tons.
New York (estimated)	100,000,000	Superior-Duluth	46,875,000
Philadelphia	26,267,335	Chicago-Calumet	13,275,000
Boston (estimated)	20,000,000	Milwaukee	8,647,000
Baltimore	14,781,942	Ashland	5,623,309
Norfolk	17,349,942	Ashtabula	15,743,375
Savannah	3,154,089	Cleveland	16,488,083
New Orleans	6,442,932	Buffalo	18,920,854
Galveston	4,445,088	Erie	3,340,071
San Francisco	9,353,530	Marquette	1,852,229
Portland, Oreg	7,923,902	Soo Canal	79,714,344

Approximately 200,000,000 tons of waterway commerce was handled at the 10 ocean ports, and, allowing for duplications, one-half that amount at the 10 lake ports. Presumably the commerce was carried on the average 200 to 500 miles, counting ocean and lake traffic, but, like some other waterway statistics, no definite figures are available.

The significance of the comparisons will not be overlooked. Ten ocean ports handled fifty times the actual commerce carried on 10 river projects that annually receive about half of the average waterway bill, and these same rivers floated only about 4 per cent of the commerce counted at 10 lake ports.

COST TO THE GOVERNMENT FOR "FLOATING COMMERCE."

The cost to the Government for furnishing a waterway for inland commerce per ton is not definitely settled as to method of computation and only approximate results can be reached, because the amount properly chargeable to investment interest is variously estimated, although annual maintenance is sure and certain. Excluding floatable timber and sand, usually hauled short distances, the following estimates have been made on the several rivers and canals noted:

	Per ton.
Ohio River (excluding coal, $40 per ton)	$3.00
Ouachita	8.00
Warrior and Tombigbee	12.00
Upper Mississippi	12.00
Lower Mississippi	35.00
Arkansas	20.00
Hennepin	36.75
Missouri	40.00
Muscle Shoals (Tennessee)	40.00
Aransas Pass Canal	80.00
Brazos	80.00
Red	100.00
Muscle Shoals (proposed)	150.00
Big Sandy, Ky	350.00

It is interesting to note that in round numbers the following estimate of expenditures per mile have been made by the Government on three waterways with a continued loss in commerce:

	Per mile.
Lower Mississippi, 1,000 miles, at	$100,000
Ohio River to Missouri River, 200 miles, at	86,000
Upper Mississippi, 600 miles, at	40,000
Ohio River, 1,000 miles, at	60,000
Lower Missouri, 400 miles, at	40,000

Government canal investments, all indorsed by the Chief of Engineers, are proportionately wasteful:

	Per mile.
Hennepin Canal, 60 miles, at	$126,000
Muscle Shoals, 26 miles, at	175,000
Muscle Shoals, proposed, 26 miles, at	560,000
Chesapeake & Delaware Canal, proposed, 13 miles, at	1,530,000

The above river and canal projects are small waterways that float an insignificant commerce compared with the investment. Can any condemnation of our wasteful purposeless waterway policy compare with a brief statement of expenditures past, present, and prospective?

I have digressed to show where hundreds of millions of dollars have been wasted by Army Engineers on inland waterways and under present methods will continue to be wasted because the Chief of Engineers is in supreme control and helps perpetuate the present indefensible "pork-barrel" system.

Notwithstanding the greater part of the $50,000,000 appropriated by Congress in 1914 and 1915 by the two substitute bills was frittered away on deserted or nearly useless waterways, a reduction in the total waste was reached through the reduced lump-sum appropriation turned over to the Army Engineers for allotment under the substitute bills. This was the only method of reducing waste because not one project ordinarily can be stricken from an omnibus bill which relies on votes secured through all the different local projects included. That is a characteristic of every pork-barrel omnibus bill. All projects stand or fall together.

With a record of two successful defeats for the river and harbor bills of 1914 and 1915, and with a saving in the total amount appropriated of $47,000,000 by the defeat of these wasteful measures, another bill was introduced in 1916, reaching $43,000,000, before it was finally passed by Congress. Senator Burton had withdrawn from public life before this session, and the assertion was confidentially made that no opposition to omnibus bill appropriations could thereafter be successfully continued. However, official engineering reports were again cited in the House to show the bad character of the 1916 bill, and on roll call 133 votes were cast against that bill. After a long discussion in the Senate, a substitute bill, carrying a reduced amount, was defeated by only one vote, while the bill proper passed the Senate by only three majority—a pronounced protest against the 1916 omnibus waterway bill, notwithstanding the absence of Senator Burton, whose criticism of such measures is a perpetual indictment of all.

Undeterred by the narrow shave of the 1916 bill, another bill was introduced in the House in 1917, during the present session, carrying $38,000,000, in round numbers. No new project had been included in bills since 1914, and ultimatums now came from different State delegations to the effect that unless new projects were inserted in the bill particular State delegations would not support the 1917 measure. New projects for particular States were the price of support. With defeat facing the bill, 81 new projects were added, covering items in many States throughout the country, and the 1917 bill was introduced in the House at $38,000,000, of which amount $29,000,000 was for maintenance and improvement of old projects; and of 81 new projects, aggregating $47,000,000, to be adopted by the bill, initial appropriations reaching $9,000,000 were inserted for first payments. Eighty-one new projects were expected to hold, and did hold, many votes for the 1917 measure, although the bill was demonstrated to be worse than any bill presented since 1914. Notwithstanding all the new support brought to the bill by fourscore of new projects, the opposition in the House recorded 132 votes. Many circumstances handicapped the 1917 fight in the House. Practically daily meetings of the committee were continued up to the time of the bill's introduction; and it was immediately placed upon the calendar to follow a $38,000,000 public-building bill, which was also opposed by only one or two Members on the floor.

Without opportunity to study the character of two so-called "pork-barrel" omnibus bills suddenly thrust upon him, the average Member was unable to join in the discussion and exposure of the bills, and the proponents of the public-buildings and river and harbor bills ridiculed the seemingly lone hand presented by the opposition. However, both bills were attacked in the House as vigorously as opportunity afforded by one or two Members, with a result that 92 votes were registered in the House against the public-buildings bill and 132 votes, as stated, were recorded against the river and harbor bill, which, I submit, was a vigorous protest against such bills.

The Senate refused to pass either the $38,000,000 river and harbor bill or the $38,000,000 public-buildings bill, and upon an offer of a $25,000,000 substitute by the opponents of the pork barrel in the Senate, a back-fire was instituted against recalcitrant Senators by the river and harbor lobby that demands $50,000,000 annually. I submit a statement for the press given out in 1917 by the lobby that has its president and chief supporters among those who fashion and determine public legislation on rivers and harbors.

The following was sent to newspapers in February when the bill and substitute were pending in the Senate:

[From the National Rivers and Harbors Congress, 824 Colorado Building, Washington, D. C. For immediate use.]

BEST RIVERS AND HARBORS BILL INTRODUCED IN YEARS IS IN DANGER OF DEFEAT.

"The rivers and harbors bill now pending before the Senate," said Senator RANSDELL, of Louisiana, "is the most constructive piece of waterway legislation introduced in many years. It eliminates a number of the projects which have been sharply criticized and provides for beginning work on 90 new projects, every one of which is of undoubted merit and importance, and has received the unqualified approval of the Army engineers. Moreover, provision is made to prosecute and maintain every worthy waterway project in the land which is already under way.

"Notwithstanding the great merit of this measure, which carries an appropriation of about $39,000,000 for the next fiscal year, a minority report has been filed by Senators KENYON, JONES, SHERMAN, HARDING, and WATSON, which proposes to substitute a lump-sum appropriation of $25,000,000 to carry on existing projects, and also authorizes 11 new projects of more or less importance.

"If this substitute is adopted, it will be the hardest blow ever received by river and harbor legislation. I earnestly appeal to every friend of waterways to do his uttermost to defeat this substitute and secure the adoption of the bill as reported by the majority of the Committee on Commerce.

"There is great congestion of traffic throughout the Union, and every agency of transportation should be fostered and encouraged to the utmost, not destroyed, or at least badly crippled, as is done by this substitute. The time is short. The emergency is acute. Any action to be effective must be taken at once."

"Effective action" resulted in condemnatory articles from ill-advised papers that did not understand the gentleman above quoted and the "president" of the $50,000,000 annual river and harbor lobby are one and the same person, and that the "90 new projects" contained in the "best river and harbor bill introduced in Congress in years," covered all the old vicious projects, including the Oklawaha, Kissimmee, Scuppernong, Cumberland, Congaree, Sabine, Colorado, Richmond Harbor, and scores of others to which reference will be briefly made. This 1917 bill was killed but will be pushed again by the same influences if an extra session is called.

To Senator KENYON, of Iowa, belongs whatever credit is due for a long, brave, and successful fight against these notorious bills. Only protests could be registered in the House, but in the Senate men were found who supported the Iowa Senator and Senator Burton in their splendid fight for economy and better legislative methods.

I have submitted evidence as far as permitted in a parliamentary way to show that the $25,000,000 Kenyon substitute for the 1917 bill, containing, as it did, 11 new projects, including New York Harbor, Boston, Norfolk, and other worthy items, was killed in the House by the notorious lobby that annually demands "whole hog or none." Seventy-nine projects, largely for dry creeks, were eliminated. The Oklawaha, Kissimmee, and others of like character held up and defeated the $25,000,000 substitute through the influences they controlled.

From the foregoing it appears that the reduction by the substitute in 1914 reached over $33,000,000; in 1915 it reached approximately $13,000,000; in 1917 the bill failed to pass, in addition to which total obligations resulting from the defeat of new projects, largely wasteful, in the 1914 and 1917 bills, each reached over $40,000,000, while the 1916 omnibus bill was only carried by one vote in the Senate over the proposed substitute offered in that session. The vicious $51,000,000 land-reclamation bill for Mississippi landowners and others was also actively opposed in the House, but finally passed.

The public-buildings omnibus bill of $38,000,000 contained so many bad items and was so notorious in character that it has never been reported out of the Senate committee, which is a justification of the fight made against it in the House. The defeat of three river and harbor bills, the passage of another by only one majority, together with the smothering of the $38,000,000 public-buildings bill, speaks for the growing sentiment against such wasteful omnibus bills. But they will again bob up, because the lobby and local interests are constantly on the job at every session, and no substitute for this objectionable method of legislation has been adopted.

"PORK" BILLS BECOMING UNPOPULAR.

Mr. Speaker, if the foregoing statement is substantially correct—and it is intended to be fairly presented—the protest against omnibus bills has become so pronounced that it calls for a revolution in methods of appropriations. The saving to the Federal Treasury has reached proportions that can not be ignored, while a pronounced protest against pork-barrel legislative methods is not to be minimized. These bills met defeat in the Senate, and to fearless and faithful opponents of waste and extravagance at the other end of the Capitol, headed by Senator KENYON, and previously by Senator Burton, belongs the credit for their defeat.

Necessarily the result in the House at times has been disappointing. No man desires to place himself in the rôle of a critic of other Members or of "their projects" or to obstruct legislation that peculiarly commands the support of Members interested in local projects. No superior virtue is claimed in condemning omnibus bills, but I submit that constant opposition to these six bills named has been sufficient to try out the character of such bills, to make a genuine and material saving in money, and to ascertain the sentiment and temper of the public, which is taxed to meet extravagant appropriations urged by Army engineers. If we read correctly public comment against disgraceful omnibus bills we must conclude that the country is opposed to such measures and does not believe in a system founded upon political pressure to be exerted by localities.

Again the defeat of three river and harbor bills and the bare passage of one other, together with the character of allotments made by the Chief of Engineers, is an argument in itself against the further submission to Army engineers of control over such bills. I have called attention to the fact that the Chief of Engineers has ignored any attempt by law to secure an abandonment of the most worthless old projects which have been continued year after year without appreciable results. I have also offered allotments made by the Chief of Engineers to show how wasteful and indefensible was the distribution of funds made under his direction. His failure to condemn projects, under the act drawn by Senator Burton, has been discussed. I desire to continue the subject to show where the responsibility for waste largely rests. It is a record that reflects on Congress for its surrender to a single subordinate officer of the absolute estimates, control, and waste reaching many millions annually.

The bad effects of the present system of engineering control is disclosed by minority report No. 1289, part 2, Sixty-fourth Congress, second session, on House bill 20097—the bill defeated this session—which sets forth many facts that call for efficient supervision of waterways not given by Army engineers. No Cabinet officer, nor other administrative official to-day, possesses the power or authority of the Chief of Engineers, who is a Regular Army officer raised to his present position through the death or retirement of some superior officer. Without reflection upon the individual, it is submitted that this officer may have no understanding or conception of commercial conditions, and, judging from results disclosed, that is beyond question. Presumably he does not understand the importance of conservative appropriations for legitimate waterways. From his earliest military experience he has recognized political influence and pressure; it has ever been exercised from the day of his first appointment to the date of his final promotion to the position of Chief of Engineers. Without criticism of the individual, it is unreasonable to expect him to withstand official pressure when brought to bear in favor of some particular project backed by a show of authority. A brief review of reports indicates the extent to which that pressure is exercised and his own course, to which brief reference will be made.

I have referred to the killing of the 1917 Kenyon $25,000,000 substitute by the lobby. For many years a river and harbor waterway lobby that terms itself a "congress," has demanded annual appropriations from the Government of $50,000,000 for waterways, irrespective of projects, and has sought to control annual appropriations made by the Federal Congress. It holds its annual meetings in Washington at the same time the Federal Congress meets. It maintains its quarters in the Capital City the year round, and, presided over by a Member of Congress, it institutes back fires against other Members. Heretofore it has conducted vigorous publicity campaigns in order to secure some particular project or the passage of annual bills. An exposure of its purposes and methods was made in the RECORD of October 8, 1914, where it was shown that it linked up all forces financially interested in river and harbor bills. Dredgers, builders of dredges, concrete interests, private land reclamationists, private water-power interests, contractors, and every other interest are here united, and these interests are agencies through which back-fires are instituted against Senators and Representatives to support such bills. Specific cases were cited and were exposed at both ends of the Capitol. Subscription lists from hundreds of contributors showing the method of secret work were also placed in the record. Resolutions of investigation were offered, supported by proof of a lobby that was termed by the New York Board of Trade and Transportation a "Mutual bribery" lobby. This is the lobby that instituted a back-fire against Senators on the 1917 bill, previously quoted. It is always on the job, supports every bill, and demands $50,000,000 annually.

ARMY ENGINEERS AND THE LOBBY.

I introduced a resolution in the Sixty-third Congress to investigate the "mutual bribery" lobby. Original evidence now in my possession was offered to show that, directly or through subsidiary lobbies, the dredgers, railways, and other interests that have a direct financial claim on Government grabs contribute secretly toward the lobby's support. In some instances this lobby equally divided with its collectors the subscriptions paid by gullible supporters. Intrenched from the Capitol Building to the Southern Building, it instigates back fires on Members of Congress to compel support for "pork-barrel" bills.

Public and private citizens of undoubted probity have lent their names and presence to the lobby under misleading and persuasive arguments that by so doing they were performing a local duty and advancing legitimate waterway legislation.

Expert testimony from its officers as to the lobby's power over Congress and its accomplishments were fully presented in the RECORD of October 8, 1914. I will only briefly refer at this time to one or two significant utterances by this lobby.

PORK DISTRIBUTED ACCORDING TO CONTRIBUTIONS.

One of the cardinal principles of the Rivers and Harbors "Congress" is that "nothing given, nothing got." By paying 0.001 per cent of Federal appropriations to the support of the Rivers and Harbors "Congress" every community has the supporting arm of officials of this lobby "congress." On pages 60 and 62 of its 1911 report appears a list of appropriations given

to the different States of the Union, amounting to $178,616,897 from 1907 to 1911, inclusive.

In two columns the members of the lobby "congress" are impressed with the relation between that body and the amount of Government appropriations for each separate State. I quote literally from the listed method of comparison and cite a dozen States or more to show the proportionate grabs that are held out invitingly to gaze by the lobby officials.

All of these facts were again presented during debate in the House on the 1917 bill. The statement taken from the lobby's official 1911 report follows:

	Amounts subscribed to the support of National Rivers and Harbors Congress, by States, 1906–1911, inclusive.	Amount of appropriations received by States, in rivers and harbors bills, 1907–1911, inclusive.
Pennsylvania (east)	$4,295	$4,837,745
Connecticut	2,115	2,318,000
Massachusetts	2,853	1,451,733
Maryland	1,755	2,778,265
New Jersey	2,735	3,484,895
North Carolina	2,533	2,259,614
South Carolina	1,137	1,237,290
Virginia	4,303	4,082,454
Georgia	8,281	4,102,889
Florida	1,620	5,188,670
District of Columbia	1,530	1,243,000
Alabama	6,090	6,952,000
Louisiana	9,505	3,820,292
Texas	8,825	9,193,300
Mississippi River		21,842,775

Mississippi River (1914), $10,500,000, or nearly one-half of the six years' total.

UNFAIRLY DISTRIBUTING THE PORK.

Texas and Florida receive more than the average State, excepting that the Mississippi River lump sum would swell the adjacent States over $21,000,000, if counted. Florida has many small waterways, like the Kissimmee and the Oklawaha, and is the home of influential Members at both ends of the Capitol, who determine the fortunes of annual river and harbor bills. Florida had $2,217,000 in the 1917 bill alone, as will later appear, but many bad items were omitted from the Kenyon substitute measure rejected by the lobby.

Doubtless it appeals to lay members to realize that by the investment of $1 in the "second congress" $1,000 will be forthcoming from the Federal Congress.

"Capt." Ellison, official secretary of the "congress" lobby, is quoted by the same official organ to have evoked applause with the sentiment—

We send Congressmen here to legislate for the Nation, theoretically, but actually to get all he can for us, and if he does not get our share, and then some, we do our best to replace him.

SECRETARY THOMPSON DEMANDS $100,000,000 ANNUALLY.

Secretary Thompson, who runs things at the "congress" lobby headquarters in the Colorado Building the year round, in his speech before the annual meeting in December, 1914, said:

The fact is that our president is a Senator and took his seat in that body a year ago last March. We amended our constitution in 1912 so as to strike out the recommendation of $50,000,000 a year. We did not strike it out because we are the kind of chumps who believe that $50,000,000 a year is too much, but because we believe the safe, sane, and wise policy would be for the Government to spend $100,000,000 or more every year on this great work.

The permanent RECORD might properly substitute "grab" for "great."

Thompson says "we" struck out $50,000,000 and now believe $100,000,000 more annually is the proper amount.

That is the character of the lobby's demands, that has for its "president a Senator."

I introduce a letter which throws an interesting light upon contributions.

WATERWAYS AND COMMERCE,
No. 150 Nassau Street.

Hon. JAMES A. FREAR, *Washington, D. C.*

MY DEAR CONGRESSMAN FREAR:

* * * * * * *

I inclose herewith original subscription lists obtained from a canvasser named John M. Williams, of the National Rivers and Harbors Congress, who received 50 per cent for the amount set opposite each name. As you will see, these subscriptions cover 1908, 1909, 1910, 1911, and 1912.

You may regard them as your property to do as you please with them.

Sincerely, yours,

RICHARD M. MCCANN, *Publisher.*

Yours, very respectfully, W. P. RYAN, *Secretary.*

I have knowledge of the information on which the foregoing statement is made, and believe it is correct as stated.

A certificate is next introduced because it relates to the fortunes of Mr. Williams, whose activities follow in connection with the Rivers and Harbors Congress and other waterway organizations:

STATE OF OHIO, EXECUTIVE DEPARTMENT,
OFFICE OF THE GOVERNOR,
Columbus, November 26, 1909.

Mr. JOHN M. WILLIAMS,
Pittsburgh, Pa.

MY DEAR SIR: I have the honor to appoint you as one of the delegates from Ohio to attend the coming session of the National Rivers and Harbors Congress at Washington, D. C., December 8–10, 1909.

You are advised that there is no fund out of which the expenses of the delegates to this Congress can be paid, but I feel that your interest in the purposes of the congress is such as to lead you to attend, if it is possible for you to do so.

Respectfully,

[SEAL.] JUDSON HARMON, *Governor.*

Mr. Williams started collections for the lobby, and a letter of authority follows containing a special plea for the Atlantic coast $300,000,000 canal system that is to be improved at once. The plea reached the pocketbooks of the dredgers, contractors, and others, as hereafter appears, following this pointed letter of introduction.

[National Rivers and Harbors Congress: JOSEPH E. RANSDELL, president, Washington, D. C., and Lake Providence, La.; J. F. Ellison, secretary and treasurer, Cincinnati, Ohio; John A. Fox, special director, Washington, D. C.]

WASHINGTON OFFICE, 1910.

To the business interests of Baltimore, Md.:

The National Rivers and Harbors Congress is working earnestly to secure the adoption by the Federal Government of a permanent waterway policy that will provide for improving all the worthy waterways of the Union.

The improvement of the canals and waters of the Atlantic coast, in which Baltimore has such a direct and vital interest, should be among the first to receive the benefit of the increased and regular appropriations for rivers and harbors that this organization is working to bring about.

Funds are needed to carry on the work which the National Rivers and Harbors Congress has persistently urged, and to the end that a strong demand may come from every section of the Republic we earnestly invite your financial cooperation.

John M. Williams is authorized to receive and receipt for all moneys that may be subscribed. He is working under the direction of and reporting to the undersigned officers of the congress.

Very respectfully,

JOS. E. RANSDELL,
President.

P. S.—We earnestly urge the people of Baltimore to contribute to the support of this great work.

DAVID H. CARROLL,
Vice President.
JOHN R. SHERWOOD,
Director.

By urging appropriations for special projects the contributors were induced to part with their money, yet this same lobby sought the defeat of the $25,000,000 Kenyon substitute that included several large harbors among new projects. Remember, it demanded that 90 new projects, bad, wasteful, and indifferent, be included for $47,000,000, or nothing. That is the issue. Shall the lobby with its influential legislators continue in control of this legislation which is apportioned to States based on subscription?

TWO CONGRESSES SHAKE HANDS.

A further list of lobby subscribers shows that Mr. Furst, president of the Dredge Owners' Protective Organization, is not wholly unmindful of the services rendered his organization by the "Rivers and Harbors Congress."

The Dredge Owners' Protective Organization confidentially assists. Witness the following:

[Dredge Owners' Protective Organization: Frank A. Furst, chairman. William P. Ryan, secretary. Executive committee: F. A. Furst, George Leary, John Gerrish, J. McMullen, P. Sanford Ross, W. J. Bradley.]

BALTIMORE, MD., *August 4, 1910.*

Mr. JOHN M. WILLIAMS, *General Agent,*
National Rivers and Harbors Congress, New York City.

DEAR SIR: I find yours of the 1st instant awaiting my return to the city this morning.

Replying to your inquiry, I am submitting below a list of our members for your confidential use, as follows:

Morris & Cumings Dredging Co., 17 State Street, New York.
Eastern Dredging Co., 247 Atlantic Avenue, Boston, Mass.
Newark Meadows Improvement Co., 62 Cedar Street, New York.
American Dredging Co., Mariner & Merchants Building, Philadelphia, Pa.
W. H. Beard Co., 21 State Street, New York.
International Contracting Co., 17 State Street New York.
Atlantic, Gulf & Pacific Co., Park Row Building, New York City.
P. S. Ross (Inc.), 277 Washington Street, Jersey City, N. J.
Hy Steers (Inc.), 17 Battery Place, New York.
North American Dredging Co., San Francisco.
American Dredging Co., San Francisco.
Sanford & Brooks Co., Baltimore.
Coastwise Dredging Co., Bank of Commerce Building, Norfolk.
Norfolk Dredging Co., 217 Water Street, Norfolk.
Bowers Southern Dredging Co., Galveston.
Breyman Bros., East Boston, Mass.
J. S. Packard Co., 31 Market Square, Providence, R. I.
Daly & Hannan Dredging Co., Ogdensburg, N. Y.
Bay State Dredging Co., 185 Summer Street, Boston, Mass.
R. Moore, Mobile, Ala.

Yours, very respectfully, W. P. RYAN, *Secretary.*

Here is the confidential collector of the lobby "congress" receiving a confidential list of the dredgers' association from its secretary for the purposes of securing funds from the dredgers to aid the lobby "congress" in putting through an annual pork barrel.

According to Ryan's letter, this secret dredgers' organization was active in 1910. During debate on the 1917 bill I submitted a statement issued by this same dredgers' organization some years ago, signed by Mr. Furst, its president, wherein contracts with the Government were admitted to have been secretly allotted and divided among these same dredgers—contracts reaching many millions annually. Data were offered showing this same dredgers' organization has fraudulently and unlawfully secretly divided up Government contracts in the past. Different resolutions of investigation were ignored by the committee, and yet this same dredgers' organization "confidentially" helped Williams with contributions to the river and harbor lobby. These contributions, it appears, Williams collected on a fifty-fifty basis for an organization that in 1917 organized its usual back fire against Senators and Members who opposed the notorious 1917 $38,000,000 pork barrel, with its 90 new projects, including scores of creeks dry, thirsty, and asking for millions of Government funds with which to liquidate.

But I have digressed in order to describe the character of this lobby that maintains quarters in the Southern Building of this city the year around, and has its annual round-up in Washington when the Federal Congress meets. I have digressed to show what influences surround a body before which Chiefs of Engineers appear and regularly orate according to annual reports of the lobby.

At its annual round-up in the city of Washington, this lobby "congress" has been attended by all the interests engaged in securing lavish waterway appropriations of $50,000,000 annually, proposed by its constitution, or $100,000,000 or more annually according to Secretary Thompson. On such occasions the Chief of Engineers and his predecessors have generally occupied positions on the lobby program. No more incongruous situation can be imagined when the official who is supposed to be free from all extraneous influences and to be governed by the merits of each particular project appears before such an irresponsible lobby. All responsibility now rests with Army engineers, so in stating the situation I am not seeking to discredit any particular individual, but to show how far the present system has discredited itself, and the general influences surrounding legislation of this character. The lobby asks for large appropriations; the Chief of Engineers determines estimates and the lobby next trys to put those estimates through Congress.

Before this waterway lobby that defeated the $25,000,000 Kenyon substitute in 1917, whose primary purpose as announced in its constitution is to secure $50,000,000 in appropriations "for a policy not a project," there appeared in December, 1916, both Chief of Engineers Black and ex-Chief Bixby. Both orated, and I offer brief extracts from their efforts on that occasion.

GEN. BIXBY ASKS, WHERE IS "PORK?"

By a coincidence, on the day the 1917 bill was agreed to by the Rivers and Harbors Committee of the House, there were placed on the desks of Members of Congress printed pamphlets from the proceedings of the river and harbor lobby. Without dwelling upon the astonishing situation or ethics of his course, I quote from remarks of Brig. Gen. William H. Bixby, former Chief of Engineers, United States Army, delivered before this lobby in Washington, D. C., December 7, 1916. He said:

I had come here expecting to hear a little bit more discussion on this question of "pork," but it does not seem to have been discussed particularly. * * * We ought to see that such accusations are refuted every time that they are made, every time that statements to that effect appear in any newspaper, and every time that they are made in a public address. [Applause by the lobby.] The noisest men always attract the most attention; the dogs whose fight is least to be feared usually bark the loudest and will often shut up quickly when given the kick that they deserve. In the same way, those men who bark loudest against river and harbor appropriations will usually stop barking instantly, as soon as you go after them with a few unanswerable facts. * * * I want definitely to say that there has not been anything which is unworthy in the way of river and harbor appropriations for the last six years. [Applause by the lobby.]

Much more to the same effect was said by this military orator, still supported by the Government, who claims that during the years from 1911 to 1916, inclusive, nothing unworthy was contained in river and harbor bills. His statement calls to mind that in this same lobby's official report for 1911 Federal appropriations are claimed to be based on contributions to the lobby. Further, that Secretary Ellison officially said, in effect, before the lobby that the measure of a Congressman's usefulness was his ability to get "pork." Again, in 1914, Senator Burton, a recognized waterway expert, led a successful fight against a wasteful pork-barrel bill previously recommended by Gen. Bixby, and demanded a reexamination of many wasteful projects. Again, in 1915, Senator Burton led another successful fight against the wasteful pork-barrel bill for that year. In 1916 another wasteful bill only passed by one vote in the Senate; and yet, with that record before the country, the ex-Chief of Engineers appears before the river lobby that claims to control appropriations and makes the speech quoted. His statement is offered in order to show the frame of mind, ethics, and business ability of a man who has controlled and disbursed a hundred millions of dollars or more on our waterways. True, this was only an ex-Chief of Engineers, but at that same lobby meeting the present Chief of Engineers, Gen. Black, also appeared on the program and gave an extended speech, covering 18 printed pages, from which I briefly quote. He said:

On the Mississippi River we have an improved waterway of ample depth and sufficient width and open the year round from St. Louis to New Orleans, but it is only within the last year or two that that waterway has begun again to be used. * * * In passing down the Mississippi from St. Louis to New Orleans two weeks ago we left St. Louis one morning early. The same day a barge load of freight left St. Louis. All the way down the Mississippi River we saw the barge load at intervals. Finally we reached New Orleans, and the barge load of freight got there at exactly the same time. * * * Later I saw the manager of the barge line, and he told me that although this enterprise of theirs is but a new one and as yet is little known, it is to-day making money. [Applause by the lobby.]

Again, I will not discuss the ethics of the Chief of Engineers appearing before this lobby or refer to 17 more pages of his address, except in one slight matter, wherein he says:

DO "GREAT EXPENDITURES BRING ANY RETURNS?

There is no use recommending too small an improvement. Very often the small improvement, costing little money and resulting in restricted channel dimensions, will be a nonpaying investment, whereas a channel of greater width and depth, with greater expenditure of money, would make ample returns to the United States.

Every contractor indorses the sentiment, and the extravagant, wasteful estimates emphasize the judgment expressed.

These speeches before this lobby are from two of our Regular Army officers who were placed in absolute charge of estimates and expenditures, including the making of all contracts, reaching upward of $50,000,000 annually. Their word is law, and I desire to test the value of their judgment, because that judgment serves to determine taxes levied on the people of the country in order to carry out visionary engineers' wasteful schemes.

Chief Engineer Black says a restricted channel is a nonpaying investment. He believes in "a greater expenditure of money." For years Chief Bixby and Chief Black have recommended enormous appropriations for the Mississippi River from St. Louis to the Head of the Passes below New Orleans, reaching $6,000,000 for 1917. The total appropriations of Federal money for this part of the river to the mouth of the Missouri, up to 1916, reached $106,264,410. Mark well the amount, for during that time the commerce of the Mississippi decreased over 90 per cent, according to reliable authority which I have repeatedly quoted; and that commerce, according to Gen. Black, is now reduced to little more than one barge with which the engineers' boat played tag on this stretch of the river. Only one continuous boat between St. Louis and New Orleans after an expenditure of over $100,000,000 and an insignificant commerce at any time or place!

Gen. Black recommended $6,000,000 for the lower Mississippi in the 1917 bill.

All the faith of waterway lobbyists and river enthusiasts in recent years has been pinned to J. H. Bernhard, who once predicted a rejuvenation of river traffic. Every citizen devoutly hopes Bernhard's prophecy will be realized, but in a discussion by Mr. Bernhard, found in the proceedings of the American Society of Engineers for 1915, occurs this remarkable statement that is respectfully dedicated to the taxpayers' horn of plenty controlled by Chief Black. Bernhard said:

To-day the Mississippi from St. Louis to its mouth affords a channel which is the best to be found in any stream in the world * * * and see its emptiness. An 8-foot channel is all that the most efficient service requires. The Government works unremittingly to develop waterways only to see the water-borne traffic grow less as the years go by.

Still the average "river man" will insist the poor condition of the channels keeps our inland waters idle. This is preposterous; the Rhine could never compare with the Mississippi in its advantages for transportation; its channel is narrower and shallower, more changeable, the current is swifter, and ice is known in the winter over its entire navigable length, yet in 1913 more than 97,000 vessels passed the Dutch and German frontier on the Rhine.

These vessels, Bernhard claimed, carried on the Rhine in 1913, 37,529,153 tons.

That is in Germany, where the Government owns railways and controls railway rates, and waterway expenditures are intelligently administered. Now let us see how we do it in the United States under Army engineer supervision.

COL. TOWNSEND'S CONFIRMATION—A REMARKABLE STATEMENT THAT COMMANDS ATTENTION.

I quote briefly from a speech made by Col. C. McD. Townsend, Army engineer and president of the Mississippi River Commission. He said, page 19, Appendix to the CONGRESSIONAL RECORD, Sixty-fourth Congress, first session:

St. Louis for the past 50 years has been the principal origin or terminus of the traffic on our western rivers, and its records summarize their tendencies. Its river commerce attained its maximum of 2,120,000 tons in 1880 and has since steadily declined to 153,000 tons in 1914. In contrast it may be stated that the commerce at Sault Ste. Marie, the outlet to Lake Superior, in 1880 was 1,300,000 tons and attained a maximum of 79,000,000 tons in 1913. The commerce of New York Harbor exceeds 125,000,000 tons.

After duplicating receipts and shipments, the following official statement is illuminating on the total Mississippi River commerce, both up river and down:

Total receipts and shipments at St. Louis by rail and by water for years given.

[From reports of the Merchants' Exchange, St. Louis.]

Year.	Total by water.	Total by rail.	Grand total.
	Tons.	*Tons.*	*Tons.*
1880	1,831,385	8,852,204	10,783,589
1890	1,265,592	15,240,141	16,505,733
1900	757,590	24,555,750	25,313,340
1905	370,425	39,141,663	39,512,088
1910	191,965	51,726,135	51,918,100
1911	369,295	46,939,995	47,309,290
1912	265,720	51,476,639	51,742,359
1913	258,709	54,350,851	54,609,560

Compare this with 37,529,153 tons of waterway commerce on the Rhine. Two hundred and fifty-eight thousand seven hundred and nine tons in 1913 representing traffic up river and down received and shipped from St. Louis, or one-half of 1 per cent of that carried by rail or less than 1 per cent of that carried on the Rhine. We have spent six times as much as on the Rhine to get 1 per cent of the commerce of the Rhine.

A small river commerce at New Orleans is only a fraction of a large continuous traffic of 40 years ago, and the ocean traffic at New Orleans is accommodated by expenditures of over $20,000,000 at the Passes.

Chief Black discovered a solitary barge carrying freight from St. Louis to New Orleans. What more striking testimony of extravagance gone mad can be afforded than one hundred millions spent on the lower river under the advice of Army engineers, with loss in commerce of over 90 per cent, and $6,000,000 more for 1917 demanded by the Chief of Engineers, who saw the barge.

Just one further word in passing. After spending over $100,000,000 on the lower river for "navigation," the Senate passed a vicious $45,000,000 land-reclamation bill for the same stretch of Mississippi River on February 26, after brief discussion. On the following day the Rivers and Harbors Committee of the House was informed that it was impossible to secure passage on the Mississippi River from St. Louis to New Orleans, because no through boat was runnning on the river. Only the Army engineer's boat makes this continuous trip, notwithstanding scores of boats are said to have run the entire distance before a dollar was expended on the river.

We must fix responsibility for these enormous waterway expenditures that are squandered on deserted waterways and are intended to benefit private landowners, who are having millions of acres of land reclaimed by Army engineers at Government expense under a representation that it is for "navigation."

Let me quote from the words of Senator NEWLANDS in the CONGRESSIONAL RECORD of February 26, 1917, this same week, when the $45,000,000 private land reclamation bill was passed by the Senate. No better authority can be found:

From what does this bill arise? It arises from the fact that certain parties on the * * * Mississippi River own large areas of swamp lands which they desire to have reclaimed. That is the principal purpose of the bill.

Again he said prophetically that the bill is a part of the "spoils system."

Is that the purpose of the so-called $45,000,000 Mississippi flood-control proposition for which over two-thirds of $100,000,000 expended by Army engineers has been squandered for a private land reclamation scheme? Hypocritically urging "navigation" needs, the Federal Treasury has been drained for the benefit of private landowners. Who is responsible?

I have disclosed where the money of taxpayers was dumped by the Chief of Engineers' allotments in 1914 and 1915. I now desire to show where it was recommended for 1917, and will briefly quote from page 1 of the minority report 1289, Part 2, Sixty-fourth Congress, second session:

The first objection to the 1917 bill does not lie in its amount, although Congress has reason to fear the wrath to come from heavy tax burdens "wrung from the people." First and last it is a monument to "profligate waste," against which this administration is pledged (Baltimore, 1912, platform). Nowhere will be found evidence of wasteful methods in governmental affairs to be compared with the autocratic demand of Army engineers in 1917 for the following amounts from Congress:

Norfolk and Beaufort waterway, $1,000,000; lower Missouri, $1,000,000; upper Mississippi, $2,000,000; central Mississippi, $350,000; Mississippi Passes, $2,000,000; Ohio canalization, $5,000,000; lower Mississippi, $6,000,000; Cumberland, $977,000, reaching a total of about $18,000,000, for 8 projects out of 300 or more contained in the bill, or about one-half of the entire fund asked for by the engineers to carry on 300 projects in the bill. These items were slightly reduced by the committee, but the amounts named are those demanded by our waterway advisers.

Deducting from glittering commercial statistics, sand, timber, and coal, all actual river commerce reported on the eight projects probably does not equal that handled at the little harbor of Ashland, Wis., nor one-half that of Milwaukee, nor Chicago, nor one-quarter that of Boston, Buffalo, Cleveland, or many other harbors that could be named. All the actual commerce on these eight river projects will not reach 10 per cent of the waterway freight handled at the Superior-Duluth Harbor, nor 5 per cent of New York City's waterway commerce. Compared with this $18,000,000, demanded for engineers for eight comparatively insignificant commercial projects, the 1917 recommendations by Army engineers for actual waterway commerce of eight other old projects are as follows:

WATERWAYS THAT CARRY COMMERCE.

Ashland (6,534,410 tons), nothing; Milwaukee (8,119,875 tons), $21,500; Chicago (10,227,830 tons), $65,000; Buffalo (19,535,503 tons), nothing; Cleveland (12,631,442 tons), $60,000; Superior-Duluth (40,494,672 tons), $45,000; New York (100,000,000 tons), $500,500; a total of about $700,000 for a few actual waterways. Army engineers demand extravagant river appropriations and Congress grants their demands, if not in one House, then in the other.

The reason for deducting sand, coal, ferriage, timber, and duplications from absurd river reports furnished by the Chief of Engineers is because sand and gravel dug from the river and hauled from a half mile to 1 mile, together with ferriage statistics across the Mississippi, Missouri, and Ohio Rivers, in no way require deep channels, yet such items make up the major part of the elaborate commerce and of freight valuations reported by the Chief of Engineers on these rivers.

Twenty times more timber was annually floated down these streams 40 years ago, before Government waterway improvements were begun, and far more coal and legitimate waterway commerce was floated down the Ohio every year before the profligate expenditure of over $90,000,000 was begun on the Ohio, of which nearly $60,000,000 has been appropriated for that river without any return.

Government material dredged from the rivers including brush, rock, gravel, sand, coal, and provisions to keep busy the engineers' fleet and thousands of employees, figure ponderously in the Chief of Engineers' reports, although actual commerce has diminished on these rivers from 80 to 90 per cent during the last 40 years.

We have seen the insignificant commerce resulting from appropriations reaching $106,000,000 on the lower Mississippi, although the Chief of Engineers asked again for $6,000,000 for this reach of the river in 1917.

Let us now take Gen. Black's recommendation of $2,000,000 in 1917 for the upper Mississippi, on which appropriations thus far reach $28,012,091 for 700 miles of river. River commerce has decreased approximately 90 per cent during the expenditure of all these millions, but in presenting the facts taken from official reports it shows how the Government and the people have been humbugged by those who are responsible for all recommendations and expenditures.

Before doing so, I call attention to a remarkable statement made by Col. McD. Townsend, president of the Mississippi River Commission, who knows the waterways of the Mississippi River Valley better than any other man in Government employ, whatever may be his judgment.

IS NOT COL. TOWNSEND'S JUDGMENT SOUND?—IT CALLS A HALT ON 58 RIVER PROJECTS. WHY NOT?

I quote from Col. Townsend's remarkable address which was extended in the RECORD of December 11, 1915. Therein he says:

Specifically the writer would not abandon any navigable stream in the Mississippi Valley that has been partially improved, but would leave 58 of them in their statu quo, confining operations to snagging and the maintenance of existing works, and would concentrate appropriations on opening up a channel of the capacity of that existing on the lower and middle Mississippi to Chicago and Pittsburgh * * *.

If the facilities thus afforded by the Government are utilized, the upper Mississippi and the Missouri Rivers should then receive attention.

Col. Townsend calls a halt on the upper Mississippi and the Missouri River improvements until the $100,000,000 Ohio and $275,000,000 lower Mississippi projects are finished, and if these streams are ever utilized (?) then go on with the remaining 58 projects, including the Missouri and upper Mississippi. He is amply sustained in his demand for a halt on the 58 projects, but our rivers will not be "utilized" for reasons that rest on unlimited railway competition. The money is wasted and worse than wasted because we are stultifying our judgment to expect even two projects to become commercially profitable under the present system.

After appropriating over $28,000,000 on the upper Mississippi, the 1916 Report of the Chief of Engineers, page 1095, says:

Amount that can be profitably expended in fiscal year ending June 30, 1918, for works of improvement and maintenance, $2,000,000.

Let us see what the Chief of Engineers says about this upper river after expending $28,000,000 in its improvement. I quote from the 1914 report of Engineers, page 2437, to ascertain the amount of freight traffic on the river in 1913:

Upper Mississippi River freight statement for 1913.

Designation.	Short tons.	Ton-miles.	Valuation.
Logs	64,489	30,245,340	$315,271
Rafted lumber, shingles, etc	13,570	4,400,147	190,001
Miscellaneous freight	1,294,864	12,229,310	31,417,968
United States material	772,392	9,445,576	781,897
Total	2,145,315	56,320,373	32,705,137

Classified freight traffic, 1913.

Articles.	Amount.		Valuation.	Average haul.	Ton-miles.

Total		2,145,315	32,705,137	26.2	56,322,373

Referring to the 1913 statement, let us briefly examine the items, which show some remarkable facts.

ENGINEER'S STATISTICS OF COMMERCE (?).

"Commerce" reached 2,145,315 tons in 1913, so the Chief of Engineers reports. Tons of what? Let us see:

	Tons.
Brush for river construction work	82,450
Gravel dredged from river	398,178
Rock for river work	708,000
Sand dredged from river	562,000
Logs that have floated for 50 years	98,268
Lumber and wood barged	64,408
Animals ferried across river	55,322
Automobiles ferried across river	6,034
	1,974,980

All could be floated in 2 or 3 feet of water, leaving 170,335 tons of questionable commerce remaining, hauled on an average of 26 miles or thereabouts, or 7,000 tons continuous haul.

What a legislative travesty when eleven-twelfths of the commerce for which $1,000,000 was allotted by the Chief of Engineers is of that character. Who weighed the brush? Who weighed the logs? Who weighed the rocks, gravel, sand, and so forth, used in the river work? Where was it carried and for what purpose? Was it floated 1 mile or 10 miles? Who knows? Why measure Government material for river work, anyway?

A WONDERFUL SYSTEM IN VALUING "COMMERCE."

The Chief of Engineers says that 26,609 tons of horses were carried a mile and a half across the river and their value was $6,540,900, or one-fifth of the total. Other live stock carried across the river, he says, was valued at $5,218,730; and then, to cap the climax, this report adds that 6,034 tons of automobiles ferried across the river were valued at $9,545,950.

Nearly two-thirds of all the glowing commerce valuations on the upper Mississippi, including Government sand, rock, and gravel, turns out to be animals and automobiles ferried across the river.

Again, how much of the remaining 170,000 tons was repair material or Government supplies out of a total of 772,000 tons?

I quote briefly from a prepared statement I submitted during debate on the upper Mississippi item in the House on January 25. It concerned a trip taken on the river from St. Paul to St. Louis, on which trip we were repeatedly "stuck" on bars below the Keokuk Dam for a total of 17 hours. Quoting from the statement:

We left St. Paul August 24 (1916) on the steamer *St. Paul*, the largest boat on the river, with less than 50 tons freight, including 100 passengers and baggage. * * * Remained on deck practically all of each day, and the first traffic boat I saw on the river, aside from Government craft, was a little towboat with a small barge of sand, which we passed 354 miles below St. Paul on August 26, half way from St. Paul to St. Louis. With the exception of Government work boats the river was practically deserted from daylight to dark. * * * The St. Paul steamer is maintained by a passenger-excursion business. It made 7 round trips during 1916 in a season of less than 12 weeks. Capt. A. O. Day, a man of 30 years' experience, of exceptional intelligence, and high standing, made the significant statement that the river is now in worse condition than before the expenditure of a dollar was made by the Government. Poor channels, sunken wing dams, without lights as a rule, were a constant menace to pilots. One hundred and thirty boats 40 years ago, a dozen excursion boats now; that carries its own story.

What has become of $28,000,000 used to foster navigation? What has become of the 130 boats once on the river? What has become of a commerce that has decreased 90 per cent? Why does Chief Engineer Black say $2,000,000 can "be profitably expended during the fiscal year"?

GEN. BLACK RIDES ON THE CREST.

Let us find the method of reasoning of this official who is in supreme control of our waterway expenditures. When before the Rivers and Harbors Committee during the preparation of the 1917 bill, Gen. Black stated, in substance, that the upper Mississippi "from Rock Island to St. Louis," about 250 miles of river, was in excellent condition for navigation, and he gave the committee the impression that he had positive personal knowledge of the fact. At that same hearing I stated a boat on which I went down the river last summer (1916), the *St. Paul*, was caught repeatedly on different sand bars between Keokuk and St. Louis for 17 hours—this is below Rock Island. To this statement the Chief of Engineers answered, "If so, the fault rested with the pilots." I answered that Capt. Day, of the *St. Paul*, was one of the oldest and best captains on the river, and the boat had pilots second to none. The fault in the river, however, primarily existed because of control of water by the Keokuk Dam Power Co. At a hearing held February 15, 1917, before the Rivers and Harbors Committee on the control of water by the Keokuk Dam Power Co., it transpired that when the Army engineers made their inspection of the upper Mississippi, the Keokuk Dam Co. was directed by Maj. Meigs, the engineer on the river in charge, to let through the dam 2½ feet of water in order to float the engineers' boat. This testimony was given before the Rivers and Harbors Committee by C. W. Kellogg, manager for the power company, and although the *St. Paul* is the largest boat on the river, Kellogg further stated that no water had ever been released from the dam to help that boat or other boats belonging to private companies. Only for Army engineers' boats on the demand of the engineers. Can anything more preposterous be imagined?

Gen. Black, Chief of Engineers, floating on a 2½-foot crest of water let through the dam for his exalted personage and for a comparatively small inspection boat, found the river in good condition, whereas all the pilots and steamboat men on the upper river have signed petitions which I read on the floor asking for the removal of Army engineers and showing at the hearing that complaints were usually referred to the power company. The power company's officers tried to explain by saying the river was not in good condition, because bars had formed in channel, and so forth. The Chief of Engineers, riding on a 2½-foot rise of water released by the power company dam, declared everything was lovely and pilots were to blame. On that sort of knowledge he recommended $2,000,000 more for this upper river in 1917. River men who are helpless and are compelled to submit to this situation, say the river is not only bad below Keokuk, due to the dam, but the river was better throughout before a dollar had been spent upon it. Can any equal instance of official incompetence and extravagance be found in governmental affairs? Hundreds of rock dams built by Army engineers, without buoys or lights, have made hazardous any navigation at all on the upper river.

Is it any wonder the present system and officials representing the Government are the butt of ridicule by rivermen, or that the following petition was sent to different Representatives, signed by practically every expert riverman on the upper Mississippi, as shown in debate on January 25 last?

PETITION NO. 1.

ST. LOUIS, MO., *September 21, 1916.*

To the honorable Members of Congress, States of Missouri and Illinois (on and along the Mississippi River from St. Louis, Mo., north), Washington, D. C.

GENTLEMEN: We, the undersigned steamboat men, have tried hard to make river navigation and transportation upon the Mississippi River north of St. Louis, Mo., a success, but it seems without avail.

Your Mr. A. E. Richards, assistant United States engineer, stationed at Hannibal, Mo., is, in our opinion, thoroughly incompetent and unreliable. He is apt and willing to cover up things he has failed to do, etc., but to actually aid us, one and all, he positively is the limit.

We respectfully ask for his transfer from this river and for the betterment of the service; his resignation, however, would be preferable.

We need action and attention on the Mississippi River during the early months of the year, not wait until September and October, when most all river traffic has ceased.

All this matter has been repeatedly called to the attention of Maj. Hoffman, at Rock Island, Ill. He pays no attention to the same, has excuses, and has failed to ever notify us of any attention or investigation he or his office has ever given same. This data is needed by us.

The Mississippi River for navigation needs a competent set of men to manage same, and to be on the job more of the time than off, as is apparent to people who have to and do run the river daily.

William Bush, pilot; Selby H. Crader, pilot; G. T. Williams, pilot; James Phillips, pilot; J. E. Short, pilot; R. M. Streckfus, master *Sidney;* D. H. Dippel, pilot; J. H. Laycock, pilot and master; Eugene Sprinkle, pilot; H. Woodruff, pilot; B. A. Burns; Joseph Streckfus, master; Streckfus Steamboat Line, John Streckfus, president; *Belle of Calhoun,* O. W. Sebastian, owner; Joseph Streckfus, secretary; Capt. B. J. Winters; John John W. Warren, master and pilot; John Streckfus, jr., master; John Streckfus, master.

And to this appeal from the only men taking advantage of the Mississippi so numerously dammed, Gen. Black, floating in his river palace on a 2½-foot rise, loftily says poor pilots are to blame for trouble. The power company officials say $28,000,000 invested by the Government leaves a poor channel, and the rivermen say both power company officers and Army engineers are to blame. Certainly a capable officer would protect those for whom this vast expenditure has been made, but the record tells its own tale of woe on the upper Mississippi.

I now offer a further petition signed by 20 pilots and steamboat men of the upper river representing practically all the steamboat interests on the upper river. It was discussed in the House during debate on January 25, and carries its own message of inefficiency of Army engineers in caring for navigation on the greatest river in the world. As stated in debate, "here is presented evidences of neglect and arrogance that would not be permitted in any other department of Government."

PETITION NO. 2.

ST. LOUIS, MO., *September 20, 1916.*

To the honorable Members of Congress, States of Missouri and Illinois (on and along the Mississippi River from St. Louis, Mo., north), Washington, D. C.

GENTLEMEN: We, the undersigned steamboat men, find the lighthouse service upon the Mississippi River from St. Louis north in a very bad, unsafe, and unsatisfactory condition.

We need more buoys, markings, lights, etc., and the attention given the river is inadequate and inexcusable. In fact, it is deplorable and dangerous, steamers grounding daily.

We ask that you proceed and have the lighthouse system on the Mississippi River, north of Missouri River, taken out of the United States Engineering Department (Maj. Hoffman, at Rock Island, Ill.) and placed back in the Lighthouse Department, where it formerly was and furnish a lighthouse tender to do nothing else but attend to the lights and lighthouse duty, attending to same at all times, and not lay up on shore most of the time.

This needs immediate attention, and continual attention; not a few spurts now and then but all the time; all the year navigation is on; and we want *daily* or trip reports of same. We haven't gotten a report of soundings and changes of channel, etc., for at least two years past. We want them and need them positively, the same as is furnished river men from St. Louis down by the Lighthouse Service steamer.

Wm. Bush, pilot; Selby H. Crader, pilot; G. T. Williams, pilot; Jas. Phillips, pilot; J. E. Short, pilot; R. M. Streckfus, master steamer *Sidney;* D. H. Dippel, pilot; J. H. Laycock, pilot and master; Eugene Sprinkle; H. Woodruff, pilot; B. A. Burns, pilot; John W. Warren, master and pilot; Jos. Streckfus, master; Streckfus Steamboat Line, by John Streckfus, president; Eagle Packet Co., by Henry W. Leyhe, manager; *Belle of Calhoun,* by O. W. Sebastian, owner; Steamboat Owners' Association of St. Louis, by Henry W. Leyhe, president; Steamboat Owners' Association of St. Louis, by Jos. Streckfus, secretary; Madison Coal Co. (tugs), by R. Parker, captain; *Capt. B. J. Winters,* John Streckfus, jr., master.

These boats are largely devoted to excursion traffic, but their rights are fixed by law and are paramount. What a scandalous condition of affairs on the greatest river in the world, and on one inland waterway that ought to furnish commerce, if any.

Subsequent to the hearing on impounding of water by the Keokuk Dam Co. before the Rivers and Harbors Committee, letters passed between different Members of Congress and Gen. Black and the steamboat men regarding conditions on the greatest river in the world, which Gen. Black previously had said before the committee were all that could be desired.

I insert a letter recently sent by the secretary of the Steamboat Owners' Association to Gen. Black, which is self-explanatory. The letter follows:

ST. LOUIS, MO., *February 23, 1917.*

Gen. WILLIAM M. BLACK,
Chief of Engineers, Washington, D. C.

DEAR SIR: I have before me your letter of February 14, 1917, addressed to Senator LEWIS, and referred to me.

I have written Senator LEWIS fully in the premises, so that he and other Members of Congress would fully understand that your letter referred only to the "Lighthouse work and aids," and not to the "Keokuk Dam," and the impounding of water by them, the fluctuations caused by their manipulations, etc., that we are trying so hard to get redress.

Further, I wish to call your special attention to this "satisfactory understanding," referred to in all your letters, which is as follows: Col. Riche called upon me and stated this "lighthouse matter" had been referred to him for investigation, this in his first talk to me on initial trip and before the investigation was completed. He stated he would suggest certain things, if so found, and if it met the approval of Maj. Hoffman, and at Washington, which seemed satisfactory, and would see me and go over the matter with me before making his report. I do not know what his report was, as we haven't a copy of same, nor were we consulted or given any notice of Maj. Hoffman or Washington rejected same. In fact, I don't know what has been done, or what is going to be done? So the "satisfactory understanding" does not come from me, or the steamboat men, who are so vitally interested. So you can see I have no reason to believe, or assurance, that the deplorable "lighthouse system" will not be the same this year as last.

You will further understand, this has nothing to do with the "Keokuk Dam" whatever and their manipulations, which is so hurting and impeding river navigation between Keokuk and Alton, as written you before, asking your aid and assistance.

You have referred this impounding of water by "Keokuk Dam" to Col. Riche, whom you will find by your records (in 1908, I believe) approved Col. McKenzie's letter allowing this dam to impound this water, which is the cause of our present trouble.

For this reason we ask that you kindly refer this investigation to some other distant engineer.

Yours, very truly,

JOS. STRECKFUS,
Secretary Steamboat Owners' Association of St. Louis.

What further can fitly express the lack of knowledge of Gen. Black as to actual conditions on a river for which he made recommendations of $10,000,000 for 1917, of which $6,000,000 was for the lower river, $2,000,000 for the passes, and $2,000,000 more for the upper river.

Immediately following my discussion of conditions on the upper river in the debate on January 25, the gentleman from Illinois [Mr. RAINEY] left the chair where he was presiding over the Committee of the Whole House and took the floor. His statement is a clean-cut indictment of present Army engineers' supervision, and his indorsement of my position was unqualified. Quoting:

Mr. RAINEY. Mr. Chairman, I find myself in agreement with the gentleman from Wisconsin [Mr. FREAR]. Conditions on the upper Mississippi River, so far as the obstructions caused by the Keokuk Dam are concerned, are exactly as the gentleman from Wisconsin has described them. In fact, he has not told the story as bad as it really is.

This unexpected testimony of a leading Member of the House whose district lies along this section of the river is here inserted to show that corroboration of the facts stated in these remarks is to be had on every hand.

The upper Mississippi in itself is a fair measure of conditions in our inland waterways and of subservience manifested toward private-land reclamation and water-power interests, but abundant proof will be submitted that this condition is prevalent and that the only way to find relief is to get out from under the domination of Army engineer control.

Cities like Davenport and La Crosse are persuaded to raise large sums of money for river terminals. Taxpayers are deceived into believing that it is for commercial purposes on the river. Waterway organizations enthusiastically shout for the flag and an appropriation. Contractors, dredgers, reclamation, and power interests are all on hand whenever the lobby demands more millions from the Federal Treasury, but what are we doing with these fabulous sums of money delivered over to the Chief of Engineers. Employing an army of laborers—but for what purpose and who is responsible?

MISSISSIPPI, BETWEEN ST. PAUL AND MINNEAPOLIS.

In discussing the inefficiency of Army engineers and of waterway expenditures, let us take another part of the Mississippi.

From the "head of navigation," Minneapolis, the river has a tortuous, unnavigable stretch to St. Paul, 10 miles below. Based on the Chief of Engineer's recommendations, $2,589,000 has already been appropriated for this 10 miles of river, or at the rate of a quarter of a million dollars per mile. Of this stretch the Chief of Engineers says, page 935, of his 1914 report:

The construction of the lock and dam may develop a passenger traffic between St. Paul and Minneapolis and is expected to reduce the freight rate on flour and grain.

He further says:

The only traffic on the river in 1913 consisted of excursion steamers to Minnehaha Creek, below Lock 1 (p. 2843).

The Chief of Engineers recommended a $235,000 appropriation for this project in the 1915 bill. When that bill was defeated he allotted $65,000 on April 1.

The fact is notorious that after 20 years' improvement and an expenditure of over two and one-half million dollars on this 10-mile stretch of river not one ton of commercial freight has ever been hauled from St. Paul to Minneapolis or from Minneapolis to St. Paul by river, nor has a solitary lonesome passenger ever taken the trip on an excursion boat or otherwise in the recollection of the oldest inhabitant.

On the other hand, presumably 75,000 passengers travel daily between those two cities on eight railways and two interurban lines connecting the cities, paying a dime to be carried from the farthest extremity of one city to the remotest corner of the other, 20 miles distant. Probably 175,000 tons of freight on the average are daily carried by transcontinental trains between the two cities, and yet, after spending over two and one-half million dollars on a 10-mile stretch of river, without securing a single passenger or one ton of freight, in 1914 Army engineers promised passenger traffic and 250,000 tons of annual freight traffic, and so gave $65,000 more to this patent commercial farce.

That is the statement of the Chief of Engineers in order to promote a power proposition at Minneapolis.

Where is the defender of this prodigal waste of money on the Mississippi River? Over $136,000,000 on three sections of the river under the advice of Army engineers and $8,000,000 recommended for the river in the 1917 bill, apart from $2,000,000 for the Passes. Who is responsible?

Let us briefly consider other projects to further test the system and fix responsibility.

For 400 miles of the Missouri River, from Kansas City to the mouth, $1,000,000 is asked by Gen. Black in 1917 in addition to which Congress appropriated $15,417,093 prior to 1917. The project will probably cost double that amount before completion—if ever completed, which is doubtful. Let us see what we are to get for $75,000 per mile for 400 miles. I quote from the Chief of Engineer's 1914 report, page 2513:

Commercial statistics—Lower Missouri River (mouth to Kansas City).

FREIGHT TRAFFIC, 1913.

Articles.	Amount.		Valuation.	Average haul.	Rate per ton-mile.
	Customary units.	Short tons.			
				Miles.	
Grain	253,940 bushels	6,701	$195,303.38	123	$0.0091

Produce		196	22,370.40	125	.0114
Wood	591 cords	847	2,135.60	9	.1002
Miscellaneous		13,579	2,520,734.80	237	.0093
Logs and lumber rafted	43,000 feet b. m.	107	473.00	150	(1)
Sand and gravel barged	238,136 cubic yards.	309,577	71,555.00	1	(1)
Total		347,235	3,929,212.32		

(1) Owner.

Total ton-miles, 5,173,170.

Of this imposing commerce over 312,000 tons of "sand" was hauled about 1 mile in 1913. Nine-tenths of the "traffic" was barged 1 mile. Study the table in order to get a fair understanding of humbug statistics handed Congress by Army engineers and of a vanished river traffic.

Instead of a 6-foot channel being required, a 2-foot channel will float the insignificant commerce, according to experienced river men, and for that river's commerce $2,050,000 was allotted by Chief of Engineers out of $50,000,000 turned over to him by Congress.

Deducting sand and 11,159 tons of ties and wood barged about 10 miles leaves 24,000 tons of questionable commerce for which the Chief of Engineers, from the official report, asked $1,000,000 in 1917.

Speaking of this Missouri River project on March 2, 1915, one month before the allotment was made, Senator Burton said:

> You may spend $20,000,000—yes, $30,000,000—on this project, and in spite of that enormous amount the traffic will diminish, because you are facing a condition that no policy of river improvement can reverse—the loss of that class of river traffic and the utilization of other agencies for the carrying of freight. I wish it were not so, * * * but I am tired of "rainbow chasing," and that is what this is. It is much worse than "rainbow chasing"; it is pure, bald, unmitigated waste.

After this remarkable denunciation of a bald, wasteful project shouldered onto taxpayers by "rainbow chasing" engineers, and after positive legislative notice directing a resurvey of this "pure, bald, unmitigated waste," and with a million dollars balance on hand, our Chief of Engineers dumped in another million on April 1, 1915. Two jitney busses would have carried all the actual commerce and saved $998,000 of war-tax revenues during 1914.

Was TILLMAN to blame when he said the bill is a "humbug and a steal"? We know it is farcical and we do more than wink at it. With positive knowledge that the waste is twice as large as in the days when TILLMAN exposed the humbug, we approve it, Mississippi, Missouri, with every other worthless project that the bill contains.

A brief comment on Gen. Black's responsibility is appended to this Missouri River project, which is primarily for a 500,000-acre private-land-reclamation scheme, as has been repeatedly shown in debate.

Col. Deakyne, an Army engineer, recently recommended the abandonment of the scandalous new $20,000,000 project. In this he was sustained by Col. McD. Townsend, who is president of the Mississippi River Commission. Both of these officers were familiar with the project and realized its character and recommended its abandonment. Chief of Engineers Black overturned that report and plunged the Government into a continuance of the $20,000,000 project, which will reach over $35,000,000 for the entire Missouri River when completed, and for an actual commerce that could be carried in several trainloads or by two jitney trucks the year round.

BLACK TAKES A $20,000,000 RIDE.

This project was discussed exhaustively in the RECORD of May 27, 1916, by an able man, Senator HUSTING, in another branch of Congress. He says:

> Gen. Black has never been on the Missouri River doing any work. The records show that all Gen. Black ever saw of the Missouri River was on a trip of 300 miles on the Missouri River when his Board of Engineers made this report—a trip up the river. He never did any work on the river; he never was near the Missouri River in his official capacity at any other time. * * * Gen. Black has been in the East all his life, so far as this sort of activity is concerned. * * * Gen. Black, without any personal knowledge of the subject at all, * * * admitting that the expenditure was without economic justification and without any reasonable expectation or hope of expectation of increased commerce warranting the outlay, reversed the findings made by the other officers (Col. Deakyne and Col. Townsend). Col. Deakyne was the man on the job for three and a half years. * * * The officer who backed him up, Col. Townsend, is on the job to-day and has been there for about four years in active charge of the district.

Who is responsible for this wasteful $20,000,000 project loaded on taxpayers, in addition to many millions spent on prior projects on the Missouri?

Coupled with Senator Burton's statement as to "unmitigated waste" and the statement of another Senator just quoted, what can be said of Gen. Black's judgment in recommending $6,000,000 for the lower Mississippi in 1917, after seeing a single barge go from St. Louis to New Orleans, or $2,000,000 for the upper Mississippi in 1917 after the Keokuk Power Co. had loosened up 2½ feet of water to help his inspection boat get over the bars, or of the lower Missouri for $1,000,000 in 1917, against the protest of Army engineers familiar with the facts, who had recommended that the private-land-reclamation scheme be abandoned?

What can be said of commerce reports presented by Army engineers on which these extravagant expenditures are based? Who is responsible?

GOVERNMENT PAYS $300 PER TON ON UPPER MISSOURI.

Again we find the short stretch of the Missouri River from Kansas City to Sioux City has received $3,234,083, heretofore recommended by Army engineers. With $141,229 on hand, the 1916 report asks for $35,000 more and submits in justification of past expenditures reaching over $3,000,000 a statement of freight traffic (p. 2673, 1916 report). It shows 101,832 tons of commerce in 1915, of which 101,335 tons was sand barged by owners 2 miles. This is the net result of a greater expenditure than has been made on many large harbors, and for a commerce in 1915 reaching 487 tons net. Who is responsible for this $3,000,000 waste and a $300 per ton cost to the Government?

On the Cumberland River, which Col. Townsend includes in his recommendation for halting present waste, Congress appropriated prior to 1917, $6,466,767. The commerce showing on the lower river, after deducting sand and gravel hauled 8 miles and logs, ties, etc., reached 16,354 tons in 1915, according to the engineers' reports (p. 2691). The upper river commerce was about the same, and the average haul along the entire river was comparatively insignificant. In order to show the wisdom

of Townsend's advice to stop short in this carnival of engineering extravagance, I call attention to other projects showing investments by the Government prior to 1917 and actual commerce returns, all on a par with the Cumberland River, counting average traffic throughout.

	Appropriated.	1915 actual commerce.
		Tons.
Upper Missouri	$3,234,083	487
Big Sandy, W. Va.	1,655,295	1,039
Cumberland River, Tenn.	6,466,767	16,354
Red River, Ark., below Fulton	2,874,687	14,275
Trinity, Tex.	2,492,287	1,571
Brazos, Tex.	1,990,000	
Arkansas, Ark.	3,823,336	12,143
Ouachita, Ark.	4,212,869	14,899
Muscle Shoals Canal, Ala.	4,632,975	7,982
Hennepin Canal, Ill.	7,657,803	7,656
Muscle Shoals Canal	4,550,000	5,887

These few "projects" have absorbed nearly $45,000,000 under the advice of Army engineers, in order to produce an aggregate actual commerce of a little more than 80,000 tons, or practically 1 per cent of the 1915 waterway commerce handled at the harbor of Ashland, Wis., or less than one-half of 1 per cent of the commerce handled at any one of several lake ports that may be named.

I am not calling attention to this wretched record just to show waste and extravagance on these river projects, but to further state that after all this enormous waste of over forty millions of dollars, of which nearly six and a half millions was for the Cumberland River, Gen. Black, on February 4, 1914, in Document No. 10, Sixty-third Congress, second session, as chairman of the Board of Engineers, recommended $4,500,000 more for the upper Cumberland River. More to the point, he reversed the action of subordinate engineers and reversed a first recommendation of local contribution. The whole miserable tragedy in political pull and wasteful extravagance contained in that document ought to make the most generous champion of present methods hang his head. Who is responsible?

Need it be said, to show the character of the 1917 bill just defeated in the Senate, that among the new projects, reaching $47,000,000, contained in the bill the Cumberland River the $4,500,000 proposition was snugly ensconced, together with the $733,000 Oklawaha River, new project, for 1,760 tons of actual commerce, and $100,000 for the Congaree, new project, for 4,324 tons of actual commerce, in addition to $668,298 already spent, and for various sums reaching a total of seven figures for many other wasteful items out of 90 new projects, including the Scuppernong, Kissimmee, New Begun, Deep Creek, Raccoon Creek, Sabine River (generally dry), Brazos, Colorado, and others of the same character? Who is responsible for their approval and estimates? Remember, again, this is the measure just defeated, which will bob up again, and which the president of the lobby says to the press is the "best river and harbor bill introduced for years." Heaven help those that preceded it if that statement be correct.

On the lower Mississippi, upper Mississippi, Missouri, Cumberland, and many other projects we have learned of prodigal waste recommended by Chief of Engineers Black, in the name of navigation for deserted rivers, without actual commerce worthy of the name. The Chief of Engineers overruled reputable officers for a $20,000,000 project, primarily for land reclamation on the lower Missouri. I now offer further evidence of profligate waste on a private water power—in the name of navigation. Document No. 20, Sixty-third Congress, second session, contains a recommendation by Chairman Board of Engineers Black for a payment of $18,700,000 to improve a water power at Muscle Shoals on the Tennessee River. The subject was thoroughly discussed in the RECORD of January 10, 1916, First session, Sixty-fourth Congress, pages 815-820.

GEN. BLACK AND THE MUSCLE SHOALS.

On page 84, of Document 20, Army engineers are quoted as favoring a dam 150 feet high, primarily in aid of navigation on the Etowah River. Col. Black recommended at Muscle Shoals $8,375,000 for navigation, $1,750,000 for flowage, and a loan of $8,325,000 to a private power company for 100 years. The Government had previously spent $4,555,000 on this notorious canal. The total commerce reached only 5,520 tons in 1912 and 5,887 tons in 1913, according to the Army engineers' reports. On the Tennessee River $11,437,160 has been spent on engineering experimentation. To this enormous extravagance Chief Black, in Document No. 20, proposed to add $18,700,000 on the Muscle Shoals 26-mile canal along this river as above stated.

When the facts were exposed to the House, the project which was contained in the 1914 river and harbor bill was stricken from the bill, notwithstanding strenuous opposition by the then leader of the House from Alabama.

In January, 1916, the military bill contained section 82, which was a proposal to appropriate $24,000,000 for this same project under a joker proposed in the bill for preparedness nitrate manufacture, with the Alabama Power Co. again the beneficiary. A full discussion appears in the RECORD of January 2, 1916, wherein the Secretary of War was shown to have the sole determination, and Army engineers, according to the hearings, had only considered the Muscle Shoals project previously approved by Gen. Black.

When the Army bill was under discussion I presented original documents showing a vigorous lobby was pressing this legislation; that the Alabama Power Co. had a $100,000,000 bond issue dependent upon the acceptance of a nitrate project by the Government; that stockholders owning nitrate patents expecting to unload on the Government were also stockholders of the Alabama company, and that the whole proposition was vicious and indefensible. Whatever may have been the effect of the discussion which appears in the RECORD of January 2, 1916, a $24,000,000 joker section previously included by a unanimous report of the Military Committee was driven from the military bill by a decided vote in the House and the proponents did not demand a record vote to which they were entitled.

After this second defeat it seemed that the Alabama Power Co.'s lobby was without prospect of unloading its infamous project on the Government, but things turned out otherwise.

Having failed to get $18,700,000 in the river and harbor bill for navigation, which has been approved by Gen. Black in Document No. 20, and after the company had failed to get $24,000,000 in the military bill for nitrates on the ground of preparedness, with the same official to ultimately fix upon Muscle Shoals for the project, the appropriation again bobbed up in the Agricultural bill, which was prostituted to cover the same Muscle Shoals project under a claim now made that fertilizer would be manufactured for the farmers. The President was left to determine the location, but the press has contained repeated notices that the Secretary of War and other officials are going to look over Muscle Shoals in determining the location of a Government plant to cost, presumably, $20,000,000. The press further announces that Gen. Black has charge of the arrangements. As the Secretary of War has written many letters indorsing projects approved by Gen. Black, there is no uncertainty of the ultimate purpose and end of this appropriation of $20,000,000. The Secretary of War will delegate to his subordinate the determination.

Eminent scientists and engineers were quoted in my speech of January 2, 1916, to show the unbusinesslike proposal of manufacturing nitrates by the fixation process, compared to using by-products of coal.

Frederick Darlington, an eminent consulting engineer, also has shown the extravagance resulting from adopting the Muscle Shoals project, and calls attention to over 2,000,000 horsepower now going to waste in plants throughout the country which can be utilized, if desired, in manufacturing fertilizer or nitrates without the investment of $20,000,000 in one plant at Muscle Shoals.

One insurmountable objection occurs to Darlington's proposal. The nine lives possessed by the Alabama Power Co.'s $100,000,000 bond-issue cat is too big a chance to overlook, and it takes only $20,000,000 of Government funds to acquire it. Beaten at securing $18,700,000 for navigation in the river and harbor bill, the cat came back in a joker for $24,000,000 for nitrates in the military bill. Again beaten squarely in a stand-up fight, the cat came back with a $20,000,000 proposition for farmers' fertilizer, with Gen. Black of the party that inspects Muscle Shoals. I do not charge anything improper on the part of any Government official. The system of delegating that power, however, is indefensible. But with the political pull and wealth now behind the Alabama Power Co., the cat is sure to come back until it gets that $20,000,000 out of the Federal Treasury, and I ask again who is responsible?

SCORES OF BAD PROJECTS IN 1917 BILL.

During the fight against the 1917 bill in the House, 81 new projects were placed in the bill, including some of the most scandalous items ever covered by a river and harbor bill. Scores of old projects were bad and wasteful, but to these were added new creeks and new runlets and old bankrupt canals and every other kind of grab that has its hands on the Federal Treasury, all with the indorsement of Army engineers. Whenever a new project for New York Harbor or Boston Harbor was inserted it was a signal for every discreditable project to crowd in, from the Scuppernong to the Oklawaha, the Kissimmee, the Sabine, and the Colorado Rivers, with Richmonds Harbor real estate project on the Pacific coast bringing up the rear. All have the official O. K. of the Army engineers and of the lobby,

which declares the bill "the best," and so forth, and proceeded to defeat the $25,000,000 substitute because it eliminated a grist of the "pork" projects.

I have repeatedly exposed many old projects and some new projects in this fight against what Senator TILLMAN calls the annual "humbug and steal," but I have no purpose to extend this argument to pork projects or to the waste, extravagance, and notoriety connected with river and harbor bills. That is a separate subject, which I have discussed day after day on the floor of the House whenever river and harbor bills have been up for consideration.

I have tried briefly in these remarks to point out the intolerable domination of Congress and of the Treasury by engineers who are supposed to make or unmake a Congressman, depending upon the approval of a local waterway project as a condition of his return. Let me recapitulate what are believed to be important facts and then let me ask, What Representative will defend the record of incompetency and extravagance accompanying these expenditures?

THE IRON HOOP TO THE PORK BARREL.

First. The Army engineer has been shown to be unfitted by lack of business training, environment, or experience from performing a service filled by experts in economics, waterways, and business management in other countries. His whole social and official life unfits him for such responsibility.

Second. Chief of Engineers Black finds nothing incongruous when appearing upon the program of a waterway lobby, such as has been heretofore exposed on the floor of the House, and briefly described in my remarks to-day.

Third. When the river and harbor bill of 1915 was defeated and Army engineers were directed to reexamine many doubtful projects not one of importance was dropped. I have presented to your notice wasteful projects that absorb many millions annually. Senator Burton and others have shown from the official engineers' reports how worthless and useless many of these projects have turned out, but more significant, Col. Townsend, the ablest inland waterway engineer, has recommended a halt on 58 Mississippi Valley projects, but Gen. Black fails to halt one as long as the Federal Treasury responds.

Fourth. Taking up specific measures, Gen. Black recommended $6,000,000 for the lower Mississippi for 1917, notwithstanding only one barge runs, or did run, from St. Louis to New Orleans, and after $106,000,000 has been spent on the lower river, with a loss of 90 per cent of its commerce during the same period.

Fifth. Gen. Black recommended $2,000,000 for the upper Mississippi in 1917, after past appropriations of $28,000,000 on this same stretch of the river. In order to bolster up the project he couples a "commerce" statement that I submit is unworthy of consideration. More significant, he boasts of the conditions on the upper river, when it appears that the Keokuk Power Co. was instructed by Army engineers to release 2½ feet of water from the lake to accommodate their own inspection boat. Col. Townsend recommended that work in this project be confined to open-channel work, costing, according to expert rivermen, less than $200,000 a year. Gen. Black overrules all and asks Congress for $2,000,000 in 1917. Further, he claims the river to be in navigable shape, when it is stated by expert river men to be worse than before a dollar was ever expended, and they unite in a petition for the removal of the local engineers.

Sixth. Gen. Black overruled Col. Townsend and Col. Deakyne, both of whom had been on the Missouri River for several years. Gen. Black took one boat ride up the river similar to his boat ride on the 2½-foot Keokuk Dam rise. He then overruled two men who were trying to obey the 1915 law and save the Government Treasury. By his action there was loaded onto the Treasury a new $20,000,000 project that is primarily for reclaiming land instead of navigation, as has been repeatedly shown in debate.

Seventh. Gen. Black as chairman of the Board of Engineers, after an expenditure of over $6,000,000 thus far, recommended $4,500,000 more for a new Cumberland River travesty, and in so doing overruled the judgment of men who had disclosed the hopelessness and waste involved in this new project contained in the 1917 bill.

Eighth. Gen. Black is in a position to load on the Treasury the $20,000,000 Muscle Shoals Alabama Power Co. project. He recommended it for navigation, but Congress struck it out. Placed in the military bill for nitrates for preparedness, Gen. Black again was made arbiter; again Congress struck it out. Finally it was placed in a third bill, this time for a fertilizing plant, and Gen. Black is again the real man behind the gun to settle the location.

I do not care to refer to scores of other projects that carry wasteful appropriations in the 1917 bill. I have no personal complaint against Gen. Black. I wish this criticism could be avoided and the weakness of the present system disclosed without so doing. He is no better nor worse than his predecessors. He is a product of a system, and that system is so bad and far-reaching that no defense can be offered for it by those who are its beneficiaries, and no criticism need be hoped for from these same beneficiaries for self-evident reasons.

In my minority report I stated that, "Nowhere will be found evidence of wasteful methods in governmental affairs to be compared with the autocratic demand of Army engineers in 1917 for the following amounts from Congress:

Norfolk and Beaufort waterway	$1,000,000
Lower Missouri	1,000,000
Upper Mississippi	2,000,000
Central Mississippi	350,000
Mississippi Passes	2,000,000
Lower Mississippi	6,000,000
Ohio canalization	5,000,000
Cumberland	977,000

These items reach about $18,000,000 for only 8 projects out of 300 or more contained in the bill, or about one-half of the entire fund asked for by the Engineers in 1917 to carry on the entire 300 projects in the bill.

To the use of words "autocratic demand" Chairman SPARKMAN and other members of the committee dissented, although it was further stated in debate that the only modification of a single item in that $18,000,000 list was the reduction of $800,000 on the upper Mississippi made on my own presentation of conditions.

That the engineers do autocratically demand from Congress the specific amounts with which to keep thousands of employees engaged on wasteful projects has been repeatedly shown, and as to the distinction between their "demand" and recommendation I offer the explanation of the leading member of the minority on the committee who defended the engineers. Like the chairman of the committee, this able Member, due to the fortunes of political primaries, will not be with us during next session. I quote from the debate on January 22, 1916:

Mr. FREAR. Immediately in connection with that statement (of "autocratic demand") appears a list of $18,000,000, or very nearly that amount, recommended by Army engineers for eight projects. Is there more than one project in the list in which any change was made by the committee, and that one reduction I recommended?

Mr. SPARKMAN. I will come to that presently.

Mr. HUMPHREY of Washington. * * * Congress has nothing upon which to base an estimate of what these projects will cost except the report of the engineers * * *. The engineers are experts, and they have expert knowledge, and it is only proper we should follow what they recommend.

Mr. FREAR. I submit that the argument of the gentleman from Washington [Mr. HUMPHREY] absolutely justifies the proposition that I make. There is no question about it.

All estimates under the present system come from the Chief of Engineers.

Congress, like an overgrown infant, accepts the "autocratic demand" of Army engineers, and I have disclosed the awfulness of the waste brought about by these "experts" during the past four years, during which time Congress has overturned their estimates and knocked over the engineers' demands and the committees that supinely follow their demands.

AN ARMY ENGINEER'S LIMITED USEFULNESS.

Engineers are able to canalize the Rocky Mountains or make a canal on the Trinity River by artesian wells, as proposed, but after spending $2,000,000 in round numbers on the Trinity no commerce has been developed, and commerce, not deserted canals, is what the American people are being taxed for. Can any distinction be more clear of where the fault lies than that shown by technical knowledge presumably possessed by Gen. Black, when compared with common sense based on commercial needs, a virtue not found under present preposterous methods.

I have tried to present a brief statement, but I find it has extended far beyond the limits originally intended. Any discussion of a subject of such importance must necessarily have many angles that require presentation. Those who are interested, and every Representative ought to be interested, will find in the numerous reports and speeches on the subject to which I have referred detailed analyses of many worthless projects now carried on by the Government that ought to be abandoned but can not be discontinued or modified under the present system.

The river and harbor bill is a simon-pure pork-barrel bill on the theory that it is supported by local interests dependent upon securing some local project. Generally speaking, all votes so interested stand together, so that not one project can be stricken from the bill in either branch of Congress. The bill stands or falls in its entirety. From that very fact has grown up efforts of localities favored with strong political and legislative influences in Congress to get all they can out of such bills. The old story of the jury finding "not guilty" the de-

fendant charged with stealing a hog because each juryman was cared for with a portion of the hog has been told on this floor repeatedly. Although a distinguished Senator now in Congress has declared such bills to be humbugs and steals, I do not question the legislative integrity of any Member nor assume greater virtue than those supporting such bills. I do say as long as omnibus bills are popular, public criticism as to extravagance and waste will be merited. Any bank in the country with the Chief of Engineers for its president and Congress for its board of directors would become bankrupt in 30 days.

There is no escape from the alternative. The system is inherently bad and is a bid for legislative influence irrespective of commercial needs. With practically no protection from the engineers the system has grown so vicious and notorious that Congress must devise some escape from its influence. Wasted public money is in itself to be deplored, but political sandbagging, scratch-my-back methods is a sign of public weakness not warranted by the high standard of men who are chosen Representatives in Congress.

I do not say this from any desire to lessen the stigma attaching to such bills, but I do know the membership of this House is composed of men of integrity and high moral character. I believe this is universally so, and if exceptions there be, they prove the rule, but weak and inexcusable things sometimes occur through the desire of Members to represent their districts, and although the locality and secret interests behind proposed projects may be primarily to blame, the Representative properly gets the blame for voting for bad measures.

WISCONSIN AND FLORIDA, OR COMMERCE VS. "PORK."

Before concluding I desire, from the standpoint of locality or sectional grab methods contained in the 1917 bill, briefly to compare the appropriations received by Wisconsin and Florida, first prefacing the comparison with the remark that the water-borne commerce of Wisconsin includes Superior-Duluth, Milwaukee, Ashland, and other harbors with a total commerce of over 60,000,000 tons annually, and an average haul of several hundred miles.

The actual waterway commerce of Florida, according to official engineers' reports, is presumably not 10 per cent of that of Wisconsin. In 1916 Florida contributed to the Federal Treasury $1,816,214.81, Wisconsin contributed $12,993,916.57. (P. 50, Internal Revenue Rept. 1916.)

With this brief preliminary statement, let me say that, apart from future obligations assumed, which in the case of Florida are several times those of Wisconsin, the 1917 bill carries $2,217,200, for 24 projects in Florida, while Wisconsin receives $147,100 for 9 projects, notwithstanding Wisconsin has 10 times the Florida commerce; all of which shows that with past waterway appropriations approximating $20,000,000 for Florida, it is an important legislative asset under the present system to have friends in court. Wisconsin contributes six times as much as Florida to the Federal Treasury, but Florida gets 15 times as much from this bill for a comparatively small commerce.

Let me further say that Wisconsin has all that was recommended by Army engineers in 1917, and presumably all that is needed. What more completely demonstrates the character of the present system than this one illustration?

LOUISIANA, NORTH CAROLINA, AND TEXAS.

Or, again, Texas, with $1,488,000 for 18 projects, in the 1917 bill, gets 10 times as much as Wisconsin, while North Carolina, with $2,133,275, counting the Norfolk-Beaufort Waterway, for 16 projects, speaks in thunderous tones its approval of the present system, although its actual commerce will not reach one-half that of the small waterway commerce of Florida, but North Carolina is well represented on locality bills at both ends of the Capitol. That is the character of the 1917 bill, "the best" bill, according to the president of the River and Harbor Congress lobby. And, incidentally, Louisiana, the lower Mississippi, and other projects, old and new, pulled several millions from the same bill.

I speak of these allotments by Congress to indicate some of the characteristics of the 1917 bill, which like every other river and harbor bill has rightfully earned the title of "a pork barrel," and one of the worst of all is the 1917 travesty.

Another subject may be worthy of brief consideration. The anxiety of Members for some local project frequently blinds their judgment and binds their support to a bill that ordinarily bristles with bad projects. Local pressure is hard to resist.

Will the citizens of Minnesota, Iowa, the Dakotas, Montana, Nebraska, Kansas, Illinois, Indiana, Wisconsin, and all other interior States study these river and harbor omnibus bills to learn what they are paying direct taxes for in these piping times of peace? Will the taxpayers of New York, Massachusetts, Pennsylvania, and other coast States that now pay most of the Government revenues, examine these same omnibus bills to learn what scandalous pork-barrel projects their Representatives must support in order to get needed appropriations for commercial harbors?

It must be understood that this is analogous to placing between 100 and 200 unnecessary public buildings in jim-crow and cross-road towns throughout the country. All omnibus bills have the same objectionable characteristics—it is six of one and a half dozen of the other when the two infamous pork barrels, a product of omnibus-bill methods, are compared. One important difference exists in effecting their defeat. The Treasury Department seeks to prevent the public buildings waste while the War Department, through the Army engineers, is directly responsible for much of the river and harbor waste and is an obstacle to some better system.

Every Member desires to perform his full duty by and for his district, but the oath of office contemplates public service not circumscribed by congressional district boundaries, nor does it follow that pork-getting proclivities determine public usefulness, popularity, nor estimate of ability held by the average district.

The Rivers and Harbors Committee of 21 members may properly be held to include those who in past years have abundantly cared for their constituencies, yet one-third of that committee, including its three oldest members, are retired by the primaries or election of 1916, indicating that widespread popularity does not necessarily follow the ability to get something for one's district whatever reason determined results.

DISTRICTS PREFER PUBLIC ECONOMY TO LOCAL PORK.

Measured by such token, I would be relegated to private life, because, with 125 miles of the greatest inland river in the country bordering on my district, I have repeatedly opposed waterway and other forms of public waste. Possibly this accounts for a statement published during the campaign in one of the leading Democratic papers of my State, that—

> The Democratic national committee considers Representative FREAR'S district vulnerable, and is preparing to send a half dozen prominent speakers into the district to help the Democratic candidate. * * * In no other Wisconsin Republican congressional district is the Democratic committee thus concentrating its orators.

Money and speakers were shoved into the district by the committee during the recent campaign, in a vigorous effort to carry it. Plum getting, however, is not a necessary asset in the tenth Wisconsin district, which gave about 14,000 majority, or more than double its usual vote in indorsement of its Representative's course, and several thousand more than was given to the head of the ticket. Vulnerability does not ordinarily come through efforts to stop extravagance and waste; otherwise the Democratic national committee would have had something to show for its money and "orators" in this Wisconsin district. What is true of that district is true of the great majority of districts throughout the country where constituencies do not ask Representatives to support dishonest bills as a price for local appropriations.

I have offered this concrete statement as to the doubtful value of "pork" getting for the consideration of some 75 Members of the House whose active aid is urged in securing the defeat of wasteful omnibus bills and for constructive legislation along the lines of House bill 6821, Sixty-fourth Congress, creating a waterway commission, or for any other measure designed to correct present evils.

WHY NOT SUBSTITUTE A BUSINESSLIKE WATERWAY POLICY?

Is not the situation disclosed in these few remarks intolerable—or, more to the point, ridiculous beyond the wildest dreams of joke artists? Extravagant military officials, without any economic or commercial experience, have been placed in supreme control of a purely business function of government that should be administered by a competent board, as in other countries. Probably two-thirds of the present expense could be eventually eliminated without injury to any real commercial project and with an ultimate saving of $25,000,000 or more annually to the Treasury. Any constructive inland waterway proposal must comprehend the control of railway rates in favor of waterways, as in Germany or wherever waterways are used commercially.

The subject requires intelligent study by students with training and understanding—not Government extravagance in order to keep busy an army of useless employees on absurd projects. Gen. Black's peculiar logic, that "with greater expenditures of money" will be found "ample returns to the United States," may be popular with the assemblage he addressed, but the people who pay the bills ask to be shown.

If we hope to get far from a fantastic military yoke, decorated with epaulets and gold lace, we must, apart from nominal technical advice, send Army engineers back to their commands

where they belong and are needed, according to ex-Chairman Hay, of the Military Committee.

Every Member of the House should give active aid toward instituting a better system. River and harbor bills, according to the lobby's claims, are supervised by a lobby headed by a Member of Congress who is deeply interested in the enormous Mississippi River land-reclamation scheme. Secret back fires have been instigated by this lobby within the past 30 days, according to documents before me, but Congress and the country are no longer deceived by appeals for an invisible commerce or impractical preparedness or other straws of like character thrown out by the lobby.

Is it not time to get rid of the whole disgraceful system and to subordinate dredgers, contractors, and private land and power interests to their proper place instead of to a venal legislative control exercised by this lobby of questionable interests, according to its own modest official reports? A change in methods can be carried out, and must be carried out if Congress hopes to clear itself from the annual pork-barrel odium. Hair-brained inland-waterway canals, wasteful canalization river projects, private land-reclamation projects like the 20,000,000-acre Mississippi scheme, private water-power projects like the Muscle Shoals Alabama Power Co.'s scheme, and various other ventures without financial limit will eventually filch billions of dollars from the Federal Treasury if not permanently blocked. These schemes have been exposed repeatedly and sometimes checked, but the larger part of $900,000,000 has been wasted under incompetent military methods instead of being used for commercial needs.

The Rivers and Harbors Committee is composed of able men but men ordinarily supposed to be interested in some particular local project or projects. That committee has been figuratively shot to pieces, as stated. Four Members voted against the miserable 1917 bill, and of the remaining 17 Members 7 will not be in the next Congress.

According to experience, the vacancies will be sought by those having pet projects, but vacancies should be filled by Members having genuine governmental interests at heart—ready to drive the present pork-barrel omnibus system out of existence. One hundred and thirty-two Members, in addition to those who were paired, for various reasons protested against the 1916 and 1917 bills. A united effort by fearless Members, old and young, to put such methods out of business will bring about a regeneration of a legitimate Government function that has fallen into disrepute.

THE PRESS HAS AWAKENED SENTIMENT AGAINST A PUBLIC DISGRACE.

The public press has done its share in awakening popular indignation against the present system. All that is now needed is united effort to purge Congress of a legislative disgrace.

The twin sister public building omnibus bill was analyzed and exposed in a speech of over an hour on the floor and in extended remarks of over 20 RECORD pages on December 7, 1916. Afterwards the bill was opposed on the floor for several days when reached immediately preceding debate on the river and harbor bill and each of these bills by a coincidence amounted to over $38,000,000. To state the fact is to indicate strenuous days of preparation and debate at the beginning of the session accompanying both bills, and without aid from those who had confidently been relied on to join in a fight against the measures.

The 1917 river and harbor bill was opposed practically alone on the floor, against calumny and personal abuse voiced by those who resented criticism, not of the bill in its entirety, but of pet projects which they alone attempted to defend. Projects should have sufficient merit to belong to the Government and offer their own justification from official reports. Now they are regarded as belonging to individuals or congressional districts. With the defeat of pork barrels, this result, together with efficiency and economy in our national waterways policy, will be effected and be a long step toward a business budget system.

If one comparatively inexperienced Member during the past two sessions, with slight aid, could help results noted, a dozen sincere, active Members could have riddled and defeated the outrageous 1917 bill, notwithstanding its 81 new projects.

In conclusion, let me say a further word personally. During the past four years a consistent fight has been waged against four river and harbor bills, a so-called flood-control or more properly a private-land reclamation bill, a public-building bill, and two or three smaller wasteful measures. The six large bills reached in amount from $38,000,000 to over $50,000,000 each, or a total of considerably over $200,000,000. Two of these bills were squarely defeated and moderate substitutes were passed; two of the bills were prevented in the Senate from becoming law during the present session; and two other bills, the 1916 river and harbor bill for $43,000,000, and the $51,000,000 so-called flood-control bill, among the worst of the spoils measures, were passed by Congress, the latter bill less than one week ago. Because of medical advice I can no longer ignore, others must take up the burden of the fight in the House in the future. Without consistent support on the floor, which has not been forthcoming in the past, all that can be accomplished in the House is to awake public sentiment by a vigorous protest. With such support the movement will win.

Every Member of Congress is equally responsible for present conditions and results. Let the Sixty-fifth Congress clean up our indefensible waterway lack of policy which has been repeatedly exposed and largely uprooted during the past four years. Let us substitute business methods in legislation for notorious omnibus bills. Surely no further argument need be offered of the imperative need of such action.

Water-Power Bill.

SPEECH

OF

HON. JOHN F. SHAFROTH,

OF COLORADO,

IN THE SENATE OF THE UNITED STATES,

Thursday, February 1 (legislative day of Wednesday, January 31), 1917.

The Senate had under consideration the bill (H. R. 408) to provide for the development of water power and the use of public lands in relation thereto, and for other purposes.

[Continued from page 2405, of the CONGRESSIONAL RECORD.]

Mr. SHAFROTH. Mr. President, at the close of the afternoon session I was discussing the conflict of jurisdiction that would arise between the administration of the State and National Governments concerning water powers. I want to call attention also to the fact that this leasing system which is proposed will create a large bureau if the leasing bills are passed. A bureau that will take in a great many officers in the administration of affairs will be maintained here in Washington. The extreme conservationists would take in not only water powers, but would provide also for leasing of the natural resources on the public lands in the Western States. Already bills are pending for a leasing system to apply to the coal lands, phosphate lands, sodium lands, and potassium lands. Their passage must inevitably lead to the extension of the system of leasing of mineral lands; I mean by that gold and silver, lead, zinc, and other metalliferous ores that are now mined under the general laws of the United States, by which absolute title becomes vested in the discoverer upon complying with the general land laws in expending $500 upon each claim and further upon the payment to the Government of $5 an acre.

Mr. President, that is the program not of the Senators who are conducting this bill, but it is the natural result of the adoption of this system. That policy has already been declared by the convention of the conservationists held at Kansas City four or five years ago, and has repeatedly been advocated by the chief exponent of the conservationist doctrine. From that there seems to me to follow the logical result that if the Government is to lease coal lands, sodium lands, phosphate, and potassium lands there must inevitably be developed a leasing system which will apply to the mineral lands.

Mr. President, it is needless for me to say that under the present system of location and discovery and the extraction of minerals under the system of laws which we now have, by which title is acquired by the individual, there has been a development that has been unequaled in the history of the world. There have been over three billion dollars of gold and silver produced in the United States since about 1848. That has improved conditions in all parts of the land.

Mr. President, I wish to call attention to the fact that when you get all these lands under the leasing system you are going to have a bureau established under the Federal Government in Washington for these lands, and it is going to be of such a magnitude that it will consist of thousands of employees, and will of necessity have the administration of some 3,000 to 18,000 miles from where the lands to be administered are located.

Mr. President, if you look at the rentals that they propose to exact from the person who builds a power plant on one of the natural streams there you will find that bookkeeping and continual inspection, so that you practically have to have men all over that western country.

We have now the forest reserves out in the West and we have a great number of men who are termed foresters. The system provides that appointive officers from Washington shall

run affairs of a local nature that are within the limits of a State. Those things of a local nature belong naturally and properly to the State, and it was never the intention on the part of the framers of the Government, nor can you construe any language of the Constitution in any way to indicate that there was a desire or an intention to include these local matters under the legislative jurisdiction of the United States.

I wish to say that the first chief head of this conservation bureau at one time told the Senator from Wyoming [Mr. CLARK], as I have heard the Senator say, that when the forestry system was developed into that perfection the German forests were in there would be required 100,000 employees in that service alone; and when you add to that the number which will be in the water-power service, the number in the sodium-land service, the coal-land service, and in the various leasing systems that are being proposed, there is no telling how many Federal employees there will be quartered in the States of the Union. That constitutes and makes a bureau which will be administered not among the people of the State, but its administration will be by persons who have no sympathy with the people of the State.

As you know, Congress passed a law which provided that thereafter employees in the forest reserves should be appointed as nearly as could be from the States in which the forests were situated. Soon thereafter the administration named the six district foresters, the men who were to have charge of the six forest districts of the United States. I want to show how that law of Congress, which was intended to insure the appointment of district foresters from the very districts where the forests were situated was carried out, how they were distributed, and from what States they came, because it is important to see whether this conservation bureau has been anxious to administer the law of the United States as Congress indicated that it should.

I will read a dispatch that came from Washington when the district foresters were appointed. As you know, these forest reserves are located in the Rocky Mountain region, and this dispatch was sent out at that time after the passage of the law which provided that they should select men as reasonably as they could from the States where the forests were located. The dispatch is as follows:

WASHINGTON, *October 7, 1908.*

The district foresters who will be in charge of the six field districts of the Forest Service—

That is, the six including all of the forests of the West—

beginning January 1 next, have been selected by United States Forester Gifford Pinchot.

They and their headquarters are as follows:

District No. 1: Missoula, Mont.; W. B. Greeley, of California.

He did not live in Montana; no one from Montana was appointed; but I presume they found, in order to get around the statute, that there was not anyone in Montana who could take care of the forest reserves.

District No. 2: Denver, Colo.; Smith Riley, of Maryland.

I suppose they thought we did not have any person out in Colorado who knew anything about the 13,000,000 acres of forest land there.

District No. 3, Albuquerque, N. Mex., A. C. Ringland, of New York.

It seems that they had to go clear to New York to find a man who would be competent to take care of the forests of that Territory. We find that for District No. 4, Ogden, Utah, whom did they appoint? They appointed Mr. Clyde Leavitt, of Michigan. They had to go clear up to Michigan in order to find a man who knew anything about, or would properly attend to, the forests of the State of Utah.

District No. 5, San Francisco. Instead of finding in the great State of California a man who was capable of taking care of and managing the forests of that State they went clear to the Atlantic coast and selected Mr. F. E. Olmstead, of Connecticut, for that position, and that in defiance of the act of Congress that they should select, as near as could be done, foresters or officers who were close to or connected with these forests.

Then, we find that in District No. 6, Portland, Oreg., instead of taking one from Oregon, where the man would be in sympathy with the citizens of that State, this Bureau went to California and selected Mr. E. T. Allen, formerly state forester of California.

Mr. President, that is the way we have been served with Federal management located here in Washington, selecting its favorites here and sending them out to the States where the people live who have the real interests of the State at heart.

Mr. President, you will find that treatment in every distant bureau. Have a bureau for these water powers, and it will be found that none of its officials will be in sympathy with the people there, or at least there will be very few sympathetic officers. That is simply the history of all bureaus that are 2,000 to 3,000 miles from where the property that they are to administer is located.

Mr. President, is that right to the States that have entered the Union upon an equal footing with the original States in all respects whatsoever? Is that fair to them, and especially in view of an act of Congress that indicates that as near as may be they should select officers from the States where the forest reserves were situate? There were six forest districts created, and not a single one of the district foresters was appointed from a State of the district in which the forests were situate.

Mr. President, we find that Congress got tired of this wholesale setting aside of forest reserves in the United States, and so they concluded that it would put an end to it. So in a bill that was passed there was a provision that "hereafter no forest reserve shall be created except by act of Congress." That is what it said.

That bill passed the House on the 1st day of March, 1907. It was passed the next day by the Senate or it was in conference one day. Now, Mr. President, while that bill was in the last stages of its passage the Forest Service was very active. There were laid before the President of the United States proclamations that were signed on the 1st and 2d days of March, after the bill had passed one of these Houses; but the act had not been signed by the President. They laid before the President proclamations for millions and millions of acres of new forest reserves, and when the bill limiting the power of the President to set aside forest reserves was presented he signed it on the 4th day of March, 1907. And yet the proclamations for the forest reserves, including millions and millions of acres, taking in a large part of the forest reserves of my State, were signed on the 1st and 2d days of March. Everyone knew that there had been great complaint about the creation of forest reserves out West, and they knew that millions of acres of forest reserves had been created upon which there was not a single tree. Yet, Mr. President, in the face of the intent and purpose of Congress manifested in the act passed and then in conference, in that brief interval between the passage by one of the Houses and the signing of the bill, millions and millions of acres of land, contrary to the very terms of the act, were created by proclamation.

Mr. President, that is the kind of treatment the West has received from this bureaucracy that has existed in Washington as against all the lands that are reserved by the Government.

Mr. President, that is merely illustrative of what we have got to expect under existing conditions. In spite of the fact that these lands, according to the acts themselves which reserved them, were temporarily to be reserved, we find that they are held in reserve year after year, and the people who have control do not propose to make the system temporary.

It may be conceded that the very best object is sought by these people; I am not presuming to say that the men who do these things are trying willfully to oppress us; but they are obsessed with one idea concerning these matters, and they think that nobody else is entitled to have an idea different from theirs. It is because of that fact that we do not want any more bureaus to manage lands or resources out our way; but I fear we are going to have them if this leasing system, which is on the program, is to be inaugurated.

I want to say a few words with relation to the leasing system in general. A leasing system was established by the United States in the early days in 1807. We find that it continued a long time. Thomas Benton, after he came to be a United States Senator, concluded that he desired to have it repealed, but it required nearly 30 years after he came to the Senate before he brought about its repeal. That is the reason I am afraid that if a water-power-site leasing bill is enacted into law I shall never in my lifetime see it repealed. I am convinced that such a leasing system is not workable and that we shall find its results will be bad.

Mr. President, the officers of the department think that they can secure an income or return from these water-power sites, as they have thought they could make a profit out of every enterprise which they have undertaken. The ex-Chief Forester once issued a statement showing that there were so many billion dollars' worth of forest lands in the western country that were worth so much in timber and so much in water power, and he estimated that at 5 per cent interest a yearly dividend, which ought ultimately to be attained, would be so many hundreds of millions of dollars, which ought to come into the Treasury of the United States. That statement was made in good faith, and I have no doubt the Forester thought it was true; but under the very experiment that he attempted what has been the result? If you will notice the appropriation bill for the Department of Agriculture, which will come in here to-morrow, you will observe, as I have observed for the last four years, that instead of the Forest Service being an asset to the Government, it is a

liability of between three million and four million dollars every year; in other words, instead of making the leases which they extend to cattle and sheep growers in that section pay, the service has become a liability. What they have to pay to their forester, for the support of the bureau, and expenses of that kind exceeds the amount received as revenue by three or four million dollars. The same was true under the old leasing system, which Thomas Benton attempted to have repealed.

Mr. JONES. Mr. President——

The PRESIDING OFFICER (Mr. HUSTING in the chair). Does the Senator from Colorado yield to the Senator from Washington?

Mr. SHAFROTH. I yield to the Senator.

Mr. JONES. I have some figures here which it might be interesting to put into the RECORD right in that connection.

Mr. SHAFROTH. Very well; I shall be glad to have the Senator do so.

Mr. JONES. I secured from the Forestry Service a few days ago a statement of the receipts of the Forestry Service since 1906, and also the appropriations which we have made for that service.

Mr. SHAFROTH. I should like to hear them.

Mr. JONES. I find that the total receipts from the timber sales from the forests since 1906 have been $9,866,523.10, while the total appropriations for that time were $57,977, 408.62.

Mr. SHAFROTH. I thank the Senator. The proportion, then, of expenditures to receipts is about 5 to 1; we are paying $5 for the service for every dollar which we are receiving from it.

Mr. JONES. But that was merely for timber sales.

Mr. SHAFROTH. If the Senator will take the balance of it, he will find that in very many cases the expenditures compared with the receipts will run up very high.

Mr. JONES. For grazing fees on the reserves we have received more than we have for the timber fees—$10,499,074.69—or we have received a total for all purposes, without taking time now to enumerate them, of $22,096,561.21, as against something over $57,900,000 which we have appropriated.

Mr. SHAFROTH. In other words, then, the proportion of expenditures to receipts has been two and one-half to one; we have expended $2.50 for every dollar which we have taken in. It will be the same way with the leasing system, if you ever pass this bill. The great trouble about this bill is that it will not work, and you will not get any returns. The most glorious predictions were made as to what the forestry system would yield. If you will take the old reports which have been made and read the anticipations which were indulged in at that time, you will find that it was predicted that the Forestry Service was going to be a great asset to the Government of the United States.

Take the old leasing system, which was established in 1807, I think it was, and which was finally repealed only in 1846, and you will find that the amount of payments of royalties upon lead ores—which were the ores reserved—which were taken out in all the years of the operation of that leasing system was just one-fourth as much as were the expenditures required, or a loss of three-fourths to the Government.

Mr. President, experience ought to teach us something. If the Government is going to impose such a system upon the Western States, it ought at least to be able to demonstrate that one leasing system has been a success. We have not yet found any which has been a success. I desire to say that a few years ago, when the Alaskan leasing bill was under consideration by the Senate, I made the prediction that there would not be any leases taken out under the system which was then devised. We were given to understand that that was an emergency measure that had to be put through quickly in order to get coal to the suffering people of Alaska.

When that law went into operation there were glorious anticipations regarding what it would accomplish; it was thought that people would flock to Alaska and take leases of coal lands, and yet when I inquired of the department the other day whether there had been a single lease of any of those lands taken out I was informed that there had not been; that there had merely been some applications for leases. I will venture to say that the applicants will never consent to the onerous terms which, as I understand, have been imposed upon those desiring to secure leases of coal lands in Alaska. Those lands being reserved are tied up to-day, and have been for two or three years, without any development upon them at all, and without any taxes whatever accruing to the people of Alaska for the support of the Government which they have to maintain over those lands.

Mr. President, why is it that bureaus of this nature do not pay and will not pay? It is because every bureau tries to make itself great in jurisdiction and strong in numbers. They are always grasping for more power; they are always thinking honestly, of course, that if they are given additional money and more men they can make the enterprises under their control pay, and yet the history of the Government demonstrates that they never have succeeded in doing so. We are going to encounter that same difficulty when we establish these inspectors, whom it will be necessary to have in great numbers over these water-power plants. That is merely one branch of the general system.

Mr. SMOOT. Mr. President, before the Senator leaves that subject, I call his attention to the fact that when the forest reserves were created the people of the West were assured that whatever fees were charged for the grazing of sheep or cattle upon the reserves would be only nominal; but of all of the collections in the last six years from the forest reserves over $10,000,000 have been collected from grazing fees alone, and now, seeing that there is not enough revenue to pay the expenses of the bureau, they are going to nearly double the charges or fees this coming year. In other words, the people of the West, who should have had the use of the public lands free, the same as the other States of the Union had when there were public lands within their borders, as long as they were not entered by citizens of the United States, are to be taxed an ever-increasing amount in order to pay the expenses of and maintain the bureau here in Washington.

Mr. SHAFROTH. Mr. President, I will say to the Senator that from leading articles that I find in the Denver papers and from protests that are made by organizations in my State I am well aware that the tax referred to is to be doubled; that is all—just doubled. It does not amount to much, of course, but it is 100 per cent. That is the way bureaus work and that is how they conduct business.

I hold in my hand a clipping from the Denver Post of September 28, 1915, which shows the relative amount at that date of public lands and private lands in the various States of the Rocky Mountain region. There is presented an illustration, giving a bird's-eye view, as it were, of the situation. The dark shaded part [exhibiting] indicates the lands in Government ownership. The unshaded part indicates the lands in private ownership. The State has to support itself entirely by taxation upon the private lands because it has no right to raise any revenue from the Government lands. It can readily be seen from the view that is presented in this paper—and I presume it is accurate—what an enormous acreage the reserves of various kinds embrace. They include forest reserves, water-power-site reserves, coal-land reserves, phosphate-land reserves, potassium-land reserves, sodium-land reserves, oil-land reserves, and all of these reserves are shown by the dark shaded part of the picture. [Indicating.] All those lands the Federal Government holds in reserve. It will, therefore, be seen how little of our land is subject to taxation for the support of State, county, and school purposes.

Mr. President, that is the reason why there have been such protests from the West; that is the reason why nearly every Senator who has come from the Rocky Mountain region has protested against the Government reserving lands in his State. I should like to have that illustration inserted in the RECORD as a part of my remarks, but I do not know whether that can be done. I will ask the Senator from Utah [Mr. SMOOT], who is a member of the Committee on Printing, whether that can be done?

Mr. SMOOT. No, Mr. President, such an illustration can not be printed without the consent of the Joint Committee on Printing under the rule that has been adopted.

Mr. SHAFROTH. Very well, then; I will not ask that it be printed, but I will state the total of the figures given. The total land surface area embraced in these States is 755,912,520 acres, the public lands unreserved and unappropriated amount to 284,008,210 acres, the national forests cover 134,149,573 acres. The total acreage in public ownership is 471,032,257, and the total acreage in private ownership is 284,882,293.

Mr. President, at the time these figures in the Denver Post of September 28, 1915, were compiled—I do not know whether they apply now or not—the percentages of land not subject to taxation were as follows: In the State of Arizona, 93.42 per cent; in California, 44.82 per cent; in Colorado, 51.45 per cent; in Idaho, 68.14 per cent; in Montana, 49.8 per cent; in Nevada, 88.78 per cent; in New Mexico, 55.88 per cent; in Oregon, 50.64 per cent; in Utah, 81.43 per cent; in Washington, 34.98 per cent; and in Wyoming, 72.24 per cent. Those figures show the vast extent of the area in each one of the States named which is owned by the Federal Government and not subject to taxation. The remaining lands in each State in private ownership

have to pay the taxes raised for the government of the entire State, because each State has to maintain law and order and has to maintain schools and county governments upon every acre of the land in the State.

Mr. President, it will be seen from these figures what a terrible hardship is being imposed upon the people of the Western States and why there has been such a feeling upon the part of the western people generally, due to the injustice that has been perpetrated upon them in having set aside such large reserves under the absolute control of the Federal Government.

Mr. GALLINGER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from New Hampshire?

Mr. SHAFROTH. Yes, sir.

Mr. GALLINGER. Mr. President, I have been much interested on more than one occasion in hearing this matter presented to the Senate, but I have been puzzled to know why the western Senators can not persuade the President of the United States to restore some of these lands to the people of the States.

Mr. SHAFROTH. Why, Mr. President, there is a bureau, which has had free access to the press of the United States, which has sent out among the people the most flattering statements concerning its work, of the great things that it is doing, and of the great frauds it is preventing. All this has hypnotized to a great extent the people of the East and has made them honestly believe that every man in the West is trying to steal something from the Government. That is the reason why there is a great public sentiment now in favor of anything that the United States Government will undertake in regard to the public lands.

Mr. GALLINGER. Mr. President, my observation has not led me to the conclusion that the people of the East desire to oppress the people of the West.

Mr. SHAFROTH. No, sir; I do not think so, and I do not believe that the Senators of the East have any prejudice in the matter at all; but I do believe that, by reason of the free printing press, to which the bureaus have had access, they have, as it were, convinced the people of the East concerning these matters, and have made them believe that they are the great benefactors who are going to save this great heritage; and, in some instances, they have made the people believe that they are going to get something in the way of a revenue to the Government. In other instances, they have extolled their work as being of great benefit; and the very fact that these conservation congresses are held and that people travel clear across the country hundreds and thousands of miles for the purpose of attending them under the idea that they are saving the country in doing so, has intensified the impression that has gone forward. The public sentiment, however, is largely based on misinformation. If we would go into these questions and discuss them sufficiently before the people, or if they would read what we have to say, I believe there would be an enormous majority against any such proposition.

The people of the United States are honest. The eastern people do not want to do any injury to the West. But when a statement comes out like the one that I heard the Senator read here from Mr. Pinchot concerning the radium lands, in which he openly accused certain persons of being corrupt because of their voting against a bill of that kind, or for the bill—I do not know which it was, but, anyway, it was something contrary to his ideas of conservation—it is time to say something.

Mr. GALLINGER. Mr. President, if the Senator will permit me, I will say to him that I am quite familiar with the propaganda that has been going on in this direction, and I have never had the slightest sympathy with it. I believe a great wrong has been done to States such as Colorado and Utah and other States that the Senator has enumerated; but it always has been a puzzle to me to know why the Senators from Colorado could not persuade a President of their own party to come to their relief and restore at least a portion of these lands to the citizens of those States. A great wrong has been done, no doubt, and it seems to me a remedy can be found if proper effort is made. The trouble has been that the propaganda has been on the other side, and through the instrumentality of certain "uplifters" in this country they have accomplished what the Senator deplores, and which I deplore quite as much as he does.

Mr. FALL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from New Mexico?

Mr. SHAFROTH. I yield to the Senator.

Mr. FALL. Along the line of what has just been suggested by the Senator from New Hampshire, I want to make a brief statement, not in justice to him, because the people of the West have long done him justice. We know that the people of the West owe as much to the Senator who has just spoken as to any other one man, possibly, in the United States, in achieving something of the end for which we have been working. We have always had his help. But, Mr. President, the influence that has caused this situation, the same influence that is being felt throughout this entire country to-day—not only in the West, where it manifests itself in the attempted control of the remaining public resources, but throughout the East and the South—is the tendency to bureaucratic government in this country. The bureaus in Washington know that their occupation is gone if the old principle, established in 1843 and followed since that time, is allowed to continue. The great West has built up a most magnificent empire under the system established and maintained here since 1846. Had that system been allowed to continue, the occupation of various gentlemen in the bureaus here in Washington would have been gone. That is the trouble to-day. They are hanging on to the administration of the public lands to-day, and I can show you from the figures in the reports of the department that it is costing the taxpayers of the United States of America a cent an acre more than the entire receipts to administer the public lands of the United States to-day. Instead of being a great heritage, administered under the laws and under the system by the bureaus as they are administering them to-day, it is costing money to the people of New Hampshire and the other States of the East and the South and the nonpublic land States, who must pay taxes for the support of this bureau here to administer these public lands. They know that if they are finally administered for the development of the States, as was advocated by Webster, if they are finally so administered as to add to the population of those States and build up the States, then the occupation of the bureau is gone.

I say to you frankly that you do not need the Interior Department of the United States to-day. It is costing the taxpayers money instead of being a self-supporting institution. With all the hundreds of millions, with all the billions of mineral wealth undeveloped in the West, the administration of the Department of the Interior is costing the taxpayers money to-day, instead of producing revenue.

This is the trouble, sir. It is not only the propaganda of a few men here—idealists, you may say—but it is the bureaucratic system that is forcing itself on this democracy of ours, and sucking the lifeblood of the democracy itself.

Mr. SHAFROTH. Mr. President, there has crystallized in the western country, and particularly in the State of Colorado——

Mr. WALSH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Montana?

Mr. SHAFROTH. I do.

Mr. WALSH. In view of the very pertinent question addressed to the Senator from Montana by the Senator from New Hampshire, I feel as if a word or two here would not be inappropriate.

I think the trouble about which the Senator from New Hampshire inquires is very largely a state of mind. Quite a good many people out in the West have worked themselves up into quite a state of feeling about it.

Mr. FALL. Merely a question of psychology?

Mr. WALSH. Psychology—that is a good word.

The Senator from New Hampshire will recognize, in the first place, that we have large numbers of Indians out there. Away back in the times when they were savages it was deemed good military policy and necessary policy to congregate them upon reservations. The Senator from New Mexico and the Senator from Arizona complain, and complain quite bitterly, about the enormous areas of their State that are included within Indian reservations. The Navajo Indian Reservation, upon which there are some 30,000 Indians, occupies a large area within that State. Within my own State we have the Crow Reservation, the Blackfeet Reservation, the Fort Peck Reservation, the Fort Belknap Reservation, and the Flathead Reservation. Now, we can not turn those Indians out in the cold. We have got to set aside a certain portion of the public lands to take care of them. My own idea is that many of these reservations should be reduced. I am asking for a reduction in the area of the Crow Reservation, but we have got to take care of them, and some lands must be set aside for them.

Second, that whole country out there in the mountains is covered with immense forests. The most destructive fires range through them from time to time and sweep away miles and miles of this valuable property belonging to the Government of the United States. The question presents itself to the Congress of the United States whether we will leave this property, thus enormously valuable, to the prey of flames, or whether we will take some steps to protect it from fire. Accordingly, these areas are set aside. Then, it is conceived that we need to protect

the watersheds of our streams. Now, I do not mean to say that there are not often included within these forest reserves large areas that ought not to be included within them. I do not intend to say that at all.

Mr. FALL. Mr. President, will the Senator answer a question right at that point? Is it not a fact within the Senator's own knowledge that it is not the forest reserves themselves that are objected to, but it is the very fact of which the Senator is now speaking, that there are enormous areas included in those forest reserves which we know properly do not belong in forest reserves?

Mr. WALSH. Why, yes; but when——

Mr. FALL. That is the objection of the western people, is it not?

Mr. WALSH. Why, to be sure that is the objection; but the point I am making is, of what significance is it to tell the Senator from New Hampshire that 49 per cent of the public lands of the State of Montana are within reservations of one kind or another unless you attack specific reservations as being too large for the particular case?

Then the Senator from New Hampshire will also recognize that that was the country of Indian wars out there, and it became necessary to establish military reservations in order that the settlers coming into that country could be protected; and thus considerable areas were set aside for those military reservations.

Then, in the State of my friend here, the Senator from Oregon [Mr. CHAMBERLAIN], as the Senator well knows, as well as in my own State, there are areas that are thus covered with timber, the timber itself being of enormous value, tempting all kinds of fraudulent entries of those lands. If they were open to ordinary homestead entry, men would go to get them merely for the purpose of getting title to the lands in order to take off the timber, and then immediately abandon the lands, or sell them for any purpose whatever; and those areas were included within the forest reserves.

I would not like to have the Senator from New Hampshire believe that our people are opposed to those policies in any sense whatever. They do complain about this particular area and that particular area as being of such a character that it ought not to be included within a forest reserve, and this particular Indian reservation as being larger than it ought to be; but I did not like to have the Senator from New Hampshire go away with the idea that the people of the West are demanding that all of this 49 per cent in the State of Montana, for instance, be immediately opened up to appropriation by anybody who desires to take it.

Mr. FALL. Mr. President, the Senator made one remark there that I want to correct to this extent: He stated that the Senators from Arizona and New Mexico—I suppose he had reference to myself when he said the Senator from New Mexico—expressed themselves bitterly about the enormous area of Indian reserves, and he referred in that connection to the Navajo Reserve. I have not suggested, in the Senate or out, the elimination of one acre from the Navajo Reserve, although it is of enormous extent. Within its exterior limits are 1,100 acres for each living Navajo, and I have never suggested the elimination of it. I have objected to adding to it the small remaining property in New Mexico that might become taxable—that is, to excluding the white man from the public lands, making reserves where the white man will have no opportunity to make a claim, and then locating the Navajos, contrary to treaty provisions, upon the remaining public lands.

I have not suggested the cutting off or the elimination of one acre of a forest reserve in New Mexico which contained timber of any value for any purpose whatsoever. I have objected to the inclusion within the exterior limits of a forest reserve of hundreds of thousands or millions of acres of land containing not a stick of timber, not a brush of it, simply for the reason that some of those who were administering the forest reserves, knowing that they are not getting an adequate revenue from the timber, knowing that they are not administering it in a businesslike way and making it self-supporting, knowing that they are compelled to come before the Congress and secure deficiency appropriations every year of $2,000,000, as they are asking now, have included within these exterior limits hundreds of thousands and millions of acres without a stick of timber on them at all, which are valuable only for grazing, and are then compelling the local people of those States to contribute to a supposed forest reserve comprising lands which the Senator himself, if he has any knowledge of conditions in my State and the State of Arizona, knows are not forested. This is what we object to. It is the administration.

Mr. GALLINGER. Mr. President, will the Senator from Colorado permit me a moment further?

Mr. SHAFROTH. I yield to the Senator from New Hampshire.

Mr. GALLINGER. I feel under obligations to the Senator from Montana for the information he gave. I do not claim, as the Senator knows—I never have claimed—to have any special knowledge concerning conditions in the Western States. I have a general knowledge, but the most that I have learned I have absorbed from the discussions in this body during my membership by western Senators.

Now, I can understand that the 40-odd per cent, or whatever it is, of reservations in the State of Montana are to a considerable extent taken up by Indian reservations and military reservations and that kind of thing; but I am still very much puzzled to know how it happens that in the State of Utah, where they have no Indian reservations—I think I am correct in saying that——

Mr. SMOOT. Just a few acres. They do not amount to anything.

Mr. GALLINGER. A few acres—that the reservations amount to 81.4 per cent, if I understood the Senator from Colorado correctly.

Mr. SMOOT. That is right.

Mr. GALLINGER. That seems to me almost incomprehensible.

Mr. WALSH. Eighty-one and four-tenths per cent of the remaining public lands.

Mr. GALLINGER. Of the remaining public lands.

Mr. SHAFROTH. Including reservations?

Mr. GALLINGER. Yes; including reservations. I think the Senator from Montana will not be surprised when I say that these things have rather startled me, and I have been at a great loss to understand why they are permitted to continue if they are a real grievance, as they seem to me to be a real grievance. That is all.

Mr. SMOOT. Mr. President, may I interrupt the Senator for just a moment?

Mr. SHAFROTH. I yield to the Senator from Utah.

Mr. SMOOT. It is true that 81.4 per cent of the lands within the boundaries of the State of Utah are classed as public lands; and included in that, of course, are all of the reservations. As far as the Indian reservations of the State of Utah are concerned, there are only the Utes there, and there are a very few acres held by what few Utes there are. The military reservations that we have in our State include perhaps 1,000 acres. The trouble is, Mr. President, that a whole area, sometimes 20 or 30 or 40 miles, is withdrawn in a forest reservation; and the Senator from Montana knows, as every other Senator knows, that included in every forest reserve in every Western State there are not simply 10,000 nor 100,000 but there are millions of acres of agricultural lands. As the Senator from New Mexico said, there is not a stick of timber on those lands. It is an impossibility ever to plant and have grown on them a stick of timber. There is not even brush upon them. They are nothing, and never have been anything, but grazing lands.

Mr. FALL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from New Mexico?

Mr. SHAFROTH. I yield to the Senator.

Mr. FALL. Just in line with what the Senator is saying, in addition there is no attempt made by the Forestry Department to put a stick of timber upon them or to grow a stick of timber upon them.

Mr. SMOOT. And the Forestry Department knows that it would be absolutely useless to undertake it, because it would not grow. There is no timber known anywhere in all the world that would grow upon those lands.

Now, just another word. No western Senator is objecting to the withdrawal of the timberlands or the lands that form the watersheds of the streams in the States. If the withdrawals were confined to that, and if the withdrawals were confined to timberlands, you would never find a Senator on this floor objecting to it. What we are objecting to, Mr. President, is the administration of the law and the power that has been wielded and used and exercised by the bureau in withdrawing from the State lands that ought to be homesteaded. Oh, I know the Senator will say that under the law any agricultural lands within a forest reserve can be homesteaded; but any citizen who has undertaken to homestead lands within a forest reserve, outside of a very limited number only, wishes he had never undertaken it and had never spent his time and his energy in undertaking it. I am not going to take the time of the Senator from Colorado to go into details as to the reasons, but perhaps before this discussion is over I will be able to tell the Senate why.

Mr. WALSH. If I may interrupt the Senator from Colorado for just a moment——

Mr. SHAFROTH. I yield to the Senator.

Mr. WALSH. I should like to say to the Senator from New Hampshire that, in my humble judgment, all this is quite irrelevant to the consideration of the bill before us. It is important to know, however, that as far as the bill before us deals with lands reserved because valuable as power sites they are an infinitesimal portion of the entire area.

Mr. SHAFROTH. Mr. President, I can not join with the Senator from Montana in the eulogy which he seems to have passed upon the Forest Service. I will tell you what the forest reserves in my State are. Forty per cent of them are above timber line. You know that in a mountainous country there is a line above which no vegetation grows, just barren rocks, and 40 per cent of the lands that have been set aside as forest reserves are in that area above the timber line. Yet in that area above the timber line there are extensive areas of rich mineral lands. There is an area of 30 per cent that lies between the timber line and what they call good timberland, because this area includes scrub timber, and 30 per cent of the reserve is timber that never could be of any commercial use, except probably a few trees here and there. The only good available timberland for timber purposes is in the 30 per cent below. Thus out of a total 100 per cent in my State 70 per cent of it has no more relation to timber than a barren piece of land.

Mr. MARTINE of New Jersey. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from New Jersey?

Mr. SHAFROTH. I yield.

Mr. MARTINE of New Jersey. Will the Senator permit me a word?

Mr. SHAFROTH. I yield.

Mr. MARTINE of New Jersey. In the suggestion made by the Senator from New Hampshire, wondering why the people view with hesitancy many of these measures, I think this thought that has not been brought out prompts a feeling of hesitancy with reference to all the bills appertaining to the public domain. For years we here in the East have seen our franchises gobbled up by a handful of men for their own selfish purposes. We have seen our riparian rights frittered away until State after State would hardly have enough for a pier for a city. I know in my own State our riparian rights have been frittered away to great corporations until we practically have nothing left. We have seen in our great western territory the alternate sections given to Oakes Ames and a few of those goody-goodies in years past in the building of the Union Pacific, the Southern Pacific, and the Northern Pacific until the people are holding up their hands. They have been educated by that process rather than by the process indicated by the writer in the magazine. I feel that they have reason to hesitate and reason to fear, and that there are millions and millions of acres as described by the Senator from Utah. Of course, it seems limitless, yet if our world is to stand and this Government, and God knows I trust it will go on and on until the end of time, your limitless acres will amount to naught after all, if they are to be gobbled up in the hands of a few. So I think with many others in the same line of thought, and I say we can not be too jealous and too guarded to carefully safeguard these acres for the posterity that may come after us.

Mr. SHAFROTH. I want to answer the Senator's suggestion, because it needs an answer. A great many people are of the same mind as he is with respect to these matters. I regard that the greatest outrage that ever was perpetrated in this country was the voting of 43 land grants to railroads, giving the alternate sections, which aggregated 155,000,000 acres, an area equal to Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, Pennsylvania, New Jersey, Delaware, and Virginia.

Mr. MARTINE of New Jersey. That is true.

Mr. SHAFROTH. But I want to emphasize that those grants were voted by the people down here in Washington, by the Senators and Representatives who thought they knew what was best for that country.

Mr. MARTINE of New Jersey. Let me say, Mr. President, that I am old enough to remember all that history of Oakes Ames, of the process of addition, division, and silence. I remember all that. While I was but a boy I was chuck full of politics, the only thing I had to study. I was brimful of it, and I saw the iniquity of it, and I have grown intensified with it.

In answer to the Senator's proposition asking that it be turned over to the States, I was a radical States-right Democrat, but in after years I changed my view. After years with the experience and the wonderful development in our country we are, I say, not a State-rights people any more. We have merged together into a homogeneous mass. We are a great Nation. So I say I can not acquiesce in the thought of turning this public land over to Colorado or to Oregon or to some other State, but I do feel that the great United States should exercise a governing care over the whole of it, that it may bless the posterity that may come after us. In the light of that which I have seen I can see the evil that will absolutely crowd out the opportunity of a man to hold a foothold. Only yesterday the distinguished Senator from Texas [Mr. SHEPPARD] told me that one woman, I think a Mrs. King, in Texas owns a million acres, and it is 15 miles from her gateway to the porch of her home.

Mr. SHEPPARD. One million six hundred thousand acres.

Mr. MARTINE of New Jersey. One million six hundred thousand acres. In Heaven's name let us do something to make this condition impossible. Let us do something to make impossible the horrid accumulation of money. God knows that is bad enough; but what should be said about the great accumulation of land—the accumulation of such big quantities of land? What is land? Even though a man may be an Apollo in physique, without a foothold of land he is the most miserable of God's creatures.

Mr. SHAFROTH. Mr. President, the very case the Senator cited was that of these land grants which included 155,000,000 acres. Such was the guardianship by which the Government administered this trust. Yet the Senator would put into the Government of the United States, notwithstanding the record made in those instances, these very reserved lands as to the administration of which the State of Colorado has recorded no such disastrous experience. We have not found it profitable to own great areas of land out there. You will find it the fact that when you undertake to run a large farm with hired help it can not be made a success; and the fact that in this country we have no law of primogeniture, which gives all the property to the first born, a division of the land follows and it passes into many hands.

Mr. MARTINE of New Jersey. I will say I am very glad to know that Colorado as a State has not this evil, as the Senator says it has not; but I say that which has been can be, and in the light of all human experience will be again. So I say that I feel it becomes my part, I feel it becomes our part, not as partisans but as bound together in American citizenship, to safeguard this splendid domain and make impossible a repetition of the evil.

Mr. SHAFROTH. Surely the Senator would not want to do a wrong to the States.

Mr. MARTINE of New Jersey. My first love is to my Nation and to the people thereof, second to my State, and lastly to my party.

Mr. SHAFROTH. Mr. President, I want to call the Senator's attention to the fact that the payment of taxes upon a piece of land for 30 years, together with reasonable interest upon each yearly payment, amounts, at the end of 30 years, to the value of the property.

Mr. MARTINE of New Jersey. I realize that.

Mr. SHAFROTH. Let me finish this, please. When you exempt lands from taxation for 30 years it makes the owner of the private property in the State pay an amount equivalent to the exempted land every 30 years. Most of these lands have been exempt in Colorado now for 60 years, and if this policy of leasing goes on it will be exempt forever, and it will continue to compel the people who hold land in private ownership to pay taxes for the Government over those United States lands for school purposes, for county purposes, and for State purposes equal to the value of the land every 30 years. That is not right, and it was never contemplated by the Constitution of the United States.

The case of Pollard, Lessee, against Hagan, in Third Howard, expressly says that the Government acquired these lands as a trustee for temporary purposes, to dispose of them, and consequently when it holds them so that the State can get no revenue out of them it is doing an immense injury to the State. You do not realize it in each yearly payment, but in the aggregate for years you find there is excessive taxation upon the lands in private ownership and the people by reason of the reservation.

When I was governor of the State of Colorado I asked the treasurer, "Why do you not have more revenue? Here we pay to the Federal Government in taxes over $5,000,000 each year, while we do not raise for State government purposes more than from $1,300,000 to $1,400,000. In other words, we pay three times as much to the Federal Government as we raise by taxation for State purposes." When I realized the fact that at that time about 60 per cent of the lands could not be taxed because they were in public ownership, I could readily see why it was that we had to skirmish around in every way possible in order to get funds to support the State government.

Consider these power plants and the injury that is going to follow from keeping title perpetually in the Federal Govern-

ment. In the State of Colorado there is one that was erected at Glenwood Springs, at a cost, I think, of $7,000,000. That is a great part of the assessable property in the county of Garfield, in which it is located. If there are labor troubles or riots, the State must bear the expense of maintaining order. If there is any disturbance at all, the county officers must attend to it. If there is any infraction of law, they have to go to court, and the court is supported by the people. If that plant is going to be held perpetually under a lease by the Federal Government, you can not levy one dollar of taxes upon it for the purpose of raising revenue for county purposes. If it is in a school district, it does not contribute one dollar to the maintenance of the school. Is not that a wrong to the State? Is it not a wrong to the people? It never was contemplated by the Federal Constitution. I can not understand why people can not see those wrongs that are perpetrated. It is all right for the Government to be great, but it should first be just. It should have been just to the people before it gave away 155,000,000 acres of land to the railroads.

Mr. President, I do not believe that all the people of the United States understand conditions in the West. I have always opposed any leasing system upon the part of the Government, because, among other things, it would mean that royalty charges would be added to the rates the consumer would have to pay. We want as low rates as possible. We are the people affected. We are the people who have to pay. We are the people who must suffer in a monopoly of these resources. Yet here is a bill which, in my judgment, will force a higher rate upon us, because every charge that you make upon those water-power plants is going to be reflected directly in the charge that is made to the ultimate consumer, not merely the amount that may be exacted as royalty, but two, three, or four times the amount.

Mr. President, the permit for the power plant that I referred to near Glenwood Springs was revoked, its franchise was revoked, two days before one of the Secretaries of the Interior went out of office, and without assigning any reason whatever for such revocation. The company was furnishing electricity to the city of Denver for lighting purposes and to the street car company for motive power at that very time, and yet without cause, without assignment of a single reason, its permit was absolutely revoked. Such was the penalty it suffered because it would not enter into a leasing arrangement by which it would pay so much to the Federal Treasury.

Mr. President, you can readily see that the company did not want to enter into such an arrangement. Under the terms proposed it was to pay a tax graduated until 10 years, and thereafter it was to pay $1 per horsepower. The plant was generating 20,000 horsepower, and it meant a tax upon the company of $20,000 a year. Do you think the company would get it back from the consumers? It would get 200 or 300 per cent of it back from the consumers. Mr. President, it seems to me that when we reason about this matter we ought to come to but one conclusion.

The Senator from Montana, I must say, thinks more of this Forestry Service than I do. There are lands, the headwaters of streams, which might very properly be reserved, and there is even merchantable timber that could be included in the reserves, but I want to say that the best indication of what the people of a State think is found in the resolutions that are passed in the State legisiature, and in resolutions that are adopted as party platforms, not of one political party but of both political parties. I have here on my desk any number of such resolutions that have been adopted, not by a majority of one or two but unanimously, against this very water-power bill. Here is a memorial of the General Assembly of the State of Colorado. It says:

Your memorialist, the General Assembly of the State of Colorado, respectfully represents that under the present Federal policy of control of the public domain the following conditions obtain:

Then it says:

1. The people of Colorado are in favor of conservation in the meaning of prevention of waste and monopoly, but are unalterably opposed to it in the definition of preserving our lands and resources in their present state for future generations.

We agree that these natural resources belong to all the people, but this ownership is not now different from what it always has been—namely, subject to the right of the citizen to acquire the same under liberal laws to the extent necessary to satisfactory settlement and the building of permanent homes.

2. It has been charged that the Western States have failed in the past to do their duty in the conservation of these resources, but those who make these charges utterly fail to consider that any unlawful acquisition or waste was committed under Federal laws and on public lands; and that the States, having no control, were powerless to prevent it. They also fail to recognize the fact that the amount of lands unlawfully acquired was a mere trifle compared with that lawfully acquired by bona fide settlers and others.

3. The older States have had, and still have, the benefits arising from private acquisitions of all the public lands within their boundaries, receiving revenue therefrom through taxation and otherwise, and it is therefore a great injustice that they should now seek to impose upon the Western States obstructions and burdens with which they themselves did not have to contend.

4. We deny that it is right or advisable for the Federal Government to retain the title to and lease the public lands for any purpose, as the history of the country shows that in 1807 Congress authorized the War Department to lease the lead mines in the territory afterwards embraced in the States of Missouri, Indiana, Illinois, Wisconsin, and Iowa, reserving to the United States a royalty of one-sixth of the product.

5. This system was vigorously opposed by the residents of the region involved from the very beginning, and after a few years' trial the Missouri Legislature and the governor of Illinois protested against it. Presidents Polk and Fillmore urged its abandonment. The Secretary of War condemned it, saying that the benefit to the Government bore "no just proportion to the injury done to the country, first, by retarding the settlement of the country and, second, by the demoralizing influence of the system."

Year after year congressional committees on public lands reported against it. One of these reports concludes as follows:

"When the United States accepted the cession of the northwestern territory, the acceptance was on the express condition and under a pledge to form it into distinct republican States—

This is the clause in every treaty under which any land has ever been acquired, and these lands out West were mostly acquired either under the Louisiana purchase or under the treaty of Guadalupe Hidalgo—

and to admit them as members of the Federal Union, having the same rights of freedom, sovereignty, and independence as the other States. This pledge your committee believes would not be redeemed by merely dividing the surface into States and giving them names, but it includes a pledge to sell the lands, so that they may be settled and thus form States. No other mode of disposing of them can be regarded as a compliance with that pledge."

For nearly 40 years this controversy was waged with increasing intensity, until 1846, when an act was passed directing the sale of these lands.

They were mineral lands and were held in the States of Indiana, Illinois, Missouri, and several others.

This condemned and discarded policy is now sought to be resurrected—

Speaking of this leasing bill—

and in pursuance thereof, there have been withdrawn forest, coal, oil, phosphate, and power-site lands, aggregating in Colorado over 21,000,000 acres, equal to 33 per cent of the total area of the State; together with similar amounts in other Western States, so that in all, the area thus withdrawn is greater than the combined area of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Delaware, Maryland, Pennsylvania, both Virginias, Ohio, Kentucky, Indiana, and Illinois—

That is the tremendous land area that has been withdrawn in the great Rocky Mountain region—

and thus nearly 300,000,000 acres are now, and have been for several years, practically out of reach of individual enterprise or taxation for the support of the State government. This obstructive policy is a departure from the policy of the past 50 years, and in violation of the rights of these States as provided in their enabling acts admitting them into the Union, their constitutions, and the fundamental principles on which the union of the States is predicated.

This is a resolution which was passed by the General Assembly of the State of Colorado in 1913, during a Democratic administration, condemning this leasing system. It continues:

The idea that the leasing of the forests and other public lands for grazing purposes to stockmen, reserving to the settler and miner a right to enter them, will give the latter adequate protection is a fallacy, for the reason that it is obvious that such entries will necessarily interfere with the proper handling of stock. Where a stockman has 1,000 acres or more under such a lease, and a homesteader should undertake to enter 160 acres or 320 acres of the best of it, it is a certainty that the stockman would in every way not positively unlawful discourage the settler, unless we credit the stockman with less than ordinary sense of self-protection. And it is equally certain that he would succeed in preventing the entry, even if he had to buy the settler off.

The inevitable result of such leases will be to substantially end homesteading and mining on the public lands.

Here is a resolution directed against this very bill, Mr. President. It was not passed by a mere majority, but it was passed by the vote of every single member of the general assembly, whether Democrat or Republican. It states further:

6. We assert that the States are vested with the right to control the waters within their respective borders (subject only to the right of the Federal Government to protect navigation on those streams that are navigable), to dispose of them to those who will use them for beneficial purposes, and that all returns therefrom, direct or indirect, justly belong to the States and not to the Federal Government.

7. Experience has shown that the methods of the Reclamation Service in the irrigation of arid lands have been less expeditious and more arbitrary and unjust in the disregard of the equitable rights of its own water users and other competitive projects than those of private enterprises.

The resolution goes off there on another proposition, but I wish to call attention to a few other extracts which are more pertinent than the reclamation proposition, although certain acts of the Reclamation Service are also condemned by the resolution. It continues:

11. Nearly all of our metalliferous lands have been included in forest reserves, since which time not a single important mining camp has been opened. The unwarranted interference by the Forest Service is largely

responsible for the falling off of approximately $20,000,000 in the annual metal output. The man who is willing to put his labor and money into the development of a mining claim is the person best fitted to classify the land and should be permitted to acquire it.

That does not look like much of an approval upon the part of the people of Colorado or of the Legislature of the State of Colorado of the Forest Service in that respect. The resolution continues:

We venture the assurance that if 40 years ago the forest reserves had been established neither Leadville nor Cripple Creek nor a score of other mining camps would have been discovered or developed.

Under the restrictions which have been imposed the department requires that a locator when he files upon a mining claim must first submit to an investigation by an inspector from the Forest Service to determine whether the proposed claim is going to injure the forest—a little 10-acre spot of land taken out of a million acres—then the report has to be submitted for approval. The miner in the meantime does not know whether he will be permitted to locate upon the claim. After he has expended $500 in work upon the ground, he applies for a patent, and offers to pay the Federal Government the amount per acre which is required by statute. Then the department sends out another man, a supposed expert, who inspects that mine. If he concludes that it does not look as though it is going to be a paying mine, then the application is turned down, and the miner can not get his patent.

Mr. President, no man is so jealous of his ability to determine whether a mine will pay as is the prospector, and I submit he is the best man to determine that question for himself. It is an insult to him when he has spent his $500 to say to him that because some man who may understand geology but not mining has concluded that the mine can not be a paying mine; therefore, although he has spent his $500 upon it, he can not get a patent to the claim.

As the Senator from Utah [Mr. SMOOT] suggests to me, nearly all of the great mines to-day are the mines that would have been turned down if we had been compelled to follow expert advice. Mr. President, as for the great Cripple Creek mines that proved so successful, the geologists of the country said that in a formation of that kind it was impossible to find gold; and yet gold has been taken out of Cripple Creek to the amount of $300,000,000. Therefore, when it is required that a so-called expert shall go out and tell a miner, who has put his muscle, his brain, and his vim into the development of a mine, that he has not a mine that will pay, and that, therefore, he must surrender his claim when he is paying ten times as much for the ground as it is worth for any other purpose, it is an insult to the miner. It is just such restrictions as these which are imposed by bureaucracy, and which result from having bureaus hundreds and thousands of miles away from the estate administered. That is what this leasing system will do, and that is one of the reasons why I am so opposed to it.

Mr. President, I desire to advert to the following clause in this resolution:

Although our lands are of great variety they are open to entry for but few purposes and in unsuited quantities. For instance, a piece of land can not be taken merely for a home.

12. In Territorial days Congress gave us the water of our natural streams and confirmed that right in the acceptance of our State constitution. Certain Federal bureaus are trying to take away that right by denying rights of way over the public domain. The contention of Federal authority, as in the case of the Engle Dam, for the first storage of water at the lower end of the stream instead of near the source of supply, would prevent the repeated use of water for power and irrigation upstream, would uselessly deprive large areas of development, and would therefore be contrary to the principle of the "best use" as demonstrated by the experience of more than half a century.

The diversion and use of water when streams are high equalize the flow, furnish a better supply of water during the dry season and by lessening floods save lives and property on the rivers below.

Mr. President, this memorial presented to Congress contains not only a condemnation of this water-power bill, but of a great many other objectionable features connected with the administration of certain laws. These resolutions were not passed haphazard by the legislature. For years and years in the State of Colorado protests have been made against leasing bills, and it seems to me some heed, some attention, ought to be paid by the Senate of the United States to a solemn protest made by the legislative body of the State of Colorado. The resolution which I have just read was passed in 1913, when the legislature was Democratic. I now read a resolution which was passed in 1915, when the legislature was Republican:

Senate concurrent resolution No. 6.

Whereas the Congress of the United States at the last session seriously considered bills providing for acts to lease water-power sites, coal, oil, and phosphate lands, and did succeed in passing a measure leasing the coal lands of Alaska; and

Whereas a determined effort is being made by certain interests to induce the United States Government to adopt the leasing policy in relation to public lands and natural resources upon such lands; and

Whereas this policy, if applied to Colorado, would place over half the area of this State under a Federal landlord system that would forever prevent this State from levying taxes upon any of these lands or resources; and

Whereas under our State constitution and under the Constitution of the United States, Colorado was admitted into the Union with all the rights and privileges of the original States, which included the right to levy taxes upon all of the property within our borders, except where title is held by the Federal Government, and the establishment of the leasing system upon these Federal lands would result in the development of these lands for the benefit of the Federal Government rather than for the benefit of the State, which is a privilege all the original States had and which has enabled them to develop their territory for the benefit of the citizens and to levy taxes against all of the territory for the support of the State: Therefore, be it

Resolved by the Senate of the Twentieth General Assembly of the State of Colorado (the House concurring), That we are unalterably opposed to the adoption of the leasing system to apply to any of the lands or resources now held in the name of the United States; and we protest that the adoption of such a system in Colorado would not only interfere with permanent development of this State but would be contrary to the rights of Colorado guaranteed to us both by the constitution of the State and of the United States; and be it further

Resolved, That a copy of these resolutions be sent to each of our Members in Congress and to the President of the United States.

Approved April 12, 1915.

As I have said, this resolution was passed by a Republican legislature, and it was passed not by a bare majority or upon a contest, but was unanimously agreed to. If any Senator thinks the people of the Western States are in favor of a leasing system, all he has to do to disabuse his mind is to read the resolutions upon that question, which I have here upon my desk, all of which I can not read to the Senate to-night. Condemnation after condemnation is uttered against the leasing system, and you can hardly find a dissenting voice in some of the States affected.

Mr. President, is it possible that these things should not be considered by Senators and Representatives? Are you going to slap the States of the West in the face in such manner as that?

There have been governors' conferences upon the subject, one having been held in the State of Colorado in 1913, which unanimously condemned the leasing system. Again, another was held the next year, in 1914, in Salt Lake City, Utah, by the governors of Western States, when the leasing system was again unanimously condemned. Are you not going to take that as an index as to what the Western States believe? Why, Mr. President, if we desire to satisfy the people of that section of the country with relation to these matters we can not but vote down the proposal to make the pending leasing bill a law of the United States.

In regard to this water-power proposition, a meeting was held in Portland, Oreg., called by the governor of one of the States, I think by the governor of the State of Washington, and I have a copy of the resolution passed by that meeting. It condemns this very water-power bill by a three-fourths vote. There was a contest there. The able Senator from Montana [Mr. WALSH] was there, with all of his persuasive powers of oratory to convince the special delegates assembled at that convention, but he did not convince them, for when the vote was cast—and it was the only time, so far as I know, when there has been a contest—three-fourths of the people there represented were against these propositions. They condemned in strong language the leasing system proposed by this very water-power bill.

Here is another resolution of the State of Colorado. It is senate joint memorial No. 6, introduced by Senator Williams, and reads as follows:

Whereas it is provided by article 16, section 5, of the constitution of the State of Colorado, that—

"The water of every natural stream not heretofore appropriated within the State of Colorado is hereby declared to be the property of the public, and the same is dedicated to the use of the people of the State, subject to appropriation as hereinafter provided"—

That is the constitutional provision of Colorado, which was adopted after the enabling act had been passed by Congress. The State entered the Union with that provision in its constitution, and for 30 years thereafter there was no attempt to deviate from that declaration. The memorial continues:

and by section 7 thereof that—

"All persons and corporations shall have the right of way across public, private, and corporate lands for the construction of ditches, canals, and flumes, for the purpose of conveying water for domestic purposes, for the irrigation of agricultural lands, and for mining and manufacturing purposes, and for drainage, upon payment of just compensation"; and

Whereas the above constitutional provisions were accepted by the Federal Government when this State was admitted into the Union, and have been followed for over 35 years by the citizens of this State with full congressional approval, and have been affirmed by the repeated declarations of the supreme court of the State; and

Whereas it is destructive of the right so established for the Federal Government to condition grants of rights of way through such domain, necessary for making beneficial use of such water, on requirements other than the constitutional requirements above set forth: Now therefore be it

Resolved, That we believe that any attempt by the Federal Government to exact in exchange for such rights any right of regulation or any compensation in excess of the fair market value of the rights

granted is in violation of the constitutional right of the State and in impairment of the State's power to develop and control its own internal resources; and be it further

Resolved, That the danger of monopolistic control of water powers, asserted as a reason for the exercise by the Federal Government of the above exactions in exchange for such rights of way, does not exist, since the State, by the exercise of its fundamental rights to regulate rates and service can prevent monopolistic control in full protection of its citizens; and be it further

Resolved, That it is not only the right and duty but also the exclusive privilege of this State to control the development of its internal resources; and be it further

Resolved, That the senate and house of this twentieth general assembly do hereby accept the suggestion contained in senate joint memorial No. 6 of the Twenty-eighth Legislative Assembly of the State of Oregon, adopted February 20, 1915, for a water-power conference, and that the governor be requested to designate five members of this general assembly to serve as a committee, with the governor as chairman, to represent the State of Colorado in the conference to be called pursuant to said joint resolution of the Oregon Assembly; and be it further

Resolved, That copies of this resolution be transmitted to the Colorado Senators and Representatives in Congress, and to the Speaker of the National House of Representatives, to the President of the United States Senate, to the Secretary of the Interior, and to the governor of each State invited to such water-power conference, for transmission to the legislature of his State.

Approved April 12, 1915.

Mr. President, there is another joint resolution giving in concrete form various objections to this leasing bill. Are you going to pay no attention to it? Are you going to say that the people out there are trying to steal something; that they are trying to get something for nothing? Why, Mr. President, it is our own people who are going to be affected by this water-power bill, it is our own people who want these low rates, and they can get them under the State management rather than through the double management of the State and of the Federal Government.

Mr. President, in view of those conditions, it seems to me that so long as these States have repeatedly and continually asserted their opposition to this doctrine, some heed and some attention ought to be given to their voice on the subject.

I presume the Senate intends to adjourn at 10 o'clock, does it?

The PRESIDING OFFICER. The Chair is not advised as to the hour of adjournment.

Mr. SHAFROTH. I will conclude in just a few moments, and let the adjournment take place if it is desired.

Mr. President, I have various other resolutions. Here are some resolutions from the State of Wyoming condemning the same thing. Here is a memorial to Congress, which has been presented here and read from the desk, resolving against these very bills. Here is another set of resolutions subsequently adopted by the Legislature of the State of Wyoming. I think, also, the Utah Legislature has memorialized Congress on this subject time and again, has it not?

Mr. SMOOT. I think the last one has already passed resolutions which I am expecting here every day.

Mr. SHAFROTH. The Senator says that even the last legislature has also protested against this very water-leasing bill.

Mr. President, I hold in my hand copies of platforms adopted by the Republican and Democratic Parties in their State conventions in Colorado, and they condemn these bills. It is not a partisan question at all out there. It is a question upon which all political parties unite, and they condemn these leasing bills. I shall not read them, because it would take some time, unless somebody wants them read. I am willing to read them if that is the case.

I will read one or two. Here is an extract from the Democratic State platform of 1910 of Colorado:

We reassert our position upon the public-land question as adopted at Pueblo in 1908, and declare the right of the State to the control of the resources within its boundaries; we are in sympathy with the policy of considering the natural resources of the Nation and the State in a manner which will protect the right of future generations, but we are unalterably opposed to the bureaucratic, arbitrary regulations which work hardship on the homesteaders and the miners and retard the development of the State.

Here is one, also in 1912, of the Democratic State platform of Colorado:

We denounce the policy of the Republican administration—

They blame it on the Republicans in this resolution. They are trying to make capital out of a popular issue, no doubt.

We denounce the policy of the Republican administration, which, having retarded our development, now proposes to withdraw all the remaining agricultural, grazing, and mineral public lands from all forms of entry, with the expressed determination of imposing upon the West a permanent bureaucratic rule and Federal leasing system of all the Government resources within our borders, and thereby disastrously retarding the development of our State and depriving our Commonwealth of its just and constitutional rights.

At that time there were some bills pending in Congress which went further than the water-power bills.

I have here copies of Republican platforms declaring against this leasing bill, in which they utter emphatic and strong denunciation of this leasing system. I can not lay my hands on them right now, but I have read them once before in a former debate. The one I have in mind condemns equally as strongly as the Democratic platform the policy of the Government in relation to this bill. I must say that those resolutions in some instances were passed by the Republican convention in Colorado, when the Republican Party was in power, showing their desire to protect the State even above any question of partisan politics.

Mr. President, I can not put in the RECORD, nor can I read, all of the material which I have here in the way of protests from Western States; but I think I have read enough to show that there is a uniform sentiment, at least in my portion of the West, against the passage of any such leasing proposition as is contained in this water-power bill. It seems to me that if the doctrine of State rights has any semblance of support in this body, its friends ought to recognize the fact that the Federal Government is intruding upon those rights when it goes into a State and segregates lands and says that the sovereignty of the State can not be exercised in its taxing power or in its right of eminent domain against these lands which it proposes to hold in perpetuity.

Mr. President, I should like to make a short résumé of what I have said in the speeches I have made, but I can not do it. The hour is getting too late. I want to say, however, that this is a most serious matter to the people of the West. It is the most vital question that ever has been presented to them, I think, since Colorado was admitted into the Union. It has been made the subject of addresses and of messages of governors to the legislature. I sent two messages myself, when governor of Colorado, to the Colorado Legislature upon this matter, and similar action has been taken by other governors, particularly the governor preceding the last one.

The people regard this as a matter that is so vital to them that they view it with almost equal intensity of feeling that southern Senators display when the force bill is referred to here. You can therefore realize the degree of earnestness we feel with relation to this policy and how vital we feel it is going to be to the development of the western country.

For these reasons, Mr. President, I submit that the bill under consideration ought to be defeated.

Preparedness—Prohibition.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday March 3, 1917.

Mr. COLEMAN. Mr. Speaker, the Sixty-fourth Congress has enacted legislation that must of necessity have great influence on the future of this Nation. While many matters of import have been dealt with none have been of greater public interest than the measures relating to preparedness and prohibition.

The preparedness enactments will unquestionably be accorded first place in importance. The conditions with which we have been confronted made necessary a reasonable degree of military activity by the peaceful people of our country. Many Members of Congress, who can not be classed as militarists, have been impelled, in face of possible conflict, to temporarily join hands with the advocates of large military establishments.

Should war, unhappily, come then our preparation, extensive as it has been, in comparison with previous efforts, will prove much less than the needs of the conflict. Should we be so fortunate as to avert war, then the great danger, to my mind, will be our ability to stem the tide of militarism and return again to our policy of moderate armaments.

A few days since we listened in this House to the reading of Washington's Farewell Address, in which, among other things, he said:

Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice.

Following the reading of this address we listened to the gentleman from Iowa [Judge TOWNER] as he applied Washington's injunction to present-day conditions. It was an interesting and instructive address, well worth the close attention it received from the Members of the House. In addition to Washington's address and Judge TOWNER's application of it to existing conditions, I wish in these times when there is great danger that

we be carried too far from our ancient moorings to quote the words of Thomas Jefferson, written to the President of the United States on June 11, 1823:

I have ever deemed it fundamental for the United States never to take an active part in the quarrels of Europe. Their political interests are entirely distinct from ours. Their mutual jealousies, their balance of power, their complicated alliances, their forms and principles of government are all foreign to us. They are nations of eternal war. All their energies are expended in the destruction of the labor, property, and lives of their people. On our part, never had a people so favorable a chance of trying the opposite system, of peace and fraternity with mankind, and the direction of all our means and faculties to the purposes of improvement instead of destruction.

These words are specially applicable to the present trying times, and while the war clouds are in evidence and conflict possibly near, it is yet our fervent hope that we be spared the sorrow and suffering that war would entail and that it become our privilege to interfere in European affairs as a great peace-loving people to bring order out of chaos and restore good feeling among the nations now at war.

It is not my purpose to say ought that might in the least degree embarrass the President in dealing with the delicate situation now confronting our Government, but rather to call attention somewhat discreetly to the notions of Washington and Jefferson, coupled with a century and a quarter of practice in the hope that it may tend to keep us steadfast in the ancient faith and away from entangling European alliances.

I shall not say more on this subject of preparedness, which I discussed somewhat fully in the first session of this Congress, and to the views then expressed I steadfastly adhere. But I can not refrain from expressing at this critical time the fervent hope that God in His wisdom will so direct the course of this Nation in its relations with other powers as to keep us out of the present stupendous war and use us as a medium to bring peace to the distracted people of many nations.

PROHIBITION.

Among the many subjects passed upon by the Sixty-fourth Congress, next in importance to that of preparedness and its accompanying problem of taxation, in my judgment, was that of prohibition.

In discussing preparedness legislation the Members, in the main, as was fitting to the importance of the subject, were steady, thoughtful, and conservative. Not so in dealing with the local problem of prohibition. Here intense excitement prevailed, bitterness of feeling was in evidence, and sharp criticism was indulged in, such as did not appear at any other time during the life of this Congress. Those who supported the District bill accused in sharp language the opponents of the measure for resorting to dilatory tactics in an effort to defeat the measure, while its opponents sharply criticized its supporters for resorting to gag rule of the most extreme and dangerous type. And both sides were justified in their accusations, but neither in the methods to which resort was had.

The fact that unfair and extreme methods were used indicates an interest so intense in this problem as to cause all fair-minded people to realize that it has reached a most acute stage in its development, and must be met and dealt with from the broadest possible point of view.

We, as Members of this body, can not be governed by the arguments advanced by the extreme wing of either wet or dry forces. The liquor man who, prompted by his selfish interests, urges the great nutritious value of alcoholic beverages and their beneficial effect upon health may be sincere, but he does not convince most of us. The trouble is we lack reliable scientific information with reference to the whole problem. But if the liquor man goes beyond all legitimate argument to protect his personal interests of a selfish nature, what shall we say of the Christian advocate of prohibition who wholly disregards the truth or, at least, so distorts it that it can not be recognized? As an illustration of the lengths to which they sometimes go, I cite the following, taken from a Washington publication issued under the direction of the board of temperance of the Methodist Episcopal Church, 204 Pennsylvania Avenue SE. This appeared under date of February 12, this year:

IF WAR COMES, IT WILL BE THE RESULT OF BEER PHILISTINISM.

A blood and beer besotted Government has flung the paper scraps of its pledge into the face of an outraged America.

The Philistinism of the malted men who misrule Germany is responsible, and that Philistinism is the product of beer.

Devoted German patriots have foreseen the doom that lies at the bottom of Germany's beer kettles. They have pointed to the inevitable vulgarization and brutalization resulting from the constant and heavy use of beer.

"The real enemy," Prof. Paul Weber, of Jena, says, "is beer Philistinism. There is in beer circles an infallible instinct against all that would lift out of the lazy, the dull, the indifferent. The intellectual desolation which one finds at the drinking tables of the educated is simply frightful."

The German ruling class has brains, but they are porcine brains. Because the German court is awash with beer it stands knee deep in the blood of the *Lusitania*. When Germany is a prohibition country, as it will be, a ruling class with the ability to understand and to make itself understood will reign in peace and honor.

So it seems from the viewpoint of an extremist that beer is the cause of war and the source of all human ills. I can only turn him over to the gentleman from New York [Mr. LONDON], who seems to have an idea that capital is the great monster and the real cause of the conflict and other human afflictions.

Personally, I could wish for many reasons to be able to advocate with the earnestness and sincerity of the gentleman from Georgia [Mr. CRISP] the cause of prohibition. I could so wish, among other reasons, for the purpose of placing myself in sympathy with the thought and efforts of the great army of Christian people who are fighting so valiantly for this cause.

But I can not, from the viewpoint of one charged with the responsibility of legislation in dealing with this question, ignore those principles of government which I seek to apply to other legislative problems. And I here call attention to some principles of government hitherto considered of prime importance, and shall seek in brief words to trace them back to their origin in the hope of obtaining a better and fuller view of their value.

The Declaration of Independence speaks of the inalienable rights of life, liberty, and the pursuit of happiness. The Constitution seeks by its provisions to protect individuals in their right to life, liberty, and property. But in connection with the question of prohibition, on which men do not seem able to reason normally, one is almost afraid to speak of the inalienable rights referred to in the Declaration and guaranteed to us by State and National Constitutions.

Our fathers were firmly intrenched in the theory of government that taught individual freedom in all matters so long as no trespass was committed on another. This theory involved a full recognition of the doctrine of the absolute rights of man as laid down by Blackstone, which he contended were coeval with the English form of government. These rights were recognized and guaranteed to the English people as ancient rights by Magna Charta, and later by the petition of right, the habeas corpus act, and the Bill of Rights.

The inalienable rights of the Declaration of Independence were not, therefore, the creation of the brain of Thomas Jefferson. For this great man only expressed, in choice language, it is true, the then prevailing idea that government had no right to interfere with the individual in his pursuit of happiness unless he, in some way, trespassed upon another's right.

This theory of government was doubtless handed down by the Romans, who in their doctrine of natural rights expressed those conditions which they supposed to have existed in a state of nature. It was an idea developed from their laws applying to strangers, in distinction to the laws which controlled the action of their own citizens. The law as applied to strangers was of course less technical than that which applied to Roman citizens and led to the development of the natural law or idealist's law that should exist among highly developed people.

The very fact that the Roman laws which dealt with strangers came to be considered as superior to the law applying to the citizens of Rome is a strong argument for that system of law which gives the largest degree of liberty to its citizens. And when we reflect that in all ages of the world that government which did accord great liberty to its subjects has stood well to the fore, and that no government has profited more from the free reign granted to its citizens than the constitutional government of these United States, we should only after the most considerate attention enlarge our restrictive legislation.

Now, whether we believe in this old idea of government and the philosophy which teaches that only crimes and trespasses should be punished, or whether we are convinced, as most of us are, that advancing civilization demands a greater interference on the part of government with the affairs of individuals, it seems to me that we have been traveling so fast in enacting restrictive measures that we may with profit pause and ask ourselves whether we have not gone too far in this direction.

Shall we so far abandon the old idea of the protection of the individual in his so-called natural rights, inalienable rights, absolute rights, or whatsoever name we give to the notions formerly existing that there were certain fundamental rights of the individual with which government had no right to interfere, as to submit complacently to the arguments of those who would place these rights so long and faithfully protected from the tyranny of kings and emperors at the absolute mercy of a majority vote of the people?

This is an important question and worthy of a moment's reflection. The law when enacted applies to all persons within its jurisdiction. Is it then within the province of the law to set

a standard of morality to which all men must live? Now, communities must enforce certain rules of conduct; otherwise there can be no real community progress. But what is the purpose of the rule thus enforced? It should be to represent the rule of conduct generally obeyed by the people, for this is the only rule that can be successfully enforced. In this fact lies much of the virtue of local government, for the law enacted by the local body is apt to fairly represent the community standard. Many laws are not obeyed to-day because legislative assemblies fail utterly to recognize this rule. Our jails and penitentiaries contain many men who are in no true sense criminally inclined and ought not to be confined, and would not be if legislative bodies paid some regard to the rule I have tried to state. And these unjust confinements are the result too often of a temporary majority trying to enforce their standard of morality on a large minority who do not agree with them. It is a great error to suppose that you can enforce a law merely because a majority so decrees. To make it effective it must be acquiesced in by the people generally. In the words of Rousseau, "A majority of the people is not the people and never can be."

Now, whether the doctrine of natural rights is sound or whether it is not, I believe that the general judgment of the mass supports the theory that in many matters which lawmakers are trying to control the individual should be left to his own inclination. I do not believe that government can by law banish evil from the world. I do not believe that man can be made moral by law. The abrogation of vice and morality is a work peculiarly devolving upon the church and the home and social forces outside of law, and I do believe that it is foolish to make law that punishes men for doing what vast numbers of their fellows do.

If this is the correct view, then the law should represent the average common sense of propriety—the aggregation of all the forces of the community—the true community conscience. The object, then, is not to enact laws prescribing that we live according to the right as understood by moral science, but rather that we live according to the right in the sense of expediency, by which I mean that standard of right which is the resultant of all the forces of the community and generally obeyed by all. The best of our citizens do not live their lives as they do because laws require certain conduct of them. They live their natural lives, in many cases, not knowing the law, and would continue to live such lives if all laws were repealed and they left to do as they pleased.

With these notions of government firmly embedded in my mind, modified, I trust, with due regard to the needs of present-day social legislation to meet the changed conditions of advancing civilization, I found myself unable to vote for Senate amendment No. 34 to the Post Office appropriation bill, which embodied the Jones amendment relative to advertising and the Reed amendment relating to the order, purchase, or transportation of intoxicating liquors.

I could not support either of these propositions, as it seems to me somewhat absurd and clearly in violation of true governmental principles to punish as a criminal the publisher of a newspaper or magazine carrying a legitimate advertisement in the community where the publication is issued for sending that same publication through the mails into certain dry territory. It ignores every rule of reason and is cruel and unusual punishment that can not, in my judgment, be justified. Nor could I support the Reed amendment, which sets aside every principle of local government by punishing as criminals the citizens of a State for doing what under the laws of their State they are permitted to do. Better by far to have national prohibition by the authority of three-fourths of the States than to pass and enforce such tyrannical laws.

And the liquor people themselves supported this legislation, with its drastic provisions. They evidently are willing to assist in making dry States "bone dry," with a view to punishing them for their apparent short-sighted vision. And this without regard to the voice of the people of those States, and yet they urged with wonderful vehemence the right of the people of the District to vote on the question of a dry Washington. It was as inconsistent as the urging of the extreme dry advocate that we have a dry Capital without a referendum, while at the same time urging a referendum on national prohibition. I say as inconsistent; let me correct myself by saying it was more inconsistent, for the dry advocate has existing legal methods on his side, whether or not they be consistent and just.

Three hundred and nineteen to seventy-two was the vote on Senate amendment No. 34. Does any person in this House believe that those 319 votes represented the real sentiment with regard to the principles of government so ruthlessly violated in the adoption of these amendments? I can not bring myself to the point of applying a different rule to the liquor question to that applied in other matters of legislation and criticize freely either liquor man or prohibitionist who is willing to set aside fundamental principles to gain a temporary advantage.

I voted for the Sherley amendment, striving to that extent to protect property rights, and while it failed I was glad to see remedial legislation passed by this House in the closing hours of this Congress extending to July 1, 1917, the time when this drastic legislation should become effective.

It was when the District bill was before the House that the bitterness of feeling was most in evidence. It was unfortunate that so important a matter was passed upon without debate. In justice to the people upon whom the law was to operate it should have been fully discussed. In justice to the great importance of prohibition generally it should have been freely debated, and in calling into play so stringent a gag rule the leaders of the movement may have invoked a weapon that will come back to cause them trouble.

So far as the real merits of the referendum is concerned, I readily appreciate that there are two sides to the argument, and that much can be fairly said on either side. The governmental machinery has provided that Congress shall legislate for the District, and it may well be argued that no special legislative machinery should be provided to deal with the liquor problem. On the other hand, it can be fairly contended that it was never contemplated by the framers of this machinery that so drastic an interference with the personal liberty and private property of the residents would be undertaken by legislation, and that such interference now being contemplated they should have the same voice that is accorded the people of the States, and certainly the same right that was exercised by the people of Alaska before dry legislation was enacted for that Territory by this Congress.

Personally I believe the people of the District should have had a voice in the matter. I am rather strong in my loyalty to the principle of local government. Because of my belief I voted for the referendum, and when it failed against prohibition.

But there is another matter in connection with the voting of prohibition for the District of Columbia that to my mind is of equal importance with a referendum to the people, and that is the question of compensation. Here we find a large city that is under the immediate supervision of Congress. It is in the large centers of population that we find the strongest adherence to the saloon. Country communities do not have the same social need for the public drinking place as the large cities. Filling this need men have invested their money in a business countenanced by the Government from the beginning of its history. In fact the Government has been in effect a partner in the business, and in view of this fact, having come to the conclusion that the business should cease within that territory embracing the Capital City it should make provision for compensation to those whose property is injured or perhaps totally destroyed. For, however the States may deal with this phase of the problem this great Government can not afford to fall behind the standard set by Great Britain, France, Russia, Switzerland, Canada, and other Governments in granting compensation with restrictive liquor legislation. Fair compensation would be in accord with those fundamental principles of government relative to property rights which I have briefly presented.

You may argue by reason of strong opposition to the liquor business that no compensation should be given to persons engaged in such a trade. But do not overlook the fact that you are thereby setting a fine example to the Socialist, who from his point of view can plead the same justification for expropriating the property rights of those engaged in what you may consider legitimate business interests. Are property rights to be protected, then be careful to give to others the same degree of protection you claim for yourself.

It is certain that we have wandered far from the doctrine of natural rights, and, while I readily agree that we have been justified in enlarging the scope of the activities of both Federal and State Governments, I yet am of opinion that in the enlargement of restrictive legislation the burden should rest upon the advocates of the restriction.

Of course we can not remain stationary. We can not continue to live according to the social standard of those who framed our Government. But we can profit by a correct understanding of the underlying principles upon which our Government was founded, and with this understanding seek to apply sound principles to present day needs. We must not legislate to meet passing notions and whims, and write upon the statute books laws to be readily broken because not representing the general community sentiment.

Personally, I am a total abstainer and have been from my early boyhood, when, in response to the earnest appeal of that great

temperance apostle, Francis Murphy, I signed the blue-ribbon pledge, to which I have ever since been true. I could wish that all men were as I in this respect and that intoxicating liquors were no more temptation to them than to myself. If this were the fact, there would be no liquor problem. I am unwilling, however, to set myself up as a judge of other men's habits, and I have little sympathy with the attack made on men engaged in the liquor business, feeling that it is no more sinful to sell than to use intoxicants.

The cause of temperance is rapidly advancing and I have faith in its continued advance. This is largely due to the evils of intemperance, both as to its effects on individuals and society. It is the economic movement rather than the moral issue that is forcing prohibition so prominently to the front. And during the past 20 years it has been going forward by leaps and bounds and has now assumed a prominence that is national and world-wide. With 25 States of the Union now dry and much of the territory in the remaining States dry under local option laws, we in justice to this great sentiment must meet the question from a broad national viewpoint.

What we need at this time is reliable, scientific information on which to base legislative action. The Government would engage in a splendid and worthy work if it authorized a full and complete investigation of the liquor problem in all of its phases. We should proceed to collect evidence somewhat on the order followed by the Swedish committee of physicians, and with such evidence in the possession of Congress intelligent action can be had.

If the prohibition wave continues to advance under the operation of the bone-dry legislation the time will soon be here when a national prohibition amendment must be submitted to the people. Practically the whole world is now studying the temperance question, and the information that is being gathered should be collected by competent men under the direction of the National Government, and this information given to the public for their guidance in seeking to solve a troublesome problem.

The Niagara River Power Bill.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 8, 1917.

Mr. AUSTIN. Mr. Speaker, during the closing hour of the debate on H. R. 20047, a bill for the control and regulation of the Niagara River above the Falls, and for other purposes, on February 7, I had a colloquy with the gentleman from Wisconsin [Mr. LENROOT], which was as follows:

Mr. LENROOT. Mr. Chairman, the ease with which the gentleman from Alabama [Mr. HEFLIN] overrules the decisions of the Supreme Court of the United States is only equaled by the ease with which the gentleman from Tennessee [Mr. AUSTIN] misstates those decisions.

Mr. AUSTIN. Well, I challenge that statement.

Mr. LENROOT. I expected the gentleman would, and I say to the gentleman that there is no decision of the Supreme Court of the United States ever rendered that is in the least degree in conflict with the provisions that the gentleman now seeks to strike out of this bill.

Mr. AUSTIN. I will put them in the RECORD.

Mr. LENROOT. All right. I will be glad if the gentleman will do so. And he spoke of the Senate of the United States. The gentleman may not be aware of the fact that five or six years ago the ablest lawyers then in that body made an investigation of this very legal question and reported that it was entirely competent for the Congress of the United States to make just such a charge as this as a condition of a grant such as is contained here.

As all time had been exhausted and I was unable to answer the gentleman from Wisconsin [Mr. LENROOT], I obtained permission to extend my remarks, in order that I might keep my promise to "put in the RECORD" the decisions of the Supreme Court of the United States sustaining my contention that it had gone on record for more than a century deciding that the respective States, and not the Government of the United States, owned the water-power rights in the rivers of the country. I not only cite the decisions of the highest court in the land, but also the opinions of the five ablest lawyers of the United States Senate, Messrs. NELSON, Root, CHILTON, O'GORMAN, and CULBERSON, referred to by the gentleman from Wisconsin [Mr. LENROOT]. It will be observed that the gentleman from Wisconsin not only misunderstood the opinion of these able lawyers, but misstated it. The fact is that subsequent to giving their opinion these Members of the Senate supported the Shields water-power bill, which concedes the ownership of water-power rights to the respective States and not to the Federal or National Government. My information is they have so voted every time this same proposition has been passed upon by the United States Senate in recent years.

OPINIONS OF THE SUPREME COURT.

1. The ownership of flowing water and the right to dispose of and to regulate and control the use thereof within their borders belong exclusively to the States as a part of their sovereign power, subject only, in case of navigable streams, to the power of the Federal Government to regulate and promote commerce between the States.

Pollard's Lessee *v.* Hagan (3 How., U. S., 212); Withers *v.* Buckley (20 How., 84); Escanaba Co. *v.* Chicago (107 U. S., 678); Kansas *v.* Colorado (206 U. S., 46); Illinois Central Railroad *v.* Illinois (146 U. S., 387); Shively *v.* Bowlby (152 U. S., 1); Sands *v.* Manistee River Improvement Co. (123 U. S., 288); Veazie *v.* Moor (14 How., U. S., 568); Hudson Water Co. *v.* McCarter (209 U. S., 349); City of New York *v.* Miln (11 Pet., 102); Gutierras *v.* Albuquerque (188 U. S., 545); County of Mobile *v.* Kimball (102 U. S., 691); Cardwell *v.* American Bridge Co. (113 U. S., 205); Willamette Iron Bridge Co. *v.* Hatch (125 U. S., 1); United States *v.* Railroad Bridge Co. (6 McLean, 517).

2. That as a consequence the United States have no such right either of ownership, regulation, or control.

Pollard's Lessee *v.* Hagan (3 How., U. S., 212); Kansas *v.* Colorado (206 U. S., 46); Ward *v.* Race Horse (163 U. S., 504).

3. The rights of consumers to the use of the water are dependent upon State and not Federal laws and subject to State regulation and control, exclusively, unless the use is interstate.

Kansas *v.* Colorado (206 U. S., 46); Osborne *v.* San Diego Land & Town Co. (178 U. S., 22); Los Angeles *v.* Los Angeles Water Co. (177 U. S., 558); St. Anthony Falls Water Power Co. *v.* St. Paul Water Commissioners (168 U. S., 349); Bean *v.* Morris (221 U. S., 485).

4. The Federal Government owns the public lands as a proprietor only and not in its sovereign capacity.

Pollard's Lessee *v.* Hagan (3 How., U. S., 212); Ward *v.* Race Horse (163 U. S., 504); Woodruff *v.* North Bloomfield Gravel Mining Co. (18 Fed. Rep., 753); Boggs *v.* Merced Mining Co. (14 Cal., 279, 376).

5. The Federal Government has no power or jurisdiction to fix rates or regulate the use or disposition of water within a State.

Sands *v.* Manistee River Improvement Co. (123 U. S., 288); Osborne *v.* San Diego Land & Town Co. (178 U. S., 22).

6. The power to fix rates or regulate the use of water not given to the Federal Government by the Constitution can not be bestowed by act of Congress as a condition to the leasing or sale of the public lands.

New Orleans *v.* United States (10 Pet., 662, 736); Leovy *v.* United States (177 U. S., 621).

7. Absolute property in and dominion and sovereignty over the soils under the tidewaters in the States are reserved to the several States.

Kansas *v.* United Land Association (142 U. S., 161).

8. Public lands owned by the United States are not subject to taxaiton by the States.

California *v.* Shearer (30 Cal., 645, 655, 658); Van Brocklin *v.* Tennessee (117 U. S., 151).

9. The power of Congress to legislate or exercise sovereignty over lands within a State is confined to lands acquired by the Federal Government for certain specific purposes and with the consent of the State.

United States *v.* Cornell (2 Mason, 60); Woodruff *v.* North Bloomfield Gravel Mining Co. (18 Fed. Rep., 753).

LATEST DECISION.

The last opinion rendered by the Supreme Court of the United States on the subject was December 11, 1916, in the case of the Long Sault Development Co. against Homer D. Call.

This case was originally brought in the Supreme Court of New York, and involved the constitutionality of a statute of the State of New York granting a corporation certain rights in the St. Lawrence River within that State, and upon a hearing in the court of appeals of the State the act was adjudged void upon the ground that the property in question was held by the State in trust for the people, and could not be granted for private use. From this decree a writ of error was prosecuted to the Supreme Court of the United States and there dismissed for want of jurisdiction because no Federal interest or question was involved, the gist of the decision being that the banks, beds, and waters of the St. Lawrence River, a navigable stream within the State, were subject to the exclusive sovereignty and control of that State.

Mr. Justice Clark, in discussing the opinion of the Court of Appeals of New York, said:

And then addressing itself to the constitutional problem thus stated, the court proceeds upon principle and authority to decide: That under the constitution of the State of New York the power of the legislature of that State to grant lands under navigable waters to private persons or corporations is limited to purposes which may be useful, convenient, or necessary to the public; that it has no power to so part with the title to such lands that the State may not in the future improve navigation over them if the public interest shall so require; and that they are held by the State on such a trust for the public use that the legislature has no power to authorize the conveyance of them to a private corporation to maintain navigation thereover "in as good condition as * * * at present," thereby parting for all time with its power to improve such navigation.

The court finds its principal authority for these legal positions in the decision of this court in Illinois Central Railroad Co. *v.* Illinois (146 U. S., 387), in which it was decided: That the title which a State holds to land under navigable waters is different in character from that which it holds in land intended for sale and occupation, in the former case it being held in trust for the people of the State in order that they may enjoy the navigation of the waters and carry on commerce over them, free from obstruction or interference by private parties; that this trust devolving upon the State in the public interest is one which can not be relinquished by a transfer of the property; that a State can no more abdicate its trust over such property, in which the whole people are interested, so as to have it under the control of private parties, than it can abdicate its police powers in the administration of

government and the preservation of peace; and that the trust under which such lands are held is governmental, so that they can not be alienated except to be used for the improvement of the public use in them.

It has been repeatedly held by the Supreme Court of the United States that the Federal Government can not grant the lands, or any interest therein, under navigable waters. Hardin *v.* Jordan (140 U. S., 382); Niles *v.* Cedar Point Club (175 U. S., 388); Weber *v.* Harbor Commissioners (18 Wall., 5771). An act of Congress authorizing Indians to fish in the navigable streams of Oregon was held in the case of United States against Alaska Packers (79 Fed. Rep., 157) to be beyond the power of Congress and void.

OPINION OR REPORT OF THE FIVE "ABLEST LAWYERS" IN THE UNITED STATES SENATE.

I now give the opinion of the five ablest lawyers in the United States Senate referred to by the gentleman from Wisconsin [Mr. LENROOT]. The report submitted by Senator NELSON was approved by Senators Root and CHILTON:

Mr. NELSON, from the subcommittee of the Committee on the Judiciary, submitted the following report, to accompany Senate resolution 44:

To the Committee on the Judiciary:

Your subcommittee, which was directed to report on the following resolution:

"*Resolved*, That the Committee on the Judiciary of the Senate be, and it is hereby, directed to report to the Senate, at as early a date as possible in the next regular session of Congress, upon the power and authority of the National Government over the development and use of water power within the respective States, and especially:

"First. Has the National Government any authority to impose a charge for the use of water power developed on nonnavigable streams, whether State or interstate?

"Second. Has it any authority in granting permits to develop water power on a navigable stream to impose and enforce conditions relating to stated payments to the Government, regulation of charges to consumers, and determination of the right to make use of such developed power?

"Third. Has it authority in disposing of any of its lands, reserved or unreserved, necessary and suitable for use in connection with the development or use of water power on a nonnavigable stream, whether State or interstate, by lease or otherwise, to limit the time for which such development may continue, or to impose and enforce charges for the use and development of such water power, or to control and regulate the disposition of such water power to its consumers?"

have considered the same and report as follows:

The interrogatories embraced in the foregoing resolution involve the rights of riparian owners, the rights of the States, and the rights of the Federal Government in the navigable and nonnavigable streams and watercourses of the country. A solution and understanding of those several rights will tend to answer and solve the questions propounded.

NAVIGABLE STREAMS.

The rule of the common law that only those streams are held navigable in which the tide ebbs and flows, and only so far as such ebb and flow, has not been adopted and does not prevail in this country. With us the question of navigability is one of fact in each case. If a stream can be used for commerce or trade in any form to any substantial extent, even for the floating of rafts of logs or lumber, it is held to be a navigable stream. (The *Genessee Chief*, 12 How., 443; the *Daniel Ball*, 10 Wall., 557; the *Montello*, 20 Wall., 430; Barney *v.* Keokuk, 94 U. S., 324; Waterpower Co. *v.* Water Commissioners, 168 U. S., 349.)

Most of our streams and watercourses are, in fact, more or less navigable in some of their reaches, and the nonnavigable portions serve as feeders for, and are so connected with, the navigable sections that it is difficult and scarcely practicable to apply a separate rule for each. This must needs be so where ample regulation of the navigable section can only be secured through regulation of the nonnavigable section. In such cases, for the purposes of interstate commerce, the Federal Government has full regulative power over the entire stream, the nonnavigable as well as the navigable sections.

In U. S. *v.* Rio Grande Irrigation Co. (174 U. S., 690) the Supreme Court, in passing upon certain statutes relating to the use of water for mining and irrigation purposes, makes this declaration:

"To hold that Congress, by these acts, meant to confer upon any State the right to appropriate all the waters of the tributary streams which unite into a navigable watercourse, and so destroy the navigability of that watercourse in derogation of the interests of all the people of the United States, is a construction which can not be tolerated. It ignores the spirit of the legislation and carries the statute to the verge of the letter and far beyond what under the circumstances of the case must be held to have been the intent of Congress (p. 706–707)."

TITLE OF THE STATES IN THE BEDS AND WATERS OF NAVIGABLE STREAMS.

The several States of the Union are each primarily the proprietors of, and have the sovereignty over, the beds and waters of the navigable streams and watercourses within their respective borders, subject only to the rights of the Federal Government under the interstate commerce clause of the Constitution (par. 3, sec. 8, Art I), and to the rights of the Federal Government as owner of the riparian lands (par. 2, sec. 3, Art. IV), which rights will hereafter be referred to and enlarged upon.

In the case of Martin *v.* Waddell (16 Pet., 367), where the question of tidelands and tidewaters was involved, the Supreme Court of the United States makes this clear and comprehensive declaration:

"For when the Revolution took place the people of each State became themselves sovereign; and in that character hold the absolute right to all their navigable waters, and the soils under them, for their own common use, subject only to the rights since surrendered by the Constitution to the General Government."

The same doctrine was laid down by the court in the case of Pollard *v.* Hagan (3 How., 212), and it was held to apply to the newer States in as full a measure as to the original States of the Union. In this case the court concludes its opinion as follows:

"By the preceding course of reasoning we have arrived at these general conclusions: First. The shores of navigable waters and the soils under them were not granted by the Constitution to the United States, but were reserved to the States, respectively. Second. The new States have the same rights, sovereignty, and jurisdiction over this subject as the original States. Third. The right of the United States to the public land and the power of Congress to make all needful rules and regulations for the sale and disposition thereof conferred no power to grant to the plaintiffs the land (tidewater land) in controversy."

In the case of Barney *v.* Keokuk (94 U. S., 324) Justice Bradley declares that the correct principles were laid down in the foregoing cases, and then adds:

"These cases related to tidewater, it is true; but they enunciate principles which are equally applicable to all navigable waters."

The rule laid down in the foregoing cases is reaffirmed and amplified with the citation of numerous authorities in the case of Shively *v.* Bowlby (152 U. S., 1).

RIPARIAN TITLE.

It is the rule of the common law that a grant of land upon the borders of a navigable stream carries the grant only to the high-water line, while a grant of land bordering upon a nonnavigable stream carries the title to the center of the stream, subject to the public easement in the water of the stream. While this is the rule of the common law, the Supreme Court of the United States, in the case of Hardin *v.* Jordan (140 U. S., 371), has determined that the limits and extent of the riparian ownership is governed by the law of the State in which the land is situated. Justice Bradley, who delivered the opinion in this case, after discussing the question and citing numerous authorities, concludes as follows:

"We do not think it necessary to discuss this point further. In our judgment the grants of the Government for lands bounded on streams and other waters, without any reservation or restriction of terms, are to be construed as to their effect according to the law of the State in which the lands lie (p. 384)."

The case of Shively *v.* Bowlby, heretofore cited, approves of and adheres to this rule, and the following cases indorse and adhere to the rule: Barney *v.* Keokuk (94 U. S., 324), St. Louis *v.* Myers (113 U. S., 566), Packer *v.* Bird (137 U. S., 661), St. Louis *v.* Rutz (138 U. S., 226), Mitchell *v.* Smale (140 U. S., 406), Grand Rapids *v.* Butler (159 U. S., 87), Water Power Co. *v.* Water Commissioners (168 U. S., 349), Kean *v.* Calumet Canal Co. (190 U. S., 452), United States *v.* Chandler Dunbar Co. (209 U. S., 447).

The rule of riparian ownership as to grants of land bordering on streams is diverse in the various States. Some States hold that the grant extends only to high-water mark; other States hold that it extends to low-water mark; while another class of States—and perhaps the most numerous—hold that the grant extends to the middle of the stream, subject to the public easement in the water of the stream. But whatever may be the law in this respect as to the effect of the grant, it only relates to the proprietorship in the banks and bed of the stream and not to the ownership of the water in the stream.

In those States which hold that the title of the riparian owner only extends to the high or low water mark the title to the bed of the stream is deemed to be in the State, and whether the title to the bed of the stream is in the riparian owner or in the State, in either case the sovereignty over and the paramount title to the water of the stream is deemed to be in the State, but it holds it not absolutely, but in trust for all lawful public uses, and in subrogation to the rights of the Federal Government.

PROPRIETORSHIP AND CONTROL OF THE WATER IN STREAMS.

While the riparian proprietor may be the absolute owner of the bed of the stream, he has no such proprietorship in the water of the stream. The water is a movable thing, and as to that he has only a usufruct. His rights in the water are subject to the sovereignty and control of the State, to the rights of the other riparian owners, and to the public easement or use. Lord Chief Justice Hale in his De Juris Maris (Hargrave, p. 6), in the quaint law language of those days, states:

"Though fresh rivers are in point of propriety, as before, prima facie of a private interest; yet, as well fresh rivers as salt, or such as flow and reflow, may be under these two servitudes, or affected with them—viz, one of the prerogatives belonging to the King, and another public interest, or belonging to the people in general."

Commenting on a case in which the riparian owner claimed the title up to the thread of the stream in the Severn River as against the King, Lord Hale says (Hargrave, p. 36):

"But though the subject may thus have the propriety of a navigable river part of a port, yet these cautions are to be added, viz: First, that the King has yet a right of empire or government over it in reference to the safety of the kingdom and to his customs, it being a member of a port, prout inferius dicitur; second, that the people have a public interest, a jus publicum, of passage and repassage with their goods by water and must not be obstructed by nuisances or impeached by exactions, * * *. For the jus privatum of the owner or proprietor is charged with and subject to that jus publicum which belongs to the King's subjects; as the foil of an highway is, which though in point of property it may be a private man's freehold, yet it is charged with a public interest of the people, which may not be prejudiced or damnified."

Sir J. Leach, vice chancellor, in the case of Wright *v.* Howard (1 Simons & Stuart's Reports, 203), an English case in chancery, decided in 1823, explains the right of a riparian as follows:

"The right to the use of the water rests on clear and settled principles. Prima facie, the proprietor of each bank of a stream (not tidal) is the proprietor of half the land covered by the stream, but there is no property in the water. Every proprietor has an equal right to use the water which flows in the stream, and consequently no proprietor can have the right to use the water to the prejudice of any other proprietor. Without the consent of the other proprietors, who may be affected by his operations, no proprietor can either diminish the quantity of water, which would otherwise descend to the proprietors below, nor throw the water back upon the proprietors above."

Chancellor Kent, in his Commentaries, states the common-law rule in these words:

"Every proprietor of lands on the banks of a river has, naturally, an equal right to the use of the water which flows in the stream adjacent to his lands, as it was wont to run (currere solebat), without diminution or alteration. No proprietor has the right to use the water to the prejudice of other proprietors above or below him unless he has a prior right to divert it or a title to some exclusive enjoyment. He has no property in the water itself, but a simple usufruct while it passes along. Aqua currit et debet currere ut currere solebat is the language of the law. Though he may use the water while it runs over his land as an incident to the land, he can not unreasonably detain it or give it another direction, and he must return it to its ordinary channel when it leaves his estate." (3 Com., 439.) (Stein *v.* Burden, 29 Ala., 127.)

In the case of Head *v.* Amoskeag (113 U. S., 9), involving the right of the riparian owner to construct and maintain a milldam on his own land under a statute of New Hampshire, Justice Gray, who delivered the opinion of the court, declares:

"We prefer to rest the decision of this case upon the ground that such a statute, considered as regulating the manner in which the rights of proprietors of lands adjacent to a stream may be asserted and enjoyed, with a due regard to the interests of all, and to the public good, is within the constitutional power of the legislature (p. 21)."

He further declares:

"The right to the use of running water is publici juris and common to all the proprietors of the bed and banks of the stream from its source to its outlet. Each has a right to the reasonable use of the water as it flows past his land, not interfering with a like reasonable use by those above or below him (p. 23)."

In the case of the United States *v.* Rio Grande Co. (174 U. S., 690), in considering a nonnavigable reach of the Rio Grande River, in the Territory of New Mexico, Justice Brewer, who delivered the opinion of the court, after quoting the foregoing paragraph from Chancellor Kent, adds:

"While this is undoubted, and the rule obtains in those States in the Union which have simply adopted the common law, it is also true that as to every stream within its dominion a State may change this common-law rule and permit the appropriation of the flowing waters for such purposes as it deems wise."

That the sovereignty and control over, and paramount title to, the waters in a stream is in the State is further established by that line of decisions sustaining the rule of public ownership, and "prior appropriation," prevailing in the mining and semiarid States, and acquiescing in its application to the lands of the United States. (Jennison *v.* Kirk, 98 U. S., 45; Broder *v.* Water Co., 101 U. S., 274; Gutiers *v.* Albuquerque Co., 188 U. S., 545; Boquilla Cattle Co. *v.* Curtis, 213 U. S., 339.)

The case of Kansas *v.* Colorado (206 U. S., 46) was a controversy between two States, one recognizing the doctrine of public ownership and prior appropriation and the other the common-law rule. Chief Justice Shaw, in the case of Elliott *v.* Fitchburg Railway Co. (10 Cush., 191), describes the rights of the riparian owner under the common-law rule in the following terms:

"The right to flowing water is now well settled to be a right incident to property in the land; it is a right publici juris, of such a character that, while it is common and equal to all through whose land it runs, and no one can obstruct or divert it, yet, as one of the beneficial gifts of Providence, each proprietor has a right to a just and reasonable use of it as it passes through his land; and so long as it is not wholly obstructed or diverted, or no larger appropriation of the water running through it is made than a just and reasonable use, it can not be said to be wrongful or injurious to a proprietor lower down. What is such a just and reasonable use may often be a difficult question, depending upon various circumstances. To take a quantity of water from a large running stream for agricultural or manufacturing purposes would cause no sensible or practicable diminution of the benefit, to the prejudice of a lower proprietor; whereas, taking the same quantity from a small running brook passing through many farms would be of great and manifest injury to those below, who need it for domestic supply or watering cattle; and therefore it would be an unreasonable use of the water, and an action would lie in the latter case and not in the former. It is therefore to a considerable extent a question of degree; still the rule is the same, that each proprietor has a right to a reasonable use of it, for his own benefit, for domestic use, and for manufacturing and agricultural purposes. * * *

"That a portion of the water of a stream may be used for the purpose of irrigating land we think is well established as one of the rights of the proprietors of the soil along or through which it passes. Yet a proprietor can not under color of that right or for the actual purpose of irrigating his own land wholly abstract or divert the watercourse or take such an unreasonable quantity of water or make such unreasonable use of it as to deprive other proprietors of the substantial benefits which they might derive from it if not diverted or used unreasonably. * * *

"This rule, that no riparian proprietor can wholly abstract or divert a watercourse, by which it would cease to be a running stream, or use it unreasonably in its passage and thereby deprive a lower proprietor of a quality of his property, deemed in law incidental and beneficial, necessarily flows from the principle that the right to the reasonable and beneficial use of a running stream is common to all the riparian proprietors, and so each is bound to use his common right as not essentially to prevent or interfere with an equally beneficial enjoyment of the common right by all the proprietors. * * *

"The right to the use of flowing water is publici juris and common to all the riparian proprietors; it is not an absolute and exclusive right to all the water flowing past their land, so that any obstruction would give a cause of action; but it is a right to the flow and enjoyment of the water, subject to a similar right in all the proprietors to the reasonable enjoyment of the same gift of Providence. It is, therefore, only for an abstraction and deprivation of this common benefit or for an unreasonable and unauthorized use of it that an action will lie."

The assertion of public ownership and of prior appropriation, already referred to, is thus described by Justice Field in the case of Jennison *v.* Kirk (98 U. S., 453). After describing the system of discovery and appropriation and development of mining claims, he adds the following:

"But the mines could not be worked without water. Without water the gold would remain forever buried in the earth or rock. To carry water to mining localities when they were not on the bank of a stream or lake became, therefore, an important and necessary business in carrying on mining. Here, also, the first appropriator of water to be conveyed to such locality for mining or other beneficial purposes was recognized as having, to the extent of actual use, the better right. The doctrine of the common law respecting the right of riparian owners was not considered as applicable, or only in a very limited degree, to the conditions of miners in the mountains. The waters of rivers and lakes were, consequently, carried great distances in ditches and flumes, constructed with vast labor and enormous expenditures of money, along the sides of mountains and through canyons and ravines, to supply communities engaged in mining as well as for agriculturists and ordinary consumption. Numerous regulations were adopted, or assumed to exist, from their obvious justness, for the security of these ditches and flumes, and for the protection of rights to water, not only between different appropriators, but between them and the holders of mining claims. These regulations and customs were appealed to in controversies in the State courts, and received their sanction; and properties to the value of many millions rested upon them. For 18 years, from 1848 to 1866, the regulations and customs of miners, as enforced and molded by the courts and sanctioned by the legislation of the State, constituted the law governing property in mines and in water on the public mineral lands."

These water rights, by prior appropriation, as described by Justice Field, were recognized and confirmed by congressional legislation in 1866 and in 1870. Those acts are now sections 2339 and 2340 of the Revised Statutes. Justice Field further adds:

"It will thus be seen that the Federal statutes merely gave a formal sanction to the rules already established. Those rules had been built up in reliance on the tacit acquiescence of the United States, the true owner of the lands and waters on which appropriations were made, and these statutes acquiesced therein expressly as 'a voluntary recognition of a preexisting right' rather than the establishment of a new one."

In the case of Broder *v.* Natoma Water Co. (101 U. S., 274) the Supreme Court, in referring to the contention that these statutes established a new right, uses the following language:

"We are of the opinion that it is the established doctrine of this court that rights of miners, who had taken possession of mines and worked and developed them, and the rights of persons who had constructed canals and ditches to be used in mining operations and for purposes of agricultural irrigation, in the region where such artificial use of the water was an absolute necessity, are rights which the Government had, by its conduct, recognized and encouraged and was bound to protect before the passage of the act of 1866, and that the section of the act which we have quoted was rather a voluntary recognition of a preexisting right of possession, constituting a valid claim to its continued use, than the establishment of a new one."

While the common-law rule prevails—in some instances with slight modifications—in all of the States, except the so-called semiarid or mining States, there can be no doubt that it is in the power of these common-law States, by virtue of their sovereignty, to modify or change the rule of the common law. In the language of Justice Brewer (in U. S. *v.* Rio Grande Co., 174 U. S., 702–703):

"It is also true that as to every stream within its dominion a State may change this common-law rule and permit the appropriation of the flowing waters for such purposes as it may deem wise."

The same justice, in the case of Colorado *v.* Kansas (206 U. S., 94), describes the power of the State as follows:

"It may determine for itself whether the common-law rule in respect to riparian rights or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation shall control. Congress can not enforce either rule upon any State." (See also McGilvra *v.* Ross, 215 U. S., 70.)

We append hereto Exhibit A, which names most of the States in which the rule of prior appropriation prevails, and also gives the constitutional and statutory provisions, with some of the decisions of the courts relating to the subject in each of these States.

PROPERTY AND RIGHTS OF THE UNITED STATES.

Except as the owner of riparian lands and except for the purpose of regulating interstate commerce, the United States has no property in or sovereignty over the streams or watercourses within the boundaries of the several States. The sovereignty and ultimate control is in the State, and the proprietorship is either in the State or in the riparian owner, or in both, according to the constitutions and laws of the several States, and the power of the Federal Government over the streams is no greater in the so-called public-land States than in the States east of the Mississippi River. In Kansas *v.* Colorado (206 U. S., 92), already cited, Justice Brewer declares:

"As to those lands within the limits of the States, at least of the Western States, the National Government is the most considerable owner and has power to dispose of and make all needful rules and regulations respecting its property. We do not mean that its legislation can override State laws in respect to the general subject of reclamation. While arid lands are to be found mainly, if not only, in the Western and newer States, yet the powers of the National Government within the limits of those States are the same (no greater and no less) as those within the limits of the original thirteen, and it would be strange if, in the absence of a definite grant of power, the National Government could enter the territory of the States along the Atlantic and legislate in respect to improving by irrigation or otherwise the lands within their borders."

THE RIGHTS OF THE FEDERAL GOVERNMENT AS RIPARIAN OWNER.

Through the treaty of independence and subsequent treaties with Great Britain, through cessions from foreign countries and some of the original States of the Union, and through discovery and exploration, and by virtue of its national sovereignty, the Federal Government became the proprietor of a vast domain of unsettled and undeveloped lands. Chancellor Kent (1 Com., 257) describes the title of the United States to this domain in the following language:

"Upon the doctrine of the court in Johnson *v.* McIntosh, 1823 (8 Wheat., 543), and Fletcher *v.* Peck, 1810 (6 Cranch, 142, 143), the United States own the soil as well as the jurisdiction of the immense tracts of unpatented lands included within their territories, and of all the productive funds which those lands may hereafter create. The title is in the United States by the treaty of peace with Great Britain, and by subsequent cessions from France and Spain, and by cessions from the individual States."

By paragraph 2, section 3, Article IV of the Constitution, Congress was given plenary control over this public domain in the following terms:

"The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States." * * *

The power thus conferred on Congress is as full and complete as the power, conferred by another paragraph of the Constitution, to regulate foreign and interstate commerce. The power of Congress is paramount and plenary in each case. Justice Brewer, in the case of The United States *v.* Rio Grande Co. (174 U. S., 690, 703), declares:

"Although this power of changing the common-law rule as to streams within its dominion undoubtedly belongs to each State, yet two limitations must be recognized: First, that in the absence of specific authority from Congress a State can not by its legislation destroy the right of the United States as the owner of lands bordering on a stream to the continued flow of its waters, so far at least as may be necessary for the beneficial uses of the Government property. Second, that it is limited by the superior power of the General Government to secure the uninterrupted navigability of all navigable streams within the limits of the United States. In other words, the jurisdiction of the General Government over interstate commerce and its natural highways vests in that Government the right to take all needed measures to preserve the navigability of the navigable watercourses of the country even against any State action."

The right of the Federal Government as riparian owner is that of a riparian owner at common law. (Sturr *v.* Beck, 133 U. S., 541; Lux *v.* Haggin, 69 Cal., 336.) This right vested in the Federal Government when it acquired its public domain and of this right it is not divested on the admission of a State into the Union, for this right is expressly reserved by the Constitution. The title of the Federal Government to the public lands in the States where the rule of prior appropriation prevails antedates the admission of those States into the Union, and over that title the Constitution reserved plenary power of disposal and regulation to the Federal Government. It is only when the Federal Government has entirely parted with that title and it has passed into other ownership that the power of regulation on the part of the Federal Government becomes extinct. The water on the riparian land of the Federal Government is an appurtenance of the land of which it can not be divested without its consent, no more than of its riparian lands. In the case of The United States *v.* Winans (198 U. S., 371) it was held that the Federal Government had the power to reserve a fishing right for the Yakima Indians in the Columbia River, and that such reservation, though made when the State was a Territory, bound the future State. And in the case of Winters *v.* The United States (207 U. S., 564) it was held that the Federal Government had the right to reserve the water in the Milk River for the benefit of the Indians and officers of the Government on the Fort Belknap Reservation, in Montana, and that this reservation of the water, though made while Montana was a Territory, bound it after it became a State. The court affirms and asserts the doctrine and rule in these terms:

"Another contention of appellants is that if it be conceded that there was a reservation of the waters of Milk River by the agreement of 1888, yet the reservation was repealed by the admission of Montana into the Union, February 22, 1889 (ch. 180, 25 Stat., 676), 'upon an equal footing with the original States.' The language of counsel is that 'any reservation in the agreement with the Indians, expressed or implied, whereby the waters of Milk River were not to be subject of appropriation by the citizens and inhabitants of said State, was repealed by the act of admission.' But to establish the repeal counsel rely substantially upon the same argument that they advance against the intention of the Government to reserve the waters. The power of the Government to reserve the waters and exempt them from appropriation under the State laws is not denied, and could not be." (The United States *v.* The Rio Grande Ditch & Irrigation Co., 174 U. S., 690, 702; United States *v.* Winans, 198 U. S., 371.)

In the case of Camfield *v.* United States (167 U. S., 518), the court declares:

"While we do not undertake to say that Congress has the unlimited power to legislate against nuisances within a State, which it would have within a Territory, we do not think the admission of a Territory as a State deprives it of the power of legislating for the protection of the public lands, though it may thereby involve the exercise of what is ordinarily known as the police power, so long as such power is directed solely to its own protection. A different rule would place the public domain of the United States completely at the mercy of State legislation."

These opinions of the Supreme Court of the United States have been concurred in by some of the courts of those States in which the rule of prior appropriation prevails.

Judge Rudkin, of the Supreme Court of the State of Washington (now a Federal district judge), in the case of Kendall *v.* Joyce (48 Wash., 492–493), declares:

"It has never been contended that a mere squatter on public land who subsequently sells out or abandons his claim acquires, or can acquire, riparian rights in a stream flowing through the land. Riparian rights are a mere incident to ownership in the soil, and, while they may relate back by fiction of law to the date of the settlement or filing, by virtue of the patent subsequently issued, yet they do not vest until patent issues, for up to that time the patent to the land with all its incidents is vested in the United States, utterly beyond the power or control of State legislatures. And the party thereafter acquiring title from the Government acquires the land with all its incidents."

In the case of Cruse *v.* M'Cauley (96 Fed. Rep., 369), the United States Circuit Court for Montana, through Judge Knowles, declares:

"It must be conceded that the United States, as the proprietor of the land over which the South Fork of McDonald Creek flowed, had a right to the flow of the waters thereof over its land, as an incident thereto. In the eastern part of Montana the United States acquired its title to land by virtue of what is called the "Louisiana Purchase." There can not be one rule as to the right to the flow of water over its lands in Montana and another rule as to its lands in Iowa and Missouri. In these last-named States there can be no doubt of the rule that the National Government would be entitled to water which is an incident to its land. As the United States then owns the waters which are an incident to its lands, it can dispose of them separate from its lands if it chooses. Section 2339, Revised Statutes, provides:

"'Whenever by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes, have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and decisions of courts, the possessors and owners of such vested rights shall be maintained and protected in the same.'

"The practical construction of this statute has been that, as long as land belonged to the United States, the waters flowing over the same was subject to appropriation for any of the purposes named, when such appropriation was recognized by the local customs, laws, or decisions of the courts. But if the water was not so appropriated when it flowed over the public domain, it was not subject to appropriation after the land over which it flowed became private property. Patents of the United States to lands contain this clause:

"'Subject to any vested and accrued water rights for mining, agricultural, manufacturing, or other purposes,' etc.

"Certainly this means subject to such water rights as existed at the time when the patent took effect. * * *

"If a person receives a patent from the United States for land subject only to accrued water rights—that is, existing water rights—and as an incident to or a part of this land there is water flowing over the same or upon the same, he would have all the rights the United States had at that time. I do not think any State law or custom can take away such rights, except for some public purpose."

The Federal Government has the undoubted right to lease its riparian and other lands with all their appurtenances. (United States *v.* Gratiot, 14 Pet., 526.)

Congress has also the undoubted power to create and establish forest reserves on the lands of the United States within any State and to authorize the Secretary of Agriculture to make proper rules and regulations for the use of the same and to charge a compensation for the use of any portion of the reservation, and such a statute amounts to a revocation of the implied license to graze the public lands, referred to and sustained in the case of Buford *v.* Houtz (133 U. S., 320). (See United States *v.* Grimaud, 220 U. S., 506; Light *v.* United States, 220 U. S., 523.)

In this connection it may be observed that the right to occupy and use the public lands of the United States for canals and ditches, for the appropriation of water for agricultural and mining purposes, is based upon and conferred by the following acts: July 26, 1866 (R. S., sec. 2339), and July 9, 1870 (R. S., sec. 2340). There is, in addition to these acts, the right-of-way law contained in the act of March 3, 1891. (26 Stat., p. 1101.) It is through these laws, and not by virtue of any State authority, that the use of the public domain for the appropriation of water is conferred and acquired.

It is further to be noted that the act of June 25, 1910 (36 Stat., 847), confers the following-described power upon the President in these terms:

"That the President may, at any time in his discretion, temporarily withdraw from settlement, location, sale, or entry any of the public lands of the United States, including the District of Alaska, and reserve the same for water-power sites, irrigation, classification of lands, or other public purposes to be specified in the orders of withdrawals, and such withdrawals or reservations shall remain in force until revoked by him or by an act of Congress."

In the light of the constitutional provision and of the interpretation placed upon it by the decisions of the Supreme Court and other courts in respect to this subject, it seems clear that the Federal Government, through Congress, has the power to lease its riparian lands, with the waters appurtenant thereto, situate within the several States, for such a period, on such terms, and for such rent as Congress in its discretion may prescribe, but the lessee would at most only acquire the common-law usufruct in the water of the appurtenant stream, as defined by Chancellor Kent and Chief Justice Shaw.

THE POWER OF THE FEDERAL GOVERNMENT UNDER THE INTERSTATE-COMMERCE CLAUSE OF THE CONSTITUTION.

For the purpose of promoting and regulating foreign and interstate commerce Congress is given plenary power over all the navigable waters of the United States, to the end of improving and maintaining their navigability; and this power is not limited to the navigable sections of streams, but extends to the tributaries and feeders of the same, for without the control of these the power over the navigable sections might become wholly impotent. (United States *v.* Rio Grande Co., 174 U. S., 690.) Neither can any limits be placed upon the methods of improving the navigability of streams nor upon the means by which commerce can be carried on upon the same.

Science has in recent years evoked from the great storehouse of nature the hidden and well-nigh limitless power of electricity and utilized the same in various ways for the promotion of commerce, industry, and the domestic and social well-being of mankind. The bounds of such power and use can not well be defined or foretold. That such power has become and may still much further become one of the great instrumentalities of commerce is evident. While sail, aside from the oar, was the only known motive power on water the limits of navigation was confined to tide water. The discoverey of steam extended navigation on our streams far beyond the limits of tide water, and who can tell how much further hydroelectrical power generated by a dam in a stream may extend navigation on that or some other stream? The water in a stream may not only be used to float and carry a vessel, a boat, or a barge, but it may also be used to furnish the motive power for the navigation of the same. And a dam erected in a stream carrying interstate commerce can well be utilized for this double purpose; and Congress, having jurisdiction over the improvement and regulation of an interstate navigable stream, has ample power to resort to all reasonable means for the improvement of navigation and the promotion of commerce on such a stream. (Gibbons *v.* Ogden, 9 Wheat., 1.)

If, for the purpose of improving the navigability of a stream carrying interstate commerce, the Federal Government constructs and maintains a dam, with locks and gates, on its riparian lands or on lands in which it has acquired an easement for such construction and maintenance, the Government has the undoubted right to establish and maintain, in connection with such dam, an electric power plant for the purpose of furnishing motive power to operate such locks and gates. And the Federal Government has the right to sell, lease, or rent, for compensation, any surplus power that may arise from and be an incident to such an improvement of navigation. (Kaukauna Water Power Co. *v.* Green Bay & Mississippi Canal Co., 142 U. S., 254.)

This case relates to the construction of a dam for purposes of navigation and the use of the surplus water incident thereto. In 1846, Congress made a grant of land to the State of Wisconsin for the improvement of the navigation of the Fox and Wisconsin Rivers. The State assumed the grant and the work. In the act of assumption it was provided among other things:

"Whenever a water power shall be created by reason of any dam erected or other improvements made on any of said rivers, such water power shall belong to the State, subject to the future action of the legislature."

The court, in passing upon the effect of this reservation to the State, declares:

"But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such improvement. Indeed, it might become very necessary to retain the disposition of it in its own hands, in order to preserve at all times a sufficient supply for the purposes of navigation. If the riparian owners were allowed to tap the pond at different places and draw off the water for their own use, serious consequences might arise, not only in connection with the public demand for the purposes of navigation, but between the riparian owners themselves as to the proper proportion each was entitled to draw—controversies which could only be avoided by the State reserving to itself the immediate supervision of the entire supply. As there is no need of the surplus running to waste, there was nothing objectionable in permitting the State to let out the use of it to private parties, and thus reimburse itself for the expenses of the improvement."

The court, after further comments and the citation of three Ohio cases, adds:

"The true distinction seems to be between cases where the dam is erected for the express or apparent purpose of obtaining a water power to lease to private individuals, or where in building a dam for a public improvement a wholly unnecessary excess of water is created, and cases where the surplus is a mere incident to the public improvement and a reasonable provision for securing an adequate supply of water at all times for such improvement."

Also, see Green Bay Co. *v.* Patten Co. (172 U. S., 58), relating to the same water power and dam after the Federal Government had taken over the work and improvement.

In general, it may be said that whenever the Federal Government is engaged in improving the navigability of a stream on which there is interstate commerce, if by reason and in consequence of such improvement, and as an incident thereto, surplus power is created, the Federal Government has the right to lease or sell such power on such terms and for such compensation as it may deem just.

Congress, as in the case of Wisconsin, Ohio, and other States, can delegate the work of improving portions of navigable rivers to States, municipalities, private corporations, and individuals, and if in connection with such improvement and as an incident thereto surplus power is created, Congress may authorize those to whom the right of improvement is delegated to lease and secure compensation for such surplus power. In such cases those to whom the power of making the improvement is delegated are the agents for and stand in place of the Federal Government. But unless such work of improvement is primarily made for the purpose of improving the navigation on streams or other waters carrying interstate commerce the Federal Government could not confer the power to obtain compensation for the use of the water.

Provision has been made in several acts of Congress for the utilization of surplus water power on navigable streams. In a part of the cases the dam or other improvement has been carried on and made directly by the United States; in other cases by private parties. Senate Document No. 57, first session Sixty-second Congress (see Exhibit B, appended hereto), contains a list of the cases where so-called water-power privileges have been granted. The case of the Black Warrior River in Alabama has been added to the document since it was issued.

ANSWER TO THE INTERROGATORIES PROPOUNDED IN THE RESOLUTION.

Coming now, in the light of the Constitution and of the construction and interpretation put upon it by the courts in the authorities we have cited, to the direct consideration of the interrogatories propounded in the foregoing resolution, and before attempting to directly respond to the same, it must be borne in mind that it is always difficult to give a satisfactory and instructive answer to a hypothetical or abstract question. It is much easier to solve a concrete case.

As to the first interrogatory, the only answer we can make is this: That whether a stream is navigable or nonnavigable, State or interstate, the rights of the Federal Government as riparian owner are practically the same; and barring any power that may rest in the Federal Government under the commerce clause of the Constitution, that Government has manifestly the right to lease, for compensation and on such terms as it sees fit, its riparian lands with the water appurtenant thereto, but the lessee would not acquire a greater right or interest in such water than the usufruct as defined by the common law, and such right or interest would be subject to and charged with any right acquired under the act of July 26, 1866. (R. S., sec. 2339.) The Federal Government has no water power aside from the usufruct to lease in such case, and if the utilization of the water in a stream is sought beyond such usufruct and for other purposes authority therefor must be obtained from the State where the residuary power over the water resides.

Responding to the second interrogatory, we are of the opinion, divorcing the question from riparian rights, that the Federal Government, in authorizing the construction and maintenance of a dam on a navigable stream by States, municipalities, or private parties for the chief and primary purpose of improving the navigation of the stream has the same right to prescribe the terms and compensation for the use of the surplus power created as an incident to the main improvement as the Government would have in case it had itself built the dam or made the improvement, and that the Government having delegated the power of building such dam to private parties might well confer upon them as compensation for the work thus undertaken the right to do what the Government itself could do in case it had itself constructed the work. In this connection, and as a further response to the interrogatory, it must be noted that the mere grant by the Federal Government of authority to construct a dam in a navigable river, not for purposes of navigation, but really for the creation of a water power, is merely a license or permit, the effect of which is that if the dam is constructed and operated conformable to plans approved by the Government it will not be deemed an obstruction or impediment to navigation. And in such case the Government would be authorized to charge a nominal license fee for inspecting and passing upon the plans and for watching over the work to see that it conforms to the plans and is properly maintained; but the regulative power of the Government would not extend to the use of the water for other purposes than navigation and interstate commerce. In such a case it seems to us that the Federal Government has no water power to sell or charge compensation for, for it is only authorized by the Constitution to regulate interstate and foreign commerce, which in this case means navigation.

As to the third interrogatory, it may be remarked that it has in part been responded to in the answer to the first interrogatory. And as a further answer we will add that the Federal Government has under the Constitution plenary power to sell or lease its riparian lands with the water appurtenant thereto, and that if on any such land there is a water-power site, that, as a part of the riparian land, can of course be sold or leased. The Federal Government has no water power distinct or separable from its riparian lands or any water-power site on the same. The only water power the Federal Government owns is the common-law usufruct in the water appurtenant to its riparian lands. In leasing its riparian lands with their appurtenant water, which is all the Government has to lease within the limits of a State, it can no doubt prescribe such terms as it sees fit in respect to rent, duration of lease, and the uses to which the leased premises may be put. It can say in its lease to the lessee, "If you succeed in creating and maintaining a water power on the premises I lease you, you will be required to rent such power on such and such terms. This condition will be in your lease; without it I will not lease you the premises. If you accept a lease with this condition and fail to comply with the condition, your lease will be forfeited." In this connection it must be borne in mind, however, that the leasing of the water-power site as a part of the riparian lands of the Federal Government does not in and of itself confer the right to create a water power. At most, as we have already stated, it merely confers the common-law right of usufruct in the water. If any other or further use of the water in the stream is required, the right to such use must be obtained from State authority, and therefore it is difficult to see how water power can be established in such cases without the cooperation or consent of the State.

Several acts have been passed by Congress relating to obstructions, and the construction of dams, in navigable rivers. Among these, to which we call your attention, is the act of September 19, 1890 (26 Stat., 426), which contains important provisions for the removal or change in bridges that are found to be an obstruction to navigation by the Secretary of War, and other provisions relating to the construction of wharves, piers, bridges, etc.

The act of July 13, 1892 (27 Stat., 88), relates particularly to the construction of wharves, piers, and bridges over navigable waters, and requires the approval of the Secretary of War for any improvement or bridge. (See sec. 3, p. 110.)

Section 10 of the act of March 3, 1899 (30 Stat., 1121), prohibits the creation of any obstruction to the navigable capacity of any of the waters in the United States not affirmatively authorized by Congress, etc., and prohibits the construction of any breakwater, jetty, or other obstruction in any river or water of the United States, except on plans recommended by the Chief of Engineers and authorized by the Secretary of War. Section 9 of the same act prohibits the construction of any bridge, dam, etc., over any navigable river without the consent of Congress and without the approval of plans by the Chief of Engineers and Secretary of War.

The act of June 21, 1906 (34 Stat., 386), relates to the construction of dams by parties other than the Federal Government, and the act of June 23, 1910 (36 Stat., 593), is amendatory of the preceding act, and lays down many important rules and regulations for the construction of dams in navigable rivers, etc.

* * * * * * *

VIEWS OF SENATOR CULBERSON.

Sovereignty, dominion, and control of the flowing waters of all streams, navigable or otherwise, within its borders are reserved to a State, subject only to such powers as are vested in the Federal Government by the commerce clause of the Constitution, and such rights as may accrue to it as the actual owners of riparian lands.

"The opinion (in Shively *v.* Bowlby, 152 U. S., 1) refers to all the cases which we have above cited and many others upon the various questions which are discussed in the case and recognizes the rule that it belongs to the States to decide as to the character and extent of the riparian rights of owners upon navigable streams within such States.

"The jurisdiction of the State over this question of riparian ownership has been always, and from the foundation of the Government, recognized and admitted by this court. (Water Power Co. *v.* Water Commissioners, 168 U. S., 366.)

"While this is undoubted, and the rule obtains in those States in the Union which have simply adopted the common law, it is also true that as to every stream within its dominion the State may change this common-law rule and permit the appropriation of the flowing waters for such purposes as it deems wise. * * *

"Although this power of changing the common-law rule as to streams within its dominion undoubtedly belongs to each State, yet two limitations must be recognized: First. That in the absence of specific authority from Congress the State can not by its legislation destroy the right of the United States as the owner of lands bordering on a stream to the continued flow of its waters, so far at least as may be necessary for the beneficial uses of the Government's property. Second. That it is limited by the superior power of the General Government to secure the uninterrupted navigability of all navigable streams within the limits of the United States. (U. S. *v.* Rio Grande Co., 174 U. S., 702–703.)

"Grants by Congress of portions of the public lands within a Territory to settlers thereon, though bordering on or bounded by navigable waters, convey of their own force no title or right below high-water mark and do not impair the title and dominion of the future State when created, but leave the question of the use of the shores by the owners of uplands to the sovereign control of each State, subject only to the rights vested by the Constitution of the United States. (Shively *v.* Bowlby, 152 U. S., 58.)

"But it is useless to pursue the inquiry further in this direction. It is enough for the purpose of this case that each State has full jurisdiction over the lands within its borders, including the beds of the streams and other waters [citing numerous authorities]. (Kansas *v.* Colorado, 206 U. S., 93.)

"As to those lands within the limits of the States, at least of the Western States, the National Government is the most considerable owner and has power to dispose of and make all needful rules and regulations respecting its property. We do not mean that its legislation can override State laws in respect to the general subject of reclamation." (Ib., p. 92.)

The fact that a stream may constitute the boundary between the United States and a foreign country does not change the general rule. Concerning a question of riparian right on the Sault Ste. Marie River, the boundary river between the United States and Canada, the court said: "The fact that it is a boundary has not been held to make a difference"; that is, a difference in the rule of law applying to riparian rights in the State of Michigan. (U. S. *v.* Chandler-Dunbar, etc., 209 U. S., 453.)

It being clear, then, that dominion, sovereignty, and control of the flowing waters of a navigable stream within its borders rest with the State, and that it may enact such laws as it deems suitable for the disposition and control of such waters for manufacturing, irrigation, or other industrial purposes, so long as the navigability of the stream is not affected, can the National Government, eliminating here the question of its possible actual riparian ownership on the borders of a stream, exercise similar power; and if so, under what warrant? Clearly, not at all, unless it be under the commerce clause of the Constitution. As to this, Senator NELSON, in his confidential report to the Judiciary Committee, says, on page 11:

"If, for the purpose of improving the navigability of a stream carrying interstate commerce, the Federal Government constructs and maintains a dam, with locks and gates, the Government has the undoubted right to establish and maintain, in connection with such dam, an electric power plant for the purpose of furnishing motive power to operate such locks and gates. And the Federal Government has the right to sell, lease, or rent, for compensation, any surplus power that may arise from and be an incident to such an improvement of navigation." (Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co., 142 U. S. 254.)

And on page 12:

"Also, see Green Bay Co. *v.* Patten Co. (172 U. S., 58), relating to the same water power and dam after the Federal Government had taken over the work of improvement.

"In general, it may be said that whenever the Federal Government is engaged in improving the navigability of a stream on which there is interstate commerce, if by reason and in consequence of such improvement, and as an incident thereto, surplus power is created, the Federal Government has the right to lease or sell such power on such terms and for such compensation as it may deem just."

And, on page 13:

"Responding to the second interrogatory, we are of the opinion, divorcing the question from riparian rights, that the Federal Government, in authorizing the construction and maintenance of a dam on a navigable stream by States, municipalities, or private parties, for the chief and primary purpose of improving the navigation of the stream, has the same right to prescribe the terms and compensation for the use of the surplus power, created as an incident to the main improvement, as the Government would have in case it had itself built the dam or made the improvement, and that the Government having delegated the power of building such dam to private parties, might well confer upon them as compensation for the work thus undertaken the right to do what the Government itself could do in case it had itself constructed the work."

The propositions laid down above are believed to be too broad. The exercise of such a power by the National Government is inconsistent with the established rule that such control of the waters rests exclusively with the State. It might result in the National Government leasing, selling, giving away, creating a monopoly in all the flowing waters within a State, or in its exercising such power at one point on a navigable stream under rules, regulations, and upon terms different from and in actual conflict with the rules, regulations, and terms established by the State for all other portions of the stream within its borders. As intimated by the Supreme Court in Kansas *v.* Colorado (206 U. S., 92), the National Government would be without power to adopt such a course with reference to lands which it actually owned and wholly controlled within the limits of a State: "We do not mean that its (the National Government's) legislation can override State laws in respect to the general subject of reclamation."

To sustain the right of the Federal Government to dispose of surplus power and water incidentally created in the course of improving the navigability of a stream, reliance is placed upon two decisions of the Supreme Court, i. e., in the cases of Kaukana Water Power Co. *v.* Green Bay & Mississippi Canal Co. (142 U. S., 254) and Green Bay, etc., Co. *v.* Patten Co. (172 U. S., 58).

The case first cited is not in point. The right of the Federal Government to sell or dispose of incidentally created surplus water power was not involved.

Briefly, the facts in this case were: Congress granted public lands to the future State of Wisconsin for the improvement of the navigation of the Fox and Wisconsin Rivers. The State accepted the grant and undertook the work of improving the Fox River, reserving to itself all water powers created and appurtenant to such improvement, "subject to future action of the legislature." Unable to complete the work, the State incorporated and transferred to an improvement company the incomplete work, vesting in the company complete title to all the improvements, water powers to be created, rights, powers, and franchises. The improvement company mortgaged the property, was unable to meet its indebtedness, the mortgage was foreclosed, and complete title passed under foreclosure sale to the Green Bay & Mississippi Canal Co., the appellee.

This company in turn became seized in fee of all the improvements and all the appurtenant rights, powers, and franchises. Finding the operation of the dam and canal unprofitable, this company in turn sold the improvements to the United States Government, reserving, however, to itself the water power created by the dam and the use of surplus water not required for purposes of navigation. Another company, claiming the right as a riparian owner, thereafter attempted to draw water from the pond formed by the dam, and thus deprive the Green Bay Co. of its use, control, and dominion over it. The Supreme Court of Wisconsin directed an injunction against the intruding company, and the case went to the Supreme Court of the United States on the ground that it involved the validity of a State statute, because repugnant to the Constitution of the United States. Mr. Justice Brown, for the court, among other things, said (p. 272):

"With respect to such rights (riparian rights) we have held that the law of the State, as declared by its supreme court, is controlling as a rule of property." (Barney *v.* Keokuk, 94 U. S., 324, etc.)

Upon the question as to the validity of the State statute, he said (p. 273):

"But if, in the erection of a public dam for a recognized public purpose, there is necessarily produced a surplus of water, which may properly be used for manufacturing purposes, there is no sound reason why the State may not retain to itself the power of controlling or disposing of such water as an incident of its right to make such an improvement."

There is, indeed, no sound reason for denying such a right to the State. Such a right is entirely consistent with the doctrine of the State's dominion and sovereignty over the flowing waters of the navigable streams within its borders. But there is no word in the entire opinion in regard to the power of the Federal Government to assert and reserve such a right, and certainly there can be no parity in application of the construction of a rule dealing with the reserved rights of the State to the limited constitutional grants to the National Government. What there is sound reason for conceding to the State, there is under the circumstances equally as sound reason for denying to the Federal Government. The first proposition from the report quoted supra gains no support from the case cited.

The other case, that of Green Bay, etc., Canal Co. *v.* Patten Paper Co. (172 U. S., 58), is another suit against the same company as above. In this suit the right of the United States to control and dispose of the surplus waters created by the improvement to navigation heretofore described was brought directly into question. As said by Mr. Justice Shiras for the court (pp. 68–69):

"Whether the water power, incidentally created by the erection and maintenance of the dam and canal for the purpose of navigation in Fox River, is subject to control and appropriation by the United States, owning and operating those public works, or by the State of Wisconsin, within whose limits Fox River lies, is the decisive question in this case.

"Upon the undisputed facts contained in the record we think it clear that the canal company is possessed of whatever rights to the use of this incidental water power that could be validly granted by the United States."

The court then reviews the history of the whole enterprise, i. e., the granting of land by act of Congress to the future State of Wisconsin for the express purpose of the improvement of the navigation of the river; the acceptance of the grant by the legislature of the State and the accompanying express reservation of title in the State to the water power incidentally created "subject to the future action of the legislature"; the act authorizing the relinquishment of such water powers to the persons undertaking the work of improvement; the act creating a corporation authorized to undertake the work and take all the powers, rights, and franchises possessed by the State; the failure of the company so created, foreclosure of the mortgage, and acquirement of all its property, rights, and powers at the sale by purchasers, who were incorporated under another act of the legislature, specifically investing them with such rights, powers, franchises, etc.; the sale by this last company (appellant in this case) of all the property to the United States Government, under an act of the Legislature of Wisconsin authorizing the sale and an act of Congress providing for the purchase, and the reservation by the company in its conveyance of title to the personal property, water powers, and appurtenances. With reference to this reservation by the company the court said (p. 80):

"The substantial meaning of the transaction was that the United States granted to the canal company the right to continue in the possession and enjoyment of the water powers and the lots appurtenant thereto, subject to the rights and control of the United States as owning and operating the public works, and that the United States were credited with the appraised value of the water powers and appurtenances and the articles of personal property. The method by which this arrangement was perfected, namely, by a reservation in the deed, was an apt one, and quite as efficacious as if the entire property had been conveyed to the United States by one deed, and the reserved properties had been reconveyed to the canal company by another.

"So far, therefore, as the water powers and appurtenant lots are regarded as property, it is plain that the title of the canal company thereto can not be controverted; and we think it is equally plain that the mode and extent of the use and enjoyment of such property by the canal company fall within the sole control of the United States. At what points in the dam and canal the water for power may be withdrawn, and the quantity which can be treated as surplus with due regard to navigation, must be determined by the authority which owns and controls that navigation. In such matters there can be no divided empire.

Evidently questioning the inherent right of the National Government under the Constitution to dispose of this surplus water power by virtue of its ownership of the dam, the court adopted the fiction of transfer and retransfer, so that the chain of title might be complete and a foundation laid for the Government's claim of authority to dispose of the surplus water. An abstract of the title would begin then with the acknowledged ownership by the State of the entire property, including the right to control and dispose of the surplus water power, and continuing, through the transfer by the State of its title and all appurtenant rights and powers to the first company; the foreclosure sale under mortgage and purchase by the second company, vesting it in turn with the complete title and all appurtenant rights and powers; the transfer by the second company to the national company of its title and all appurtenant rights and powers, all these transfers being duly authorized by acts of the Wisconsin Legislature; and finally the retransfer of the right to the use and enjoyment of such water powers by the Government to the second company, but a retention of all other property conveyed, including whatever power of control may have been vested in the company by the State. As Mr. Justice Shiras says (p. 76):

"We have here the case of a water power incidental to the construction and maintenance of a public work and, from the nature of the case, subject to the control of the public authorities, in this instance the United States."

And, at page 79:

"The legal effect and import of the sale and conveyance by the canal company were to vest absolute ownership in the improvement and appurtenances in the United States, which proprietary rights thereby became added to the jurisdiction and control that the United States possessed over the Fox River as a navigable river."

In other words, the United States bought the right to dispose of this surplus water power. It never possessed it under the commerce clause of the Constitution giving it control of the navigation of the river. It was a proprietary right, coming down by regular conveyance from the State of Wisconsin. The National Government always had the right under the Constitution to prevent the State of Wisconsin, or its successors in title to this dam and appurtenances, from destroying or impairing the navigability of the river by an improvident diversion of the flowing waters, but it never had the right, until it acquired it by purchase, of disposing of the surplus water power so created, and the court does not say it did. The State had such a right, and the court in the first case, supra, specifically recognized not only its right but its power to dispose of it.

So far as the authority of the National Government in the premises is concerned, what this case really does decide, and that is not now an open question, and was not so then, is, that the National Government has plenary power to maintain the navigability of streams uninterrupted, and further, that in the exercise of that power, it can determine at what points in its dams erected in aid of navigation water may be withdrawn, the quantity that may be withdrawn so far as it affects the question of navigability, and all other matters affecting that question solely. As is said by the court (p. 80): "In such matters there can be no divided empire." The power to sell surplus water incidentally created by improvements in aid of navigation is not given the National Government, in terms at least, by the Constitution.

The sole and exclusive right of the States to control the disposition of the flowing waters within their boundaries, limited only by nonimpairment of the riparian rights (under the State system) of the Government as an actual owner of lands, and noninterference with the maintenance and improvement of the navigation of streams, has been too repeatedly and too strongly confirmed by the Supreme Court to be now questioned, and this reserved and valuable right would be seriously impaired—sometimes, perhaps, entirely destroyed—if the National Government, under the guise of aiding navigation, could exercise a precisely similar, but paramount, right at will. Here, too, there should be "no divided empire." The National Government has the undoubted power to see to it that the navigability of streams is maintained when they are in fact navigable, and that right is granted to it by the Constitution of the United States. The State has the undoubted right to control the disposition of the waters within its limits, subject only to the limitations stated, and that right has been repeatedly confirmed by the Supreme Court. Neither should seek to invade the province of the other. In Kansas *v.* Colorado (206 U. S., 88), Mr. Justice Brewer said:

"Yet, while so construed (that is, broadly), it still is true that no independent and unmentioned power passes to the National Government or can rightfully be exercised by the Congress."

The power to seize upon and dispose of the flowing waters of a State would be both independent and unmentioned. Assertion of the existence of such power under the second paragraph of section 3 of Article IV of the Constitution, providing "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States," etc.

was made by counsel for the United States Government intervening, apparently, upon the theory that the National Government, being a large owner of arid lands in the Western States, might enter into a general scheme of reclamation, and, consequently, had an interest in the controversy between the States as to the disposal of the waters of the Arkansas River—the boundary between them. The contention of the Government met with no favor, the court stating emphatically that no such power had been granted and none could be exercised. Conceding, however, that so far as its own lands were concerned, the National Government had power to make all needful rules and regulations, the court materially qualified this declaration by adding:

"We do not mean that its legislation can override State laws in respect to the general subject of reclamation." (Ib., p. 92.)

VIEWS OF SENATOR O'GORMAN.

The title, ownership, and dominion over navigable waters are vested in the several States abutting thereon, subject to the rights delegated by the States to the Federal Government.

The power conferred by the Constitution of the United States upon Congress "to regulate commerce" comprehends control of the rivers for that purpose only. Before the Revolution the right of dominion and ownership in the rivers, bays, and arms of the sea and the soils under them resided in the Crown, and, as stated by Chief Justice Taney in the leading case of Martin *v.* Waddell (16 Peter, 367), "when the Revolution took place the people of each State became themselves sovereign; and in that character hold the absolute right to all their navigable waters and the soils under them for their own common use, subject only to the rights since surrendered by the Constitution to the General Government."

To the same effect Shively *v.* Bowlby (152 U. S., 1) and Knight *v.* U. S. Land Association (142 U. S., 161).

In Illinois *v.* People (146 U. S., 387) the court said:

"It is the settled rule of this country that the ownership of, and dominion and sovereignty over, lands covered by tidewaters within the limits of the several States belong to the respective States within which they are found, and with the consequent right to use or dispose of any portion thereof, when that can be done without substantial impairment of the interest of the public in the waters, and subject always to the paramount right of Congress to control their navigation, so far as may be necessary for the regulation of commerce with foreign nations and among the States. This doctrine has often been announced by this court and is not questioned by counsel of any of the parties."

In Kansas *v.* Colorado (206 U. S., 46) it was said:

"The Government of the United States is one of enumerated powers; that it has no inherent powers of sovereignty; that the enumeration of the powers granted is to be found in the Constitution of the United States, and in that alone; that the manifest purpose of the tenth amendment to the Constitution is to put beyond dispute the proposition that all powers not granted are reserved to the people, and that if in the changes of the years further powers ought to be possessed by Congress they must be obtained by a new grant from the people. While Congress has general legislative jurisdiction over the Territories and may control the flow of waters in their streams, it has no power to control a like flow within the limits of a State, except to preserve or improve the navigability of the stream; that the full control over those waters is, subject to the exception named, vested in the State."

In United States *v.* Rio Grande (174 U. S., 709) Mr. Justice Brewer, alluding to the limited and restricted function of the National Government in relation to navigation, said:

"The Hudson River runs within the limits of the State of New York. It is a navigable stream and a part of the navigable waters of the United States, so far at least as from Albany southward. One of the streams which flows into it and contributes to the volume of its waters is the Croton River, a nonnavigable stream. Its waters are taken by the State of New York for domestic uses in the city of New York. Unquestionably the State of New York has a right to appropriate its waters and the United States may not question such appropriation, unless thereby the navigability of the Hudson be disturbed."

These authorities establish the proposition that the ownership of the waters and soil of navigable streams is in the State, and that the Federal Government has no right or power to interfere with the State's property except for the purpose of preserving or improving the navigability of a river. The surplus water or power produced as an incident to the public improvement made by the Government in aid of navigation belongs to the State. Under the commerce clause the Government acquires no title or property interest whatever in the river or bed thereof. The Constitution confers a naked power to regulate commerce; nothing more. The title of the State remains unimpaired, both as to the water and as to the soil. There is no power expressed or implied in the Constitution justifying the claim that the Federal Government may appropriate such surplus water or power. The assertion of such a right would constitute an interference with and confiscation of the property of the State by the Federal Government. The State is the owner of its natural resources, and, within its properly reserved power, has an absolute right to make use of its property, including the water power of its rivers, subject only to the limitation that it can not impede commerce and navigation.

The right of the Government to sell or lease its own property does not justify this attempted appropriation of the property of a State. Section 3, article 4, of the Constitution is a grant of power to the United States of control over its own property, but what belongs to the State can not be the property of the Federal Government.

The United States is not authorized by any of the enumerated powers to engage in the business of manufacturing, transmitting, or selling electrical power, whether at cost or for a profit; and the commerce clause was never designed to permit the Federal Government to secure revenue or profit as an incident to the promotion of the facilities of navigation.

Federal expenditures must be reimbursed exclusively through taxation. The function of taxation is to secure sufficient money to perform the delegated governmental functions. This power was limited by section 8, article 1, as follows:

"The Congress shall have the power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States."

The Constitution merely permits regulation in the interest of navigation and commerce by the Federal Government. Regulation does not mean appropriation or confiscation of the rights of a State in its natural resources.

The contention in favor of the right of the Federal Government to lease the excess water power is without authority or reason to sustain it. Kaukana Co. *v.* Green Bay (142 U. S., 254) and Green Bay Co. *v.* Patten (172 U. S., 58) are not in point and do not support the proposition. The commerce clause was not involved in either case. In the former case the controversy arose between a State and a riparian owner, and in the latter case the right of the Federal Government grew out of a grant and was not based upon the commerce clause.

The claim is made that the Government's improvement creates the excess power, but the fact is that the water that produces the power concededly belongs to the State, and the only effect of the improvement by the Government is to enlarge the potentiality of the State's water at the point of improvement.

The Government has no more right to claim ownership of the increase of the water than the State or a riparian owner would have to require the Government to make compensation for impairment of the stream at other points resulting from the improvement. Where depreciation is necessarily caused by the improvement for navigation the State must bear the loss; where appreciation results from the improvement the State is entitled to the gain. In either case the property affected belongs to the State. As we have seen, the title of the State includes the water as well as the bed of the rivers. The right of the State, under its title, to appropriate the water, subject only to the power of the Government under the commerce clause, is recognized by the cases cited, and the State's title necessarily excludes dominion over its waters by the Government except for the single purpose above indicated. The Government may improve navigation; it can not confiscate the property of the State.

Infantile Paralysis.

EXTENSION OF REMARKS

OF

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GALLIVAN. Mr. Speaker, I am exceedingly sorry that the sundry civil appropriation bill passed unanimously by this House has failed to receive the consideration of the honorable Senate. In that bill appeared an item for $400,000 for the study and prevention of epidemics, and it has been my good fortune to have been successful in persuading the Committee on Appropriations to include in the list of epidemics, for the prevention of which this money was to have been expended, the terrible scourge known as infantile paralysis. At the opening of this session of Congress I introduced a bill calling for a Federal appropriation for an intensive study of the disease, and the committee very generously responded with its approval.

The bill is as follows:

A bill (H. R. 17851) authorizing the Secretary of the Treasury to expend the sum of $250,000 on an intensive study of infantile paralysis.

Be it enacted, etc., That the Secretary of the Treasury be, and hereby is, authorized to expend, through the Public Health Service of the United States, the sum of $250,000, or so much thereof as may be necessary, out of any money in the Treasury not otherwise provided for, on an intensive study of infantile paralysis.

Anterior poliomyelitis, or infantile paralysis, is perhaps the most dreaded disease from which human beings suffer. In other acute infectious diseases the patient either dies or recovers, and the recovery means usually complete restoration to the normal of the functions of the individual. In this disease, when death does not end the infection, recovery is associated in most cases with paralysis and deformity which cripple the individual for the rest of his days.

Another source of horror is the insidious onset of the disease, which often appears out of a clear sky. A child may go to bed in a perfectly healthy condition, as far as external appearances indicate, and wake up in the morning a cripple for life.

Medical research has furnished no satisfactory explanation of the method of transmission of the disease, so that health authorities and parents are at a loss to determine what precautions to take to protect children against infection. One group of theorists claim that the transmission is by means of uncooked food; a second group believe that insect carriers, such as the flea, transfer the infection from the diseased to the healthy, while the dominant group are of the opinion that transmission from a sick child to a susceptible one occurs through the medium of human carriers who have been in contact with cases or who have suffered from the disease and who carry the virus in the secretions of the nose or elsewhere, perhaps without undergoing true infection themselves.

Laboratory research in determining the method of transmission is difficult or impossible on a comprehensive scale for most laboratories, because the disease is only transmissible, outside of man, to monkeys, and among these particularly the anthropoid apes. Adequate research is only possible to organizations of investigators who are backed by unlimited resources. These conditions are found in America only in the Rockefeller Institute and the National Medical Services.

FACTS WHICH ARE KNOWN.

1. Epidemics such as the recent one in Sweden and the present one here are national in their spread, as the health authorities of New York, Chicago, Baltimore, Philadelphia, and Boston will testify.

2. The disease is due to a minute bacterium discovered in America by Flexner and Lewis, and first cultivated in America by Noguchi. (Rosenow and Herzog have found bacteria other than this virus in cultures made from the tonsils, spinal cord, and other tissues of patients who died of the disease, and claim to have reproduced the disease in rabbits. Most observers, however, who have made cultures during life from the spinal fluid, or promptly after death from the tissues, find only the Flexner virus, and look upon the bacteria described by Rosenow and Herzog as secondary infecting agents, and not the primary cause of the disease.)

3. The virus will live outside the body in 50 per cent glycerin solution for a period of six months.

4. Outside of the spinal cord where the virus leads to the destruction of the nerve cells of the anterior horns, giving rise to the characteristic paralysis with deformity, it has been shown by Flexner to be present in the nasal secretion of patients. (Observers at Johns Hopkins Hospital claim to have found the virus in the intestinal tract of patients who died of the disease.)

5. The virus has been obtained from the nasal secretions of patients in the Swedish epidemic up to 204 days after the attack.

6. The susceptibility of children to the disease is limited to a small percentage. But there is no means of knowing which children among a given group will be picked out by the disease and converted into cripples for life.

7. The virus has a peculiar affinity for the tissues of the spinal cord and brain.

The disease process is a low-grade inflammation with a long incubation period and resembles the slower infections, such as typhoid fever, rather than the very acute processes, such as scarlet fever and measles. When sufficient harm has been done to the cells of the central nervous system the disease symptoms appear with almost explosive rapidity. The infection would probably be of little importance were it not for its tendency to focus in the nervous tissues of the body, and particularly the nerve cells. These cells are so highly organized that they present little resistance to injury, if an injurious agent can reach them, and have lost the power to reproduce themselves so that a given cell once destroyed is not replaced. The cells of the anterior horns of the spinal cord govern the transmission of impulses to muscles which cause them to contract. When these cells are destroyed the corresponding muscles receive no messages or impulses to contract, and therefore remain inactive (paralyzed) and gradually atrophy; that is, shrink. The opposing muscles may be actuated from cells which did not suffer, and therefore tend to overact when the pull of the normally opposing muscles is lost. This leads to further deformity on top of the paralysis.

SUGGESTIONS AS TO THE SCOPE OF THE RESEARCH.

1. Higher apes are a sine qua non for the proper study of the disease. Cultivation of the virus outside of man and the apes is only possible where the virus exists in a pure state, as in the spinal cord. The identification of the virus where it is present on a surface on which other bacteria thrive, as in the nose, is only possible through the inoculation of monkeys, in whom the other bacteria are killed off, but the virus grows in purity, giving rise to infection of the animal.

Under present conditions of transportation it is a very difficult and expensive procedure to obtain anthropoid apes. These animals are notoriously delicate, and the long sea voyage leads to sickness and death, either on the voyage or shortly after their admission to the country.

Unna, dealing with the similar problems in the study of syphilis, established his research laboratory on the island of Java in the home of the higher ape, where these animals were inexpensive to buy and could be kept under natural conditions, so that exhaustion, such as followed a long sea voyage, and intercurrent diseases could be eliminated. The results obtained by his research indicated the desirability of the procedure.

It is therefore recommended that a research expedition be sent to the Tropics where higher monkeys are available in numbers, and inexpensive, for the purpose of study of this disease. Since the virus can be preserved in 50 per cent glycerine for six months the forwarding of material for study is a simple problem in transportation, particularly since the islands where research could best be carried out are in relatively close relation to the Philippines. The possibility of the transfer of monkeys to our own island possessions and the carrying out of the research on American ground might be worth considering.

2. Since the virus is known to exist in the nasal secretions of convalescents for a long period after recovery from the acute manifestations of the disease, it is evident that convalescent children may serve as reservoirs for the virus. In this country cold weather usually puts a stop to active epidemics. But a child who carries the virus in the nose for 200 days may be the means of protecting the virus during the winter months, so that it is ready in the spring for the infection of others and the starting of an epidemic.

It has been shown that the virus is unlike ordinary bacteria and resembles other filterable viruses; e. g., that of smallpox in its resistance to glycerine, which kills other bacteria; in other words the virus exhibits a stronger resistance against the killing power of glycerine than do bacteria. It is probable that there exist chemical agents incapable of killing bacteria, but capable of destroying the virus. Experimentation should be carried out to determine the resistance of this virus to various chemical substances, with the view of obtaining some agent, harmless to the patient, but effective in destroying the virus in the nose, so that the convalescent from the disease will cease to be a menace to the community. That the virus is vulnerable is indicated by the rapidity with which it loses its virulence in cultures, though retaining it in glycerine and in nasal secretions. (For example: Inhalation of alcohol vapor might destroy.)

3. The most important desideratum, however, is the obtaining of a prophylactic agent which will protect the individual against infection. The need of such an agent is acute because of the futility of treatment in most cases. To be sure there are prodromal (threatening) symptoms in many cases, but these are usually mild, and it is only the rare discriminating physician who suspects the possibility of infantile paralysis, and insists on the removal of spinal fluid for the purpose of making a diagnosis. If the fluid shows an inflammatory process, the injection of the blood serum of one who has recovered from the disease may prevent the oncome of paralysis.

But for one case in which prodromal symptoms give warning and the keen physician insists on lumbar puncture, there are hundreds in which the onset is too sudden, or the parents fear the operation, or the serum is not available, or its use is not followed by good results. So that in the last analysis treatment is of little avail, largely because the harm has already been done to the cells of the spinal cord before there is even a suspicion that the disease exists.

The disease resembles smallpox, against which prophylactic vaccination has accomplished so much, in that one attack usually protects for life; in that the viruses are filterable and exhibit a similar resistance to glycerine; in that the serum of the patient who has recovered from the disease possesses the power to destroy the virus.

The virus of smallpox is so modified by passage through the cow that it is rendered incapable of producing in human beings the general disease, smallpox, but produces the local process, vaccinia, which confers protection.

The similar virus of rabies as a result of slow drying loses the power to produce rabies, but when injected into the human body confers protection from the disease.

Search should be made for some procedure which, perhaps through modification in other animals, or through physical or chemical means, will so affect the virus that it will not produce infantile paralysis, but can be used to protect children against infection with the disease.

4. Epidemiological studies of the means of transmission of the disease are now being carried out in the various foci of infection by State and municipal health authorities. A central administration, such as the National Health Services can furnish, should collect and correlate these data.

Prompt action should be taken in this matter, because it is probable that with the opening of spring this terrible disease will show renewed activity either in the regions in which it is already epidemic or in new territory. There are hundreds of mothers who are wondering at this moment whether this disease will leave their loved ones whole or will transmute the beautiful bodies of their children into deformed and loathsome travesties of the human form divine.

Sociological aspects—i. e., dependency of crippled children, whose life expectation is not shortened as a result of their deformity, but can not do a man's work in the world, etc.

I desire to call to the attention of Congress some expert opinions setting forth all that is known to date about this frightful malady.

TELLS HISTORY OF INFANTILE PARALYSIS—DR. E. W. TAYLOR BELIEVES QUARANTINE NEEDLESS—INSECT THOUGHT TO SPREAD IT, HE SAYS IN HARVARD MEDICAL LECTURE.

Pretty much all that is known of infantile paralysis was related by Dr. E. W. Taylor in a public lecture at the Harvard Medical School on Longwood Avenue yesterday afternoon—and there are mighty few definite things that are known about the disease outside of the fact that it is epidemic and seems to have become more so in the past few years, especially in the United States.

The scientists have been hard after it the past few years, however; and they believe they are close to a solution of what is regarded as about the most mysterious disease known—a disease that can not be traced to insanitary conditions, that seems to prefer the well-to-do rather than the poor, that flourishes more in rural districts than in cities, that is more prevalent in summer than winter, that is apparently not contagious from contact with a person afflicted with the disease, and that is spread either by an insect—like yellow fever—or else in some way not yet known to science.

STRICT QUARANTINE NEEDLESS.

Dr. Taylor said that such strict forms of quarantine as have been adopted by boards of health are apparently needless and only tend to panic, for there is absolutely no more proof that infantile paralysis can be caught from contact than can yellow fever, which up to within a few years was thought to be spread by contagion. Even as it is, the death rate is not nearly as great as the rate from other prevalent forms of disease, such as pneumonia and tuberculosis. In New York last year it was only 1 to 500 of the population.

He said it looks as if teething might have something to do with it, as the greatest number of cases occur among children about two years of age; but there is nothing certain about this, as people at all ages up to 50 catch it. There are few cases that occur among people above 50.

It is very probably an ancient disease, he said, though not understood until within a few years, and was probably mixed up in the minds of physicians with meningitis. In fact, the symptoms of the disease are very similar to the symptoms of a variety of diseases such as diphtheria, scarlet fever, and malaria—or any infectious disease. There is a headache, a slight rise in temperature and, later, stiffness of the neck, followed by extreme headache, pains in the back, and vomiting.

These are common symptoms in a variety of diseases, and it has been found frequently that cases supposed to be infantile paralysis turn out to be something else.

It was first noticed as a specific disease resulting in paralysis by a German physician in 1816, but it was not thoroughly analyzed until 1838 and 1840. It raged in Sweden about 1880 and went into Norway and from these countries it spread to Germany, Austria, and France, but for some unknown reason did not touch England.

The fact that the disease affected the spinal cord gave it is name, but it has been discovered that it attacks the brain and other nerve centers also. It wasn't noticed particularly in the United States until about 10 years ago, but since then it has been on the increase.

GERM TOO SMALL FOR MICROSCOPE.

Dr. Flexner and Dr. Willis, of the Rockefeller Institute, have been studying the disease for several years and have collated some important data, but the germ has not been discovered and is supposed to be too minute to be detected by the microscope. In this respect it is like the yellow fever germ, and most scientists are inclined to the belief that it is transmitted in a similar way—by some insect. The only animals it attacks are domestic animals, and scientists are looking for some clue in this direction.

There were 20,000 cases of infantile paralysis in the United States in 1916, and of these 10,000 were in New York State and about 3,000 in Massachusetts. The disease has been in Australia and has gone around the world. But the mortality is not nearly as great as from other infectious diseases, such as yellow fever.

The proof that the disease is not contagious by contact is very evident, the speaker said. A child 2 years old slept in the same bed with a girl 17 years old who had the disease and the child did not catch it. This is only one of several cases carefully studied. He said the disease does not spread in schools or in children's hospitals.

—

EVEN INFANTILE PARALYSIS A FORM OF GRIP, SAYS PHYSICIAN—DISEASE THAT RAVAGED NEW YORK LAST SUMMER MERELY ONE MANIFESTATION OF EPIDEMIC STILL WITH US, HE DECLARES.

[By Bernard Frankel, M. D.]

The present epidemic of grip is not a newcomer in our midst—although loudly heralded as such—but a direct continuation of the grip epidemic of last winter, which has never ceased since then its nefarious work among us.

During last summer this same grip did terrible execution among our children under the guise of the so much dreaded infantile paralysis, which I found to be not a separate disease—as generally considered—but only a special form of grip, one that involved mainly the very vulnerable nervous system of children, thus giving rise to paralysis. All of its other symptoms were identical with those of other forms of grip, from which there was no possible way of differentiating it in the early stages before the very onset of paralysis. For this reason some physicians diagnosed during the height of the epidemic every severe case of grip as infantile paralysis. If, however, no symptoms of paralysis manifested themselves they called the case abortive, one that recovered before paralysis had had time to develop.

My view of the grip origin of infantile paralysis was unreservedly indorsed by Dr. D. M. Lewis, of New Haven, Conn., who, in his official capacity as bacteriologist to the local board of health, was enabled to trace the origin of last summer's epidemic of infantile paralysis in New Haven to numerous preceding cases of grip among members of the same families in that community; and who also held with me that the so-called abortive cases of infantile paralysis were nothing else but typical cases of grip.

In an article entitled "Epidemic gastro-enteritis, infantile paralysis, and influenza," which appeared in the December 2, 1916, issue of the New York Medical Journal, and in which I first broached this view of the identity of infantile paralysis and grip, I brought out the following facts:

1. The similarity of the symptoms (except the paralysis) in both diseases.

2. The tracing of the origin of some cases of infantile paralysis to contagion from other cases of ordinary grip.

3. The identity of the germs which are the cause of both diseases. For I hold—contrary to the generally accepted theory—that grip is caused not by Pfeiffer bacilli but by the same variety of streptococci that Dr. Rosenow quite recently discovered to be the cause of infantile paralysis. This view is supported by recent important observations of Dr. G. Matters and Dr. Moody, of Chicago.

These investigators, working independently, have made an exhaustive bacteriological study of numerous cases of grip during last year's epidemic and found that, while streptococci were the most frequently present germs in these cases, Pfeiffer bacilli were absent in most cases.

The rapid spread of infantile paralysis—even among families from which in their isolation all strange children were excluded for months—was attributed in a great measure to so-called "carriers"—that is, persons who, while not suffering from the disease themselves, are supposed, nevertheless, to carry its germs about them, and thus communicate the disease to children with whom they come in contact. In my opinion, these mysterious "carriers" are ordinary cases of grip, which communicate the infection to children in their immediate entourage. As a result of such infection infantile paralysis would develop in children predisposed to that disease, more especially under atmospheric conditions favoring such development.

The practical application of this theory would imply the imperative necessity of extraordinary care in guarding children against any possible grip contagion, especially during the probable recrudescence of infantile paralysis next summer, for, aside from the fact that grip is generally dangerous for children, they would also be threatened by possible paralysis complications in such seasons.

Another form of grip was described by me under the name of epidemic gastro-enteritis. It involves the stomach and intestines of both adults and children, lasts, usually with intermissions, for a couple of weeks, and frequently attacks several members of the same family in succession. I found such to be the case in my own family in Elmhurst, Long Island, as well as in the families of several of my patients.

These disorders, generally mistaken for ptomaine poisoning when they are severe enough, or else treated as ordinary indigestion, may present in their milder forms only symptoms of nausea, loss of appetite, and general weakness, while in the severer cases we may have uncontrollable vomiting, persistent diarrhea with cramps, at times also high fever, jaundice, delirium, and even a fatal termination. During last winter's epidemic of grip a series of such severe cases of disturbances of the stomach and intestines, many of which terminated fatally, were reported among several members of the same families in one of our large cities. The local physicians were greatly puzzled by these cases; some of them suspected ptomaine poisoning, while others thought poisonous candy to have caused the symptoms; but no definite and satisfactory diagnosis was made, although from the description of the symptoms at the time I had no doubt that they were cases of severe gastro-enteritis of grip.

Under the name of "pseudoscarlatina" I described still another form of grip, very closely resembling scarlet fever, for which it is frequently mistaken. Careful observation, however, discloses marked differences from true scarlatina in the subsequent course of these cases, their complications, and the most effective mode of their treatment.

But of all the various forms and complications of grip, the ones that concern us most vitally during the winter season are those involving our respiratory system and ranging all the way from a simple cold in the head to bronchitis, pneumonia, pleurisy, etc. The prevalence of these respiratory disorders during winter, late fall, and early spring is due to our frequent exposures during these seasons to extreme changes of temperature and to inclemency of weather, with resulting chilling of our body surface, while their comparative rarity during summer is due to opposite atmospheric conditions and consequent absence of such exposures and chilling.

As to "wide-open windows," they can no more keep out grip and pneumonia in winter than they could arrest the spread of infantile paralysis and similar germ diseases during summer. Of course, there is no denying the benefit of open-air treatment in pulmonary tuberculosis and some other conditions, as well as the absolute necessity of adequate ventilation of our dwellings and sickrooms; but in cases of grip this ventilation must be carried out in such a way as to prevent the patient from coming into direct contact with currents of cold outside air before it is warmed to the temperature of the room, as otherwise such exposures too near a wide-open window—a partly open window at a considerable distance from the patient can do no harm—may aggravate the attack or lead to dangerous complications, such as pneumonia, etc.

Moreover absolute rest in a moderately warm and properly ventilated room forms one of the most essential requisites in the intelligent and efficient treatment of not only the acute attacks of grip, but also of its periods of convalescence, as well as of the latent, subacute, and chronic forms of grip.

These latter forms, which, by the way, I have not seen mentioned in medical literature, are not accompanied by fever or any acute and localized inflammatory process, as is the case with acute grip, but are marked instead by great general weakness or asthenia and extreme exhaustion of the vital energies. The patients in these cases wonder why "they can hardly drag themselves about," the slightest exertion throwing them into profuse perspiration and often causing a feeling of utter exhaustion, as if they "were ready to drop dead."

Because of their failure to recognize the existence of these latent, subacute, and chronic forms of grip, many physicians are at a loss to account for these symptoms in the absence of fever or any other evidence of disease. And yet these symptoms admit of a very plausible interpretation; for the toxins of germ poisons of all the various forms of grip exert an extremely deleterious and depressing influence not only on our general nervous and muscular system, but also on the nerves and musculature of the heart in particular. This, if not properly guarded against by rest and medication, may lead sometimes to such gradual and partial dilatation of the heart that it can hardly be diagnosed, although it may suddenly become exaggerated during overexertion, and even result in death from heart failure.

This undoubtedly is the cause of many sudden and puzzling deaths following grip, especially among the aged.

Cases of chronic grip are often accompanied by attacks of a dry, paroxysmal cough, recurring for months and even years after every exposure, and leading to chronic bronchitis, with emphysema, asthma, and various other chronic lung troubles, and during very acute relapses also to pneumonia, pleurisy, etc.

In the January 27, 1917, issue of the New York Medical Journal, under the title "Influenza Versus Tuberculosis," I described these chronic forms of grip with the respiratory disorders complicating them. Some of these at times are accompanied by coughing up of blood, loss of weight, etc. I pointed out that these are frequently mistaken for tuberculosis, and therefore urged a thorough reexamination of all the supposedly tuberculous patients in whose sputum tubercle bacilli were absent, in order to remove from tuberculous institutions all the nontuberculous cases admitted there through an error in diagnosis.

Dr. Thomas McGroe, professor of medicine at Jefferson Medical College in Philadelphia, and Dr. Elmer H. Funk, associate in medicine at the same college, made the following statements in their article on "Bronchiecstasis," which was read before the section of practice of medicine at the sixty-seventh annual session of the American Medical Association in Detroit, June, 1916, and which was also reprinted in the October 7, 1916, issue of the Journal of the American Medical Association, on page 1065:

"The nontuberculous cases are often regarded as tuberculosis, an error which can be made only through carelessness. The sputum of a patient with advanced pulmonary (lung) lesions due to tuberculosis always contains tubercle bacilli. If this was recognized we would not miss so many cases of chronic nontuberculous lung conditions and call them tuberculosis. It would be interesting to know how many such are in tuberculosis sanatoriums to-day with a diagnosis of advanced pulmonary tuberculosis, but no tubercle bacilli in the sputum. The first case here reported is an example (the patient was in several sanatoriums with an invariable diagnosis of tuberculosis), [This case was positively proved later, on autopsy, to have been a nontuberculous bronchiectasis.] It sounds elementary, but evidently requires emphasis to insist that *when symptoms and signs point to advanced pulmonary tuberculosis, and repeated sputum examinations do not show tubercle bacilli, the condition is not tuberculosis.*" [The italics are mine.]

These statements from authorities on lung disease require no comment, and suggest the frequency of such mistakes in the diagnosis of advanced nontuberculous lung diseases as tuberculosis. Routine and indifference are the bane of some hospitals, and more especially of some tuberculosis sanitoriums, where many of the advanced tuberculosis cases being beyond hope of recovery, there may develop a tendency to consider most of the inmates as foredoomed to an early death and therefore not worth much troubling about. It is therefore incumbent upon the friends of tuberculous patients, and one of the duties they must not shirk, to see to it that the positive diagnosis of the presence or absence of tuberculosis in every particular case is established beyond the shadow of a doubt, if possible.

They must not depend blindly upon an oracular pronouncement of the case as tuberculosis, no matter by what authority, but must personally satisfy themselves of the correctness of such a diagnosis by repeated examinations of the sputum in a reliable private laboratory, and in doubtful cases insist also on the application of all the other modern scientific methods of diagnosis, such as X rays, complement fixation test of the blood, and even inoculation of animals.

Unless they do all these things they must carry on their conscience the burden of possible guilt in being accessory—through negligence—to pushing their unfortunate friend into the clutches of the merciless white plague. For patients suffering from nontuberculous lung diseases, because of their greatly weakened resistance, may very readily contract tuberculosis when brought into close contact with active cases of that disease in tuberculous institutions.

Qualifications of Electors.

EXTENSION OF REMARKS

OF

HON. WILLIAM GORDON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GORDON. Mr. Speaker, under general leave granted Members of the House to extend their remarks in the RECORD I insert a letter from Mrs. Arthur M. Dodge, together with an argument by Hon. Oscar Leser, against interference by the Federal Government with the power of the State to prescribe the qualifications of electors.

NATIONAL ASSOCIATION OPPOSED TO WOMAN SUFFRAGE,
37 West Thirty-ninth Street, New York City,
February 28, 1917.

Hon. WILLIAM GORDON.

DEAR SIR: Inclosed is a statesmanlike study of the proposal to enfranchise women by an amendment to the Federal Constitution.

Judge Leser, of Baltimore, in this "case against the Federal amendment" clearly proves that this question, involving State sovereignty and the right of local self-government, is a separate and distinct issue from the question of woman suffrage.

There are many able statesmen of both parties in favor of woman suffrage—notably President Wilson and Senator William E. Borah, of Idaho, who oppose this amendment and who are largely responsible for the fact that both great political parties in their national platforms recognize "the right of each State to settle this question for itself."

In the last four years 13 States, with over 41,000,000 population, have rejected woman suffrage by popular vote. These States include some of the most populous, the most experienced, the most advanced in the United States in protecting the real rights of women.

The proposal that the people of these States should be robbed of the right guaranteed in the constitutions of their States and the United States to say who shall vote for the representatives of their States, and, furthermore, should be forced to pay increased taxes for a political experiment they consider inimical to the interests of women and the welfare of their States, is a proposition subversive of every principle of local self-government and sound statesmanship.

Trusting that your name will appear in the list of statesmen who realize that the success of self-government in this country is a greater issue than the triumph of any minority movement, I am,

Respectfully, yours,

MRS. ARTHUR M. DODGE, *President.*

THE CASE AGAINST THE FEDERAL AMENDMENT.

[By Hon. Oscar Leser.]

In view of the renewed effort to bring about woman suffrage for all the States by the method of an amendment to the Federal Constitution, rather than by separate action of the individual States, it becomes important to point out the significance of the changed procedure by which the voting franchise is proposed to be enlarged. With the merits of woman suffrage this article will not deal, for it is intended as much for the consideration of those who favor the vote for women as for those who oppose it. Only those advocates to whom the end justifies the means—whatever they are—will refuse to weigh carefully the right or wrong of the particular means which are now sought to be employed to accomplish the desired end.

When we find that suffrage by action of the State electorates has made practically no headway during the last four years; that it has been rejected in that period by 13 States in 16 popular elections—States which contain nearly one-half the population of the United States; and that during this period it has been adopted only by two States of small population (Nevada and Montana) it well behooves us to inquire into the processes involved in the attempt to accomplish by Federal action that which has apparently proved impossible to accomplish by action of the individual States.

Article V of the Constitution of the United States reads thus:

The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several States, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several States, or by convention in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress.

The joint resolution now pending before the Congress is in the following form:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article be proposed to the legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said legislatures, shall be valid as part of said Constitution, namely:

ARTICLE —.

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

SEC. 2. The Congress shall have power, by appropriate legislation, to enforce the provisions of this article.

It will be observed, first, that three-fourths of the States (namely, 36) can impose woman suffrage on all of the 48 States of the Union.

Secondly, that if the amendment is adopted, women will be empowered to vote in all the States not only for Federal officers but also for State officers and for officers whose election is authorized by the States, which embraces all county, municipal, and other local officers.

Thirdly, that action on the amendment is left to the legislatures of the several States and not to the alternative agency permitted by the Constitution, namely, to conventions elected by popular vote to pass upon the question.

Woman suffrage, if accomplished by Federal amendment, can thus be forced upon 12 States against their will, depriving them of the freedom to govern themselves in their own affairs in the manner desired by them and best suited to their own local conditions. Except in the fifteenth amendment, which as Senator Root has pointed out, was "justified only upon the same grounds which justified the war and the emancipation proclamation," no attempt has ever been made by the National Government to interfere with the free play of each State in determining who shall and who shall not exercise the right of suffrage in each individual State. The very foundation of self-government rests upon this principle. The control of its own suffrage is perhaps the most important right still left to the States.

In view of the methods which it was found necessary to employ to secure the "adoption" of the fifteenth amendment, there is every assurance that the people of the several States are alive to the value and importance of the State's right to control suffrage.

Just as there are many discriminating advocates of woman suffrage who perceive the impropriety and danger of Federal interference with the question, so there are many opponents of suffrage who would yield a cheerful acquiescence in a fair, free, and untrammeled decision by the electorates of their States.

The report of the Senate Committee on Woman Suffrage, submitted in 1913, while discussing the merits of the question, fails to advance a single reason why the States should be stripped of their jurisdiction to determine the matter for themselves. Even the right of the States to pass upon the Federal amendment by popularly elected conventions is denied, since the joint resolution places the ratification with the State legislatures. Ratification by conventions would still make it possible to force suffrage upon States which do not want it, but it would at least carry the assurance that the ratification reflected the will of the people of the States which approved it. There is no such assurance in a bare majority vote of "those present" in the comparatively small groups of individuals composing the State legislatures.

If we examine more closely the processes and rules governing an amendment to the Federal Constitution we shall perhaps better understand why so much confidence should be expressed in the early accomplishment of woman suffrage by this means, in the face of the almost unbroken line of defeats in the State campaigns in the last four years.

In the first place it has been held that a Federal amendment does not require a two-thirds vote of the entire membership of each House of Congress. The language of the Constitution might lead one to think differently, but precedent has sanctioned the rule that two-thirds of the "members voting," a quorum being present, is sufficient. A quorum consists of a majority of the members chosen and sworn. In the present House of Representatives the full membership is 435. A quorum consists of 218, and two-thirds of this number is 146. In the Senate, with a membership of 96, two-thirds of a quorum would be satisfied by 33 votes. It would therefore be possible for Congress to propose a constitutional amendment by a vote of a little more than one-third of the membership.

In the next place, there is no right of presidential veto. The Executive takes no part in the proposal of an amendment. The veto power, in ordinary cases, serves as a wholesome check on hasty or unwise action, but here the President would have no voice, a circumstance that doubtless affords little disappointment at the present time to those who want this particular amendment.

In the next place no time limit is set within which the several States are required to take action, once an amendment has been proposed by Congress. Nothing is said on this point in the Constitution, and my own view is that it would be entirely competent for the amendment itself to declare that unless it is ratified by a sufficient number of States by a certain date it should be of no effect. The precedents of Congress show that when a State legislature has once ratified an amendment it can not revoke its action; on the other hand, a legislature which has acted unfavorably is not prohibited from changing its mind later by voting approval. Thus the rule does not work both ways, but always and at every point, the way is smoothed for a favorable outcome. In the case of the fifteenth amendment three States which rejected it were permitted to ratify it later; while one State (New York) which had ratified it was not permitted to rescind its action.

A remarkable illustration of the indefinite pendency of an amendment is found in the case of Ohio, whose legislature by joint resolution of May, 1873, ratified an amendment proposed by Congress on September 25, 1789. There was an interval here of 84 years. The amendment in question regulated the power of Congress in "varying the compensation" of Senators and Representatives, and while it has never been accepted by a sufficient number of States to make it effective, the Ohio instance affords nevertheless an illustration of the potential force of an amendment once proposed. Apparently there is never a time when an amendment is definitely out of the way, since the States which have rejected it can recant at pleasure while States not in existence when it was proposed can act upon it, and States which have voted favorably can not recede from this position, no matter what change in conditions may make it wise for them in their own interest and in that of other States to do so.

If the considerations already mentioned are not sufficiently valid and serious to inspire hesitation and caution on the part of Congress, and to prompt unfavorable action on the suffrage amendment, then such an attitude ought surely to follow when it is understood that the proposal of a Federal amendment in this instance is nothing less than a device to thwart and override the popular will by avoiding a popular vote in the States, and forcing woman suffrage through a sufficient number of the legislatures. It may be assumed that in all of the 11 Western States which have amended their constitutions by adopting woman suffrage, the ratification of a Federal suffrage amendment would represent the popular wish. These States represent about 9 per cent of the country's population. In all of the other States the wishes of the people would be subjected to the hazard of legislative action, which, on a question like this, is peculiarly liable to be governed less by the will of the majority of the electorate than by the exigencies of politics, personal pressure, giving way to the line of least resistance, caucus rule, accidental majorities, log rolling, the influence of committees, not to mention the influence—proper or improper—of lobbies. Then again it has not been uncommon for measures to pass through legislatures by the skillful application or nonapplication of parliamentary rules, such as the "counting of a quorum" at an opportune moment or the failure to record the vote correctly or the refusal to entertain an embarrassing motion. Let it be remembered that a bare majority vote is all that is required. This means a majority of a quorum. It would therefore be possible for a minority of the entire legislature to ratify, so that the vote would not even theoretically reflect the wishes of a majority of the people. Consider also the unequal apportionment under which many legislatures are constituted and it will be readily seen how even a vote of a full majority with each member acting in good faith and voicing the genuine sentiment of his particular constituents, would not necessarily reflect the wishes of a majority of the people of the whole State.

However reliable a State legislature may be in registering the sentiment of the State on other questions of Federal amendment, the question of woman suffrage offers peculiar reasons for securing the sense of the State in some other way. There are so many issues at State elections that members of the legislature would rarely be chosen with regard solely to their attitude on suffrage. Other matters may be of such overshadowing importance that a constituency opposed to suffrage might return a member favorable to it. Other members may not have declared their position on this issue. Still others may "change their minds" after the election. It is an observed fact that a very small percentage of legislature men serve more than a single term, and the tendency is not toward increasing this percentage. The failure to interpret (or to interpret but not carry out) the wishes of the constituency must be set down as one of the more important reasons for this tendency. It is small consolation for a State merely to be able to retire its representatives after they have voted to double the electorate against the wishes of their constituents. There are always persons who have no intention of seeking reelection. Of these there will be some who will not care to resist the pressure which can be exerted upon them in divers ways in behalf of questions like suffrage or prohibition, when the appeal is to the emotions.

That the possibilities of the situation have not been overdrawn will appear from the fact that in the last four years 19 legislatures, which, in 13 States, have approved suffrage amendments to their State constitutions, have been repudiated by the people on this question. In the following States it required the favorable action of two successive legislatures before the amendment referendum could be held: Iowa, Massachusetts, New Jersey, New York, North Dakota, and Pennsylvania. In Michigan, Missouri, Nebraska, Ohio, South Dakota, and West Virginia it required action by a single legislature; while in Wisconsin the referendum was on act of assembly and not on an amendment. In Ohio the question was twice submitted, first in 1912, by the constitutional convention (when it was voted down by 87,455 majority) and in 1914 by the legislature (when the adverse majority was increased to 182,905).

In spite of a defeat by 91,478 votes in Wisconsin in November, 1912, the next legislature within six months again passed a suffrage act (which under the constitution required a referendum). This bill was vetoed by the governor in a strong message characterizing the action of the legislature as not consistent "with a proper respect for the deliberate judgment of the people of the State, so recently and fully registered."

New York State furnishes a similar example of legislative misrepresentation and cowardice. In November, 1915, the people recorded their disapproval of the suffrage amendment by a majority of 194,984 against it. In spite of this emphatic proof that the legislatures of 1914 and 1915 had failed to sense the public will, the legislature of 1916 again voted in favor of a suffrage amendment.

In the face of these actual examples of legislative misrepresentation the believers in popular rule, which includes believers in constitutions which represent the wishes and sentiments of the electorates, are justified in insisting that the question of woman suffrage shall be settled by the States and by the people of the States at the polls.

"I Have Kept the Faith" and Performed the Duties of the High Office to Which I Have Been Five Times Elected to the Best of My Ability.

EXTENSION OF REMARKS

OF

HON. JAMES T. McDERMOTT,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. McDERMOTT. Mr. Speaker, after a membership in this House extending over a period of 10 years, I am about to go back to my district and relinquish the trust which my constituents imposed upon me. In giving an account of my stewardship, I can conscientiously say, "I have kept the faith" and have performed the duties of the high office to which I have been five times elected to the best of my ability. No man can say more.

The record of every Member of this House is an open book. His name and his votes are placed in the archives of this great body, and are forever open to the scrutiny of all mankind. It is a simple matter to learn one's position on any of the great issues, and yet, Mr. Speaker, during the primary in my district last fall, when I was a candidate for renomination, I was accused of having voted against many of the bills favorable to the cause of labor and others that tended to the betterment of the Nation generally. This is not true. I denied the statement then and I deny it now; I challenged the man making it and I challenge him now to produce one scintilla of proof of what he charged. He has not done so; he can not do so. Thank God, I have never resorted to unfair tactics during my public career, and never have, knowingly, falsely accused a man. I have made mistakes; yes. Who has not? But my mistakes have been honest ones, and I do not fear, in rendering this final account, to lay my record bare.

I came to Congress as an avowed friend of the workingman, and I am retiring now with the satisfaction of knowing that I have done my share, humble though it may have been, in helping to frame many of the beneficial labor laws now on our statute books.

At the beginning of the Sixtieth Congress a few Members, of which I had the honor to be one, banded themselves into what is known as the "labor group," pledged to vote for all legislation beneficial to the American workman irrespective of politics. This group has steadily grown in numbers and influence, and through its efforts many measures helpful to the cause of labor have been put through the House. Unfortunately some of these measures failed to become laws owing to the failure of the Senate to pass them, but for this the Members of the House can not be blamed.

In this first labor group was William B. Wilson, of Pennsylvania, a coal miner by trade, and one of nature's own noblemen. His worth was recognized in his district, and he was sent to Congress, where he became chairman of the powerful Committee on Labor. When labor was honored with a seat in the President's Cabinet he was named as the first Secretary of the Department of Labor, being supported for this high position by workingmen the country over. He has honestly and ably represented them. His course has been so fair that he has won the respect of capital and retained the confidence of labor. No man in public life enjoys higher esteem from all classes than he. It has been my good fortune to be closely associated with this distinguished gentleman.

Mr. Speaker, the record of the Democratic Party for years is a record of constructive legislation enacted, a record of progress, a record of Americanism. Its crown of achievement is filled with precious jewels. And no jewel in that crown shines more brilliantly than does the jewel that represents the efforts put forth for the good of labor. My record as a friend of labor is consistent. I have worked and voted for bills to advance the cause of the working people. I have stood for shorter hours and for increased wages; for the betterment of working conditions generally. The bulwark of our Nation rests upon the shoulders of the man who toils, and it is a short-sighted policy that would impose onerous burdens upon those shoulders.

Let me briefly review some of the beneficial legislation that the Democratic party has written into law. In the Sixty-second Congress the eight-hour law was put into effect in all the Government departments, and its observance was compelled by all the great industries that do business with the Government. My vote helped to accomplish this result.

No more humane measure ever passed Congress than the bill known as the child-labor bill, which prohibits the shipment in interstate commerce of the product of any mine or quarry situated in the United States which has been produced in whole or in part by the labor of children under the age of 16 years, or the product of any mill, cannery, workshop, factory, or manufacturing establishment situated in the United States which has been produced in whole or in part by the labor of children under the age of 14 years or by the labor of children between the ages of 14 years and 16 years who work more than eight hours in any one day, or more than six days in any one week, or after the hour of 7 o'clock in the morning or after the hour of 7 o'clock in the evening. I am proud to say I voted for this measure.

The Adamson bill providing an eight-hour day on railroads is another piece of legislation to which the Democratic party can point with pride. This bill was considered while I was absent in Chicago conducting my primaries, and although I did not get a chance to vote for it I announced myself in favor of it. Had I been in Washington when the vote was taken I certainly should have voted "yea."

One of the most meritorious measures ever put through Congress was the bill to exempt labor organizations from the operations of the Sherman antitrust law. This measure was strongly urged by the American Federation of Labor, and the friends of labor in Congress regarded it as an absolutely necessary piece of legislation. I supported this measure, even to the extent of voting to pass it over the veto of the President when it was attached as an amendment to the sundry civil bill in the third session of the Sixty-second Congress.

Another very meritorious measure for which I had the honor of voting was the workmen's compensation bill, which subsequently became a law. I also voted for the bill (which is now a law) providing for a jury trial in a case of indirect contempt of court. This law is of great importance to the toilers of the soil.

Mr. Speaker, it is always a satisfaction to a Member of Congress to vote for a meritorious bill. And this satisfaction is intensified when one votes for a bill that he feels will do much for the cause of labor. That is the feeling I had when I voted for that excellent measure that provides that injunctions shall not be issued without giving the parties to be enjoined notice and an opportunity to be heard except in certain contingencies; that no injunction shall be issued for any cause arising out of a labor dispute except to prevent irreparable injury to property or property rights of complainants, for which injury there is no adequate remedy at law; that injunctions shall not be issued to prevent strikes and the activities (when peaceful) necessary to their conduct, such as picketing, boycotts, persuasion to work or refrain from working, payment of strike benefits, peaceful assembling, or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto. This law will rank as one of the greatest achievements of the Democratic Party.

In spite of the charges made against me during the recent primary, my record shows, Mr. Speaker, that I voted for the great measures advocated by our President and which have been written into the statutes. Appropriations for the Children's Bureau; compensation for members of families of National Guardsmen; the revenue bill, which puts the burdens on the rich and takes some of the burdens off the poor by taxing inheritances, incomes, and so forth; the child-labor bill, which keeps the young boy and girl out of the sweatshops and factories and thereby makes it possible for the child to gain an education; the shipping law, which will restore our merchant marine to the high seas—all these and more had my vote. I have worked earnestly and my labors have been successful in having the condition of the postal employees and those of the Bureau of Animal Industry bettered.

But, Mr. Speaker, labor has not been the only beneficiary of Democratic rule. During the past three Congresses much legislation to all classes has been enacted. We have made a long step forward in perfecting our national defense. I have consistently favored an adequate Army and Navy. I hope the day may never come when we shall have to use this Army and Navy against a foreign foe; but if that day does come during my lifetime I will thank God that we are in a position to afford adequate protection to the loved ones who are dependent upon us and will take satisfaction in the thought that I helped to prepare for this defense. Millions spent now in preparation may save billions in the future. We have enacted liberal pension laws not only for the heroes who battled to preserve the Union but for those brave men who fought in Cuba and the Philippines; also for their widows and orphans. I have always supported a liberal pension policy. I feel that we owe these brave men a debt that money

can not repay. The least we can do is to provide for them and their widows in their declining years.

We have established a new banking and currency system and the fear of panics has passed. The bill creating the Federal Reserve Board and the amendments adopted subsequently all received my vote and support. The creation of this new system is one of the greatest achievements of President Wilson's administration.

I have been criticized, Mr. Speaker, because of my vote against the immigration bill. Had that bill not contained the literacy test, I would gladly have supported it. But the literacy test is not a fair test of a person's fitness to enter this country, and in my rejection of it I have, I know, the support of the thinking people of my district. I have no apology to offer for my vote against this bill, nor have I any apology to offer for my vote in favor of Canadian reciprocity when President Taft fostered this proposition during the Sixty-first Congress. The bill designed to put the reciprocity into effect passed the House by a vote of 221 to 93. It placed food products, wood pulp, and print paper on the free list and reduced the duties on agricultural machinery.

On Thursday, March 1, 1917, the House of Representatives by the enormous vote of 403 to 13 passed the patriotic measure authorizing the President of the United States to supply merchant ships, the property of citizens of the United States and bearing American registry, with defensive arms, and for other purposes, which is as follows:

Be it enacted, etc., That the President of the United States be, and he is hereby, authorized and empowered to supply merchant ships, the property of citizens of the United States and bearing American registry, with defensive arms, and also with the necessary ammunition and means of making use of them in defense against unlawful attack; and that he be, and is hereby, authorized and empowered to protect such ships and the citizens of the United States against unlawful attack while in their lawful and peaceful pursuits on the high seas.

SEC. 2. That the sum of $100,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be expended by the President of the United States for the purposes herein stated, the said sum to be available until the 1st day of January, 1918; and the President is authorized to transfer so much thereof as he may deem necessary to the Bureau of War-Risk Insurance, created by act of Congress approved September 2, 1914, for the purpose of insuring vessels, their freight, passage moneys, and cargoes against loss or damage by the present risks of war: *Provided*, That said Bureau of War-Risk Insurance shall not insure any arms or ammunition or any vessel carrying arms or ammunition consigned to belligerent countries or any citizen thereof.

SEC. 3. That for the purpose of meeting the expenditures herein authorized, the Secretary of the Treasury, under the direction of the President, is hereby authorized to borrow on the credit of the United States and to issue therefor bonds of the United States not exceeding in the aggregate $100,000,000, said bonds to be in such form and subject to such terms and conditions as the Secretary of the Treasury may prescribe, and to bear interest at the rate not exceeding 3 per cent per annum: *Provided*, That such bonds shall be sold at not less than par, shall not carry the circulating privilege, and that all citizens of the United States shall be given an equal opportunity to subscribe therefor, but no commission shall be allowed or paid thereon; that both principal and interest shall be payable in United States gold coin of the present standard of value, and be exempt from all taxation and duties of the United States, as well as from taxation in any form of all State, municipal, or local authorities; that any bonds issued hereunder may, under such conditions as the Secretary of the Treasury may prescribe, be convertible into bonds bearing a higher rate of interest than 3 per cent per annum if any bonds shall be issued by the United States at a higher rate than 3 per cent per annum by virtue of any act passed on or before December 31, 1918.

SEC. 4. That in order to pay the necessary expenses connected with the said issue of bonds, or any conversions thereof, a sum not exceeding one-tenth of 1 per cent of the amount of bonds herein authorized to be issued, or which may be converted, is hereby appropriated out of any money in the Treasury not otherwise appropriated, to be expended as the Secretary of the Treasury may direct.

The bill authorizes the expenditure of $100,000,000 to protect the lives of citizens of the United States and to protect American commerce from unlawful attacks while in their lawful and peaceful pursuits on the high seas. This measure I regard as one of the most patriotic ever presented for consideration to the Congress of the United States, and I am proud to have the opportunity of sustaining the President in this critical hour, and do so, knowing that it does not mean the plunging of our country into the conflict, but, on the contrary, defines our position and shifts the cause for war on any foreign aggressor who deliberately violates all rules of neutrality and refuses to recognize the rights of the United States.

I doubt whether a Member of Congress or a Member of the Senate desires to see this country engage in the conflict. I for one would abhor our entering into the European struggle, but upheld by international law, neutrality laws, and treaties we, as a great Nation, must uphold the principles as laid down by our forefathers who fought for the glorious liberty we enjoy to-day.

The President is the Commander in Chief, and for the past four years has led the country safely amid pitfalls, intrigue, and plots laid in both this country and abroad. The fact that we are not at war to-day speaks for the success of the President in the handling of the foreign situation. To-day we have decided whether America will willingly surrender the rights of life and the rights of liberty of national enterprise, the rights of property and the rights of honor.

May the President be guided and directed in the wise exercise of his powers we have granted him so that we may remain at peace.

Resolution in Regard to Daylight-Saving Plan.

EXTENSION OF REMARKS

OF

HON. J. M. C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. SMITH of Michigan. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I wish to incorporate the following resolution passed by the legislature of the great State of Michigan in relation to the movement for the daylight-saving plan; and while this will not apply with material force to agriculture, I think the great benefit derived from it will result from uniform action concerning the operation of our industries, the management of proper schedules, and setting a definite plan in relation to hours not only for labor but for all other occupations and engagements.

The resolution follows:

LANSING, *March 1, 1917.*

Hon. JOHN M. C. SMITH,
Washington, D. C.

MY DEAR MR. SMITH: I have the honor to inform you that the two houses of the Michigan Legislature have concurred in the adoption of the following resolution:

"Senate concurrent resolution 14, requesting Congress to pass the so-called daylight-saving bill.

"Whereas there is a world-wide movement at the present time for the adoption of the so-called daylight-saving plan; and

"Whereas a number of European countries of the first class have adopted said plan and it is now under consideration before the Congress of the United States; and

"Whereas the adoption by the United States Government of said plan for use throughout the country would cause an immense saving of artificial lighting bills and would provide during the summer months of the year, from April to September, an added hour of recreation, open-air exercise, or rest for the masses during the latter part of the day; and

"Whereas said project is now indorsed by President Wilson, the American Federation of Labor, the United States Chamber of Commerce, and other leading commercial and labor organizations throughout the country: Therefore be it

"*Resolved by the senate (the house of representatives concurring)*, That the Legislature of the State of Michigan herewith indorses the so-called daylight-saving bill now before Congress and recommends to the Senators and Representatives from this State cordial support thereof, and that a copy of this resolution be sent to them and to Hon. WILLIAM P. BORLAND, Congressman from Missouri, and to Hon. JACOB H. GALLINGER, United States Senator from New Hampshire, authors of daylight-saving bills in Congress."

Very respectfully,

D. E. ALWARD,
Secretary of the Senate.

Review of Legislation by the Sixty-fourth Congress.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. HASTINGS. Mr. Speaker, when the gavel falls at noon on March 4 the Sixty-fourth Congress will pass into history. Perhaps more general legislation was enacted during this Congress of two sessions than in any other since the foundation of the Government.

The people of my district are, of course, familiar with the laws of national importance that have been passed, through accounts of them contained in the public press. In addition to studying questions affecting the Nation as a whole, I have endeavored to give special consideration to matters peculiarly affecting Oklahoma, and particularly the second congressional district. Appreciating that we have a wonderful new State, rich in natural resources and a splendid citizenship, I have done

everything possible in the last two years to encourage and further its development.

ROAD LEGISLATION.

The question of good roads is of as much, if not more, importance to our State than any other State. The eastern part of Oklahoma is newly surveyed, the lands have been recently allotted, and permanent roads are now being made along section lines. I introduced a bill appropriating $25,000,000 to aid in the building of good roads, under the terms of which $532,138 would have gone to Oklahoma. A number of other bills upon the same subject were introduced by various Members of the House. A bill was finally passed appropriating the first year $5,000,000 and increasing the appropriation annually thereafter, until the year 1921, when the sum of $25,000,000 is appropriated. This legislation will necessitate studying how to construct good roads, the material to be used, and their advantages. It will have a great educational effect and stimulate the making of good roads everywhere.

I introduced a bill making an appropriation for a road from Fort Gibson to the National Cemetery, one and one-fourth miles distant, a place of much historical interest. This bill was referred to the Committee on Military Affairs of the House, favorably reported by the War Department, but owing to the demands upon the time of the members of this committee in considering national preparedness, it could not be reached and reported at this session.

I also introduced a joint resolution appropriating $25,000 to erect a monument to Thomas Jefferson at the north end of the bridge across the Canadian River in McIntosh County, Oklahoma, in order to emphasize the importance of the Jefferson Highway to be constructed through the State. This highway will not only be used by the people locally, but thousands of tourists will travel it—many of whom will be attracted by the natural advantages of Oklahoma and permanently remain in the State.

RURAL CREDITS.

One of the leading questions in Oklahoma to-day is that of rural credits. Farmers should be able to borrow money at lower rates of interest upon long terms, payable in small interest payments, or on the amortization plan. To aid in enacting such legislation I sought and secured a place on the Banking and Currency Committee. A joint committee had previously gone to Europe to make a study of rural-credit systems there. Much data was gathered and an exhaustive report made. Bills were introduced in the Sixty-third Congress, and the committees gave much consideration to them, but no legislation was enacted. The rural-credits act approved July 17, 1916, is one of the most important laws passed during the present administration. The bank serving Oklahoma is located at Wichita, Kans., and anyone desiring information or blanks can secure them by applying to the Farm Land Bank there. I see from the press that many farm loan associations are being formed, and that farmers are taking advantage of the low rates of interest which this act will give.

POSTAL LEGISLATION.

No branch of the Government comes nearer to all the people than the Post Office Department. A year or two ago in some counties of my district there were no rural routes. Appreciating the advantages of free mail delivery to the farmers there, much thought and consideration has been given by me to postal legislation. I made a speech last year reviewing the history and growth of the department, when the appropriation bill was being considered, and emphasized the necessity for enlarging the parcel post, as well as the extension of the rural service. I voted against limiting the weight of packages to be carried by parcel post to 50 pounds. The appropriation for Rural Delivery Service was increased from forty-eight and one-half to fifty-three million dollars last year. A similar amount is carried in the appropriation bill for the present year, and the amount for village delivery is increased from $250,000 to $500,000. I have written thousands of letters, advising and encouraging the circulation of petitions for the establishment of rural routes, and have visited the department frequently to urge expeditious and favorable action upon them. I believe that as many rural routes have been established in my district during the last two years as in any other congressional district.

Every town or city where the postal receipts exceed $5,000 is entitled to free village delivery under the present regulations. I have written the postmaster in each place coming within the rule, urging that the people be advised of this service, and that a petition be circulated for it. Free village delivery has been inaugurated in a number of them. With the increased appropriation carried in the present bill the department will be enabled to greatly enlarge this service. The department has been frequently visited by me, in order to confer about appointments and numerous details for the convenience of employees and additional service for the patrons.

I introduced a bill providing for 1-cent drop-letter postage. Many other Members introduced similar bills. They were favorably reported by the Committee on Post Offices and Post Roads as an amendment to the Post Office appropriation bill, but upon objection the amendment went out on a point of order. It is thought that this legislation will be enacted at an early date.

AGRICULTURE.

Farming is the chief industry of the United States. More people are engaged in it and more are dependent upon the products of the farm than upon any other industry. Much beneficial legislation of a general character has been enacted during the Sixty-fourth Congress. The appropriation bill last year carried a larger appropriation than any previous bill of its kind. It had many items in it of peculiar interest to our State, including appropriations for experiments in every subject affecting farm life—the testing of soils and seeds, diseases of animals, diseases of plant life, including diseases of cotton, corn, potatoes, wheat, and forage crops, as well as the studying of diseases of fruit trees. The information obtained in this way is given to farmers of the country through bulletins, yearbooks, reports, and books of various kinds, as well as agricultural journals and farm demonstrators. By special rule, there was added for the protection of the farmer: (a) The reenactment of the cotton-futures act, so as to insure its constitutionality; (b) the grain-grades act, to insure uniformity of grain grading; (c) the warehouse act, providing for the establishment and licensing of warehouses and the insurance of uniform receipts, to enable farmers to store their farm products and use the receipts as collateral security. The Agricultural appropriation bill for the current year carries large appropriations for all these matters.

I have secured and forwarded to farmers documents, bulletins, books, and valuable data on practically every question affecting farm life and have distributed seed to every resident of my district whose name was furnished me, without exception.

VOCATIONAL EDUCATION.

The vocational education bill, approved February 23, 1917, is another piece of legislation of much interest to my district and the Nation. The purpose of this bill is to cooperate with the various States in arousing interest in vocational training. The law is to be administered through a board composed of the United States Commissioner of Education, three Cabinet officers, and three additional members to be appointed by the President, by and with the advice and consent of the Senate. Appropriations are made for use in cooperating with the various States, increasing in amount from year to year until $7,000,000 is appropriated annually, conditioned upon a like sum being appropriated by the several States, for use in teaching and preparing teachers in agriculture, home economics, and industrial subjects. The great purpose of this law is to teach the people of the country to be practical, so that they will not only acquire knowledge but learn to use it in a beneficial way and to their personal advantage. I earnestly invite the attention of the citizens of Oklahoma to it.

INDIAN LEGISLATION.

Because of conditions in eastern Oklahoma, Indian legislation is of special importance. All the people, Indian and white, are anxious to have the affairs of the Five Civilized Tribes wound up as speedily as is consistent with the proper administration of these matters. Much has been accomplished along this line during the past two years.

The Indian appropriation bill for both years contained many provisions of special interest to eastern Oklahoma, and among them are the following:

First. An appropriation of $185,000 for the office of the Superintendent for the Five Civilized Tribes.

Second. An appropriation of $85,000 for probate attorneys.

Third. An appropriation of $275,000 to aid rural schools. This money is of great assistance to many schools. We have some school districts where there is but little taxable land, and schools could not be maintained for more than two months in the year without this help.

Fourth. Smaller appropriations for many other purposes.

In both appropriation bills provisions were made for per capita payments. Last year there was a per capita payment of $300 to the Choctaws, and this year a per capita payment of $100 will be made. Last year a per capita payment of $200 was provided for the Chickasaws, and this year $100. A per capita payment of $200 for the Seminoles was provided for each year. In the aggregate $11,458,400 was provided to be distributed per capita among these three tribes. In addition, last year the remainder of the Cherokee tribal funds, amounting to $138,000,

was distributed per capita among the members of the tribe. The affairs of the Cherokee Tribe have been completely wound up. No other legislation is necessary for this tribe.

The present Indian appropriation bill contains a provision to the effect that no additional allotments of land will be made to members of the Creek Tribe. This will make section 16 of the act of April 26, 1906, operative, and as soon as litigation pending in the courts for the cancellation of certain allotments and the recovery of the land for the tribe is ended, the land recovered, if any, will be sold and the funds added to the other moneys of the tribe. All Creek funds will then be distributed per capita in accordance with the Creek agreement. On March 1 the sum of $2,155,900.85 was on deposit in the United States Treasury to the credit of the tribe, but it can not be disbursed until this litigation is ended, all their property sold, and the proceeds added to the other funds of the tribe, so that all the money can be paid out in accordance with existing law. No other legislation by Congress is necessary to wind up the affairs of this tribe.

The same is true with reference to the Seminole Tribe. My information is that some litigation is pending over a school building. When this matter is settled, the affairs of the Seminoles can be wound up—no additional legislation is required. The Seminoles had to their credit on March 1, 1917, $924,901.04.

All necessary legislation has been enacted to wind up the affairs of the Choctaws and Chickasaws, except for the sale of the coal and asphalt lands. A bill was prepared and introduced at the present session of Congress and favorably reported by the Committee on Indian Affairs for this purpose. It had the indorsement and met with the approval of the entire Oklahoma delegation, the representatives of the Indians interested, the coal lessees, and the citizens generally residing in that country interested in its development. While this legislation was not enacted, because of the congested condition of the calendar, hope is entertained for favorable consideration at the next session of Congress. On March 1, 1917, the Choctaw Tribe had to its credit $4,772,391, and the Chickasaw Tribe had $1,536,778.86.

On December 6, 1915, the day Congress convened, I introduced as my first bill H. R. 108—a bill to transfer the administration of individual Indian affairs from Washington to Muskogee. It has been extensively commented on in the press throughout the State. After exhaustive hearings before the Committee on Indian Affairs, it was unanimously ordered favorably reported. I made an extended speech in favor of it in the House, but due to the large number of bills considered by Congress, it was not reached for consideration. It is my purpose to reintroduce it at the next session and press its early passage. No other bill more vitally affects the people of Oklahoma. It is designed to prevent delays, by securing speedy action on all Indian matters at home. With men familiar with conditions, there is no argument against it, and I am glad to know that there has not been a single protest against it in Oklahoma. It has met with the unanimous indorsement of the press and the citizens generally, Indian and white.

I introduced a bill providing for the payment of the "Loyal Creek Indian claim." It was favorably reported and is upon the calendar.

The "Enrollment Records" were by the act of May 27, 1908, made conclusive evidence of the age of members of the Five Civilized Tribes. Recent decisions of our courts construing this provision are confusing. I introduced a bill to make the printed books, prepared and published by the Interior Department, conclusive both as to age and quantum of blood. The purpose of this bill is to make the dates to which ages were calculated, the birthdays of the enrolled members. Of course, this legislation would only be prospective. Upon investigation it was found that the ages were not calculated to any definite date upon the printed Creek rolls; and complaint was made that there was an error in calculating the dates as to the printed Seminole rolls. The perfection and enactment of this bill would make it of great value to people everywhere, not having immediate access to the enrollment records at Muskogee, and would make the printed roll books of some value.

Among other bills, I introduced one giving district courts jurisdiction to partition lands to full-blood heirs of deceased allottees. This was made necessary by the decision of our Supreme Court in the case of Coleman against Battiest, holding that the district court had no jurisdiction.

Another bill which I introduced provides for the appointment of three commissions. One for the Cherokee Nation, one for the Creeks and Seminoles, and one for the Choctaws and Chickasaws, charged with the responsibility of visiting the several tribes to which they were assigned and receive and hear applications for the removal of restrictions, and to report to the Secretary of the Interior such restricted Indians whose restrictions should be removed.

The present Indian appropriation bill contains a provision authorizing the members of the Committee on Indian Affairs elected to the next Congress to make an investigation of Indian affairs during the coming recess. This committee expects to visit Oklahoma at an early date, perhaps this month, to secure first-hand information regarding conditions there. I am sure the trip will result in beneficial legislation.

On February 27, 1917, I invited the attention of the Interior Department to the advisability of again offering for sale the surface of the segregated coal and asphalt lands in the Choctaw and Chickasaw Nations, and urged that this be done at an early date. The Indians are anxious to have these lands sold and the money derived therefrom either distributed per capita or placed to their credit bearing interest. The department was advised that these lands were appraised too high in Haskell County, but that when next offered they are not required to bring their appraised value.

A bill to establish a fish hatchery in Oklahoma was introduced by me. It was included as an item in the omnibus fisheries bill, which passed the House, and was favorably reported by the Senate committee, but favorable action could not be secured in the Senate. It is hoped that early action upon this bill can be secured at the next session of Congress.

A bill to purchase the Creek capitol building and grounds at Okmulgee for a public building was introduced by me. It was favorably reported and included as an item in the public-buildings bill which passed the House, but consideration of it could not be secured in the Senate. A bill appropriating $50,000 for the Federal building at Muskogee, introduced by me, was also included as an item in the public-buildings bill.

Under an act of 1862, as amended in 1866, Oklahoma is entitled, in my judgment, to 210,000 acres of land for the Agricultural and Mechanical College. With the Oklahoma delegation and Hon. H. B. Teehee, I appeared before the Department of the Interior in support of this claim. A bill was introduced, both by Congressman McCLINTIC and myself, authorizing the granting of this land to Oklahoma, or its equivalent in money, and both appeared before the Committee on Public Lands and made arguments in support of it.

Many private bills of various kinds, in addition to the above, were introduced.

In order to give a better idea of the magnitude of the work and the difficulty of getting speedy consideration of bills introduced, permit me to say that 21,102 bills have been introduced in the House and 8,331 bills in the Senate on practically every conceivable subject. In addition there were introduced a large number of resolutions—separate and joint.

Every bill introduced is referred to an appropriate committee, where it is carefully gone over and considered with amendments. Committee assignments are important, therefore, to secure early reports of bills, so as to get them upon the calendar and to secure favorable expeditious action upon them. I was on the following committees during the past session: Banking and Currency, Accounts, and Expenditures in the Interior Department. Within the last few days, I was made a member of the Committee on Indian Affairs. This will permit me to go with the committee officially in its tour of investigation of Indian matters during the recess of Congress. I have attended every meeting of the committees of which I was a member, and have regularly attended the daily sessions of the House, never missing a record vote during the past two years.

It is the ambition of every Member of Congress to effectively serve the people of his district, and it has been a pleasure to receive thousands of letters asking for information or making requests of various kinds. I have answered all of them and made every effort to comply with them, if it could be done consistently. Frequent visits to the different departments were made to get information, correct complaints, or otherwise serve my constituents.

During my term in Congress, I made speeches on the floor of the House on the following subjects: Good roads; rural credits; Post Office appropriation bill; Indian appropriation bill, (a) Choctaw and Chickasaw per capita payment, (b) $275,000 item for rural schools; Arkansas River; Agricultural appropriation bill; H. R. No. 108, transferring supervision of restricted Indians from Washington to Muskogee. This was done in addition to taking part in the consideration of other bills on the floor. No other Congress has considered or enacted so much legislation of importance to the entire country and of special benefit to the State of Oklahoma.

I have attempted to invite attention to some of my various activities during the past two years peculiarly affecting the people of my district, as they are entitled to know what their Representative has endeavored to accomplish. I have worked in entire harmony with the other members of the Oklahoma delegation in both the House and Senate and have had their

active assistance and hearty support, and all are entitled to credit for what has been done for the good of our State.

Much preparedness legislation has been enacted because of the revolution in the Republic of Mexico to the south of us, with which every one is familiar, and the indescribable slaughter across the sea, involving all the leading countries of Europe. Frequently on the very verge of war, our matchless President, by his patience, wisdom, firmness, and skilled diplomacy, has saved us from its awful consequences. The situation is now so tense that no one knows what a day may bring forth.

The people of this country have confidence in the President and believe that he will keep our Nation at peace, so long as it can be done with honor. Sharing this confidence and appreciating that he has innumerable resources of information through diplomatic channels as to the foreign situation not open to all, I have given him my unqualified support.

A "Rice Day" for America.

EXTENSION OF REMARKS

OF

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GALLIVAN. Mr. Speaker, it is perhaps not known that fully 60 per cent of the world's population does not know what a potato is, and their principal diet, as a substitute for a vegetable, is rice. Such being the case it would be reasonable for a man to suggest to those who can not afford to pay exorbitant prices, for what might be termed a luxury, to cultivate a taste for rice. It is a matter of history that the endurance of the Japs was attributed to a diet almost wholly of rice during their war with Russia.

One pound of rice has as great a food value as fully 6 pounds of potatoes, and at the present market price a good rice should be bought for the same price per pound as a pound of potatoes.

With the exception of the State of Maine, the potato crop was a failure last season, and, due to the scarcity of labor, the acreage planted this year in Maine will not be more than one-fourth of what was planted last season; inability to get a suitable fertilizer for potatoes is another reason for a prospective decreased acreage. That will necessarily cause a high price on potatoes next season, and for that reason people who have limited means must adopt a substitute, and the best one known is rice.

Some stores are featuring rice, and their advertisements are of a decidedly misleading character. For instance, a certain chain store advertises "Fancy whole-head uncoated Carolina at a special of 9 cents per pound." As a matter of fact, there has not been sufficient Carolina rice raised in that State to supply the home demand, and the dealers in Charleston are obliged to purchase supplies from New Orleans and other rice-growing centers. The entire Carolina crop would just about feed the sparrows on Boston Common. The type rice that is being represented as a Carolina is a hybrid known throughout the South as the Blue Rose, and can be bought in New Orleans for 4 cents. Allowing for freight and a fair profit, the stock should be retailed on the Boston market at not over 6 cents a pound in small lots.

If the public are forced to pay unreasonable prices for rice, it will be due to the fact that the dealer is taking advantage of the high prices on other commodities to get an extra profit on rice.

We are in a measure paying indirectly for the war abroad, and every dealer in a commodity of any description should use his utmost efforts to keep down the price to the consumer rather than accept every opportunity to extort a little extra profit.

The high price of grain has prompted those throughout Massachusetts to deplete their stock of hogs, and to see a pig on a farm this year will be quite a novelty. It will be the incentive for the "trusts" to create extremely high prices on all pork products during the entire year, and for that reason the public will be obliged to adopt every known method of economy in order to make both ends meet. Many will attribute the existing conditions to a Democratic administration, but as a matter of fact had it not been for a Democratic administration this country would have been plunged into war long ago, and then the prices on commodities that appear so high to-day would figure extremely low under such conditions.

The public may rest assured that prices here to-day, irrespective of the advantages taken by the trusts, are really low as compared with the neutral countries abroad, reports to the contrary notwithstanding.

In conclusion, let me repeat that there is as much food value in 1 pound of rice as there is in 6 pounds of potatoes, so that a fancy river rice at 8 cents a pound would give as much feeding value as 48 cents' worth of potatoes. As a vegetable it is much more healthful and satisfying. Take 1 pound of rice and 1 quart of milk, at a total cost of 18 cents, and it would make a hearty meal for four adults. What should be agitated is a rice day throughout the country to encourage the use of the product.

There is no doubt potatoes will not go as low as $2 a bushel all this year, and the quicker we can induce the public to take to rice the better it will be for them. The best fertilizer you can get to-day is a 2–10–1, and to raise a decent crop a man should have a 2–8–6. Now, with such a deficient content of potash and scarcity of help, how in the name of goodness can you expect to get potatoes plentiful and cheap? We have an ample amount of potash in our soil, but it is dormant and will not come into action on potatoes or corn without a liberal use of the commercial potash, and the headquarters of that is in Germany.

Smith-Hughes Vocational Educational Bill.

SPEECH

OF

HON. JOHN W. ABERCROMBIE,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 16, 1917.

The House had under consideration the report of the conference committee on the bill (S. 703) to provide for the promotion of vocational education.

Mr. ABERCROMBIE. Mr. Speaker, as a member of the Committee on Education I trust that the report of the committee of conference will be adopted. The pending measure, which provides for the promotion of vocational training through cooperation between the Federal Government and the State governments, was prepared by the Commission on National Aid to Vocational Education which was appointed by President Wilson under a joint resolution adopted during the Sixty-third Congress. The personnel of that commission was such as to guarantee that the result of its labors would be what it proved to be, an illuminating contribution to the subject of vocational education.

The system of vocational education which is proposed will have a tendency to hold in the schools for a longer period the millions of boys and girls who under existing conditions withdraw at about 14 years of age vocationless, aimless, and helpless. It is estimated that about 50 per cent of our youths now withdraw from school at that age, most of them to enter occupations for which they have received no training. As a result an alarming number are doomed to lives of inefficiency, failure, and unhappiness.

It is believed that the proposed system will tend also to check the alarming drift of population from the rural districts to the cities. Formerly only one or two members of a farmer's family left the farm and moved to the city. To-day the entire family moves. One hundred years ago only 4 per cent of our people lived in towns and cities. To-day 40 per cent live in towns and cities. Nearly 25 per cent live in 50 cities. Between 1900 and 1910 population decreased in 769 counties, embracing an area of 472,462 square miles, or about one-sixth of the area of the entire country. In 327 other counties the increase amounted to less than 5 per cent, and in 561 counties the increase was only from 5 per cent to 15 per cent. Thus in 1,657 out of a total of 2,841 counties the population either decreased or increased at a rate far below the average increase of 21 per cent for the whole country. Practically all of these counties were rural.

During the decade ending in 1910 our rural population increased only 11.2 per cent, while the urban population increased 34.8 per cent. This means that the people in the rural districts have found agriculture unsatisfactory. They have found it unsatisfactory because they have not been adequately trained for it. A better system of agricultural education is needed to

meet the food demands of an ever-increasing population, both urban and rural. At the present rate of increase the population of the United States, with the beginning of the next century, will be about 450,000,000. Before the present century ends bread, something to eat, will be the world's dominant issue.

Mr. SLAYDEN. Will the gentleman permit an interruption?

Mr. ABERCROMBIE. Yes.

Mr. SLAYDEN. The gentleman's statement that he thinks this will keep the youth in schools longer was interesting to me, because when I was taken through a very admirable vocational training department of the public schools in my city last year by the superintendent, he told me that the only drawback to the system was that it took them away from school earlier, that they got trades earlier and abandoned the academic training, and went to earning a living. The gentleman differs with him.

Mr. ABERCROMBIE. Yes; experience has proven that with few exceptions pupils remain in school longer on the average where vocational training is properly correlated with academic instruction. Where vocational instruction is not provided about 50 per cent of the pupils leave school by the time they have finished the fifth grade.

Mr. Speaker, the Commission on Vocational Education by which the pending bill was drafted estimates that of the 12,659,203 persons engaged in agriculture in the United States in 1910, less than 1 per cent had received adequate preparation, and that a like proportion of the 14,261,376 persons engaged in manufacturing and mechanical pursuits were inadequately trained vocationally. The commission estimates, also, that through mortality and superannuation our great army of workers is reduced annually by about 1,000,000. Since it requires from two to four years of special training to prepare adequately for most callings, it is obvious that, omitting the obligation to those already at work, continuous vocational instruction for an average of 3,000,000 persons should be provided—must be provided—if we are to be an efficient people, individually and collectively.

To what extent have we made provision for vocational education? Are we doing for our youths what other Governments are doing for theirs? While here and there, notably in Wisconsin, good vocational schools have been established, the task is only begun. Compared with several other countries, Germany especially, we are far behind. In our entire domain of 48 States, with a population of over 100,000,000, there are fewer vocational schools than in the small Kingdom of Bavaria, which has a population only slightly larger than that of the city of New York. The city of Munich alone is training adequately a greater number than all of our larger cities combined. For 30 years practically every German citizen has received special training for his life work. As a result the people of Germany are universally conceded to be the most efficient in the world. That efficiency is due to her system of education, which guarantees to her children such training as will fit them for success in their occupations of life. What vocational education has done for the people of Germany it will do for the people of every other country.

Our natural resources are unexcelled by those of any other nation; but of what avail are they if we do not develop the intelligence, energy, and skill to use them wisely and in fullest measure? Vocational efficiency is needed to conserve and develop and utilize our natural resources, which, under existing conditions, are being exhausted and wasted. We are the most extravagant, the most wasteful people on earth.

Human labor is as essential to industrial and economic growth as are natural resources, and the nation that fails to conserve its labor through vocational guidance and training is as foolish as the one that wastes its natural resources. Yea; it is more foolish, for waste of human labor is the most costly, the most impoverishing form of material extravagance.

Practically all of the problems growing out of the lack of adequate vocational training for the masses are national, as well as local or State. A workman is trained in one State and plies his trade in another. Goods are manufactured in one State and used in another. Foods are produced in one State and consumed in another. People are born in one State and live in another. Interstate migration produces large net gains in some States—large net losses in others. In 1910 nearly 17,000,000 native-born citizens were living in States other than those of their birth. In this day of transportation, exchange, travel, visitation, and communication, we are one people, our problems are common problems, our duties common duties. The task of vocational education is National as well as State, local, and individual.

Vocational training is the most expensive form of education in both the trades and the professions, and imposes financial burdens in the bearing of which the entire Nation should participate. Cooperation between the Federal Government and the States is necessary, and such cooperation is provided in the pending bill.

Briefly stated, the provisions of the proposed act are as follows:

OBJECT AND SCOPE.

1. Appropriations to the States are made for two purposes:

(a) For the training of teachers of agricultural, trade, industrial, and home-economics subjects.

(b) For the salaries of teachers, supervisors, and directors of agricultural subjects, and of teachers of trade, industrial, and home-economics subjects.

2. Appropriations to a Federal board are made for administering these funds and for conducting studies and investigations in vocational subjects.

DIVISION OF APPROPRIATIONS.

1. For the training of teachers of vocational subjects the appropriations are as follows: For the fiscal year 1917–18, $500,000; for 1918–19, $700,000; for 1919–20, $900,000; for 1920–1, and annually thereafter, $1,000,000.

2. For the salaries of teachers, supervisors, and directors of agricultural subjects the appropriations are as follows: For the fiscal year 1917–18, $500,000, this amount to be increased by $250,000 a year until a total of $2,000,000 is reached in 1923–24, and thereafter the increase to be $500,000 annually until a maximum of $3,000,000 is attained in 1925–26, at which amount the annual appropriation shall remain.

3. For the salaries of teachers of trade, industrial, and home-economics subjects the appropriations are the same as for the salaries of teachers, supervisors, and directors of agricultural subjects. Not more than 20 per cent of these appropriations shall be expended for the salaries of teachers of home-economics subjects.

4. For administering the funds and for conducting studies and investigations in vocational subjects an annual appropriation of $200,000 is made to the Federal Board for Vocational Education.

5. Appropriations for the training of teachers of vocational subjects are to be allotted to the States in the proportion which their total population bears to the total population of the United States; those for paying the salaries of teachers, supervisors, and directors of agricultural subjects, in the proportion which their rural population bears to the total rural population of the United States; and those for paying the salaries of teachers of trade, industrial, and home-economics subjects in the proportion which their urban population bears to the total urban population of the United States.

In the beginning a State may elect to participate in the distribution of any one of the appropriations, but after June 30, 1920, it can not share in either of the appropriations for the payment of teachers' salaries unless it has made provision for the training of teachers of vocational subjects.

SCHOOLS AIDED.

1. Only schools under public supervision or control are to be aided.

2. The instruction given must be lower than college grade and designed to fit youths over 14 years of age for the useful occupations of life.

3. Three types of schools are to be aided:

(a) All-day schools, in which approximately half of the time is to be devoted to practical instruction in vocational subjects.

(b) Part-time schools, for those who have already entered employment. At least one-third of the amount appropriated to each State for teachers' salaries must be expended for the support of such schools.

(c) Evening schools, for youths over 16 years of age who are employed during the daytime, the instruction to be supplemental to their daily employment.

PLAN OF ADMINISTRATION.

1. A board, to be known as the Federal Board for Vocational Education, is created for the purpose of cooperating with the States in administering the funds and promoting vocational education. As recommended by the committee on conference, the board will consist of the Secretary of Agriculture, the Secretary of Commerce, the Secretary of Labor, the United States Commissioner of Education, and three members to be appointed by the President, one of whom shall be a representative of the agricultural interests, one a representative of the manufacturing and commercial interests, and one a representative of labor.

2. In order to share in the distribution of any of the funds the States are required through legislative action to create or designate State boards of not less than three members each, with which the Federal board will cooperate. The creation or designation of these boards is left entirely with the States. The State treasurers are made the custodians of the funds for their respective States.

3. The States are required through legislative action to accept the conditions set out, and this must be done before they can participate in the use of any one of the funds, provided that in any State whose legislature does not meet in 1917 the governor may appoint a board of not less than three members, or may designate an existing board, to administer the funds until the legislature meets in due course and has been in session 60 days.

4. The State boards, with the approval of the Federal board, will formulate plans, designate schools to be aided, select teachers, arrange courses of study, provide equipment, and have direct supervision of the work of instruction.

5. For every dollar paid from the funds allotted to any State for the salaries of teachers or for the training of teachers the State or local community, or both, will be required to expend an equal amount for the same purpose, and in addition meet all other costs of plant and maintenance, including salaries of other teachers necessary to complete well-rounded courses of instruction. So long as a State uses the funds in conformity with the purposes and provisions of the act it will receive its allotment in quarterly installments.

APPORTIONMENT BY STATES.

For the training of teachers of vocational subjects each State is granted not less than $5,000 annually until the close of the fiscal year 1918–19 and $10,000 per year thereafter.

For the salaries of teachers, supervisors, or directors of agricultural subjects each State is guaranteed not less than $5,000 annually until the close of the fiscal year 1922–23 and $10,000 per year thereafter. Like minimum amounts are guaranteed each State for the salaries of teachers of trade, industrial, and home-economics subjects.

The apportionment by States for a period of 10 years is shown in the following tables, which are based upon the census of 1910:

Table showing amounts which each State will receive for the training of teachers of vocational subjects.

State	Total population.		Allotment, 1917–18.	Maximum allotment, 1920–21, and annually thereafter.	Special allotment to guarantee $5,000 to each State in 1917–18.	Special allotment to guarantee $10,000 to each State beginning 1919–20.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. CLARENCE B. MILLER,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. MILLER of Minnesota. Mr. Speaker, under the authority granted me to extend my remarks, I am inserting, for the purpose of giving it publicity, a letter I have just received signed by the principal and teachers of the State high school at Sauk Center, Minn. These signers are nearly all college men and women of the West, and I desire that this expression from them be placed in the RECORD as in striking contrast to that which came from 150 college men and women of the East who appeared before the Foreign Affairs Committee of the House, of which I am a member, a short time ago. This large delegation that appeared before our committee vehemently protested against military preparedness, protested against taking any steps for the protection of American life and property on the high seas, and some of them at least announced they were opposed to fighting, even though this country should be invaded by a foreign foe. In other words, if any foreigner wanted this country bad enough to take it, they would surrender without a blow in its defense. The sentiments thus expressed by these young men and women filled me with grave concern and some alarm. If their ideas are shared generally by the young college men and women of the country, there is no future for the country. We might as

well haul down the flag now and turn this country over to a people who have wisdom enough and courage enough to set up a government here that will last. These expressions are not simply those of pacifists; they are those of persons lacking in every element of patriotism, lacking in every essential element of citizenship that means for the safety and perpetuity of the Nation. If any institutions are inculcating doctrines similar to those presented by this delegation, and are receiving State aid or governmental aid, they should be a subject of immediate inquiry. If they are private institutions in that their income is independent of any State or Federal assistance and they are inculcating doctrines of this character, it should be the duty of this Government to make inquiry into the character of the institution then. But I can not bring myself to believe that the sentiments expressed before our committee are shared by more than a few who constitute a decided exception to the general class. Those who came here probably represented no one but themselves. Nevertheless, they went on record as representing the sentiment in some 50 colleges, and the leading colleges, too, of the East.

The letter which I have received is as follows:

STATE HIGH SCHOOL,
Sauk Center, Minn., February 22, 1917.

Hon. C. B. MILLER,
Washington, D. C.

MY DEAR MILLER: We believe that the extreme pacifists are dangerous and a menace to the country and therefore should be interned. We are in favor of strongly supporting the President in taking a firm stand to uphold all the rights of Americans. We are against a referendum vote on the question of war. We believe the President and Congress should have all the power as they now have. We believe that Congress should back up the President in all his acts in maintaining the rights of this country before the world, and we sincerely hope that every Congressman will do all in his power to give the President support under strong leadership.

Trusting this will receive your consideration, we are,
Very truly, yours,

R. A. MCGEE.
L. O. MYHRE.
C. E. LUCAS.
M. D. AYGARN.
O. E. STEPLL.
H. M. BISEL.

There is one feature of this that gives me especial pleasure. One of the signers and the principal of the school is Mr. M. D. Aygarn. I would expect a sentiment of this kind to come from a school in his control. Some twenty or more years ago he was a student in the Rushford High School, of which I was principal. He spent three years and graduated, later going to the State university, where he made a splendid record. In the Rushford High School I organized a military company of the young men, purely voluntary in character. Mr. Aygarn was one of those who took the drill. This was the first military company ever organized in any high school of Minnesota. I can not help but feel that the seed then sown has brought forth fruit.

I have also recently received a telegram from the Commercial Club of Cloquet, a splendid city in my district. The patriotic spirit of this telegram is worthy of wide publicity. It is as follows:

CLOQUET, MINN., *March 3, 1917.*

Hon. CLARENCE B. MILLER,
Washington, D. C.:

The Cloquet Commercial Club urges you to give your unqualified support to the President in the present crisis to the end that he may be clothed with the necessary authority to protect the lives and property of American citizens and uphold the honor and dignity of this great country.

CLOQUET COMMERCIAL CLUB,
JOHN G. WHAVENS, *President.*
C. B. MCDONALD, *Secretary.*

But about the most interesting communication I have received on this subject—and I have received several thousand on one side or the other—is a letter that has just come to me from an old Confederate veteran, who now lives in Minneapolis.

His letter is as follows:

MARCH 3, 1917.

DEAR MR. MILLER: I desire to convey to you my warmest thanks for the courtesy you extended to me when I was at the reunion of the Blue and the Gray at Gettysburg July, 1913. I also, through you, herewith tender my services to the United States of America in the event of war between the United States and Germany to serve in any capacity where I can best serve my country in her hour of need.

I was in the Confederate Army for four years in Longstreet's Corps, Hood's Division, Lee's Army of Northern Virginia. Am 74 years old and capable of doing good service for many years yet, and am willing to devote my life to my country under Old Glory. I had a good record in the army. I escaped from Rock Island prison September 8, 1864, made my way to Canada, and was with J. Y. Beall September 20, 1864, when 22 of us captured the steamers *Philo Parsons* and *The Island Queen* on Lake Erie and scuttled and sunk them.

There is lot of ginger in me yet, and I want to show my loyalty to Uncle Sam before I die.

With kindest remembrances, I am,
Very respectfully,

DAVID H. ROSS.
Company C, Eighth Regiment Georgia Volunteers.

I can not too strongly commend the spirit this man displays. It is a positive inspiration to the young men and women of today and a stinging rebuke to that skim-milk patriotism, which we frequently meet. It is inspiring to know that it correctly expresses, as I firmly believe, that ardent love of country and willingness to make any sacrifice for her safety that animates the splendid men and women of the South. We do not want war. We should do everything we honorably can to prevent our country entering into a war with any country, but if our best efforts fail in this direction, then the stern call to duty should be responded to by every citizen of this Republic. If the hour does come, I believe we shall see the splendid citizenship of the South vieing with the loyal ones of the North to take a front rank among the defenders of the land.

Representative Government.

EXTENSION OF REMARKS
OF
HON. WILLIAM GORDON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GORDON. Mr. Speaker, under leave granted Members of the House, I insert copy of recent correspondence with the secretary of the Twentieth District Democratic Club, of Cleveland, Ohio.

The correspondence is as follows:

TWENTIETH DISTRICT DEMOCRATIC CLUB,
Cleveland, Ohio, February 17, 1917.

Hon. WILLIAM GORDON,
Congressman, Washington, D. C.

MY DEAR SIR: As secretary of the Twentieth District Democratic Club, I am directed to inclose to you a copy of a resolution passed at the meeting last night.

With kind wishes, I am,
Very respectfully, GEORGE J. W. MATHEWS,
Secretary.

TWENTIETH DISTRICT DEMOCRATIC CLUB,
Cleveland, Ohio, February 17, 1917.

On motion made and seconded at a meeting of the Twentieth District Democratic Club, held last night, the following resolution was introduced by Joseph J. Devney, and copy of same ordered sent to Hon. Woodrow Wilson, President of the United States of America; also copy to Hon. WILLIAM GORDON, Representative of the twentieth congressional district of Ohio:

"Whereas the Representative of the twentieth congressional district of Ohio, Hon. WILLIAM GORDON, voted against House bill 20632, providing for an appropriation to better prepare this Nation to protect itself in case of war; and

"Whereas the President may have conceived the impression that Mr. GORDON reflects the sentiment of his district in respect to preparedness: Be it

"*Resolved by the Twentieth District Democratic Club*, That it is our firm conviction Mr. GORDON does not represent the sentiment of his district in this respect, but that it stands as solidly behind the policy of the President in dealing with foreign affairs as any district in the country; be it further

"*Resolved*, That we hereby pledge our loyalty and express our unlimited confidence in this trying situation in our great President, Hon. Woodrow Wilson; be it further

"*Resolved*, That we respectfully request and urge our Representative to stand firmly with the President in this crisis and support the preparedness program, so that in case of war it may be ended as quickly as possible and hasten the day when the President's splendid program for permanent peace may be consummated."

GEORGE J. W. MATHEWS,
Secretary Twentieth District Democratic Club.

UNITED STATES HOUSE OF REPRESENTATIVES,
Washington, D. C., March 1, 1917.

GEORGE J. W. MATHEWS,
Secretary Twentieth District Democratic Club,
1455 West Fiftieth Street, Cleveland, Ohio.

DEAR SIR: I have just received your letter dated February 17, but postmarked at Cleveland, Ohio, February 27, 1917, inclosing carbon copy of resolution introduced by Joseph J. Devney, re-

citing, in substance, that in my vote against H. R. 20632 I did not represent the sentiment of my district, and "that the district is solidly behind the policy of the President in dealing with our foreign affairs" and in favor of "providing for an appropriation to better prepare this Nation to protect itself in case of war."

Permit me to congratulate the gentlemen who voted for this resolution for their assurance of support of President Wilson in dealing with our foreign relations. I have continuously supported his conduct of our foreign affairs and aided him in every way in my power to maintain the honor and dignity of this Nation in his negotiations with foreign nations, and expect to continue to do so. I have supported all legislation which, in my judgment, was adequate and necessary to protect this Nation in the event of war, and shall continue to do so.

When H. R. 20632 was pending in the House I voted to recommit the bill to the Committee on Naval Affairs with instructions to report the same forthwith back to the House with the following amendments: "Strike out all appropriations for 2 of the 3 battleships now carried in the bill and insert in lieu thereof appropriations for the construction of 30 destroyers instead of 15, and for 30 submarines instead of 18, the type and cost of such additional destroyers and submarines to be the same as those now carried in the bill." I supported this amendment because I believed that it would render our Navy more efficient and because the destroyers and submarines are less expensive, better suited for our defense, more effective, and, being smaller craft, could be provided more quickly than the battleships, as the Government has been notified that the battleships authorized last year can not be completed within four years. The House rejected this motion to recommit, and I voted against the bill because I believed that if it were defeated it would be perfected by amendment to better meet the public requirements.

I wish you would assure Mr. Devney and the other gentlemen who are apprehensive as to the official action of their Representative in Congress that so long as I have the honor to represent the twentieth district I shall support the President when he is right, and when I believe he is wrong I will do my best to put him right; that as a Member of Congress I shall vote for and support such measures as in my judgment are necessary to provide for the adequate defense of this Nation, and that in all matters I shall be governed by the highest and best interests of the people of the United States, as I see them; but that while I remain a Member of Congress I alone am responsible for my official conduct to the people of the twentieth district, and I shall not delegate my authority to anyone. If the gentlemen who are complaining in this resolution want a rubber stamp for a Congressman, who will simply echo and record the opinions of some one else who is not officially responsible to my constituents, then they ought to have selected some one other than myself. I made this very clear in my campaign for renomination and reelection, and my position remains unchanged.

You will please communicate the contents of this letter to the gentlemen who voted for the resolution which you mailed me.

Yours, truly,

WILLIAM GORDON.

Recipe to Cure and Prevent the Spreading of Foot-and-Mouth Disease.

EXTENSION OF REMARKS

OF

HON. EDWARD J. KING,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. KING. Mr. Speaker, a short while ago I received from Mr. J. L. Hammett, whose address is 90 Canal Street, Boston, Mass., a communication offering a recipe for the cure of the foot-and-mouth disease and requesting that it be circulated and given publicity among the farmers and stock raisers of the country. I suggested to Mr. Hammett, who, as I understand it, is a practical stockman of many years experience, that if he would forward me the recipe in detail I would be glad to have it extended in the CONGRESSIONAL RECORD for the benefit of those interested as part of my remarks. Mr. Hammett thereupon forwarded me the following recipe, to wit, to cure and prevent the spreading of foot-and-mouth disease:

First. Make the stable floor as dry and clean as possible and sprinkle it with air-slaked lime.

Second. Select out from the herd all affected animals and place them on the floor thus prepared (each confined to a stanchion the same as the well ones).

Third. Give each in their morning feed (of either dry or wet mash) a heaping tablespoonful of flowers of sulphur.

Fourth. Wash their feet clean with warm soapsuds and sprinkle powdered blue vitriol freely on the hair near the hoof and between the toes. Give the sulphur and powder the feet every morning till cured. Keep them dry and warm and give them plenty of fresh air. Do not let them run out in the rain or walk out in the mud, but let them out in the sun pleasant days on dry ground for exercise.

Give all the rest of the herd a half dose of sulphur each three mornings and there will be no spread after the first treatment.

Supplementary to this I will add that a tablespoonful or more of powdered charcoal is always good to aid digestion, and I put it in when mine were being treated. For swine do just as some sheepherders have done in New England for a hundred years. Make a large trough and march them through some 4 inches of a weak solution of blue vitriol and give them a half spoonful each of sulphur in their feed for three mornings. Give all the herd a little sulphur. In fact, all animals need a little regularly as often as twice a month to keep them in first-class trim.

Mr. Hammett also accompanied the recipes by the following supplementary statement, to wit:

Foot-and-mouth disease of cattle, sheep, and swine is not so fearful a calamity as it is generally supposed to be if properly treated when it first appears. Dr. T. W. White, of the Board of Animal Industry of Massachusetts, wrote December 9, 1914, in reply to a protest against killing a herd where only a few were sick, and for which the State and Federal Governments later paid over $40,000 for their destruction: "I do not know of any instance where anyone contends that foot-and-mouth disease is not curable or where the animals do not in more than 95 per cent recover without any treatment whatever. In fact, so far as the present outbreak goes, I have not heard of a single death among the animals affected; largely the reason for killing and the vigorous efforts made to thoroughly cleanse the premises has to do solely with the economic question of destroying a few animals that the disease may not spread to countless numbers."

The fearfully contagious character of the disease has been the belief that has led to drastic laws for its treatment. Now, if it can be proved that a simple treatment costing not over 10 cents a head and a little labor has for over 40 years cured every herd affected with the disease where it has been tried, and that in every case there has been no spread to other herds, is it not about time a campaign of education along the line of prevention and cure was started and the laws requiring killing and quarantining wiped off our statute books?

Several remedies have been used, such as burnt alum, saltpeter, camphor, borax, sulphur, oil, and creoline for feet, and several other drugs in various combinations, and cures resulted with no spread to other herds. But the simplest remedy, the one most easily understood and applied, and one that has never failed is a heaping tablespoonful of flour of sulphur every morning in their feed and wash their feet with warm soapsuds and sprinkle them freely with powdered blue vitriol. Sprinkle the stable floor with air-slaked lime, keep them warm and dry. Do not let them go out in the mud, but give them plenty of fresh air. A spoonful or more of powdered charcoal has been added to their feed in several cases with good effect. Killing and quarantining has never stamped it out of any country so but what it has reappeared in from two to six years, and Philip Haller, of 2754 Broadway, New York, wrote as follows March 23, 1915: "I am a German, but have lived for over 20 years in England, but for the last 7 months I was staying in Germany, and I know as a fact that in Germany cattle suffering from hoof-and-mouth disease are not killed off, as I was staying in a village where the disease had broken out in one stable and I was therefore able to learn exactly how the authorities over there go to work. But my knowledge is not derived from this village alone. I know of other villages where the disease has appeared and made full inquiry and gathered all the information as to what was being done. As soon as the hoof-and-mouth disease appears in any stable in the village that stable is isolated in the best possible way, but no killing is done either to infected cattle or other domestic animals, but a war is waged against rats, and everybody in the immediate neighborhood of the stable is compelled to destroy rats. The hoof and mouth of the suffering animals are thoroughly washed out twice a day with disinfectant, the stable also washed with disinfectant and thoroughly limed, and invariably within three or four weeks the disease dies out and rarely appears in any other stable."

In order to ascertain whether or not there was anything harmful in the recipes so given to the country by Mr. Hammett, the following correspondence took place between myself and Drs. A. D. Melvin and J. R. Mohler, Chief and Acting Chief of the Bureau of Animal Industry, Department of Agriculture, Washington, D. C.:

FEBRUARY 10, 1917.

Dr. A. D. MELVIN,
Chief of Bureau of Animal Industry, Washington, D. C.

MY DEAR DR. MELVIN: A stockman, who claims to have had a great deal of experience with the foot-and-mouth disease, has sent me a recipe for its cure, which is as follows, to wit: "To cure and prevent the spreading of the foot-and-mouth disease—

"First. Make the stable floor as dry and clean as possible, and sprinkle it with air-slaked lime.

"Second. Select out from the herd all affected animals and place them on the floor thus prepared (each confined to a stanchion the same as the well ones).

"Third. Give each in their morning feed (of either dry or wet mash) a heaping tablespoonful of flowers of sulphur.

"Fourth. Wash their feet clean with warm soapsuds and sprinkle powdered blue vitriol freely on the hair near the hoof and between the toes. Give the sulphur and powder the feet every morning till cured. Keep them dry and warm, and give them plenty of fresh air. Do not let them run out in the rain or walk out in the mud, but let them out in the sun pleasant days on dry ground for exercise. Give all the rest of the herd a half dose of sulphur each three mornings and there will be no spread after the first treatment.

"I will add that a tablespoonful or more of powdered charcoal is always good to aid digestion, and I put it in where mine were being treated. For swine do just as some shepherds have done in New Eng-

land for a hundred years. Make a large trough and march them through some 4 inches of a weak solution of blue vitriol and give them a half spoonful each of sulphur in their feed for three mornings. Give all the herd a little sulphur. In fact, all animals need a little regularly as often as twice a month to keep them in first-class trim."

I do not know whether there is any merit in the above or not, but I would thank you to give me your opinion as to whether or not any harm could result therefrom.

Yours, very truly,

EDWARD J. KING.

—

WASHINGTON, *February 13, 1917.*

Hon. EDWARD J. KING,
House of Representatives.

DEAR MR. KING: I am in receipt of your letter of February 10, submitting a recipe from a stockman for the cure of foot-and-mouth disease and wishing to know whether or not any harm could result therefrom. In reply I believe all standard textbooks on the subject claim that there is no specific remedy known for foot-and-mouth disease, and it is therefore frequently recommended in countries like France, Italy, Russia, and Germany, where the disease is indigenous; that treatment should be directed toward allaying the local inflammatory processes as well as preventing severe complications. Blue vitriol is one of the drugs most frequently recommended for such palliative treatment, and occasionally flowers of sulphur is likewise recommended, but it is known definitely that neither of these drugs, alone or in combination, will prevent the spread of foot-and-mouth disease.

As you know, this disease is one of the most contagious of animal infections and no experiments over which the department had any control have ever been permitted on account of the danger of the disease getting beyond control. Inasmuch as there is no foot-and-mouth disease in the country at the present time it would not be possible to make a test of the recipe.

Most animals will recover from foot-and-mouth disease with or without treatment, but it is practically impossible while the infected animals are being held for recovery to prevent the spread of the infection to others; in fact, the disease would be likely to spread faster than it could be cured and therein lies the harm which could result from the treatment mentioned.

Very truly, yours,

A. D. MELVIN,
Chief Bureau of Animal Industry,
Agriculture Department.

—

FEBRUARY 19, 1917.

Dr. A. D. MELVIN,
Bureau of Animal Industry, Washington, D. C.

MY DEAR DR. MELVIN: I am in receipt of yours of the 13th instant, and in reply to mine of the 10th instant, concerning recipe from a stockman for the cure of the foot-and-mouth disease, I thank you for the information given me in your communication.

There is, however, one thing that I would like to know, and which you have possibly overlooked, and that is this: Is there anything harmful to the animal treated as per this recipe? I understand the harm which might be done by the spreading of this disease.

Yours, very truly,

EDWARD J. KING.

—

FEBRUARY 20, 1917.

Hon. EDWARD J. KING,
House of Representatives.

DEAR MR. KING: Replying to your letter of February 19, I beg to advise you that there is nothing harmful in the proper doses of flowers of sulphur and blue vitriol suggested for cattle and hogs by your correspondent. In fact, flowers of sulphur mixed with molasses is a farm remedy given to many children as a spring-time tonic in certain sections of this country, and blue vitriol solution has been frequently used in different strengths with more or less success in foot-rot of sheep, foul foot of cattle, and intestinal parasitism of hogs and sheep. As previously stated, the harm would lie in attempting to treat foot-and-mouth disease cases with these drugs, thereby permitting the disease to spread faster than it could be controlled.

Very truly, yours,

J. R. MOHLER,
Acting Chief Bureau of Animal Industry,
Department of Agriculture.

Arming of American Merchant Ships.

EXTENSION OF REMARKS
OF
HON. EDWARD COOPER,
OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. COOPER of West Virginia. Mr. Speaker, I have refrained from making any comments on the international situation. Now that the die has been cast I feel that the people of my district are entitled to know my views on this important resolution. The discussion which has gone on here almost daily for a number of days I have deplored. The headlines in the daily papers have done much to inflame the public. But, after all has been said and done, the American people will uphold the stand taken by the President to protect American lives and property.

The Representatives of West Virginia, while undertaking to carry out the wishes of the people of their respective districts, are not unmindful of the fact that on February 5, 1917, house joint resolution No. 13 was passed by the house of delegates and the State senate of West Virginia, approving the course of the President of the United States in severing diplomatic relations with the Imperial German Government, and pledging to the National Government the support of the people of West Virginia.

My influence has always been exerted for peace, but I do not believe in peace at any price. I am convinced we can not much longer remain out of the European struggle unless we are willing to sacrifice principles the American people have contended for since the organization of our Government. We have always believed in freedom of the seas, and our good American blood has been given up time and time again in the defense of those principles.

Every honorable effort has been made to keep this country out of war, and every effort honorable with American ideas of right and justice will continue to be made to keep out of the terrible conflict now going on in Europe. But we can not accept the ideas of one of the belligerents that it has a right to prescribe the places to which we shall be permitted to sail our ships, and if we sail our ships other than in the manner dictated to us by this belligerent, our ships will be sunk without notice by a new instrument of destruction—the submarine.

This Nation must not be allowed to become only a Nation of money makers. Death and misery on the battle fields of Europe have brought prosperity throughout this land, and many of our rights violated by the warring nations of Europe have been forgotten by the desire to make dollars out of the misery of others. The time has arrived when we must either accept "peace at any price," with a temporary chance to earn gold, or insist upon the protection of our rights on the high seas and elsewhere secured for us by the blood of our forefathers shed upon many battle fields.

Mr. Speaker, I desire to have published as part of my remarks a copy of a letter written by Albert Sidney Johnston—one of our West Virginia fighting editors—to the President of the United States, which letter, in my opinion, breathes the spirit of the people of West Virginia on the international situation. Mr. Johnston is recognized in West Virginia as one of our most able editors, and words from his pen at this time are read with interest by the people of our State:

[The Monroe Watchman, A. S. Johnston, editor and publisher.]

UNION, W. VA., *February 14, 1917.*

The Hon. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR MR. PRESIDENT: Just a word, Mr. President, from an average citizen in intimate touch with his fellows to assure you that our people are with you. You know far better than I the unrepresentative character of the noisy and well meaning but utterly mistaken pacificists. Of course we all want peace, but not at the price of American honor and the continued and inhuman sacrifice of the lives of American citizens while engaged in their lawful and peaceful pursuits.

Our fathers fought and bled to establish the rights we now enjoy, and we, their children, are not willing to supinely surrender them and have America become a vassal state.

Mr. President, you have our full confidence and support. I have three sons eligible to military duty. It is needless to say they are dear to me; but they are all at the service of our country for the defense of her high and indisputable rights.

May God continue to give you a right judgment and further you with his continual help.

Most truly, yours,

A. S. JOHNSTON.

(Copy to Hon. EDWARD COOPER.)

Brief Review of the 64th Congress of Especial Interest to First District of Massachusetts.

EXTENSION OF REMARKS
OF
HON. ALLEN T. TREADWAY,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. TREADWAY. Mr. Speaker, the Sixty-fourth Congress having closed its sessions, it is proper that the people receive some report from Members relative to legislation of direct effect upon their interests. It has been my purpose during my membership in Congress to keep the people of my district as thoroughly informed as possible about public matters and have invited a free expression of opinion from them. I am glad to say I find this invitation being accepted more generally as time goes on. My correspondence continues to increase, and the views of my constituents are more freely expressed now than at any previous time.

The Sixty-fourth Congress has been a memorable one. President Wilson was insistent upon having enacted into law various ideas of his own, but many of these have failed as a result of the international situation. I do not intend to dwell at this time upon general subjects. It has, however, been gratifying to receive so many words of commendation when I have considered it my duty to place patriotism above partisanship and vote for such measures as carried with them the defense and protection

of American citizens on sea and land, together with a better preparedness for national defense.

My constituents will recall that I voted against the McLemore resolution and voted for the armed neutrality bill, which was so recently defeated in the Senate, together with all measures looking to better preparedness of the Nation both on land and sea. I have consistently favored and intend to continue to favor the construction of a Navy amply able to defend American rights. It is unfortunate that the military bill failed of passage, as it carried appropriations needed for defense under the new conditions with which the Nation is now confronted. This, however, can be corrected promptly on the assembling of the special session of the Sixty-fifth Congress, which has been called. I am not a believer in national aggrandizement, but as a world power upon which new responsibilities will be forced after readjustment in the Old World we must continue, as we have begun, to be suitably prepared to maintain our present position. I believe the better the preparation the less danger of disagreement with other countries.

Upon the assembling of the next Congress as an adjunct to preparedness the question of universal military training will be prominent, and it is a subject to which much attention will be devoted. But it is only my intention, as previously stated, to touch briefly in review upon matters of local interest.

Two bills of considerable interest in Massachusetts have become law.

They are the vocational educational bill and the so-called "good-roads bill." As finally agreed upon there was very little opposition to the vocational educational bill. Like many other Federal statutes, Massachusetts had set the example along this line. Doubtless this act will be beneficial in coordinating and making uniform the great subject of vocational education and rendering a benefit in this connection to other communities similar to that which we in Massachusetts had started as a State. Vocational education is one of the pressing subjects of the day, and it is gratifying to find that the people throughout the country have become aroused to its benefits.

Another measure in which Massachusetts seems to have set the example is that providing compensation for injuries to Federal employees. I spoke in favor of this bill when it came before the first session and pointed out that Massachusetts was one of the first, if not the first, State to put upon its statute books a comprehensive workingmen's compensation act. I also called attention to the fact that during the five years the act has been in existence in the Bay State it has been very widely extended, so that to-day not only all forms of corporate employment but likewise the employees of the State, the employees of cities, counties, and towns, if those units desire, shall be provided for under the comprehensive act on our statute books in Massachusetts. The committee in framing the bill appeared to have given careful attention to the operation of the statute in Massachusetts.

The "good-roads bill" did not appeal to the representatives from Massachusetts. We recognized the able manner in which the subject of State highways has been handled by our State commission. We also considered that the subject is one for State action rather than for national action. Further, under the act as passed by Congress the contribution from the State of Massachusetts by taxation is far in excess of that which will be returned to the State. In other words, we will be building roads for other States, for which they have not seen fit to tax themselves as Massachusetts has done.

Even more sweepingly does the recent revenue law affect Massachusetts than this "good-roads bill" in a particularly unjust way. This law, which was insisted upon by the majority in the face of the strongest kind of northern opposition in Congress, appears most unfair, with its exorbitant taxation of the business interests in the northern States, and especially as regards the industries of Massachusetts. It is another instance of the present domination of the South in placing the burden of the taxes upon the North, while the cotton growers are permitted to continue their occupation untouched by this unjust law. "Preparedness" is the excuse, but an undue proportion of additional revenue is required for unnecessary measures in no connection therewith.

I was very glad to be instrumental in securing recognition of the claim of Massachusetts under the Federal statute for assistance in support of the nautical training school. I introduced a bill to pay the State of Massachusetts the amount which had accumulated since the act was passed, namely, $125,000. This was incorporated in the naval bill at the first session of the Sixty-fourth Congress and has been paid to the State treasurer. The present naval bill, now law, carries the same item for the past fiscal year, namely, $25,000, which in due time will reach our State treasury.

Certain bills looking to increase of pay for letter carriers and post-office employees and a leave of absence for them when incapacitated received my hearty support, and at hearings which were held by the Committee on the Post Office and Post Roads I spoke for the Madden and Griffin bills. The last Post Office appropriation bill carries an amendment proposed by Mr. Madden, of Illinois, by which a much larger percentage of clerks and carriers in first and second class offices are entitled to an increase of pay, which is thoroughly deserved. I shall hope to see a similar increase given to other classes in the near future, as well as to the rural carriers. Continued interest in the Madden and Griffin bills will be shown and their passage eventually expected.

There are frequent cases where veterans of the Civil War are entitled to special acts carrying a higher rate of pension than the statutes actually provide. Several of these cases have come to my attention during this Congress, and it has been a pleasure to me to secure favorable consideration of them. One especially striking instance was that of a blind chaplain of a Grand Army of the Republic post in the district. This man, who had an honorable service of practically four years in the Civil War, in which he received wounds in the body, left the Army in possession of his eyesight; but three years later he was injured so that he became totally blind. He has received $30 monthly under special act, but in view of the high cost of living and the fact that he has an invalid wife, who is unable to get about except in a wheel chair, an increase to $50 seemed a just amount for this meritorious case. I had the honor of securing passage of the bill for this fine old gentleman, who has the love and respect of all who know him in his community.

An item of great importance to the eastern section of the first district of Massachusetts is the subject of agreement between private corporations developing hydroelectric power and the Federal Government, permitting the use of navigable streams for this purpose, which, at the same time, benefits navigation. It is on this form of agreement that development of navigation on the Connecticut River depends. The Board of Engineers of the United States Army has recommended that such an agreement may be entered into. It is understood that private capital can be secured. The hindrance is the present form of the so-called general dam act. It must be amended in such a way as to invite private capital. One form of amendment has passed the House and another has passed the Senate, but neither was acceptable to both bodies. It is a cause of great regret that such a stream of water as the Connecticut River above Hartford can not be made available both for navigation and power purposes. The administration advocates remedial legislation. It seems to me that the so-called conservationists have overstepped themselves in continually compelling the waste of the amount of power that could be developed in the Connecticut River rather than aiding in conserving it by use.

Eventually this legislation will be adopted, and I assure my friends that no subject will receive more attention from me while in Congress than Connecticut River navigation. I have, in the Sixty-third and Sixty-fourth Congresses, served on the Committee on Rivers and Harbors, where I have endeavored to consistently oppose appropriations for small and useless streams which cause this kind of legislation to be designated as "pork barrel." To this I am bitterly opposed but not to such appropriations as will deepen harbors for carrying on great commerce or for streams as worthy of development as the Connecticut River.

The agricultural interests have been given careful consideration by the Sixty-fourth Congress. Much experimental work has been authorized of direct effect upon crops and products. One of the crying needs to-day is a closer relationship between the producer and the consumer, that one may secure a fair return for his product and the other may purchase the necessaries of life more reasonably. There are great opportunities to secure information upon all subjects pertaining to rural life. Let your wants be known to your Congressman and you will find him anxious to place any literature or advice possible in your hands.

As the Sixty-fourth Congress closed with grave responsibilities resting upon the shoulders of your Representatives, so the Sixty-fifth Congress opens. No man can accept such a position of trust without feeling the need of assistance. I hope to receive and benefit by the support of my constituents. The first district of Massachusetts is one to be proud of, and I know its people will expect me to act in their behalf in these trying times in our national history in a way that will reflect credit upon their patriotism and loyalty.

Arming American Ships.

EXTENSION OF REMARKS
OF
HON. FREDERICK C. HICKS,
OF LONG ISLAND,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 1, 1917,

On the bill (H. R. 21052) authorizing the President of the United States to supply merchant ships, the property of citizens of the United States and bearing American registry, with defensive arms, and for other purposes.

Mr. HICKS. Mr. Speaker, few, if any, of the many pamphlets and brochures that were published before and during our Revolution have come down to the present day. There is, however, one sentence from those forgotten writings which has been preserved, and which has oft been repeated since it was penned by its author, Thomas Paine. It is, "These are the times that try men's souls." There have been numerous occasions since the founding of our Republic when those words were applicable. They are applicable now in the stress and storm through which our Nation is passing. But because the times are troublesome is no reason why we should falter in our course of action. On the contrary, now is the time to show firmness and determination. As I view the situation, our duty—plain and insistent—is to pass this bill without a dissenting vote. By its passage we give support to the Chief Executive in the hour of the country's trial and show to the world that America is united and determined in the maintenance of its rights. Division spells weakness, and weakness is an invitation to the aggressor.

It has been stated on the floor of this House that the passage of this bill will be a declaration of war. It has also been maintained that if this measure becomes law the President will be clothed with the power of declaring war irrespective of the will of Congress. I deny both allegations. There is not a syllable in this bill which makes for war; there is not a word that suggests aggression. It asserts nothing but our "right of defense against unlawful attack." It provides for nothing but the protection of American lives and American property on the high seas. It does assert that this great Nation, under threats and compulsion, is not willing to surrender its unquestioned rights as a neutral in the world conflict.

If we, in the fullness of our power and our greatness, are not willing or are afraid to act, even in self-defense, then the hour has struck for our national existence and the time of our decadence is at hand. If we are not willing to assert our rights and tamely submit to the dictates of other nations, then, Mr. Speaker, our sovereignty has departed and the sacrifices of our ancestors in an heroic past were made in vain; then the history of the fathers, with their undaunted courage and unswerving patriotism becomes a blank page and the destiny of America is ended.

This bill does not by word or inference delegate to the President the right to declare war. Upon Congress alone rests that responsibility, and I would not be willing, even if I could, to delegate that power to another authority. In order that there may be close cooperation between the two branches of Government, I feel that during the crisis through which we are now passing Congress should be in session to advise and assist the President as it did during the Spanish War. At this time, Mr. Speaker, we should support the administration, and I shall vote for this bill. My only regret is that it did not come before us weeks ago. I shall vote for it, not with fear and hesitation, as expressed by some gentlemen on this floor, but with a firm conviction that it is my duty as an American citizen and the representative of 250,000 patriots on Long Island. There is no fear in my heart when I register my vote for the flag of my country and the protection of the lives of American citizens on land and sea.

We are all conscious of the horrors of war and no one desires to precipitate this Nation into the deadly strife that is raging in Europe. Peace for our Republic should be the ambition of every patriot and an appeal to the arbitrament of arms the last resort of an enlightened nation. I deny that this bill will bring us nearer to strife. The surrender of one's rights, instead of insuring peace, is more apt to provoke hostilities. It is lethargy and indifference, not virility and determination, which lead to disaster.

The delimination of a war zone on the high seas and the ruthless destruction of property within that zone are not countenanced by any provision of international law. Nevertheless we propose to meet that abnormal situation in a legitimate way by arming our merchant ships so that they may defend themselves against unlawful attack. In doing so we do not propose to infringe upon any of the recognized rights of a belligerent nation. There is no intention to abrogate the doctrine of contraband, of blockade, or of visit and search when lawfully exercised. But we do insist that the dictates of humanity, the recognized precepts of international law, and the rights of a neutral nation shall be respected and preserved.

Mr. Speaker, I feel it the duty of every Member of Congress in this solemn hour to think and act only for the United States. This is an American question; it deals with American interests and upholds American prestige. Political enmities should be forgotten and we should remember only that we are all citizens of a common country. Sectionalism should give way to nationalism, expediency to principle, and partisanship to patriotism. Birth, creed, and race should be subservient to Americanism, as a united Nation, animated with the spirit of justice, acclaims to the world the perpetuity of our institutions for the generations that are to follow.

Arming of American Merchant Vessels.

EXTENSION OF REMARKS
OF
HON. JOSEPH B. THOMPSON,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. THOMPSON. Mr. Speaker, I take advantage of the opportunity to extend my remarks in order to explain to the people who have been kind enough to send me here the reasons for the position I have taken on many matters affecting their interests. We have just voted on a question of vital importance to the Nation, and I desire to express my views not only on the question of giving the President power to arm ships but on other matters.

Section 1 of the bill passed the other day provides—

That the President of the United States be, and is hereby, authorized and empowered to supply merchant ships, the property of citizens of the United States and bearing American registry, with defensive arms, and also with the necessary ammunition and means of making use of them in defense against unlawful attack.

In the committee an amendment was proposed which would have made the provision read:

That the President of the United States be, and is hereby, authorized and empowered to supply merchant ships whose cargoes are not in whole or in part composed of arms and munitions of war consigned to belligerent nations or citizens thereof, the property of citizens of the United States and bearing American registry, with defensive arms, and also with the necessary ammunition and means of making use of them in defense against unlawful attack.

I voted for the amendment in the committee. The minority of the committee submitted reasons for the adoption of the amendment in a report which I desire to call to the attention of the House. They said:

An unsuccessful effort was made in committee to amend section 1 of this bill so as to except from its provisions ships engaged in carrying cargoes consisting in whole or in part of arms and munitions. It would be manifestly unneutral for our Government to arm and protect ships engaged in the munitions traffic with belligerents.

It is true that there is no international law imposing a duty on neutrals to restrain their citizens from selling arms and ammunitions to belligerents. But the belligerents against which such arms and ammunitions are intended to be used have a right to capture the same in transit on the high seas.

If the Government of the United States should arm and protect a ship carrying arms and ammunitions consigned to a belligerent, thus itself becoming a party to the traffic, it would commit an unneutral act—an act of war.

I will not elaborate upon the reasons set forth in this report. They appear to me to be compelling. We are assured, however, that the President will not permit the clearance of ships armed and ammunitioned by the Government carrying arms and ammunition consigned to the belligerents or to citizens thereof. I am satisfied the President will do this, and for that reason I voted for the bill as reported.

The American people do not desire to become involved in the European war. They are a peace-loving people. They are not afraid to fight when it becomes necessary in defense of their country or their country's honor. They are unwilling to surrender their undoubted right to carry on their peaceful and lawful pursuits on the high seas. They went to war in 1812 to establish these rights, and in 1917 they are willing to lay down their lives to maintain them. Before doing so, however, they

desire the exercise by the Government of great caution in order that they may not be plunged into a conflict the result of which does not vitally concern them.

They have faith in the President. They know how for nearly three years he has successfully steered them through troubled international difficulties without involving them in war, and they are willing to risk him in this emergency. I hope and believe he will keep them in peace.

The greatest danger we face to-day does not come from oversea. It is here at home in the person of the jingoes who desire to involve us in the war abroad. Every conceivable character of misrepresentation and artifice is being used to excite the minds of the people. There appeared in one of the Washington papers a couple of mornings ago an article under the flaming headlines:

GERMAN PLOT TO CONQUER UNITED STATES WITH AID OF JAPAN AND MEXICO REVEALED—DETAILS OF MACHINATIONS, BEGUN IN BERLIN JANUARY 19 AND FURTHERED BY VON BERNSTORFF, IN PRESIDENT'S HANDS.

In the body of the article I note the following:

The Associated Press is enabled to reveal that Germany, in planning unrestricted submarine warfare and counting its consequences, proposed an alliance with Mexico and Japan to make war on the United States if this country should not remain neutral.

And, again:

Mexico, for her reward, was to receive general financial support from Germany, reconquer Texas, New Mexico, and Arizona—lost Provinces—and share in the victorious peace terms Germany contemplated.

The article does not state what Japan was to receive for her withdrawal from the cause of the allies and joining with the central powers. I presume, however, that it might be justly concluded that Japan would be given California, Oregon, and Washington—our Pacific Coast States—the States which have been most offensive in the enactment of laws disagreeable to that nation.

Then again the article conjures from the imagination a lot of facts which have never been admitted and do not exist. It says:

The document supplies the missing link to many separate chains of circumstances, which until now have seemed to lead to no definite point. It sheds new light upon the frequently reported but indefinable movements of the Mexican Government to couple its situation with the friction between the United States and Japan.

The next paragraph of the article reveals the real reason for its production. For the resolution we had before us a couple of days ago it would substitute a resolution immediately plunging our country into the European war on the side of the allies and against Germany. Every member who does not favor the bill as originally introduced in its entirety, with much more, is by innuendo accused of being a German sympathizer:

What Congress will do and how Members of Congress who have openly sympathized with Germany in their opposition to clothing the President with full authority to protect American rights will regard the revelation of Germany's machinations to attack the United States is the subject of the keenest interest.

But we now come to the climax:

Such a proposal as Germany instructs her minister to make to Mexico borders on an act of war, if, actually, it is not one.

If we are to follow this article, there ought to be substituted for the bill passed the other day an act declaring war against Germany, an entrance by the United States into the European conflict on the side of the allies.

This calls attention to another article which appears on page 2 of the same paper, the headlines of which read:

ALLIES WANT UNITED STATES IN WAR, SAYS HALE—COUNT ON MORAL EFFECT, MAINE SENATOR-ELECT REPORTS.

The body of the article reads:

NEW YORK, *February 28.*

"The allies want us in the war; Lloyd George wants us in the war; Premier Briand wants us in the war," was the word brought to the United States to-day by Col. Frederick Hale, United States Senator-elect from Maine, who arrived aboard the American liner *Finland*.

Hale has been abroad several month studying war conditions before taking his seat in the next Congress.

"I had a talk with Lloyd George before I left England," Hale said. "I also had a talk with Premier Briand, of France, and other officials closely in touch with the conduct of the war. Without exception, they are elated at the step which sent Count von Bernstorff back to Germany, and believe the next move will carry the United States into the war on the side of the allies.

"The moral effect of the entry is all that is hoped for by the European countries. They declare the spectacle of only a few American troops fighting the German armies in France would have a tremendous moral effect.

"Much speculation is being given in Europe to the part this country would take if she should enter the war. It is thought she could help most by supplying convoys for steamships and by allowing the use of her great credit. Her manufacturing possibilities, it is also held, would help very much."

This discloses the desire of many in this country to participate in the European war. The central powers, of course, could not send either their navy or their army to attack the United States, nor could our Government send its Army or Navy to attack the central powers. The sole desire on the part of those in our country who wish that we project ourselves into the conflict, and those, as explained by Senator-elect Hale, of the allies, who desire that we participate in the war is for the purpose of our furnishing food and clothing and lending our credit to the allies. If it comes to this, God pity the poor taxpayers of this country! All we can do will be to hold the bag and pay the bills.

This is the usual mental food that is being served our minds from day to day. No one is so foolish as to fail to recognize the purpose behind it all.

I have faith in the President. In his message to the Congress last Monday he said:

It is devoutly to be hoped that it will not be necessary to put armed force anywhere into action. The American people do not desire it and our desire is not different from theirs. I am sure that they will understand the spirit in which I am now acting, the purpose I hold nearest my heart, and would wish to exhibit in everything I do. I am anxious that the people of the nations at war also should understand and not mistrust us. I hope that I need give no further proofs and assurances than I have already given throughout nearly three years of anxious patience that I am the friend of peace and mean to preserve it in America as long as I am able. I am not now proposing or contemplating war or any steps that may lead to it. I merely request that you will record me by your own vote and definite bestowal the means and the authority to safeguard in practice the rights of a great people who are at peace and who are desirous of exercising none but the rights of peace, to follow the pursuits of peace in quietness and good will—rights recognized time out of mind by all the civilized nations of the world. No course of my choosing or of theirs will lead to war. War can come only by the willful acts and aggressions of other.

The fear I entertain is that the jingoes will in some way manufacture a sentiment for war. If the President is permitted to handle the situation, I feel sure we will be guided in peace through the international problems. There is undoubtedly a few in this country who desire that our Government become involved in war. They have boldly proclaimed it. Through newspapers and public addresses they have been carrying on a campaign for what they are pleased to call preparedness, which, in fact, is nothing short of militarism. They have seen fit to recklessly criticize all who do not contend for this.

Inasmuch as I am one of those who favor peaceful settlement of all international difficulties, if such be possible, I take this opportunity to explain my position on the so-called preparedness question.

A few days ago I voted against the fortifications bill, carrying an appropriation of more than sixty millions of dollars, and later against the Navy bill, carrying approximately $370,000,000. I owe it to those I represent to state the reasons for my votes.

I am not hostile to an adequate program of preparedness. I am for preparedness in the sense that we should have an Army and a Navy of sufficient strength, both in numbers and equipment, to protect us from all forms of aggression from without and maintain the peace and security of the people from within. With this view, I believe, the larger part of all thinking people concur. I am opposed to militarism on the one hand as I am opposed to an idle sense of security, which makes no preparation on the other. The one paves the way for absolutism and slavery from within; the other subjects the people to bondage from without. To me all forms of slavery are equally to be despised.

Until wars are known no more, some degree of preparedness, I take it all will agree, is necessary.

This leads to the consideration of two questions: First, is it possible in the present state of the world to immediately abolish war; and, second, if not, then what constitutes adequate preparedness?

I have given some consideration to these questions and have arrived at certain conclusions. These conclusions have controlled my votes. Is it possible in the present state of the world to immediately abolish the possibility of war? I do not think it is. I wish I did. If I did, I would favor the plan which would bring it about. If I did, I would oppose all further appropriations for the Army and for the Navy.

Why is it impossible to abolish war?

There are many reasons which force this conclusion. Nations, States, counties, cities, and towns are but aggregations of people. The individual is the unit of each. The ideals, passions, and prejudices of the citizen become the ideals, passions, and prejudices of the Nation, the State, the county, and the city.

Every generation of man has been distressed by one or more destructive wars, and frequently with many. The generation just preceding the outbreak of the sickening conflict now being fought on the plains of Europe witnessed the Boer War, the Spanish-American War, the Philippine Insurrection, the Russo-Japanese War, the Civil War in Mexico, the Turko-Balkan War, and the Balkan War. This list does not include the many interventions which our Government has been forced to undertake in Cuba, in Haiti, and in San Domingo; nor have the revolutions in Portugal and China been mentioned. There has been a war during practically every four years of the

world's history and they have not grown less numerous or destructive with time.

What causes brought about these wars? The following is a fairly accurate grouping of the causes:

First. Prejudice, hate, and intolerance growing out of differences of religious views. Wars growing out of these differences have been among the world's most cruel and bloody.

Second. Prejudice, hate, and intolerance growing out of racial differences. The very foundation on which a democratic government is founded is liberty, fraternity, equality, and justice. No race believing itself to be superior, or in fact being superior, can meet in genuine equality and fraternity a race with which it refuses to mix its blood in lawful wedlock. There are many races with which our people will not intermarry.

Third. Because of a desire for liberty. Wars of this kind have been few and very generally quickly degenerated into campaigns of conquest or were shrewdly converted by tyrants into vehicles for the promotion of their selfish ambitions.

Fourth. Because of the ambitions of kings and czars for conquest.

Fifth. Because of the economic struggle for existence. These struggles have usually grown out of one of two factors—population or commerce. Nations, as well as people, have the right to exist, a right to their place in the sun. The Chinese laborer who lives on one-twentieth the amount required by an American laborer and can, therefore, produce and sell his products correspondingly cheaper, could not hope to live long in peace with his starving American competitor. Two men cast adrift in midocean on a plank which can sustain but one will not long continue in peace. A struggle will ensue for the exclusive possession of the plank. Nations, as well as men, will fight for the right to live. They have done it in all past years and, until nature is changed, will continue to do so in the future.

Until all men are equal in fact as well as in theory; until all men enjoy liberty in truth as well as in name; until all men fraternize in absolute equality; until equal and exact justice is extended to all and the knowledge of that fact brought home to their minds and consciences, there can be no universal peace. Those who are, or who imagine they are, unjustly treated will complain and struggle for justice, liberty, and equality.

There will always be a conflict between those who enjoy special privileges and those who seek the destruction of those privileges. Those who possess the privileges will not surrender them without being compelled. Their surrender will require the exercise of force, and the exercise of force is war. Until all men and all nations are willing to do to others as they would have others do to them there is a constant possibility of conflict, and so long as such a possibility exists there will exist the necessity for such preparedness as will enable the Nation to protect its citizens from plunder and slavery. I am in favor of such preparedness. I am not, however, in favor of what some are pleased to call preparedness, which, in fact, amounts to militarism and is un-American, undemocratic, opposed to the principles on which our Government was founded, and will inevitably, sooner or later, result in despotism.

This is not a new question. It is as old as the Constitution. It is, indeed, presented in a new garb during the excitement of the world's greatest war. If it were not for the conflict now going on oversea we would not witness all this agitation for the creation of the largest Army and the greatest Navy in the world. Advantage is taken of the present condition of nervousness and hysteria to saddle on the taxpayers a burden which is fast driving the country into bankruptcy.

Why all this clamor for a large Army and Navy? Since when was it discovered that the military system established by the Constitution—a small standing Army and a well-regulated militia—is a failure? Why the reason for the change? The membership of the State militia and volunteers have fought successfully all the wars of our country from the Revolution to the Spanish-American, and hitherto no complaint has been lodged against either their courage or their efficiency.

Moreover a large standing army in time of peace is contrary to the genius of free government and destructive of the liberties of a people. In the convention which framed the Federal Constitution this question was carefully considered and extensively debated and the dual system—a small standing army and a well-regulated militia—was adopted. The reasons which controlled the convention were twofold: They deemed it best adapted to protect the country from foreign invasion and the people from despotism. Patrick Henry, in discussing the question in the convention, said:

> And those nations who have gone in search of grandeur, power, and splendor have also fallen a sacrifice and been victims of their own folly. While they acquired those visionary blessings, they lost their freedom. My great objection to this Government (Mr. Henry referred to the proposition which placed the State militia under the control of Congress) is that it does not leave us the means of defending our rights or of waging war against tyrants. It is urged by some gentlement that this new plan will bring us an acquisition of strength, an Army and the militia of the States.

Mr. Henry opposed conferring on Congress the control of the State militia; he continued:

> This acquisition will trample on your fallen liberty. Let my beloved Americans guard against that fatal lethargy that has pervaded the universe. Have we the means of resisting disciplined armies when our only defense, the militia, is put into the hands of Congress?

And further he said:

> Whither is the spirit of America gone? Whither is the genius of America fled? It was but yesterday when our enemies marched in triumph through our country. Yet the people of this country could not be appalled by their pompous armament; they stopped their career and victoriously captured them. Where is the peril now compared to that? Some minds are agitated by foreign alarms. Happily for us, there is no real danger from Europe; that country is engaged in more arduous business; from that quarter there is no cause of fear; you may sleep in safety forever for them.

These words from the great Virginian appear to have been uttered for this occasion. He was no traitor, no mollycoddle. His was the voice heard above all others when war was necessary to obtain peace and liberty. Having bravely risked his fortune and his life that the people might be free, he sought in the convention to guarantee that liberty to posterity.

The proponents of militarism have set out to destroy the military system of the Constitution and erect on its ruins a large standing army, the greatest navy in the world, and universal compulsory military service. You have not glanced over the pages of the metropolitan newspapers during the last year without being reminded that the mobilization of the National Guard on the Mexican border has demonstrated its utter uselessness. The purpose of this campaign is obvious. It was to descredit the National Guard and secure the enactment of legislation which will saddle on the country universal compulsory military service.

Indeed, a bill having this object in view has already been favorably reported to the Senate, and it will not at all surprise me if it is attached to the Army appropriation bill when it reaches that body. The bill reported gives the President power to conscript into the Army every man between the ages of 19 and 28 years. It requires every man between those ages to register that he may be easily found if it becomes desirable to conscript him. It subjects those who fail to register to a fine of $1,000 and 12 months' imprisonment. It subjects them to a trial by court-martial, without a jury, and their only recourse is by appealing to the Federal district court. What chance would a poor, common, ordinary man have in those courts? It makes a person employing a man between the ages of 19 and 28 who has not served in the Army or possesses a certificate of exemption from such service guilty of an offense and subject to the payment of a $1,000 fine and 12 months' imprisonment. It requires all men between those ages to take six months' military training during the first year and report on a given date every year thereafter. It provides for pensions. The Army General Staff has just recommended a universal compulsory military plan, but the time of training is one year instead of six months. The most vivid imagination can not picture the cost of such a scheme and no one can foretell its fateful results.

Gen. Scott, Chief of Staff of the United States Army, testifying before the Military Affairs Committee of the House in its 1916 hearings, page 773, said:

> The conclusion of the War College division, which is concurred in by the remainder of the War Department staff, is that our system should be able to furnish 1,500,000 trained troops at the outset of the war and 1,500,000 additional in 90 days.

Hon. A. C. SHALLENBERGER, a distinguished member of that committee, estimated the cost of such an army, in a speech a few days ago, would be—

For equipment	$2,576,000,000
For reserve artillery ammunition	1,444,000,000
For reserve supplies	1,000,000,000

or a total of $5,016,000,000—a staggering sum. And, continuing, Mr. SHALLENBERGER said:

> This estimate does not include pay, the cost of subsistence, transportation, maneuvers, quarters, or a hundred other expenses that make up the Army appropriation bills.

The annual appropriation to support and equip such an army will not be less than a billion dollars a year, a sum equal to the entire appropriations for all the departments of the Government before this military agitation began. This for the Army alone. We ought not deceive ourselves. The requirements for the Navy will be no less. Heretofore they have been greater. The naval bill, stupendous as were the figures when it passed this House, has been increased by the committee of another body, and we are informed it carries, as reported, the sum of five hundred and

thirty-three millions. This bill as it passed the House carried a provision—

It is hereby reaffirmed to be the policy of the United States to adjust and settle its international disputes through mediation or arbitration, to the end that war may be honorably avoided.

This has been stricken from the bill. The mask is being gradually removed, and the people will learn presently what all this agitation means. The traditional policy of our country to settle all its disputes through mediation and arbitration is to be abandoned. In the future the disputes are to be settled on gory fields of glory amid the booming of cannon, the roar of musketry, and the shrieks of the dying.

It is time some thought were taken of the taxpayers. Where is all this money to come from? The Government can not make it. Wealth is created by labor, not by law. In the final analysis every dollar required to pay these enormous sums must come from the sweated pockets of the toiling masses. The historian will find it hard to justify the immense burden of taxation which this Congress is fastening on the American people.

That the people may know what is being done, I call attention to the expenditures for the Army, the Navy, and fortifications during the first year of each administration, beginning with the first term of President McKinley in 1897 to the inauguration of President Wilson in 1913.

The statement contains also the amounts appropriated for the years 1914 to 1917:

Title.	1897 Fifty-fourth Congress.	1901 Fifty-sixth Congress.	1905 Fifty-eighth Congress.
Army	$23,278,402.73	$114,220,095.55	$77,070,300.88
Fortifications	7,377,888.00	7,383,628.00	7,518,192.00
Navy	30,562,660.95	65,140,916.67	97,505,140.94
Total	61,218,951.68	186,744,640.22	182,093,633.82

Title.	1909 Sixtieth Congress.	1913 Sixty-second Congress, first session.	1914 Sixty-second Congress, second session.
Army	$95,382,247.61	$90,958,712.98	$94,266,145.51
Fortifications	9,316,745.00	4,036,235.00	5,218,250.00
Navy	122,663,885.47	123,225,007.76	140,800,643.53
Total	227,362,878.08	218,220,955.74	240,285,039.04

Title.	1915 Sixty-third Congress, first session.	1916 Sixty-third Congress, second session.	1917 Sixty-fourth Congress, first session.
Army	$101,019,212.50	$101,974,185.87	$267,596,530.10
Fortifications	5,627,700.00	6,060,216.90	25,747,550.00
Navy	144,868,716.61	149,661,864.88	313,300,555.84
Total	251,515,629.11	257,696,267.65	606,644,635.94

The amount carried in the House bill for fortifications equals the entire amount appropriated for the Army, the Navy, and fortifications when President McKinley was first inaugurated, just 20 years ago. The amount appropriated for the Navy alone in 1917 exceeds by fifty-six millions the entire amount appropriated for Army, Navy, and fortifications in 1916. The Navy bill will again this year carry an amount nearly equal to the total appropriations for Army, Navy, and fortifications last year. It appears that nothing short of national bankruptcy can halt us.

Last year, 1916, the expenditure of $267,000,000 for the Army, $313,000,000 for the Navy, and $25,000,000 for fortifications was justified on the ground of preparedness. If $606,000,000 constituted preparedness, what will $1,000,000,000 appropriated this year be denominated? Notwithstanding they secured all they asked last year, they are clamoring as loudly now as then that we are unprepared. This war spirit, like the appetite, grows more fierce the more you feed it.

When $9,000,000 is appropriated for a system of rural credit banking to relieve the farmers of the high interest rates they are compelled to pay; when $85,000,000, running over a period of five years, is appropriated, to be matched by a like sum provided by the States, for the construction of goods roads; when $7,000 is appropriated to begin the construction of a measly post-office building at Norman and a like sum at Stillwater, one the seat of the State university and the other of the State A. and M. College, to accommodate the boys and girls attending these institutions and enable them to secure their mail without losing a half day on each visit to the post office, it is denounced as "pork." But when a cool billion is voted for the Military Establishment it is praised as an act of patriotism. Those who vote for it are exalted and praised as patriots, while those who dare vote against such extravagance are denounced as cowards and traitors.

Because, in the discharge of my duty as a representative of my people, I voted against the extravagant naval bill the other day one of the self-styled "patriots" from Wall Street wrote me a note, which reads as follows:

NEW YORK, N. Y., *February 17, 1917.*

Dishonorable J. B. THOMPSON,
Congressman, Washington, D. C.:

If you will inform the New York Times how much money you received from German agents to dishonor your country, they will gladly publish the item.

PUBLIC OPINION.

The charge that my vote was controlled by money, contained in this letter, is as willfully and maliciously false as its author is contemptible and cowardly. It is high time that we were taking stock in this country to find out who is pro-American. I am neither pro-English nor pro-German. I deny the right of any pusillanimous cur, even though he does hail from Wall Street, to dictate to me how I shall cast my vote. I am pro-American all the time and shall vote for what I think is the best interest of my country, regardless of the slanders and denunciations of such polecats. Patriotic thinking could hardly be expected, however, from idiotic individuals in the midst of a campaign of vituperation such as we have witnessed in this country during the past year.

The gentleman from Texas [Mr. CALLAWAY] read into the RECORD the other day a statement which, if true, explains the "holier-than-thou" attitude of these self-annointed but bloodless patriots.

The article reads:

In March, 1915, the J. P. Morgan interests, the steel, shipbuilding, and powder interests, and their subsidiary organizations got together 12 men high in the newspaper world and employed them to select the most influential newspapers in the United States and sufficient number of them to control generally the policy of the daily press of the United States.

These 12 men worked the problem out by selecting 179 newspapers, and then began, by an elimination process, to retain only those necessary for the purpose of controlling the general policy of the daily press throughout the country. They found it was only necessary to purchase the control of 25 of the greatest papers. The 25 papers were agreed upon; emissaries were sent to purchase the policy, national and international, of these papers; an agreement was reached; the policy of the papers was bought, to be paid for by the month; an editor was furnished for each paper to properly supervise and edit information regarding the questions of preparedness, militarism, financial policies, and other things of national and international nature considered vital to the interests of the purchasers.

This contract is in existence at the present time, and it accounts for the news columns of the daily press of the country being filled with all sorts of preparedness arguments and misrepresentations as to the present condition of the United States Army and Navy, and the possibility and probability of the United States being attacked by foreign foes.

This policy also included the suppression of everything in opposition to the wishes of the interests served. The effectiveness of this scheme has been conclusively demonstrated by the character of stuff carried in the daily press throughout the country since March, 1915. They have resorted to anything necessary to commercialize public sentiment and sandbag the National Congress into making extravagant appropriations for the Army and Navy under the false pretense that it was necessary. Their stock argument is that it is "patriotism." They are playing on every prejudice and passion of the American people.

If this statement is true, it is but in keeping with greed and selfishness in all ages. It was rampant during the days of the Revolution. Thomas Jefferson, writing from Paris in 1785, complained about it. He said:

You ask me what are those operations of the British Nation which are likely to befriend us, and how they will produce this effect? The British Government, as you may naturally suppose, have it much at heart to reconcile their nation to the loss of America. This is essential to the repose, perhaps even to the safety of the King and his ministers. The most effectual engines for this purpose are the public papers. You know well that that Government will always keep a kind of standing army of news writers, who, without any regard to truth, or to what should be like truth, invented and put into the papers whatever might serve the ministers. This suffices with the mass of the people who have no means of distinguishing the false from the true paragraphs of a newspaper. When forced to acknowledge our independence, they were forced to redouble their efforts to keep the nation quiet. Instead of a few of the papers formerly engaged, they now engaged every one. No paper, therefore, comes out without a dose of paragraphs against America.

I am glad the press in Oklahoma has maintained its reason and has not been carried away by the Moloch of war. In these days, when our country stands trembling on the perilous edge of battle and the President is staggering under the burden of awful

responsibility, there are some—happily the number is not large—who, instead of remaining calm, are howling to excite our citizenship and bring about a condition which will plunge our country into the horrors of bloody war. I do not question the right of such people, be they newspaper editors or cranks, to take their places in the blood-drenched trenches of Europe, on either side of the contest, but I do protest against their use of the privilege of free speech to embroil 100,000,000 of American citizens in the conflict.

I am firmly convinced that, if the President is permitted to handle the situation in his own good way, he will guide the country in peace and honor through the perils, threatening though they be.

Mr. Speaker, the naval appropriation bill does not provide ships for immediate use. If our country should become involved in war, the building program in that bill offers no relief. The war would be ancient history before the battleships and battle cruisers can be constructed. It requires from 48 to 52 months to construct a capital ship. Forty-eight months is four years, and quite a war could be fought and brought to an end in that time.

The bill provides for three additional battleships, one additional battle cruiser, and three additional scout cruisers. The contract for the construction of four battle cruisers and three scout cruisers, authorized and appropriated for last year, has not yet been let. In order to expedite the construction of those ships this bill carries an item increasing the limit of cost, authorized last year, of battleships from $16,500,000 to $19,000,000 and of scout cruisers from $5,000,000 to $6,000,000, an increase of $13,000,000 over the estimate of the Navy Department last year.

Six members of the Committee on Naval Affairs, lacking but one to constitute a majority of the Democratic membership, dissented from the report of the majority of the committee. They gave the reasons for their dissent in a minority report. It appears to me that their position can not be successfully controverted.

In summing up they said:

Without undertaking to set out in detail further facts justifying our dissent from the report of the majority of the committee, we beg to state that it is our opinion and judgment—

First. That a postponement of appropriations at this time for the four additional capital ships and the three additional scout cruisers carried in the present bill will materially aid the Navy Department in providing the best possible terms for the construction of the battle cruisers and scout cruisers, which were authorized and appropriated for at the first session of this Congress, and are still uncontracted for.

Second. The delay in appropriating for the building of additional ships of the types of those now appropriated for and uncontracted for, until the next Congress meets will result in a reasonably probable saving of many millions of dollars to the Government and at the same time will probably insure an earlier completion of said ships than if now appropriated for and a long time limit thereby impliedly given for their completion.

In support of these conclusions, the following facts may be briefly adverted to, namely:

With the shipyards already overcrowded with Government and private work and all labor available for building ships being now worked to its full capacity, it is a mistake to largely increase the Government contracts to be let out until some promise of real competition by shipbuilding plants can be assured. This competition will be assured:

First. When the European war is concluded (and this is not beyond the pale of reasonable probabilities during the present year).

Second. When our navy yards are equipped to build any type of ships that Congress may order (and this may be accomplished, so the Navy Department advises, with the appropriations carried in this bill for such purposes, in the same limit of time that will be required for private shipbuilding companies to equip their yards for the building of battle cruisers).

* * * * * * *

It may be interesting to call attention to the five-year building program, which the President in his annual message at the first session of the Congress recommended and which the Navy Department then strongly urged. An examination of this five-year program will disclose that if appropriations for additional capital ships and scout cruisers are now postponed until the next Congress meets the building proposals recommended in the five-year program referred to will by this Congress have been substantially complied with for the fiscal years of 1917 and 1918.

It being admitted that these vessels can not be constructed in a shorter period than four years, that the cost of a capital ship is from two and one-half to three million greater than in normal times and a scout cruiser one million more, how can a vote for this measure be justified?

The gentleman from Alabama, Mr. OLIVER, moved to recommit the bill to the Committee on Naval Affairs with instructions to strike out the provision for the construction of three battleships, one battle cruiser, and three scout cruisers with a view to using the amount appropriated for their construction for building submarines and destroyers. Had this motion been agreed to, the submarines and destroyers could have been furnished in a reasonable time. If our Navy is supplied with a sufficient number of submarines and destroyers, no navy in the world, no matter how large and powerful, could approach our shores. The war in Europe has demonstrated the fighting value of submarines. Not a single shell from a hostile fleet has been dropped on the shores of an enemy. They dare not approach for fear of destruction by a submarine. All the battleships and battle cruisers of belligerent nations are bottled up in some harbor or canal, protected by destroyers and mines and fenced in by nets. They sought safety in flight from the Dardanelles.

Ashmead Bartlett, the famous English war correspondent, in telling of that campaign, certifies to the efficiency of the submarine.

The British effected a landing there on April 25, 1915, Mr. Bartlett says:

The Dardanelles expedition, if it served no other purpose, is an object lesson on the difficulties encountered by a hostile fleet operating many hundreds of miles from its base in the face of submarine attack.

Up to May 20 an immense fleet of predreadnaught battleships was able to lie off the coast and render the expeditionary army immense moral support by protecting its flanks and encouraging the troops, who love to hear the great shells whistling over their heads. On May 13 the *Goliath* was sunk in the straits during the night by a torpedo attack. On May 20 the first submarine was sighted. The entire fleet had to weigh anchor and steer about to avoid giving a sitting shot.

The more valuable battleships, like the *Queen Elizabeth*, the *Agamemnon*, and the *Lord Nelson* (they are among the finest ships afloat), faded away toward the west and were not seen again. On May 25 the *Vengeance* was narrowly missed by a torpedo, and the battleship *Triumph* was sunk. On May 27 the battleship *Majestic* was also sunk. On the following day there was not a single battleship off the Gallipoli coast. All had been obliged to fly to protected harbors for safety.

The facts are plain; dreadnaught fleets are useless for offensive purposes, provided you are dealing with an enemy supplied with submarines. They are a poor defense, as well, because they can only deal with the enemy's fleet as a whole, provided it chooses to come out and fight. Local defense must be left to the submarines destined to remain in home waters.

Now for the submarine in attack. Supposing the United States were engaged in war against a European or an oriental power. If there is to be a war at all it necessitates one of the belligerents crossing either the Atlantic or the Pacific. It would be utterly useless for either a European power or an oriental to dispatch a fleet to the Atlantic seaboard or the Pacific unless they were already in possession of a prepared base where that fleet could lie at anchor in security against submarine attack. * * * To send a great fleet of modern dreadnaughts to an indefinite objective, namely, to cruise up and down the enemy's seaboard on the off-chance of the enemy coming out to risk an engagement, would be merely courting disaster. Such a fleet would be in the nerve-racking position of being exposed to submarine attack from the moment it left its own shores to the moment the survivors regained the shelter of home waters. * * * Even supposing there was a base available within a short distance of its objective, the attacking force would be little better off, and you would merely have a repetition of the stalemate which exists in the North Sea at the present time.

Col. Isaac Newton Lewis, United States Army, retired, the inventor of the machine gun in general use in the European war, after a visit to the scene of hostilities, said:

The effectiveness of the submarine as a weapon can never again be disputed. It has now come to the point where it must be considered as the controlling element in sea power.

In the light of these facts I can not see the necessity for this enormous investment in capitol ships, which we can not hope to build before the war in Europe has ended. All this talk of foreign countries transporting large bodies of men 4,000 miles across the sea, landing them, and invading our country; all this talk of their battleships laying waste our coast is "tommy-rot." When the conflict in which they are now engaged is concluded, I feel quite sure they will want some rest, but, should they not what will we be doing while they are accomplishing their task? Is there a Government in the world foolish enough to imagine it can come to our doors and conquer us? Nations do not deliberately enter on campaigns of conquest without some chance of final success. Victory does not go to the country that wins the first engagement; it rests with the one whose banners fly in triumph over the last battle field. No nation would be so idiotic as to calculate only on a successful landing. It would consider also the probability of being able to retreat.

The testimony before the Committee on Naval Affairs last year disclosed that he had the best coast defenses in the world. Gen. Weaver, Chief of Coast Artillery, testified:

We have the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

We gave them all they wanted last year to construct the defenses contemplated. The amount appropriated for coast defenses last year was more than four times amount appropriated the year previous. In the face of this testimony we are appropriating this year two and one-half times what we appropriated last.

Gen. Miles said:

During the last 30 years the Government has spent approximately $200,000,000 for our coast defense. I am prepared to say that our coasts are as well defended as the coasts of any country and with the same class of high-power guns and heavy projectiles. They are better in some respects than the guns that are mounted at the Dardanelles, which have resisted the most powerful ships of war of the British and French navies.

We have back of that 10,000,000 men capable of doing military service should the demand come; more than a million men, considering those of military age who were in the Spanish-American War, those who have

passed through the Army and National Guard, who have received military instruction; 136,000 graduates from our agricultural colleges, drilled and instructed under Regular Army officers.

Admiral Knight testified:

The dangers of transporting a fleet across a great expanse of water and maintaining it are almost insuperable.

Admiral Fletcher said:

It has been recently forcibly demonstrated that ship attack on forts are futile. This war has conclusively demonstrated what every military strategist knew before—that it is impossible for sea craft to successfully attack land fortifications.

Gen. Miles testified further:

The results at Alexandria, Port Arthur, and at the Dardanelles furnish sufficient evidence that guns on board ships are no match for coast fortifications and submarine guns.

When the invading country has crossed the ocean, destroyed our Navy, and passed our land fortifications they have still, said Gen. Miles:

To meet the physical strength of this Nation—10,000,000 men capable of doing military service, 1,000,000 who have received military instructions under Regular Army officers, and 136,000 graduates from our agricultural colleges to officer them.

Gen. Miles ought to be a fairly good judge of what it takes to constitute a soldier. He fought through the Civil War side by side with the Volunteers; he fought with the Regulars in the Indian campaigns, and for many years before he retired was the Commanding General of the United States Army.

Mr. KAHN, of the Committee on Military Affairs, asked him:

You think the German conscript is a pretty good soldier, do you not?

Gen. MILES. Yes, sir. However, I would match a volunteer American, defending his liberties and his Government, against any German soldier.

Again, he says, with reference to landing troops on our shores:

I will suppose an unsupposable case. Suppose they could put an army on a fleet of 500 ships and move it across the Atlantic without being disturbed by any naval power and they could land. They certainly could not go into any port. They could not go into our ports any more than they could go through the Dardanelles. That has been demonstrated. Our forts are equipped and fortified as well as the Dardanelles. Suppose they got that far—as to land at some remote point—if we could not gather enough men in the Army and militia and by other means to destroy that army before they could send their ships back to get another load, I would want to move to some other country.

Mr. Speaker, the jingoes and the metropolitan press have manufactured a scare and the militarists have taken advantage of it to fasten on the people a system which in the past has invariably resulted in the destruction of the liberties of the people. The military spirit is not the force which has made our country great and given it standing among the nations of the world.

The bill as it passed the House made provision for the construction of three battleships at a cost of $28,178,532 each, a total of $84,535,596; one battle cruiser to cost $26,6[illegible]1,496; three scout cruisers to cost $6,746,145 each, or a total for the three of $20,238,435—$131,468,677 in all—a sum nearly equal to the entire cost of the Naval Establishment before the armor-plate campaign began.

It requires a half million bales of cotton to construct one battleship. Oklahoma produced last year 807,132 bales—not enough to build two battleships. The counties of my district produced 90,820 bales, distributed as follows:

Murray County	9,547
Garvin County	27,280
McClain County	11,650
Cleveland County	11,272
Oklahoma County	10,381
Logan County	11,539
Payne County	9,151

The entire production of cotton in my district would build about one-fifth of one battleship. The cost of maintaining one of these ships during one year equals the price of 15,000 bales of cotton. But one county in my district produced a sufficient supply of cotton to maintain a battleship for a single year. It is time some one was turning from the gold and tinsel, the epaulets and braid, the music, and the fanfare of militarism and casting a glance at those back home who pay the bills—those back home who would be called to do the fighting if war should come. You can depend upon it that the writing and talking warriors will not be found when shrieking shells are bursting over embattled legions and the ground is running red with the blood of dying heroes.

Think of all the tragedies wrapped up in that cotton, of the little barefooted children toiling through the long summer days to cultivate it and shivering in the frost of the November mornings to gather it! It is well that we should pause and think of them before we vote these enormous appropriations. They are trusting us to see that their money is wisely and economically spent. Are we doing it? I do not believe we are. Each, however, is responsible to those who sent him here and must answer to them for whatever mistakes he may make.

The people of this country do not want war if it can be honorably avoided, but if it should come they will be found willing and eager, in the future as in the past, to defend the country and its honor to the last drop of their blood. If the military columns were to be filled from the ranks of only those who shout for war and denounce all peace lovers as cowards and traitors, there would immediately be a marvelous change in the attitude of many parlor heroes.

Some Reflections on War and Its Horrors—Unlikelihood That This Country Will Ever be Invaded—Dr. Arthur MacDonald Reviews the General Situation and Submits Much Interesting Data.

EXTENSION OF REMARKS

OF

HON. E. W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. SAUNDERS. Mr. Speaker, under leave granted me to extend my remarks, I insert the following:

WAR AND CRIMINAL ANTHROPOLOGY.

(Read before the American Institute of Criminal Law and Criminology at its sixth annual session, held at Washington, D. C., Oct. 23, 1914; in affiliation with the American Bar Association.)

[By Arthur MacDonald, Washington, D. C., author of Man and Abnormal Man (this work is a Senate Document), and honorary president of the Third International Congress of Criminal Anthropology of Europe.]

The President has done his best to keep us out of war and to such an extent that he has even been criticized for being so patient. Therefore all citizens should immediately make all possible efforts and personal sacrifice to aid him in the present crisis and its impending consequences, by conscientious thinking, argument, and persuasion. Even in war the controlling forces are mental. Let us be Americans, first, last, and forever.

WAR IS INTERNATIONAL CRIME.

There is perhaps no branch of knowledge as extensive in its content as criminal anthropology; there is no subject in which research requires such varied information and breadth of training; there is no science which affords more opportunities for mental acumen and ability of the highest character to carry out most lofty purposes, than criminal anthropology.

One of these purpo[illegible]s is the prevention of international crime, which may be called war. In the study of crime in its broadest sense, the criterion for the degree of criminality is coming to be measured according to the degree of injury to humanity. From this point of view, war or international crime is the most serious of all crime.

EMBRYOLOGY OF WAR.

Zoology and entomology tell us of violent conflicts between animal organizations similar to those in human warfare. But in the case of animals there is no hypocrisy; everything is open. When an army of ants rush upon an ant hill to capture it, they do not kill more than is necessary to accomplish their purpose.

WAR LIKE A DUEL.

It would seem in the origin of human society that the clans were rather peaceful in their nature, and that their wars were of a juridical character. Such is still the form of armed conflict among Australian aborigines. The contest is arranged like a duel. It is said that this habit of dueling is so strong in these aborigines that if their enemies are not armed they furnish them with arms before attacking them.

In small savage societies the wrongs submitted to by one and inflicted by the other are most often individual, as violations of hunting grounds. Retaliation was also frequent, and its repetition eventually created a taste or habit or need for war, which increased in the course of social evolution. The first clans had only to defend their crops and fishing or hunting grounds; they had only to protect their blood relations. In such a primitive state of affairs, war could not enrich the conqueror, for there was little or nothing to pillage.

ROBBERY BECOMES THE PURPOSE OF WAR.

In the shepherd or agricultural stage, customs changed; raids were made in order to steal sheep, crops, and utensils; war lost its juridical character and theft became the principal end, and the killing was sometimes pushed to extermination, not even sparing an adversary in order to make a slave of him. Man set out to steal the soil itself and to conquer more and more as human possessions grew larger. Great States were formed; great armies took part in war. The more ferocious were the nomadic peoples, whose expeditions were all for plunder. By the fact of war aristocracies were constituted; chiefs in war became kings; sacerdotal classes or castes were founded and monarchs were more and more likened unto God. This was especially true when society became complicated. Those who were conquered became slaves or serfs attached to the soil.

NO REAL EVOLUTION OF WAR.

In general, war changes its form according to diversity of country, age, and race; but fundamentally there is no real evolution. War is always a falling back into savagery; that which varies and becomes complicated is only the process in use; thus it is the arms, the tactics, the strategy; now, industries, science, and intelligence are more and more employed.

OBJECTION TO THE USE OF FIREARMS.

With the introduction of firearms it was objected that they made too much noise and did insufficient damage. Others said it was wrong to so expose a brave man that he could not defend himself and place him and the coward on equal footing. But war having lost its juridical character, artificial superiority in arms was sought without the least hesitation. The general use of firearms increased complications and expenses and favored the substitution of permanent armies for feudal warfare, and as a result the centralization of royal power. Gradually monarchies developed toward absolute power; despotism weighed as heavily upon the nobility as upon the common people. When royal power was absolute, it claimed alone the right of peace and war, and royal caprice was sufficient to plunge a nation into war.

WAR ONCE MOST HONORED PROFESSION.

War was once the most honored profession and grew to be a trade or business, but a trade honored above all others. For the upper classes it was necessary either to fight in behalf of the king or to enter the clerical order; other professions or occupations were less respectable, and military courage took the place of all virtues. Religious morality was guarded by laical morality. The king was annointed by the Savior, the king's will was divine in character. Thus St. Augustine said: "If God by a special prescription commands to kill, homicide is a virtue."

NUMBER LOST AND LENGTH OF WARS.

As to the number of men lost, modern wars are worse than ancient. It has been estimated that about 6,000,000 men were killed on European battle fields during the two centuries before 1870. Five-sixths of this total of victims perished during the last 90 years of that period. One war alone in the eighteenth century (the Seven Years' War) cost the life of 900,000 men.

If we take the history of the world from 1496 B. C. (the close of the Amphictionic Council) to the year 1861—that is, a space of 3,357 years—only 227 were years of peace throughout the whole world and 3,130 years of war; or, in other words, there was 1 year of peace to 13 years of war. From this point of view war would seem to have been the normal condition of the world and peace simply an interruption of war.

But the much more accurate way is to consider nations individually, and, as indicated in the figures below, the results show that, for instance, from 1800 to 1895 the years of peace were from four to seven times as many as the years of war; that is, peace was the usual or normal condition of a nation rather than war.

	War years.	Peace years.
Germany	11	85
Spain	13	83
Austria-Hungary	14	82
Italy	16	80
Turkey	16	80
England	19	77
Russia	20	76
France	21	75

HISTORY IS HISTORY OF THE ABNORMAL.

The traditions of the tribes, like the history of civilization, describe the crises, the exceptional thing, the abnormal events; so that in savagery as well as in civilization the abnormal constitutes most of what we know. In fact, it is most difficult, if not impossible, to gain definite and comprehensive knowledge of what mankind was doing most of the time, even during civilization. Thus through history we have been misled in supposing that war was a normal condition or that it occupied so much of the time of civilization. The historical method seems to have been very much like that of the modern newspaper, three-fourths of the news in which relates to the exceptional or abnormal.

DEFENSE OF WAR.

One apologist for war wrote that without spoils war would be absurd. Napoleon said that he gained millions of money with soldiers, and with these millions he found more soldiers. This may be called a vicious circle. Even the usuages of civilized war are the negation of the elementary principles of morality, and especially when most civilized peoples war against inferior races. Listen to one of the convenient maxims: "God did not purchase with His blood the souls of the Indians, and He is not bound to treat them different from the vilest animals."

In accordance with this theological doctrine, untold horrors were committed on inferior races. In general, the so-called morality of war has remained the same from antiquity until the present day. When the conqueror arrogates the right of life and death over the conquered, it is sufficiently logical for all other rights to follow.

Another historical authority says that war was necessary for the spread and progress of ancient civilization. Land and men were seized from barbarians and from those civilized States which were degenerating, and thus it was possible to preserve civilization.

It is asserted that war is a necessity, since it has existed everywhere and at all times. But cannibalism, like war, was the universal practice for thousands of years, and often sanctified by religion. Nevertheless, civilization has practically put an end to it. Also slavery existed thousands of years, yet the more advanced civilizations do not tolerate it longer.

A pompous argument sometimes heard is that war is divine, a chastisement inflicted by God upon civilization, and a necessary expiation. With the development of theology and science such arguments have been eliminated. But since theological arguments have become insufficient to justify war, the metaphysicians have come to the rescue. It is said one is not called upon to resort to the past to justify war, for war is simply a juridical test—a sort of general ordeal—and the prayers of the belligerents to God to help them are similar to the pleading of advocates before the tribunals of justice. A celebrated metaphysician maintains that whatever exists is just, from the fact alone that it has happened. Protestations of conscience are simply subjective phenomena and consequently negligible quantities; the irrationality of the strongest is best. This seems to mean that in the long run might makes right.

METHOD OF ARGUMENT FOR WAR AND CRIME THE SAME.

There is no evil, however great, but has some good of some kind in it. Yet the same kind of argument in defense of war can be used in support of crime. Thus if we look at nature from a scientific point of view, we note that some of the most repugnant and cruel animals are serviceable in destroying other animals just as dangerous. Also, certain poisons can serve as antidotes to certain other poisons and thus be useful. In this sense crime, like war, may have some utility. The punishment of the criminal can be beneficial not only to himself but to society in preventing others from committing crime. Criminals are sometimes made useful in building of roads and other works. They were used in constructing the pyramids of Egypt and the Suez Canal.

But is the fact that crime may have some utility any reason we should defend it and advocate it, like some do war?

UTILITY OF CRIME AND WAR.

Yet, however great the evils of war, there is no use in making them out worse than they are. In the study of anthropology as applied to crime, we may divide criminality into three kinds, individual, national, and international, or war.

It may seem strange to speak of the utility of crime; that is, while every effort should be made to prevent and lessen crime, yet, nevertheless, there may be a certain utility in crime, as already suggested.

NATIONAL CRIME.

Just as individual crime can be useful to society, so can national crime, which may take the form of tyranny, revolution, or civil war. Tyranny has the least utility, for it especially impedes progress and stops initiative. It, however, may have a useful mission in making a country more homogeneous and more centralized and sometimes better equipped for conquest. In republics at times of great danger a dictatorship is often established.

Revolts and revolutions are of utility to the social organism not only when they are justified, but even when they are not. Generally revolutionists have an ideal; they are altruistic, and this side of their character develops with their evil propensities.

In general, it must be remembered that often the most just ideas have never been able to be carried out except by violence, and that this violence is not habitual but only temporary and is sometimes a power that nothing can replace. The utilitarian side of civil war appears less certain, yet in periods of a country's development such war seems to be the only thing which will unite different provinces, which will solidify them into one state.

INTERNATIONAL CRIME.

However undesirable all kinds of crime are, international crime or war, though most terrible in many ways, is a civilizer as well as a destroyer.

One of the first useful rôles of international crime or war is purely anthropological; it is social selection. It is true, as we have said, that the best blood is sacrificed in war. But war is not a solution between individuals but between nations. In primitive times especially the most feeble race was conquered and exterminated or reduced to slavery, while the superior race developed and extended into the territory of the conquered. Sometimes an inferior race has so little physical and mental aptitude that it encumbers the ground and injures the development of progress, and its disappearance through degeneration is good for mankind in general.

COLONIZATION.

Another anthropological gain from war is colonization, which usually results in the destruction of the native inhabitants. Although this is cruel, it is a social selection. If the two races should mix, it would depress the superior and cause the dilution and total disappearance of its blood. It is said that often the conquered race is superior intellectually, but it is inferior physically; it is exhausted, and war may be necessary to infuse new life blood into it.

War may be useful also in furnishing the superior race a greater area where it can grow. The only means is to increase its territory by conquest. When the superior race renders the inferior tributary, or reduces its population to slavery, it can give its energy to the making of arms and procure new advantages by destroying other peoples, and at the same time develop intellectually. This is what slavery did for Rome. Slavery, however odious in itself, was necessary to give Greece the time and opportunity to produce its culture and intellectual development.

War aids in the expansion and transmission of new and progressive civilization from nation to nation. When a country rested in isolation it was closed to ideas from without; there were no means of regular communication and commerce; voyages were unknown; no journals, no books. An idea is born in the nation and dies there. Human progress was very slow, but war broke down many obstacles. The wars of Alexander took Greek civilization into the Orient. So the Roman civilization penetrated the Occident by means of arms.

While the advantages of war have involved the greatest of evils, war may nullify itself by becoming so onerous and dangerous as to perish by its excesses. This would be the greatest advantage of all from war; it would be war-suicide—that is, the end of war itself.

CIVILIZATION SUPERFICIAL.

According to geology and prehistoric anthropology, man was a savage hundreds of thousands of years. The world has been civilized only five or six thousand years and civilization is necessarily on the surface of human nature. But this does not lessen the importance of civilization, nor does it lessen the belief in the probability of it eventually preventing all wars. For civilization, though its foundation be comparatively shallow, can, nevertheless, suppress or cover up man's deep-seated savagery, causing it to remain dormant, and can also avoid those conditions which tend to develop the war feeling.

As education by means of environment and direct teaching has nourished and developed the war feeling in the past, so education can retrace its steps by destroying brutal ideals which have been the objects of adoration, can enlighten intelligence and develop humanitarian feelings, and, by exposing the many sophistical arguments for war, can bring the mind of man to realize the fundamental foolishness and irrationality of war.

EVILS OF MILITARY DISCIPLINE.

Much can be said of the good military discipline has accomplished, yet as to the superior mental qualities in a nation, how can they be developed under a military régime of passive obedience? Is it necessary to say that the most noble sentiments in civil life, as pity, love, charity, and humanity are absolutely opposed to war, the main object of military discipline? Every soldier, well trained, must learn to kill with neither emotion nor scruple. Thus by the sole effect of such discipline men can retrograde to a mentality inferior to that of many animals, and some of them descend so low morally as to take pleasure in murder. The effect of military discipline and service on sexual morality needs no comment.

In the past woman loved the merchant as a servant, the poet and artist as a jewel, the wise man as a rarity, the judge as an object of respect, the rich man as an object of preference, but her heart was with the soldier.

WAR FROM THE SCIENTIFIC POINT OF VIEW.

Looking at modern civilized man from a scientific point of view, he exceeds all others in criminality; he kills not only his own species, which animals rarely do, but beings of all other species; those which it is not an advantage to kill, he subjects to slavery. The egotism of the human species surpasses that of all others. The basis of this egotism and selfishness is a combination of psychic and physical force, and not moral force.

At present modern Europe, where the highest civilization exists, has millions of men at war, while Rome, with her vast empire had only 300,000 legionaries; and this is the state of the world in its commercial glory, and yet in the face of this fact it is claimed that commerce and war are antagonists.

WAR A GREATER EVIL THAN DISEASE.

To improve the race by means of war has been argued by some, but physical disease accomplishes this more effectually, since the lower strata are the main sufferers, while in war much of the best blood of the nation is sacrificed; physical weaklings are left at home to reproduce their kind, and later many wounded, shattered, or diseased return.

War is an extension and development of universal homicide, and while we look with horror upon the cannibal, the words of Montaigne are not inapplicable when he said, that "it is more barbarous to kill a live man than to roast and eat a dead one."

EVILS OF SECRET DIPLOMACY.

In modern times especially, secret alliances betwen nations seem to have been a menace to peace in the world. Thus A, B, and C, the diplomatic representatives of three countries, in order to insure the greatest secrecy, have been known to travel incognito to some place in the woods and make certain secret alliances, supposed always to be for the benefit of their respective countries.

But later on one of these three diplomats makes a secret alliance with other countries, which agreement may not be for the interest of those with whom he has already made a compact. It should be remembered that sometimes the best of men in their personal relations would not do things that they might attempt in their official capacity for the sake of protecting the interests of the countries they represent. This is natural.

When, however, circumstances arise which reveal to a nation some alliance against its own interest and which was made with them by another country with whom it already had a secret agreement and who was supposed to be friendly, this discovery usually gives rise to strong indignation and resentment on the part of the nation which may threaten the peace of other nations. Diplomatic contingencies of this nature appear to have been in existence for a long time in Europe, and on several occasions have caused grave apprehensions of a general war. But diplomatic sagacity has averted such a catastrophe until the present time.

As is well known in Europe, there has been for a long time a general belief that such a war as the present would occur. Had it been deferred until later, it might have been still more terrible than it is now. While a student in European universities some 20 years ago, I was frequently told by the professors that it was only a question of time before a general war was sure to come.

PARTIAL DISARMAMENT OF NATIONS POSSIBLE.

Of course, no one can tell in the least the probable outcome of the present war. But it seems to me that one of the results may be a general disarmament, or at least a lessening of the armament of all nations; and perhaps it may be caused by two very different methods: First, by impressing the enormity of the evils of war so strongly upon the people as to make them willing to agree to it; and, second, that those who may be victorious can compel the vanquished as one condition of surrender to agree to a general disarmament of all belligerents. The present war shows clearly that to have a big navy and big army is no guaranty of peace at all, as has been so often claimed. We hear much about the destruction of European militarism and we would that it might be accomplished. We would also at the same time that militarism on the sea, which makes war feeling still more extensive, could also be destroyed or reduced to a minimum.

INTERNATIONAL NEUTRAL COMPACT.

Or the neutral nations might form a compact in order first and most important of all, to keep themselves from being drawn into the war whirlpool; and, second, to protect their commercial rights.

Then they might agree to try and bring peace between the belligerents, or at least lay down certain regulations to safeguard their neutral commerce.

The danger of neutral nations being dragged into war increases as the belligerents become more desperate and reckless, and as a natural result careless of the rights of neutrals, who, in turn, are themselves in an irritable and nervous condition, resulting from psychological radiation, which is caused by reading and contemplating the events of the war, especially by persons who go to extremes in their support of, or antagonism to, one or the other belligerent.

Another menace, and most threatening one, is the possible breaking of international law by precedents due to the introduction of new means of warfare, such as submarines and air machines, as well as to many other new conditions, such as enormous numbers and variety and extent of area of the war zone. All these menaces combined are liable to produce such a strain upon neutral nations as to plunge them into the abyss. The great need, therefore, of an international compact between neutral nations at the earliest possible moment should be urged by everyone.

STUPIDITY OF MAN.

Whether stupidity of man be necessary or not is a large question; but nevertheless it seems to be a fact, judging from present conditions in the world.

It is estimated that criminals constitute about 1 per cent of the community; and when we consider all the evils and expense these unfortunates bring upon the remaining 99 per cent, the absurd management which allows so small a part of society to cause so much trouble becomes apparent.

This absurd management on the part of society within a country is bad enough; but when we consider the arrangements between different countries, called diplomacy, and the present status of Europe, the absurdity is infinitely worse. Even hyenas and tigers would have better sense than to kill their own species, which, as we have said, man does more than all other animals.

Just as an individual may exaggerate his own importance, honor, and dignity and become easily insulted, so nations may do, and call it patriotism. But patriotism which is based upon too much exaggeration and conceit, easily plunging a nation into war, is not the most desirable kind of patriotism.

The struggle of life should be between good and evil, and not between vengeance, greed, grievance, and haughtiness.

I. STATEMENT AS TO EUROPEAN WAR.

My desire is to give a very short statement or history of only the leading events of the European war and to do it as if I had come down from some other planet and had no particular interest in the matter except to state the truth as well as I can. But before doing this a few observations might be made.

Our country is naturally and necessarily on the side of the allies.

The American people may be divided (temporarily only) into four general classes: The proally, pro-German, anti-English, and really neutral class, which is small. In the proally division are some extremists who might be designated as hyphenated Anglo-American and among these there are a few who are so extreme as might be said to have a form of Anglo-American mania.

On the other hand, among the pro-German are a large number who are naturally so strongly pro-German as to be designated hyphenated pro-German Americans and among these there are a few who are so extreme that they may be said to have a form of pro-German-American mania.

It is not our purpose in the least to justify or to criticize any of these points of view held by the tentative divisions of American citizens which we have made, and for the following reasons:

1. It is impossible to obtain many important facts of the war and doubtless will be so long after the war is ended.

2. The political strategics of Europe is most intricate and much more involved than the military strategics.

3. To understand the present conditions and questions at issue, even if all the facts were known, would require most extensive and accurate historical knowledge, as well as intimate acquaintance with the different peoples of Europe.

4. To discuss the merits or demerits of any or of all the belligerents, or to pass judgment upon any or all of the neutrals in their attitudes is wholly premature.

While, then, an ethical consideration of the causes and purposes of this war is not to be thought of, it may be proper to give a very short recapitulation of only the most important events of the war:

1. For the last quarter of a century there has always been in Europe the belief in a general war to come. This belief had developed gradually into a conviction through occasional incidents, like the Morocco affair, before the present war started. Yet

2. No nation in Europe desired war, and whenever danger of it threatened, they all usually were desirous of thwarting it as long as possible.

3. The powers also could not see how war could be put off forever, for no nation would be expected to make concessions that might involve its honor and dignity. In short, the clash was looked upon as inevitable in the course of time. Therefore

4. Naturally each nation was preparing for a war which they did not want, but which they could not see how to avoid.

5. Love between the nations of Europe is a myth; mutual suspicion is the fact; this suspicion can produce all degrees of unfriendliness until relations may become so strained as to result in war.

6. The incidental occasion of the war (not the cause; there is a chain of causes) was the shooting of the heir to the Austrian throne. For many years there had been a secret propaganda among the Slavs under Austrian dominion of a revolutionary nature, of which Austria was well aware. This propaganda was encouraged by Serbia, if not by Russia, and the assassination of the heir to the Austrian throne was praised by the Serbian press. Whether justified or not, Austria decided that this assassination afforded an opportunity to stop this propaganda and bring Serbia to terms. As in the past, Serbia had usually yielded to Austria, it was expected that she would do so this time. But it is stated that a few hours before Austria's ultimatum expired, Serbia received a long telegram from Russia, causing Serbia not to yield.

7. As soon as war was threatened between Austria and Russia, the German Emperor tried to confine it to Austria and Serbia, because otherwise Germany would be obliged to defend Austria and therefore go to war against Russia and France, who would be obliged to support each other. The German Emperor was informed that Russia had begun general mobilization, extending even into Siberia; he then begged the Czar to stop this general mobilization or he would be forced to strike at once. The Czar answered that he could not stop the mobilization, and this is believed to be the truth, for the Czar had always been the leader for European peace, and would have stopped it if he could. But it is explained by the statement that the military power had gained control of the Russian Government and the Czar was practically unable to act.

8. As soon as the fact of general mobilization of Russia was established, what to do, then, became a military rather than a political question. As Germany and France could mobilize quicker, whichever of these countries started first was important, but not vital. But as Russia required two or three months to mobilize, time was of a most vital importance to her. From a military point of view there was nothing left for Germany to do but to strike at once, first at France, with the idea of conquering her before Russia could get ready; that is, before Russia was fully mobilized.

9. It is true that England tried to stop the war which was threatening by proposing to Germany a discussion of the matter, which, in all probabilities, would have required a month or two, but Russian mobilization had started and could not be stopped, and from a military point of view no nation under such circumstances would allow its enemy a month or two to get ready. It is thought also that Russia expected help from England; if this be true, it would encourage Russia, as it would be the first time she has had an opportunity to receive effectual help from England. France also for the same reason would receive encouragement by the expectation of a favorable attitude on the part of England.

10. From a military point of view (not of justice or of right or wrong) Germany could not take the risk of attacking France through the German border only, not only because of the very strong French fortifications on the border, but on account of the natural disadvantages, since the hills and mountains on the German side are precipitous but on the French side are slanting. For this reason of military necessity, which knows no law, Germany first asked permission, and being refused, violated the neutrality of Belgium.

11. It is said that England advised Belgium to refuse Germany's request. If this be true, it encouraged Belgium to act as she did. The main reason given by England for joining the war was the violation of Belgium's neutrality.

12. It has been stated that Italy was offered almost as much territory, if she would not enter the war, as she has gained since joining the allies.

13. The efforts of the allies to prevail upon Greece to enter the war and the seizing of some of her territory contrary to her will (though Greece was naturally friendly), practically amount to violation of her territory, and was doubtless done through military necessity which, as we have said, knows no law.

14. There are about 100,000 Greeks living in Bulgaria, and about 1,000,000 living in Turkey. If Greece should join the allies, most of these Greeks would doubtless be in great danger. It is but natural that Greece should consider them, and not desire to enter the war.

15. The general opinion of many European experts is, that each belligerent would have acted about the same as any other belligerent under similar conditions.

OFFICIAL TESTIMONY AS TO ARMAMENT AND DANGER FROM ATTACK.

There is in our country much confusion of ideas as to armament and danger of attack from possible foreign foes. Many opinions honestly and intensely held are not only at variance but in many instances absolutely contradictory. Under such circumstances, the only thing to do is [1] to seek the opinion of those most competent to tell us. The testimony on these points will be found in the hearings before the Committees on Naval and Military Affairs in both Houses of the present (Sixty-fourth) Congress. As these hearings are most voluminous, consisting of thousands of pages and not easily accessible, and as the testimony of our leading officers on the general question of armament and dangers of being attacked by some foreign foe is very much scattered, we will summarize it in the form of conclusions, and as far as possible in the words of the experts, but without quotation marks.

CONCLUSIONS BASED UPON HIGHEST OFFICERS' TESTIMONY.

From the point of view of science, opinion is valuable according to first-hand knowledge and extensive experience. The testimony of our leading naval and military experts, therefore, must be accepted as to matters within their realms.

The following are some of the conclusions which may be drawn from their testimony as given in the congressional hearings already mentioned:

1. There is no other country except England against which we could not successfully defend ourselves, according to Admiral Fletcher.

2. And not even in the case of England was the admiral certain that we could not successfully resist her attack if she could not send more than 50 per cent of her navy against us.

3. Since no country could send all its navy to attack us, and since ship for ship our Navy is equal to the German Navy and larger than any other navy except England's, and since the navy which goes a long distance to make an attack is at a great disadvantage, we could successfully resist the attack of any navy except England's.

4. If Japan, for example, could send all her navy (this is not even supposable in the case of any nation), we could resist her successfully, as her navy is much smaller; but if she could only send half of her navy, it would not be much of a fight.

5. We have the best coast defenses in the world, according to Gen. Weaver, who takes no stock in the idea that the ships of foreign nations carrying guns of longer range can silence our guns. For, according to Capt. Sims—

6. No ship can go up against land fortifications, because she can not do them any harm, and they can do her a great deal of harm. Also, according to Gen. Miles—

7. The results at Alexandria, Port Arthur, and the Dardanelles show that guns on board of ships are no match for coast fortifications and submarine guns. But—

8. Suppose the enemy's fleet arrived (they could not enter our ports, and would not) and landed at some remote point, they would have to send their ships back to get another load, and if in the meantime we could not destroy that army, Gen. Miles says he would move to some other country. But, according to Gen. Miles, this is an unsupposable case.

9. The dangers of transporting a fleet across the great expanse of hostile water and maintaining it are almost insuperable, according to Admiral Knight.

10. Under modern conditions of war a fleet would not attempt to enter a fortified harbor; it would not pay, according to Admiral Fiske.

11. A hostile fleet could not and would not enter the mouth of the Panama Canal, in the opinion of Admiral Fiske. And Admiral Vreeland says:

12. It is the policy of other Governments to increase their navies along with other leading powers, and if in the same ratio there would be no advantage to any of them, and the only limit to such increase would be the limit of taxation.

13. As to universal military service, according to Gen. Miles, you can not Germanize the American people; it would be a very dangerous step toward imperialism; it would compel the American people to perform military service and be absolute subjects of a despotism; and, further, according to Gen. Miles,

14. There are at least 1,000,000 men who have passed through all the drills, discipline, and instruction of the Regular Army. And Gen. Miles says further:

15. The placing of an army on American soil is the last thing any European Government would attempt. It would never be reembarked.

16. According to Secretary of the Navy Daniels, we have more complete defenses at our harbors, more newly enlisted men, and more efficient and better educated and trained soldiers than ever before; in short, we are completely equipped in every department and more efficient than ever before in the history of our country, and the public attacks upon our Navy are not true. Also, in the opinion of Admiral Blue, our Navy as a fighting machine has never been in better shape than it is to-day.

The question will arise, after reading this testimony, as to what is the matter. Why do some people seem frightened at the danger of being attacked, and, so to speak, are on the run? Why are appropriations into the hundred millions of dollars now being considered which will tax the people to the uttermost? It seems due to the psychology of fear and to ignorance of the testimony of our highest naval officers.

The dangers of war come from our own country and not from Europe, where the lame, halt, and blind, and the physically exhausted have reached an enormous number, not to mention the prodigious financial indebtedness already incurred. Most of the best trained soldiers have already been killed or wounded, and the number killed and being killed form the greatest cemetery known to history.

ALL EUROPEAN NATIONS SEEK OUR GOOD WILL, NOT ENMITY.

Anyone who has lived in Europe a number of years and is familiar with the languages, people, and history knows that the idea of any nation there coming over here to attack us is not only a product of imagination worked up here but is amusing to the people over there, and for the following obvious reasons:

1. The people in Europe generally want to please us; they desire us to spend our money there, and they borrow money from us; for these and many other commercial reasons the idea of their wishing to have a war with us is preposterous.

2. Whether the allies or the central powers win out, or whether it is a draw, or whether peace may soon be made, they will all have all they can do for a long time to adjust themselves, police their country, and recuperate. The fear that any of them might come over here to attack us is almost insuperable, as our Navy experts testify. They will have enough troubles without seeking them 3,000 miles away.

EUROPEAN WAR SHOWS ARMED PEACE TO BE A CONTRADICTION.

3. If we propose to repeat the history of Europe and build up an immense Navy, claiming it is for defense only, which is the usual hackneyed bluff of the most aggressive nations, we will cause other countries to become suspicious, then envious, and probably eventually unfriendly. This imaginary idea of armed peace is just what Europe has been following for many years, and the outcome has been demonstrated beyond a doubt. In science facts talk, not theories nor fine-sounding words.

4. To propose compulsory military training, resulting as a natural consequence in compulsory military service, or making it easier to accomplish, is to prepare this country for the rankest sort of militarism, which is almost revolutionary, tending to uproot the very foundations of our Government. It is to outkaiser the Kaiser.

5. Since the minds of our people have been saturated with all kinds of war ideas and fears, reasonable, unreasonable, and imaginary, it may be well to increase our Navy and Army a little for psychological reasons, to assuage this fear and nervousness which have been created and stimulated artificially, and it would seem for purposes of financial gain.

—

II. QUICKNESS OF COMMUNICATION DANGEROUS IN DIPLOMACY.

Formerly, when methods of communication were primitive, geographical conditions or environment were more powerful in separating nations, and even at present they are still more fundamental than political conditions. Had there not been telegraph, telephone, and wireless, with other modern fast means of communication, enabling quick diplomatic action and affording less time for deliberation, and so more danger of precipitate action from which it is difficult to retreat on account of pride, it may have been that the present war would have been delayed, if not avoided.

RIGHTS OF NATIONS RESTRICTED BY CONTINUITY OF COMMUNICATION.

There seems to be little probability of any country invading the United States; no country desires to make us an enemy, for commercial and financial reasons, if for no other.

But there is a probability of our rights on the sea and the rights of our citizens in foreign countries being very much invaded, and more so than in former wars, for the obvious reason of the war involving so many different nations, producing new war conditions. But not only the unparalleled extent of the war, but the fact of the great increase of intercommunications of every nature, as telephonic, telegraphic, and through increase of steamship lines, railroads, and eventually airship lines and undersea passages. These things necessarily produce a tendency to continuity and centralization which afford many advantages in times of peace but great dangers in times of war. That is, this great increase of numerous kinds of communication makes it much more difficult to avoid infringing upon the rights of other nations; in fact, it is evident that some of the present laws of war must be modified, to the disadvantage of neutrals; that is, the advantages of peace coming from closer and better communications must be paid for by neutrals by infringements of what they have formerly called their rights.

NEW CONDITIONS REQUIRE MORE PATIENCE AND FORBEARANCE.

The neutrals near the seat of war are naturally suffering more than those remote therefrom.

It is evident that none of the belligerents have any desire to injure the neutrals or infringe on their rights, but when fighting for their lives they feel justified in doing things from military necessity that nullify the rights of neutrals. The present war, as indicated, suggests that what have been considered rights of neutrals in former wars must in a great measure cease. It therefore behooves all neutrals to be very patient and to forego many of their rights and not to overestimate their "dignity" and thus involve themselves in the war and make it still more difficult for other neutral nations to remain neutral, which finally might draw the whole world into war.

ALL COUNTRIES FROWN UPON INVASION.

Any country will defend itself against unprovoked invasion, and, even if provoked, other nations will frown on invasion. To repel invasion is recognized as similar to self-defense in an individual.

—

III. DANGERS FROM PREPONDERATING ARMAMENT.

The purpose of all science is to seek the truth. With this idea in view, we shall see that according to English statesmen excessive armament tends toward war; that according to President Wilson there is no safety with preponderating armaments, and according to United States officers invasion of our coasts is most improbable; and there is no evidence of any nation desiring to invade us. It will also be indicated that disregard of our rights on the sea is due to military necessity and is without malicious intent.

DANGER FROM FOREIGN INVASION VISIONARY.

President Wilson has said, "We are threatened from no quarter." Ex-President Taft has stated that "there is no occasion for alarm." Gen. Miles says that "placing an army on American soil is the last thing any European Government would attempt," and Admiral Knight asserts the danger of transporting a fleet across a great expanse of

hostile water, and maintaining it, are almost insuperable. Hon. CLAUDE KITCHIN, majority leader of the House of Representatives, says: "All the talk and writings by the press and the so-called 'patriotic societies' about our 'utter helplessness,' our 'dangerous unpreparedness,' our 'defenseless condition,' our 'growing weakness,' our 'having fallen to the third or fourth grade of inferiority in naval strength,' etc., is pure tommyrot, based not on a single fact"; and lastly, President Wilson says, in his address to the Senate, "There can be no sense of safety and equality among the nations if great preponderating armaments are henceforth to continue here and there to be built up and maintained." In spite of all this expert naval, military, and political opinion, and in direct opposition to the experience and verified predictions of leading English statesmen (cited below), nevertheless we are told that our general naval program will cost up to 1925, $1,500,000,000, and to maintain it $760,000,000 annually.

PROPOSING TO REPEAT THE UNFORTUNATE EXPERIENCE OF EUROPE.

For the last 25 or more years the leading European nations have been increasing their navies and armies, thus developing their armed peace. If none of them had made such increases in all probability there would have been no war. The enormous Navy now proposed for the United States will make all nations suspicious of us, just as the increase of armed peace in Europe created suspicions, which were one of the great contributing causes of the present war. And now it is proposed to repeat European experience, the terrible consequences of which are right before our eyes.

EUROPEAN METHOD WAS FATAL.

Excessive increase of armament, as in the English and German naval rivalry, and the German and French return to three years' army service, was always dangerous not only as direct threat but indirectly as alterations of the balance of means to ends, as acquirement of foreign possessions and economic and political interests; for all the powers have imperial vices from land grabbing to diplomatic intrigue. Admiral Fiske and other admirals have stated that Germany and England would have to go to war some day in self-defense on account of their building program, one against the other. Tolstoi said, "No enlightened man can help knowing that the universal competition in armament of States must inevitably lead them to useless wars, or to general bankruptcy, or else to both the one and the other."

ENGLISH STATESMEN SAID EXCESSIVE ARMAMENT TENDS TO WAR.

Leading English statesmen thought excessive armament tended toward war, and they predicted correctly. In 1905 the prime minister of England said: "I hold that the growth of armaments is a great danger to the peace of the world * * * a policy which inflames old sores and creates new ones."

In 1908 Sir Edward Gray said: "When I see the great progress of naval expenditures * * * in some other countries * * *; if they are carried out in their entirety it will undoubtedly become necessary for us * * * for the preservation of our independence, and for our own safety at home, to make further increases in our own navy."

The Foreign English Secretary said about this time: "We are in comparatively calm weather * * * but the excessive expenditure on armaments makes the weather sultry."

In 1909 Sir Edward Gray said: "The great countries of Europe are raising enormous revenues, and something like one-half of them is being spent on military and naval preparations * * * in preparations to kill each other * * * a satire and reflection upon civilization."

In 1909 Lord Roseberry said: "* * * When I see this bursting out of navies everywhere * * *, I do begin to feel uneasy at the outcome of it all and wonder where it will stop, or is it going to bring back Europe into a state of barbarism."

In 1911 Mr. Churchill said: "Our naval preparations are necessarily based upon the naval preparations of other powers."

Lord Haldane said in 1914 that "Europe was an armed camp * * * if armaments were piled up, it was not for aggression but for fear."

Every sophism, platitude, and pretext that preparedness means peace have nothing to stand on, by what took place six months after this speech, when the present war began. And finally—

Lord Roseberry says: "I know nothing more disheartening than the announcement recently made that the United States—the one great country left in the world free from the hideous, bloody burden of war—is about to embark upon the building of a huge armada destined to be equal or second to our own. It means that the burdens will continue upon the other nations, and be increased exactly in proportions to the fleet of the United States, so remote from the European conflict, should voluntarily in these days take up the burden which after this war will be found to have broken or almost broken our backs.

History shows that armed peace tends to cause war, and that peace does not rest upon force; that increasing preparedness, as a matter of fact, makes war more probable. It has been said that three-fourths of the nations of the earth have no navies at all, and have no wars.

MILITARY MEN THEMSELVES CONDEMN WAR.

Napoleon said "Brute force can create nothing durable," and the Duke of Wellington called war a "detestable thing; if you had seen but one day of it, you would pray that you might never see another." Sheridan said war would eliminate itself. Sherman said, "I confess without shame that I am tired and sick of war. Its glory is all moonshine. It is those who have neither heard a shot nor the shrieks and groans of the wounded who cry aloud for more blood, more vengeance, more desolation. War is hell." Washington considered war "the plague to mankind." Jefferson called it "the greatest of human evils." Franklin said that "there never was a good war nor bad peace," and Emerson called war "an epidemic of insanity." Washington said, "Cultivate peace and harmony with all nations. Overgrown military establishments are, under any form of government, inauspicious to liberty, and are to be regarded as particularly hostile to republican liberty."

—

IV. MILITARY TRAINING IN THE PUBLIC SCHOOLS.

There is hardly any ism but that something may be said in its favor. It is easy to admit some good that military discipline might accomplish, but it is difficult to see how the superior mental qualities in a nation can be developed under a military régime of passive obedience. The most noble sentiments in civil life, as pity, love, charity, and humanity are absolutely opposed to war, the main object of military training. Every soldier well trained must learn to kill without emotion or scruple. Thus by the sole effect of such discipline men can retrograde to a mentality inferior to that of animals, and some of them descend so low as to take pleasure in murder. The effect of military discipline and service on sexual morality needs no comment. A soldier must obey orders, the fundamental principle of militarism.

"Do you think your conscience was meant to die
And your brain to rot away?"
But the captain answered, "I do not think;
I do not think; I obey."

CHILD TRAINING FOR WAR.

We give the child in the cradle some bright-colored war toy; later in the nursery he is encouraged to play with toy soldiers, toy weapons, and to invent toy battle scenes. There could not be a better training to prepare him to become a warrior; he is malleable now, and the influence of war ideas is all the deeper. With the wooden war horse and tin sword he can make a great charge; with the toy cannon, the natural imagination of the child passes easily to battalions, war, and bloodshed; the toy soldiers slaughtering imaginary enemies. Thus the foundation of militarism is laid in earliest childhood.

In the school during war times the teachers may talk on incidents of the battles; the great generals are pictured as heroes for their success in the slaughter. The enemy, of course, is not worthy to exist, and should be eliminated; abuse is heaped upon him. This is an effectual way to teach hatred to the young.

The War Department may issue a circular pressing schools to teach boys the use of the rifle; the next step is the formation of cadet corps in the schools. This, with military drill, develops the youthful mind for future militarism; the schoolboy is turned into a conscript; the bayonet will supplant the book; the slaughter of the enemy will take the place of citizenship, all indicating the patriotic spirit.

We can not teach the golden rule and retaliation, which would tend to make us hypocrites and liars. To teach children and youth the right to kill, lie, steal, boast of slaughter, and rejoice at suffering and how to burn down homes is to undermine the foundations of humanity.

"Obey his superior's commands; and if it were to crucify Christ he would do it;" such are the words of a faithful soldier.

EXPERIENCE OF AUSTRALIA AND NEW ZEALAND.

From a scientific point of view results of experience are much more valuable than theory.

In Australia military drill becomes obligatory at the age of 14 and in New Zealand at the age of 16. In these countries thousands of boys have been thrown into military prisons, where they came in contact with undesirable characters and without any of the safeguards of the home.

Arthur Watts, organizer of the Australian Freedom League, shows that in Australia in 1913 the number liable to prosecution for non-registration at the end of the registration period was 7,324. Official figures show the percentage of absentees from drills ranged from about 31 to 52 per cent in Australia. Nonattendance at drills constitutes a basis for prosecution. In the city of Auckland, New Zealand, of about 90,000 population, during 1914 there were, not counting withdrawn cases, a record of 770 prosecutions.

BOYS STIGMATIZED AS CRIMINALS.

John F. Hills, South Australia, a well known educator, has stated that in times of peace "military imprisonment" was inflicted on "over 4,000 Australian boys and youths." The New Zealand Freedom League, in its report for 1914, when discussing the prosecution in police court which were found necessary in connection with the inforcement of military drill, says: "There are many instances of shameful injustice, and altogether one is impressed with the fact that boys from 14 years upward are compelled to mix with the worst characters off our streets, to hear of filth and crime from which they should be protected, simply because they object to be brutalized by the agents of war or because they happen to have been absent from parade."

Those who are opposed to drill from conscientious or other reasons are often called "liars," "unpatriotic," and "traitors." An oath is demanded of the boys. That in New Zealand has been as follows:

"I, ——— ———, do sincerely promise and swear that I will be faithful and bear true allegiance to our sovereign lord, the King, his heirs and successors, and that I will faithfully serve in the New Zealand military forces, according to my liability under the defense act at present in force, and that I will observe and obey all orders of his majesty, his heirs and successors, and of the generals and officers set over me until I shall be lawfully discharged. So help me God."

This oath was often forced by threats of fine and imprisonment on boys who were drilling and on those whose parents refused to consent to their boys binding themselves to so drastic a surrender of their consciences into the keeping of the military authorities. "Before New Zealand came under the iron heel of militarism the only person who could inflict a fine upon anyone was a magistrate. But to-day a military officer can impose fines on the boys under his care at his own sweet will, and, what is far more serious, can cause that fine to be collected by a policeman of the lad's wages.

The general unpopularity of these conditions in Australia is indicated by the fact that, according to the reports of the Australian Freedom League, in two and one-half years, up to the last day of 1913, there were 22,148 prosecutions of your people from 14 and upward. This was in a population of 4,500,000 persons.

LABOR UTTERLY OPPOSED TO MILITARISM.

The American Federation of Labor, at its thirty-sixth annual convention, passed the following resolution:

"Whereas the Secretary of War has communicated with public school authorities in various parts of this country, inquiring if they were willing to introduce military training of the boys in the schools, and stating that the War Department would provide instructors and rifles and ammunition; and

"Whereas the American Federation of Labor is utterly opposed to militarism: Therefore, be it

"Resolved, That this convention protests against the action of the Secretary of War, and hereby instructs the executive council of the American Federation of Labor to request President Wilson to prevent any further attempt to militarize the public schools."

The Pennsylvania Arbitration and Peace Society adopted the following resolutions:

"First. Military training is not conducive to the best physical development of school boys. It is contrary to the practice and experience of the skilled leaders in physical education. This idea is summed up in

the words of Dr. Charles Eliot, former president of Harvard University: 'Military drill seems to me one of the poorest forms of bodily exercise; very inferior to most gymnastic exercises and to all free sports. There is too much routine and automatic action to it and too much repression of individual freedom.'

"Military drill is inelastic, undeveloping, and opposed to that flexibility and intiative which are valuable ends in physical training. Dean Russell of Teachers' College, Columbia University, has recently expressed similar views in condemning military training for school boys, and Dr. Sargent, of Harvard University, is equally emphatic.

"Second. The teachers and educators of the United States are practically a unit in opposing this movement. The National Education Association, at Oakland, Cal., in 1915, resolved: 'The association deplores any attempt to militarize this country. It again declares against the establishment of compulsory military training in the schools, on the ground that it is reactionary and inconsistent with American ideals and standards.'

"Third. Military training in schools is utterly futile as a preparation for service in the field. The small amount of training that can be given is unsuited to the age and development of boyhood.

"Fourth. None of the great European countries at present engaged in warfare is practicing military training for its boys in the schools. Such a system was tried in both England and France, but was given up on account of its uselessness and futility.

"Fifth. The development of a system of military training would entail great expense to no good purpose, interfere with the working of the schools in introducing into the school system men out of touch with educational ideals and practices."

STATEMENTS OF EDUCATORS AND SPECIALISTS.

David Starr Jordan says: "The objections to military training as a part of a general education are mainly three. The one is that such training is, on the whole, highly specialized for a particular profession, and that war. The second is that the martial spirit or specific bias which this training gives to some degree unfits its possessor to consider justly the affairs in which this Nation is concerned. It tends to exaggerate a perverted form of patriotism that prompts men to sanction unnecessary wars. A third objection is that military drill is in the hands of noncommissioned officers, in general with no fitness for teaching, while its value as exercise is far inferior to that of a well-appointed gymnasium, or even of an ordinary athletic field."

Nathan C. Schaeffer says: "Since there are more than 12,000,000 male persons in the United States between the ages of 12 and 23, the proposed legislation would give us more than 1,000,000 military officers in a country devoted to the arts of peace. Who can tell the ultimate effects of such a policy or system after it has been fastened upon the youth of our land?"

Col. Thomas F. Edmands says: "The modern drill regulations are by no means adapted for work in schools under any circumstances. They need a man's brains and muscles. Every time I tell the truth about the matter I generally raise a storm from persons illy informed upon the subject, and from the boys, whose self-conceit engendered by this drill should be one of the greatest arguments against its further practice."

Dr. Angerstein, a high authority in Army circles, pronounces it a physiological crime to introduce military drill into the schools.

John H. Finley, president of the University of the State of New York, and State commissioner of education, says: "Military drill in schools would imply a perpetuation of internal hatreds and brutish warfare."

John W. Foster, former Secretary of State, says: "The natural tendency of the youth of our country to military exercises is great enough already, and it is cruel to stimulate in them the art of killing their fellow men."

John Dewey, of Columbia University, says: "It would be a long step backward in the tradition of the American people and of American education to introduce rifle practice into our public schools. * * * It is undemocratic, barbaric, and scholastically wholly unwise."

STATEMENT OF DR. PHILANDER P. CLAXTON, UNITED STATES COMMISSIONER OF EDUCATION.

Military training is impracticable in a very large majority of the public schools of the United States and is, I believe, not desirable, either because of its educational value for physical development or as a means of preparation for defense. For all these ends proper care of the health of children and provision for vigorous free play, games, and sports and proper forms of gymnastic exercises are much more valuable. Out of the millions of vigorous, helpful, intelligent, patriotic young men which the public schools might thus furnish to the country from generation to generation, armies for defense could be formed and trained as might be necessary more effectually and more economically than by means of military training in the public schools.

—

V. MORAL EVILS OF WAR.

We all hate war, but the purpose of this study is to make us detest it so much that we will avoid doing things which lead to war.

The deepest evil of war is not only suffering, death, ruin of cities, wasting of homes, plagues, famine or fire; but war also depraves as it destroys; it is the moral damage as well as the physical. The murderous desires and frenzy of noncombatants at home are nearly as bad as the stabs of the soldiers; the brutality of the man in the street, the bloodthirst fostered by teachers inculcated in schools, preached in churches, and exhorted in the name of the Lord; this saturation of the people at home with murder and hatred is moral shrapnel. The journalist encouraging hate; the speculator telegraphing hate for sake of greed; the mob thirsting for blood and a raging hell of diseased patriotism, permeating a whole nation, saturating the minds of everyone from the youngest child to the oldest citizen; these are some of the moral evils of war.

SINCE THE ENEMY SHOULD NOT EXIST ANYTHING CAN BE SAID AGAINST HIM.

The leader of a hostile people may be a great patriot and impartial judgment may make him a hero, but those who war against him will ridicule him and the press will influence the popular mind against him.

In war, calumny of the enemy is often childish. It has been said that "the journalistic ink slinger is as necessary as the scout; the platform libeller as important as the sentry; the parliamentary mudlark as essential as the general on the field; the pulpit bearer of false witness not less needful than the chaplain of the regiment."

Often a nation's character must be destroyed in order to get the people to fight; if they seem to be softening a little, then atrocities are exaggerated. The origin of the war must be justified, right or wrong; it must be in self-defense (whether it is or not), or it will be difficult to get the people in the proper war-like spirit. The enemy must be represented as savages, monsters and not fit to live. The foe must be accused of murder, rape, assassination, and (if necessary to stir up the people more) of every imaginable abomination; this seems to be the duty of the patriot scandal-monger, being, as Benjamin Franklin said, "to render the enemy odious and contemptible."

Just as a nation blackguards its enemy, so it must exalt itself, that force of contrast between saint and sinner, as it were, will make the people feel justified in treating the enemy as bad as possible. "To see ourselves as others see us," would be treason to suggest.

The longing for distinction is one of the main impulses in military feeling. A nation will read with admiration the rising of a race oppressed by another nation, but shows indignation, if it, itself is the oppressor; scorn increases with conceit, hatred with egotism. The country is filled with egomania, continually extolling its own virtues and exaggerating the smallest success over the enemy, and silent on, or underestimating everything the enemy does. If victorious over ignorant natives or untrained soldiers, it calls the result a great triumph of military skill and heroism. But even defeat does not quiet the egomania, which praises the valor and strategy of the enemy. In war the enemy is a savage, a barbarian, a butcher, a monster, atrocious, kills and rapes women, slaughters children; to exterminate the enemy is the duty of humanity. This is the usual feeling in war, and it makes no matter who the enemy is, whether right or wrong, he must be killed, and this feeling is called patriotism.

Herbert Spencer mentions how cruel the English considered the French for lighting fires at the mouth of Arab caves, because they refused to submit, but it was no such barbarity in India for the English to execute groups of rebel Sepoys by fusillade and then setting fire to the heap of them because they were not all dead. Thus war bias prevents the sense of justice. What we do is virtuous and heroic, but if the enemy do it under the same conditions it is contemptible and barbaric.

UNJUST PATRIOTISM.

To risk life on battle fields is not the only kind of patriotism, for it may be only love of adventure and excitement. It can be more difficult to live nobly for one's country than die for it, more sacrificial to keep it from war than to plunge it into conflict. War demands that free speech be suppressed, that the government, right or wrong, must be supported; that is, the citizen must rely on passion rather than justice, if circumstances make it necessary, as it is said so often, "Everything goes in war and love," thus the country's interest is greater than personal honor and conscience; glory is higher than righteousness. Thus "patriotism" is against the highest sense of honor; a peacemaker is called a traitor; such is the inherent injustice of so-called patriotism.

To insist that because a certain country has borne and nourished you, you must indorse all its quarrels, is the same as saying you must stand by your parents, even when they commit murder; this is the doctrine worthy of criminals and pirates, not patriots.

A diplomat picks a quarrel in order to attack and steal a bordering country, a preacher who uses religion to develop hate and justify murder, an editor who supports the country right or wrong, a mob which breaks windows and stones citizens—these all are patriots, but those who stand for international justice and peace are called traitors; this is not patriotism, it is moral insanity; this kind of patriotism poisoned Socrates and crucified Jesus; it invokes military necessity, under which every imaginable abomination has been committed.

True patriotism respects true patriotism in other countries; domestic faithfulness regards the sanctity of other homes. Pride, not patriotism, tramples upon the sense of nationality in other people.

MILITARISM AGAINST REPRESENTATIVE GOVERNMENT.

Militarism strangles freedom of speech, turns citizens into soldiers, democracy into officialism, dictatorship, and absolutism. Ministries and cabinets exhibit almost limitless power, putting a country into such a position as to force its legislature to declare war, leaving it no choice in the matter; a practical absolutism, not the purpose of representative government. Cheap literature in war causes an outpouring of newspapers, magazines, and even books written under the spell and glamour of militarism, making the soldier and war the national ideal, glorifying heroic murder, which practically is the zenith of patriotism. Thus citizens become despots, and love of country is changed to lust for conquest.

Militarism, imperialism, and Caesarism are of the same family, and mutual friends and enemies of democracy. Militarism, sometimes called "preparedness," means preparedness for war rather than peace, if the history of the world is of any value.

WAR HYSTERIA.

War feeling is often a form of hysteria. If an army conquers a small body of untrained fighters, it is reported as a triumph of heroism and military sagacity. "Every private is a Leonidas and every scuffle a Waterloo." The least victory sets the whole nation aflame; many, drunk with whisky, bellow forth their patriotism; profanity, insolence, and vice march with the mobs, and uncontrollable emotions, shrieking, hollering, blaspheming, followed by dances and miscellaneous kissing—the bishop gives thanks unto the Lord and the people drink, and the delirium goes on until Tedeums are sung at Westminster.

FEELINGS OF THE VICTORIOUS ENGLISH IN THE BOER WAR.

The feelings of the victorious English in the Boer War are thus expressed by one of their number: "Feeling a rare satisfaction, a warm glow of the heart, when he sees the smoke of their homesteads ascending to heaven; they are but human vermin; a heart of a rebel is getting his deserts." "Farm burning goes merrily on, and our course through the country is marked, as in prehistoric ages, by pillars of smoke by day and fire by night. I do not gather that any special reason or cause is alleged against the farms burnt; to save trouble we burn the lot without inquiry; only the women are left." (Quoted by Walsh, p. 51.)

Great Britain's enemy is "the most unenlightened, the least progressive, the most tyrannical, the most corrupt, and, in a word, the worst section of the Dutch element in South Africa." "A band of brigands and assassins." "A horde of the most miserable scoundrels the nation has produced." "The craftiest, most hypocritical, most

dishonest, most untruthful, cruelest, most ignorant, most overbearing, most immoral, and stupidest race of white people in the whole world." (Newcastle Daily Chronicle, p. 229, Walsh.)

SOME PREACHERS OF THE GOSPEL IN THE BOER WAR.

The preachers and ecclesiastical leaders seemed to practice opportunism. One said, "For all who believe in the Lord Jesus Christ to so handle the trouble as to commend themselves to the larger number" (War against South Africa, p. 347). Another divine said it is not their business "to investigate the causes of war"; and another asserted, "It is not a case of arbitration, it must be a fight to a finish." (Sun, London, Dec. 5, 1900, Walsh.)

Every successful war is usually acclaimed as a "leading of God's good providence, leaving a legacy for the church, creating opportunities for her work" (Archbishop of Cape Town), or as Dean Spruce said, "justified in invoking the blessing of the Most High upon the British arms to carry out the work intrusted to the Anglo-Saxon race" (New Age, Apr. 30, 1903).

"Christian soldiers" have been described as men who fight like devils and pray like saints. A Christian soldier is a contradiction: "My Kingdom is not of this world, else would my servants fight."

Distinguished ecclesiastics of England used these expressions as to the Boers: "A blow at the tyrant, the oppressor, and the murderer" (Conn Newbold, New Age, Dec. 18, 1912); "a brutal and degraded race" (Bishop of Pretoria, New Age, May 28, 1903); "outside the pale of civilization" (Rev. H. P. Hughes). Another divine denounced the pacificists as "imbeciles if they think the war can be stopped and traitors if they think it ought to be stopped" (War Against War in South Africa, p. 284).

Pulpiteers obsessed by the war spirit are swept away by the calumnies and lies; thus a preacher says, "There must be no half measures, for we will give no quarter. * * * Oom Paul will swim through seas of blood, upon his belly, psalm singing" (Daily Telegraph, July, 1899).

"For you can not cure the stubborn foe until surgery and cauterizing instruments in the shape of fire and sword scrape and burn him to the very bone" (Chaplain J. R., D. D., Aberdeen, May, 1903).

"Let us hope above all that we shall have done with magnanimity" (Rev. J. B., Feb. 24, 1901).

Edinburgh Evening News, May, 1900: A preacher says, "The national conscience is clean—it is a righteous war; from the bottom of our hearts we can invoke the blessing of the Almighty God." "War is hell" is an expression frequently used by its advocates, "therefore we must not be shocked by atrocities but expect them as a matter of course and cast no reflections upon those who keep hell going by deeds natural to it" (quoted by Walsh).

The case of horses is as pitiable as that of men; though man may enjoy blood glory, they perish "in heaps with intense anguish."

War is like the crown of thorns upon the brow of the Prince of Peace. Would Christ take a gun and shoot anybody? Can anyone imagine such a thing? All the philosophical and exegetical sophism of the world can not justify the spirit of Christianity in contradicting itself.

The dean of Durham Cathedral (Jan. 21, 1900) said in a sermon, "There is no nobleness save that of purity and love, no gospel save that which preaches forgiveness, no joy like that of joining hands in peace." For preaching this sermon the dean was compelled to resign and was publicly rebuked from the bench by Justice Grantham.

Another reverend gentleman said, "I personally refuse to think that the red-fool fury of modern jingoism is at all the true mind of the British people at this time. It is an overgrowth, a product cooked by deception from ignorance and excitement." For these utterances this pastor was compelled to resign.

A religious paper writes, "Until now blood has been running in tiny rivulets—the British Army in the two republics must exterminate the Boer vermin and soak the soil with their blood, that the grass may grow quicker" (New Age, May 25, 1913).

London Times, October 31, 1899:

> "And when I note how noble nations form
> 'Neath the red rain of war, I deem it true
> That He who gave the earthquake and the storm
> Perchance made battle, too."

Think of these words by a Protestant archbishop, and then consider what was taking place in the Japanese War, as quoted by John Morley, M. P. (Brechin, Jan. 18, 1905): "In these fierce hand-to-hand fights men grappled, raged, and tore each other like wild beasts, biting, clawing, and gouging each other's eyes out."

ODE TO THE BAYONET.

> "Ho! clear the way, for 'ere 'e comes,
> When Tommy joins the 'unt,
> With the stabbin' of the bayonit,
> The bayonit, the bloody bayonit,
> Gawd 'elp the man in front.
>
> "The flashing, gashing bayonit,
> The ruddy, bloody bayonit."
>
> (London Times, Oct. 11, 1899.)

"It is a religious war; from the bottom of our hearts we can invoke the blessing of the Almighty God," says Dr. MacGregor.

Paul declared that the weapons of his warfare were not carnal but spiritual; yet there are missionaries who recognize the religious power of the bayonet and the Maxim gun. No wonder missionaries have sometimes been killed by so-called heathens! Thus religious propaganda comes to be regarded as a form of foreign invasion.

BOER WAR UNJUSTIFIED.

Editor of London Echo: "In the whole history of England there is * * * no war more unnecessary and unjust than the one in which we are now engaged in South Africa. I may be wrong, but if I am wrong, I can not understand the ferocity with which every criticism, every claim to freedom of speech has been suppressed. Why can not the full light of day be let in first on the raid; * * * second, on the exclusion of the Transvaal from The Hague conference; third, on the persistent refusal of England to refer the dispute to arbitrators even when all foreign arbitrations were excluded." (Moral Damage of War, p. 193.)

James Bryce, M. P. (November, 1899), says: "It seems a tragic irony * * * before the ink was dry to The Hague protocols we should be engaged in war against a State which had repeatedly suggested arbitration."

War injures the humanitarian, forces him in the shady paths of life; war injures public sentiment by putting the warrior in offensive contrast to the humanitarian, by loading the bloody conqueror with honors, while the unselfish helper of his country goes unnoticed. Spies are to be made a great deal of.

MORAL OBTUSENESS OF MILITARISM.

If ordered to execute a dying man, a soldier will drag him from his bed, place him in a chair (as he can not stand), and shoot him in the presence of his nursing wife. (London Daily News, Aug. 6, 1902.)

A "rebel," whose only crime is that of George Washington's, with a fatal disease also upon him—tie him blindfolded to a chair, in spite of his petitions to stand up and look death in the face, and, 15 to the file and 10 paces off, will fill him with lead, fling him into a hole and march away to the sound of merry music. (Reynolds's Newspaper, London, Jan. 24, 1902, a soldier's letter.) A soldier must obey orders, the fundamental principles of militarism.

VI. ATROCITIES AND OUTRAGES OF WAR.

It will be evident to any impartial reader of accounts of wars that outrages and atrocities are committed by all countries when conditions, or so-called military necessity, require it. It is a form of hypocrisy when one nation accuses the other of outrages which the accusing nation in previous wars has practiced itself.

The extent and degree of outrages and atrocities are generally due to the special conditions and degree of provocation. In addition to this, there are in the large armies of every country unfortunately a few men with natural brutality and low moral nature who may commit atrocities with no provocation; they are never forgotten and their number is usually greatly exaggerated. Their publication with exaggeration only increases the hatred between the nations fighting. Such publication and exaggeration may be encouraged to make the soldiers fight harder and also to gain sympathy from neutral nations.

In order to make good and innocent people willing to continue the war, or to make them indignant and ready to fight, atrocities common to war must be dilated upon, tales told of, as well as abuse heaped upon the foe. But the country fighting the foe must be praised for its high morality and its noble and just cause to make the contrast all the greater.

DIFFICULTIES IN THE ENEMY'S COUNTRY.

When in the enemy's country, after the army has captured a village or city, perhaps at great cost, sacrifice, and bloodshed, then the soldiers have a right to expect the citizens of the surrendered or conquered town to give up their arms and cease from warfare; but where, after citizens are warned that they will be shot if they undertake warlike action by shooting at soldiers, and if they do so, their houses are liable to be burnt down and they themselves shot on the spot. These are the most terrible things in war; but, still more terrible, the innocent are liable to suffer with the guilty. If, for instance, a soldier is shot at from a house and suspicion points to two windows, one of which is in the next house, if it be impossible to decide from which house the shot came, vengeance may be applied to both houses. Unhappily women and young boys, as well as men, sometimes shoot from houses, so that all are liable to be shot.

In the uncertainty and excitement of war not very much time and effort will be given to find out exactly who did the shooting; in fact, it might be impossible to find out. So may many suffer however innocent simply on account of the foolish and unmilitary action of one person. In such conditions, terrible injustice is done most innocent people; and we are indignant and are amazed at such outrages. But this is war, the flower of militarism. Instead of showing our just resentment at such cruelties, let us vent our rage rather on war itself, the occasion of all this military severity. As often suggested, the choice between entering war and remaining neutral—in short, between war and peace—may be a choice between two evils, and the decision should be on the side of the lesser evil.

Let us admit that for a country not to be equipped reasonably or adequately for war may cause it not to receive proper attention and respect from other countries, even to the extent of humiliation; let us admit this to be an evil. Now let us set over against this evil the injustice that war brings to innocent people, noncombatants, the outrages they suffer, the destruction of their homes, the shooting of them in cold blood, and their awful suffering from fear and terrorism sometimes visited upon them through military necessity.

PEACE THE LESSER EVIL.

Let us picture, if possible, the almost infinite injustice and suffering that, for instance, the Russian peasants have experienced, when with only short notice, hundreds of thousands have been ordered by their own generals to quit their homes; where to go they know not, many without conveyances to carry anything; nevertheless they must take what they can carry afoot—old and young, bedridden, sick, and crippled—must depart in the cold, many scantily clad, the poorest, who are in the majority, suffering the worst. Many, of course, die on the way, enduring untold agony from exposure, exhaustion, and starvation. Think of these poor, innocent, peaceful peasants, who only want to be let alone, whose sons and fathers were torn from them to go to the front, are, after making such sacrifices for their own country, now forced by this very country into ruin, starvation, and death; and this all on account of military necessity of their own fatherland. Think of this infinite suffering and injustice to hundreds of thousands and compare it with the admitted evil of humiliation, and then pray tell us which is the lesser evil. The long-lasting and paramount effects of war horrors and devastation are infinitely a greater evil than the short and comparatively temporary effort of neglect of dignity and honor, which consists mainly of pride, egotism, and selfishness.

IMPORTANCE OF DIGNITY-AND-HONOR IDEA EXAGGERATED.

Consider how little real feeling of humiliation (much less suffering) there is among the great majority of inhabitants of a country whose officials claim to have been humiliated by the words or acts of some other Government. In the present status of humanitarian feeling, three-fourths and probably more of the citizens who have to do the fighting do not feel the humiliation; they desire to be let alone and pursue their peaceful occupations. If some of them do feel it, it is generally after efforts are made to stir them up to stand on their dignity; they really don't feel that the dignity of their country has been greatly injured, especially if they are not a military nation. Other nations well understand they are not bullies with an exaggerated idea of their great dignity; but suppose other nations do take some advantage of this nonmilitary nature, these nations do not dislike a country for that reason; nor are they really unfriendly, though they

may desire to take advantage. After all, this dignity or honor idea is often much exaggerated by the nation itself. The officials may feel it more, but that may be due mainly to their own egotism. But we have admitted the evil of humiliation. Yet how small an evil it is in comparisen with the infinite evils and injustices of war upon the great majority of innocent citizens who must sacrifice their bodies on the battle field or themselves at home.

ALL GUILTY OF ATROCITIES.

After brief mention of war barbarities in ancient times, we shall call attention to cases of outrages and atrocities committed by the Union armies and Confederate armies in the War of the Rebellion, and by United States soldiers in the Philippines; by the British Army in the Boer war and Germans in Belgium. There are hundreds of cases published of outrages and atrocities of the French and the Belgians in the present war, by the French and Germans in the war of 1870, and in many other wars involving many different nations. But it is not necessary to go into these, much less into the cruelties and barbarities common to war in ancient times. The cases we shall mention are given more as illustrations, and are sufficient. Doubtless such cases are often exaggerated, as we have said; but, on the other hand, many occur which are concealed or suppressed or never come to light.

There is, therefore, little reason to doubt that terrible outrages and atrocities are sufficient in number to merit the consideration, disgust, detestation, and horror which we all feel toward those who commit them. Yet, as I have said, they are the necessary consequences of war itself, which we should condemn rather than war's results. Alcoholism often increases those horrors, especially where citizens shoot soldiers from houses, which the soldiers enter, and if finding drink there, may commit all forms of outrages in their drunkenness. History shows it makes no difference against whom the order is given, whether Boer or Arab, Filipino patriot or American citizen, Union or Confederate soldier, Belgian, French, German, or English, it makes little difference; they are all guilty at times. Military necessity and exasperating conditions are the usual reasons given. Such moral outrages can easily develop into atrocities. It is simply war, the flow of militarism. If you object to such outrages, be honest and object to what leads to them.

The War Lord illustrates the need of obedience, the cornerstone of military training, and says, "I may call upon you to shoot down or bayonet your own relatives—father and mother, sisters and brothers. My orders in that respect must be executed cheerfully without grumbling. You must do your duty no matter what your heart's dictates are."

WAR BARBARITIES IN FORMER TIMES.

Outrages and atrocities have accompanied war since the stone age. All organizations of human beings, small and large, seem to have been endeavoring to destroy one another, and in order to reach this end they have been willing neither to recall from any excess nor to escape any sacrifice. That the human race endures has been no fault of mankind.

One of the earliest forms of war, where atrocities were frequent, is bestial war, as practiced by cannibalistic tribes in Australia, who simply hunt the other tribes and eat them when they succeed in catching them.

The Papuans of the archipelagoes have a detestation of human life, it being for them a need, pleasure, and glory to kill; especially to decapitate, receiving merit according to the number of heads, which they especially prepare by mummifying and painting; ordinarily the aged and feeble are decapitated; prisoners are eaten when they are not used as slaves; some in their spare moments have the decapitated heads so arranged as to be suspended on the arms of the conqueror as precious trophies. Among the Fijis in battle the women would rival the men in brutality, taking their children with them and urging them to strike and insult the vanquished. The Fijis eat their victims on the battlefield and have at home a stone commemoration of the event. A celebrated chief gloried in having 900 of such mementoes. Sometimes they do not take the trouble to kill their victims, but roast them alive. To have killed many men and destroyed many villages are glorious deeds pleasing to the divinity.

Among the Ethiopians, those who fall on the battle field are divided with the conquerors and prepared and sent away as provisions. The prisoners are eaten at leisure; children are reserved for the rulers.

American Indians sometimes tortured their prisoners in most horrible fashion; burning them slowly, stripping the flesh off their fingers, or crushing them between two stones, then disarticulating their members, tearing out their finger nails and finally scalping them and throwing hot coals over their heads and thus burning them to death.

The captive should give no sign of pain or feebleness, for that only affords his tormentors great joy. The Indians say, only by slow torture can one be avenged. In Central America captives are sometimes skinned alive and their hearts cut out with religious ceremonies.

BIBLICAL EXAMPLES.

Saul spent much of his time fighting the Philistines, Moabites, and Edomites and in massacring them; with the Amelicites he only spared the King (Samuel xiv, 43–52; xv, 1–8). David followed his example.

Alexander the Great massacred 6,000 combatants in an ancient fortification of Tyre; 2,000 were at first spared, so that the soldiers might amuse themselves later in crucifying and hanging them.

The Greeks sometimes mutilated the living by cutting off the right hand.

The Commentaries of Cæsar, though of unique literary value, are a terrible nomenclature of massacres and pillage; thus after capturing Avaricum Cæsar killed all the population—men, women, and children—making in all 40,000 souls.

ATROCITIES BY THE BRITISH SOLDIERS IN THE BOER WAR.

An officer in the field (December, 1900): "It was sufficient that arms were discovered; firewood was at once collected; the wife and little children, bedridden old men and women were ordered out without a moment's respite and the homestead burned before their eyes. It was midwinter, and the nights were indescribably cold, and in these thinly populated districts there were often no neighbors to give shelter. It was murder as cold-blooded and deliberate as if they had been placed against a wall and shot; worse, indeed, because their sufferings would have been sooner over." (Walsh.)

"Later on houses were burned on all sorts of pretexts, until farm burning became the daily business of soldiers." A lieutenant testifies (Ottawa Citizen, Jan. 7, 1901) that, "We moved on from valley burning, looting, and turning out the women and children to sit and cry beside the ruins of their once beautiful farmsteads. * * * We burned a track six miles wide through these fertile valleys and completely destroyed the village of Wilport."

Morning Leader, June 11, extract from a letter: "* * * but it was grand sport chasing young cockerels and chopping geese's heads off, hearing pianos play as they rolled upside down into a fire lit in the middle of the room, piling pictures and brackets, etc., on a deal table and then putting a straw mattress underneath to start the blaze."

War gods are not heroes but frequently incendiaries. Here is a part of an order in the Boer War: "Unless the men * * * surrender * * * the whole of their property will be confiscated and their families turned out destitute and homeless" (dated Kingersdorf, July 9, 1900).

"When the flames burst from the doomed place the poor woman threw herself on her knees and bared her breasts, screaming 'Shoot me; shoot me. I have nothing more to live for, now that my husband is gone and our farm is burned and our cattle taken!'" (Morning Leader, May 21, 1901.)

Lord K. sent secret instruction to take no prisoners—that is, if the Boers surrender, they are to be shot down (January, 1901).

"The orders to take no prisoners came from headquarters and were given to Morant by Capt. Hunt, who in due course passed them on. Had Hunt and Morant not obeyed they were liable to be shot themselves." (Lieut. G. R. W., Oct. 20, 1904.)

"In the last two fights we used the bayonet freely as we advanced, and the Boers appealed for mercy in vain." (Private G. W., of Second Battalion of the Coldstreams.)

"A Boer was taken; he then threw down his rifle and asked for his life, and for an answer got a coarse jibe and was spitted, unarmed, on the bayonet of an English soldier." (The Tablet, London, Jan. 5, 1901.) An English soldier, presumably an officer, calls this "a good story."

"We proceed in deadly silence, with bayonets fixed, with instructions not to shoot but to use bayonet and butt—and take no prisoners. We take no more notice of shrieks for mercy than we would for cawing of crows." (Reynolds's Newspaper, Feb. 3, 1901.)

"There was a very general impression that the fewer the prisoners the greater would be the satisfaction of the commander. * * * The result was that many wounded Dervishes were killed." (Winston S. Churchill and Walsh.)

"He had in his possession an affidavit signed by two Dutch women, who underwent the last extremity of outrage at the hands of the British troops. This was admitted, because the soldiers were punished." (J. M. A., Manchester Guardian, Dec. 15, 1900.)

"The girl, evidently mistaking him for an officer, approached him between her sobs, struggled with her English to make a complaint. The reply she got was an insult, foul and brutal. * * * She sank to the dust at the man's feet with that peculiar half sob, half moan that tells the depth of feminine anguish having been sounded." (Morning Herald, Australia, Nov. 20, 1900.)

Lord G. H., in the House of Commons, narrated this of the Ninth Lancers: "Before his death the man stated that he had been assaulted by two men of the Ninth Lancers because he failed to find native women for them. The matter seems to have been taken very coolly; it was not until some days later that inquiry was instituted. This inquiry was perfunctory. A few days later another native was killed." (New Age, Nov. 27, 1902.)

A battle painter defined war as "the antithesis of all morality, of all humanity * * * for man as he is, war it can be said is a very attractive business." (Herald of Peace, May 4, 1904.)

A private says "man hunting is better than football, and that he is enjoying himself very much." (Narraccoote Herald, June, 1901, South Africa.)

A wounded colonel cries: "Exterminate the vermin; give them hell, boys," and the wounded were shot and the unwounded were "made to dig their own graves" and then shot. (Otago Witness, June, 1901.)

Snipers were not only riddled with bullets, but bayoneted and torn to pieces. (Otago Witness, June, 1901.)

"We burn the houses because your men won't give in; if that won't do, we'll burn the women next." (Times, Nov. 17, 1900.)

"The people thought we had called for refreshments and one of the women went to get milk. Then we had to tell them we had come to burn their place down." (With Remington, p. 187.)

"Told a woman and two daughters to take a few things and quit in 10 minutes. We then set the house on fire. They dropped on their knees and prayed and sang, weeping bitterly. * * * One of the poor women went raving mad." (Tottenhaus Herald, Dec. 12, 1901.)

BULGARIAN ATROCITIES.

(Les Cruantes Bulgares on Macedonie osientale et en Thrace, 1912–1913; Athens, 1914.)

Neither sudden explosion of national feeling nor violence inseparable from obstinate fighting seem to justify massacres, forfeit of honor and life, and destruction, ravages which the regular Bulgarian Army seemed to have made with deliberation and with a system determined and defined in advance by the Bulgarian authorities themselves in the last Bulgarian war.

The principal objects of the Bulgarian outrages were the clergy and teacher of the Hellenic communities. Not a village occupied by the Bulgarians escaped massacre of its men, women, and children, violation of its daughters, and pillage and burning of its houses. For instance, at the first invasion of Demir-Hissar they massacred all the men of the village of Petrove, and, after violating women and young girls, put them in a mosque and set in on fire, and in the face of this funeral pyre they played music. At Petritsi, before the cadavers of the Mussulmans, they made the wives and daughters of these victims dance.

At Demir-Hissar the bishops and three priests, with many notables and women, were tortured and put to death.

RUSSIAN CRUELTIES.

A Russian Greek Christian calls the Japanese "the unclean race of monkeys."

"What I have seen is nothing compared to what others have witnessed. Two thousand persons were deliberately drowned at Moxxv, 2,000 at Rake, and 8,000 in and around Blagovetschensk; 12,000 corpses were encumbering this river, among which were thousands of women and children. * * * This is Russian work." (New Age, Nov. 22, 1900.)

"The captain of a Russian cruiser recently asked the local authorities for permission to execute within the harbor a seaman who had been found guilty of striking a superior officer. The request was refused, whereupon the cruiser left the port, returning to-day. * * * The man was executed on the high sea in circumstances of great barbarity * * * being tied to a cable which was then passed under the ship's keel three times. It was not until the third time that the man was pronounced dead." (Herald of Peace, Jan. 1, 1914.)

OUTRAGES ON BELGIANS BY GERMAN SOLDIERS.

The official report (Report of the Committees on Alleged German Outrages, etc., 61 pp., and Evidence and Documents Laid Before the Committee, etc., 206 pp. London, 1914, 8s.) of the committee on German outrages on Belgians, appointed by the British Government, comes to the following conclusions:

(I) That there were in many parts of Belgium deliberate and systematically organized massacres of the civil population, accompanied by many isolated murders and other outrages.

(II) That in the conduct of the war generally innocent civilians, both men and women, were murdered in large numbers, women violated, and children murdered.

(III) That looting, house burning, and the wanton destruction of property were ordered and countenanced by the officers of the German Army, that elaborate provision had been made for systematic incendiarism at the very outbreak of the war, and that burnings and destruction were frequent, where no military necessity could be alleged, being, indeed, a part of a system of general terrorization.

(IV) That the rules and usages of war were frequently broken, particularly by the using of civilians, including women and children, as a shield for advancing forces exposed to fire, to a less degree by killing the wounded and prisoners, and in the frequent abuse of the Red Cross and the white flag.

This report is based upon the deposition of some 600 persons, making a volume of 296 pages.

SHOOTING OF GERMAN SOLDIERS BY BELGIAN CITIZENS.

Over against this British report is a report (Die voelkerrechtswidrige Fuehrung des belgischen Volkskriegs. Auswartiges Amt., 1914, 320 pp., 8s.) in German, entitled, "Belgian Citizens' Warring Against International Law," based upon depositions of some 200 German soldiers, making a volume of 320 pages, to show that the Belgian civil population individually and en masse attempted to carry on warefare with German troops.

Allowing for the ex parte character and possible exaggeration of these two reports, it is apparent to any impartial reader that these two reports counterbalance, complement, explain, and confirm each other.

There seems to be little doubt that in the beginning of the war Belgian citizens carried on a wild people's war against the German soldiers, which was a flagrant breaking of international law and had terrible results for the Belgians and their country.

This citizens' war raged all the time while the German soldiers were marching through Belgium. As the Belgian Army, after hard fighting, was being driven back before the German soldiers, the Belgian civil population sought to hinder the march of the German soldiers in every way. There is overwhelming evidence that the civil population of Belgium of every grade, age, and sex, with the greatest bitterness and madness took part in warlike action against the German soldiers. As already mentioned, this evidence is based upon official especially sworn statements of 200 German soldiers and first-hand reports of those in the service. There are 320 pages of this material, giving only what is *most important*.

According to the German report the civil population of Belgium fought the German soldiers in numerous places in the Provinces of Liege (based upon the statements of 8 witnesses), Luxemburg (9 witnesses), Namur (13 witnesses), Hennegan (8 witnesses), Brabant (6 witnesses), East and West Flanders (6 witnesses).

Results of an especially terrible character came from the citizens fighting in Ashrot, Audenne, Dinant, and Louvain. Special reports of the war minister are made upon this, going into details, given by numerous witnesses. Here people of all stations in life, laborers, manufacturers, teachers, priests, women, and children were found with firearms in their hands (25 witnesses). Shots came from houses, gardens, roofs, and cellars, from fields and woods, and this where there had been no Belgian troops for a long time. In these fights weapons were used, which no regular army would employ, such as hunting arms and amunnition, old revolvers and pistols (17 witnesses); thus German soldiers were wounded with shot, others scalded with hot water (9 witnesses).

The Belgian "Free Corps" had no responsible head and displayed no military sign (12 witnesses). If some of the civil guard were with them there was still no military sign, and in addition they were in citizens' clothes (8 witnesses). In general the Belgian citizens' war against the German troops was unorganized, especially in Aerschot, Anderme, and Louvain. It is shown that in a large number of instances the Belgian citizens appeared friendly to the soldiers at first entry, then when darkness came on or by other opportunity they began to fight the German soldiers; this occurred in 14 towns or cities. In these cases the citizens failed to carry weapons openly.

In Liege, Herbe, Brussels, Aerschot, Dinant, and Louvain German soldiers were shot at in the dark by Belgian civilians (14 witnesses). Further, the Belgian people had not respected the Red Cross, and under this flag had not hesitated to shoot German troops, and to attack hospitals in which were wounded soldiers (28 witnesses). Finally the German wounded soldiers were robbed and killed by Belgian citizens and atrocities were committed upon them, even by women and young girls—eyes being put out, ears and nose and fingers cut off and other parts of body mutilated (16 witnesses). In other instances German soldiers were poisoned, hung upon trees over which burning fluid had been poured, and otherwise burnt to death (11 witnesses).

Citizens caught in such acts were given a hearing when possible, and if guilty were shot. Old men, women, and children were saved (11 witnesses).

The Belgian Government did not, but could have hindered the free-corps war (17 witnesses) and avoided the terrible and unnecessary bloodshed which resulted.

In Aerschot there was a prearranged and sudden attack by the citizens upon the chief commander of the German soldiers, in which he was killed (5 witnesses).

In Dinant not only did Belgian citizens in general shoot German soldiers, but troops were treacherously and suddenly attacked by citizens (87 witnesses).

LOUVAIN.

As an example of the special reports upon different cities, we give some of the main points in the report upon Louvain.

On the 19th of August, 1914, the German troops entered Louvain. At first the citizens and soldiers got along extremely well together; the citizens showed themselves so friendly to the German soldiers that many of the soldiers went about the city unarmed (14 witnesses).

But this peaceful picture changed on August 25. At this time Belgian troops advanced out of Antwerp toward Louvain; the German troops in Louvain marched out against them; more troops from Liege were sent through Louvain to the front. The battle ended in a severe defeat for the Belgians, who in the evening were thrown back to Antwerp. But the citizens of Louvain believed that with the initial advance of the Belgian troops and the help of the English soldiers that the Belgian soldiers would succeed, and saw in this Belgian advance encouragement and success to take part in the warfare (4 witnesses).

Before this battle was decided a German militia company marched about 7 o'clock in the evening from the northwest to the east end of the city to the railway station. In marching through the city they found everything quiet; there were not a large number of soldiers in the city at the time (4 witnesses). They observed, however, surprisingly many young people, apparently of the well-to-do classes, in small groups in the streets, who slowly went back into the houses; women and children were not to be seen (4 witnesses).

The returning march of the German militia company and other smaller groups of troops in the city greatly strengthened the belief of the inhabitants that the Germans were beaten and upon their retreat were captured. This also gave an impetus to the carrying out of a plan which apparently had been made in advance, to exterminate the Germans on their retreat through the city, for a short time after this militia company had arrived at the railway station and about 8 o'clock in the evening rockets were fired in the city, first green, then red (12 witnesses).

At this signal the civil population of Louvain in different parts of the city began to shoot furiously at the German soldiers with muskets, revolvers, and pistols from the cellars and windows of the houses, and principally from the roofs (35 witnesses); the shooting sounded in some places as from machine guns (7 witnesses). The German soldiers were completely surprised; many were wounded and some killed. In the columns and divisions of baggage placed in the streets there was great confusion from horses breaking away and running, having been hit by balls or shot or otherwise frightened (5 witnesses).

The firing was especially heavy at the market place, where the staff of the general commander was located. Many officers and troops were wounded and killed. The staff of the general commander alone lost 5 officers, 2 officials, and 23 men and 95 horses. The shooting was heaviest, however, at the railway station, where the German militia company had marched. There was heavy shooting at the soldiers in the "Place du people." To add to the terror, the city was in darkness.

As soon as the soldiers could recover from their surprise they returned the fire, entering and searching the houses from which the shooting came. Some of the citizens were killed in fighting (4 witnesses), others being caught with weapons in their hands, were shot (9 witnesses). Many citizens escaped through the backs of houses and continued the street fight in other places. About 11.30 at night the commander general of the Eleventh Reserved Army Corps returned to the city and was shot at on his way to the Rathhaus.

In order to put an end to the street fighting, the mayor and other prominent citizens were taken as hostages and led through the city, and were required in a loud voice to command the people to cease hostilities. Although severe penalties were threatened, the demands had no result; the people continued fighting the soldiers, and in their wrath they even shot physicians, sanitary officials, the sick and wounded who were under the protection of the Red Cross (10 witnesses); shooting also at a hospital (3 witnesses); explosives and bombs were used (4 witnesses); hot tar was also poured upon the soldiers (2 witnesses).

Atrocities were committed thus: A German soldier was found disemboweled and others mutilated. Most severe measures were necessary to stop this kind of warfare, and those taking part in the attack were shot, and the houses from which shooting came were burned; it was impossible to stop the fire at times spreading to other houses, and this was the cause of the burning of the celebrated cathedral; the Rathhaus, however, was saved. Only a very small part of the city was destroyed.

Notwithstanding these severe measures, the next morning the citizens renewed the attack. The unrest endured the next two days, although the hostages were again led through the streets (17 witnesses).

That this general attack of the citizens was prepared long in advance is shown (1) by the sending up of rockets, (2) by the finding of large quantities of arms, (3) by a large number of young men coming to the city, (4) by finding in the burned houses large quantities of cartridges and explosives. Unfortunately, a number of priests encouraged this fighting, and some of them took part themselves (9 witnesses).

VII. COMPARATIVE MILITARISM.

One way to estimate militarism in a country is to give the number of soldiers and sailors (including officers) in time of peace, relative to the population, which is done in column 2 of the following table. The countries are arranged according to a descending scale of militarism, Roumania being highest, which is 15,700 soldiers and sailors per million population. United States is last, having only 1,499 soldiers and sailors per million population. Sweden is second, having 15,299 soldiers and sailors per million population. France is third, having 14,874 per million population, but she is highest of all the larger nations in degree of militarism. Servia is fourth, Bulgaria fifth, and Turkey sixth. Germany is seventh, but of the larger nations she is second, being next to France in degree of militarism. Italy is eighth, Greece ninth, Austria-Hungary tenth, and so on down.

In some of the countries no trustworthy data as to sailors are obtainable, especially in the Balkan States, which, however, stand very high in militarism on land; they are rated without regard to their militarism on sea. If we compare the larger nations only, the order in degree of militarism (column 2) is France first, then Germany, Italy, Austria-Hungary, Russia, Great Britain, and the United States, which is by far the least military of all.

In column 3 the figures are given for militarism on land only; the order is practically the same as in column 2 for both land and sea, except Great Britain, which is very low in militarism on land. In column 4 the figures are given for militarism on sea alone, the order being Great Britain first, then Sweden, Italy, France, Germany, Russia, and so on. Great Britain's militarism on sea is more than three times as much as any other country; she is the only country having more sailors than soldiers. It will be found on the whole that militarism is according to geographical and political necessity.

In columns 5 and 6 are given the absolute numbers of soldiers and sailors (officers and men) in army and navy. The popular mind generally rates the militarism of a country according to the size of its army, which is incorrect, for the army might be large simply because the country is large; thus Russia has by far the largest army; so the United States, a nonmilitary country, has a larger Army than most of the Balkan States, which are bristling with militarism.

Also, it would not do to estimate militarism according to amount of money paid out per capita of population (columns 7 and 8), for a country might have a much higher degree of militarism than it had money to carry it out; also, larger and richer nations would have a high degree of militarism. Thus Great Britain's per capita rate for army and navy combined is the highest, making it most military of all, which is not true.

In column 9 is given the number of bordering nations for each country. Other things being equal, a nation having a large number of countries bordering upon it would be expected to have a larger army for its protection, especially if these other countries were first-class powers.

The true way, therefore, to estimate militarism is according to the number of both soldiers and sailors relative to population in times of peace.

Comparative militarism.[1]

VIII. Summary of Conclusions on War.

What might stop war.

War may cease as soon as the instruments of destruction become so great as to threaten everyone's life. If the use of air machines like Zeppelins or more dangerous inventions to come, increases until every citizen at home is kept in constant fear, sleeplessness, and worry for his personal safety, such conditions would soon bring the people to a realization of the senselessness as well as terribleness of war and that nonexistence were preferable to existence under such circumstances. The natural instinct of self-preservation would assert itself so emphatically as to make it very difficult for a nation to enter war.

It would also be very difficult to commence war if a two-thirds vote of the citizens of a country were required before war could be declared. For the average citizens, whose blood is practically shed, should have more voice in the matter. The fact that a few high officials, however conscientious, can place their country in such a position as to virtually force it into war is the result of an old régime, which is not only unjust to the great majority who must bear the brunt of battles but ill adapted to present humanitarian needs. The officials themselves would doubtless be the first to welcome any change in form of government that might lessen the weight of their terrible responsibilities.

Reasons for writer's interest in problem.

All American citizens—in fact, citizens of all neutral nations, in their own way and according to their own convictions—should do everything they can to keep their country out of the European war. This study is an endeavor of one American citizen to lessen war.

The author may be permitted to give a few reasons which led him to undertake to do what he thinks to be not only his duty, but the duty of everyone who has had special opportunities. He resided some four years in Europe, mainly in France, Germany, and Switzerland, pursuing university studies and, mingling with the people, he had many advantages in gaining an insight into their life and thought. His specialty also was criminal anthropology, which includes the subject of war more particularly in its psychological aspect.

Point of view of an Alsatian.

As an illustration, a shoemaker in Alsace-Lorraine was asked whether he preferred to live under the French or German Government. His answer was as follows: "You know that our language is French and our sympathies are with them." When questioned as to actual practical difference under the Germans, he said: "As far as business is concerned, I am a little better off; the Germans are more rigid in enforcing laws as to apprenticeship, so that unskilled shoemakers are not able to compete with us so much as when under French rule. But we want to be let alone; we don't want any more fighting over the matter."

IX. Principles for the Scientific Study of Humanity.

Criminal anthropology, or criminology, is a scientific study of humanity. Of all forms of human abnormality crime is nearest the normal; in fact, more than three-fourths of the criminals, so called, are normal, and the study of them is practically the study of normal men. Penal and reformatory institutions, therefore, should not be called "criminal," for it is unjust to stigmatize a large number of persons when so few of them merit it. These unfortunates have enough difficulties to contend with without the addition of a stigma.

The scientific study of humanity requires the investigation of man physically, mentally, and morally. A knowledge of medicine and laboratory-training in psychology and anthropology are much needed in such study. The following are some of the principles of the study of humanity which should apply to relations between nations to avoid war, as well as to relations within nations to develop peace:

1. The study of humanity, to become a science, must depend upon investigation of large numbers of individuals, and the method should be the same for all classes, if we are to distinguish the normal from the abnormal.

2. Abnormal man may be abnormal in the right direction, as genius man, talented man, and statesman; or in the wrong direction, as criminal, pauper, and defective man. It is all man, and the study of these different classes might be called the anthropology of the living, as distinguished from prehistoric anthropology.

3. The best method for humanitarian study is that of the laboratory in connection with sociological data. For

4. All facts about human beings are important from the scientific point of view, whether such facts be immediately available or not.

5. The prison and reformatory can serve as a humanitarian laboratory for the benefit of society. As most of the inmates are normal and their surroundings uniform, the conditions for scientific research are favorable.

6. We can not be tempted to do wrong unless there is something in us to be tempted; that something is a part of ourselves as distinguished from our environment; therefore

7. The comprehensive study of man requires an investigation of both the individual and his surroundings, for the environment may be abnormal rather than the man. Thus

8. The exhaustive investigation of a single criminal illustrates just how and by what steps both environment and inward nature may lead to criminal acts.

9. Degrees of crime should be estimated according to detriment to the community. From this point of view international crime, or war, is the greatest of all crimes. And

10. One of the objects of criminology is to lessen and prevent war by knowledge gained through investigation of its causes.

11. No evil can be permanently lessened without first finding its causes. There is probably no one cause of anything, but a chain of causes. And

12. There is little hope of making the world better if we do not seek the causes of evils at their foundation.

13. The prison should be a reformatory and the reformatory a school; their principal object should be to teach good mental, moral, and physical habits; both should be distinctly educational.

14. The ground for the imprisonment of the criminal is, first of all, because he is dangerous to society. And though confined, he should not necessarily be punished. For

15. No one is responsible for the first 15 years of life, nor is anyone accountable for the tendencies inherited from ancestors. As the die is usually cast before adult life arrives, responsibility is most difficult to determine and is often a minimum quantity. Therefore

16. We should judge of people by their excellencies rather than by their defects. As has been said, "To know all is to forgive all." Yet

17. Society has no right to permit prisoners to be released who will probably return to crime; for

18. Where it is a question between justice to the individual or justice to the community, the community should have the benefit of the doubt.

19. One purpose of criminal anthropology is, through knowledge gained by scientific study, to protect the weak, especially the young, in advance, before they have become tainted and fallen; not locking the barn door after the horse is stolen, which is the defect in most schemes of reform.

20. Institutions for reforming human beings should have the conditions as similar as possible to surroundings outside, so that when inmates are released they can adapt themselves more easily to society and not become misfits.

21. Cranks or mattoids who attempt the lives of prominent persons are very important solely on account of the enormous injury they can do to society. They therefore should be studied most thoroughly. Just as the physician studies his patient in order to treat him properly, so one should study the criminal.

22. Criminals, paupers, and other defectives, constituting about 1 per cent of society, are social bacilli which require as thorough scientific investigation as the bacilli of physical disease. But

23. Why should we allow 1 per cent of society to cause so much trouble and expense to the remaining 99 per cent, crime alone costing more than one-half billion dollars annually? It is mainly because of neglecting the young, where study of man should begin. And

24. The time has come when we should study a child with as much exactness as we investigate the chemical elements in a stone or measure the mountains on the moon.

25. Drunkenness is not only one of the main causes of crime, but one of the greatest enemies of humanity, because it brings suffering upon so many innocent people.

26. All that is diseased is abnormal, but not all that is abnormal is diseased; thus a hand with six fingers is abnormal, but not necessarily diseased.

27. He must study the normal to comprehend the abnormal, for

28. When the normal acts in an unsuitable way or at the wrong time or place it may become abnormal. The fundamental conception of the abnormal is excess of the normal; but

29. The difference in degree between the normal and abnormal can be so great as to result in a difference of kind, just as when two fluids reach a certain amount a precipitate is formed, which is very different from the ingredients from which it was deposited.

30. Nothing will hinder development of the young more than the prospect of having plenty of money and no necessity to work. Idleness often leads to crime.

31. It is more important to know what is good than what is true; for

32. Increase in intellectual development is not necessarily connected with increase of morality, and education which trains the mind at the expense of the will is a questionable education. And

33. The longer we live the more we appreciate the average honest man as compared with the dishonest talented man.

34. To any observer of life the impracticability of pessimism and the advantage of optimism are evident. It has also been estimated that

35. Most of our thoughts, feelings, and acts are indifferent; but of those remaining three-fourths are pleasurable and one-fourth painful, indicating more pleasure than pain in the world.
36. Human nature is like a plank across a stream—if one man passes over it at a time a whole army can cross; if two, it bends; and if three, it breaks.
37. Success is often more dangerous than defeat, for it tends to develop conceit, overconfidence, and loquaciousness.
38. There is nothing so ridiculous as the self-important man, the all-wise man, and the "Smart Alec."
39. The greatest of all studies is man, which is based upon the individual, the unit of the social organism.
40. Just as the physician studies his patient in order to treat him properly, so one should study the criminal, who is usually a fool, because he is opposed to the great majority of society and is almost sure to fail.
41. The study of medicine is the study of the future. To know the geography of the body is more important than to know the geography of the world. Know thyself.
42. Of all forms of abnormal humanity crime is nearest the normal; the study of criminals, therefore, is mainly the study of normal men, and knowledge thus gained may be generally applicable to the community as a whole.
43. Every person dangerous to property or life, whether insane, criminal, or defective, should be confined, but not necessarily punished.
44. The determinate sentence permits prisoners to be released who are morally certain to return to crime. The indeterminate sentence affords the prisoner an opportunity to reform without exposing society to unnecessary danger.
45. In studying man, names are unnecessary and statement of facts is not criticism, for science is absolutely impersonal.
46. Every one has the right to a proper bringing up.
47. The time has come when we should study a child with as much exactness as we investigate the chemical elements in a stone or measure the mountains on the moon.
48. The treatment of young criminals should be the prototype for treatment of adults, and procedures against them should have as little publicity as possible.
49. Publication in newspapers of criminal details is an evil to society on account of the power of imitation. In addition it makes the criminal proud of his record, develops the morbid curiosity of the people, and it is especially the weak who are affected.
50. Place confidence in the so-called bad boy, awaken his ambition and teach him to do right for right's sake.
51. Put the criminal upon his honor. A criminal once said, "If they will not believe me when I tell the truth, I might as well tell lies."
52. Opinion is valuable according to knowledge, especially first-hand knowledge, and science is common sense condensed, where an ounce of experience is worth a pound of theory. But
53. The highest impulse of science is the love of truth for its own sake.
54. A person is valuable to the community in the proportion he contributes to it more than he receives from it; yet
55. About all most people can do is to earn a living, not to mention saving something for old age.
56. As long as there is enough, no human being should be deprived of the necessities of life.
57. If we must have an aristocracy, let it be one of intellect rather than money or family; for
58. The only thing in which man excels the animals is his mentality.
59. This is the generation of the exaltation of mediocrity.
60. To choose the good is often to choose the lesser evil; for the millennium has not yet arrived.
61. Act as thou wouldst act, if all the consequences of thy act could be realized at the moment thou actest.
62. Science seeks what is—the truth, ethics what ought to be, and aesthetics what is as it ought to be.

X. Government and Other Publications on Humanity.

[By Arthur MacDonald.]

Abnormal man, being essays on education and crime, criminal sociology, criminal hypnotism, alcoholism, insanity, and genius, with digests of literature and a bibliography. 1893. Published by United States Bureau of Education. Washington, D. C. 445 pages, 8°. 2d edition, 1895. Price, 25 cents.

Criminology, a psychological and scientific study of criminals, criminal contagion, criminal hypnotism, and recidivation, with introduction by Lombroso, Bibliography. Second edition. New York, 1894. Funk & Wagnalls, publishers. 416 pages, 12°.

Le criminel-type dans quelques formes graves de la criminalité; Jesse Pomeroy, "the boy torturer"; Piper, "the brainer (Belfry case, Boston); "Jack, the Ripper" (de Londres). Bibliographie de sexualité pathologique. Troisième édition. Une volume en 8°, illustrait de portraits. Publié par. A. Storck, Lyon, et G. Masson, Paris, 1895. 300 pages. This work is not published in English.

Education and Patho-social Studies, including an investigation of the murderer "H." (Holmes); reports on psychological, criminological, and demographical congresses in Europe; London slums and Gen. Booth's Salvation Army movement. Reprint (from Annual Report of United States Commissioner of Education for 1893–94), 57 pages, 8°. Washington, D. C., 1896. Price, 5 cents.

Emile Zola, a psycho-physical study of Zola's personality, with illustrations; his physical and mental peculiarities; nervous system, finger imprints, morbid ideas, etc.; visual perceptions, hearing, smell, tactile sensations, perception of time, association of ideas, and suggestibility; character, method of work, etc.; with bibliography. Reprints (from Open Court, August, 1898, with appendix (34 pages), and "Practical Psychology," August, 1901), 1901.

Experimental Study of Children, including anthropometrical and psycho-physical measurements of Washington school children; measurements of school children in United States and Europe; description of instruments of precision in the laboratory of the Bureau of Education; child study in the United States; and a bibliography. Reprint (from Annual Report of United States Commissioner of Education for 1897–98), 325 pages, 8°. Washington, D. C., 1899. Price, 20 cents.

Hearing on the bill (H. R. 14798) to establish a laboratory for the study of the criminal pauper, and defective classes, treating especially of criminology with a bibliography of genius, insanity, idiocy, alcoholism, pauperism, and crime, had before the Committee on the Judiciary of the United States House of Representatives. 309 pages, 8°. Government Printing Office. Washington, D. C., 1902. Price, 15 cents.

Senate document No. 400 (57th Cong., 1st sess.): A plan for the study of man, with reference to bills to establish a laboratory for the study of the criminal pauper, and defective classes, treating especially of Hypnotism, with a bibliography of child study. 166 pages 8°. Government Printing Office. Washington, D. C., 1902. (166 pp.) Price, 15 cents.

Statistics of crime, suicide, and insanity and other forms of abnormality in different countries of the world, in connection with bills to establish a laboratory, etc. Senate document No. 12, 58th Congress, special session, 8°. Government Printing Office. Washington, D. C., 1903. (195 pp.) Price, 10 cents.

Man and abnormal man, including a study of children, in connection with bills to establish laboratories under State and Federal Governments in the study of the criminal, pauper, and defective classes, with bibliographies. Senate document No. 187, 58th Congress, 3d session. 780 pages, 8°. Washington, D. C., 1905. Price, 40 cents.

This document ("Man and Abnormal Man") includes in substance the matter contained in the six Government publications enumerated above.

El criminal tipo en algunas formas graves de la criminalidad. Madrid. La Español Moderna, 170 pages, 8°, 1908.

Juvenile crime and reformation, including stigmata of degeneration, being hearings on bills to establish a laboratory, etc., before Senate Committee on Education and Labor and House Committee on the Judiciary. Senate document No. 532, 60th Congress, 1st session, 339 pages, 8°, 1908. Price, 25 cents.

NOTE.—HOW TO OBTAIN THE PUBLIC DOCUMENTS.

These public documents, especially "Man and Abnormal Man," and "Juvenile Crime and Reformation," might be obtained either through any United States Senator or Representative, or by writing directly to the Superintendent of the House or of the Senate Document Room.

Also the "Superintendent of Documents," at the Government Printing Office, Washington, D. C., will send any public document on receiving its price.

ARTICLES IN PERIODICALS.

(Copies of these articles might be obtained by writing to the periodicals in which they appear.)

Beikohuniokeru furyoojino kanka (reform of children in the United States). Kyooiku Jirón, Tokyo, January 15, 1908. 5 pages.

Statistics of alcoholism and inebriety. Journal of Inebriety. Autumn, 1909. Boston. 18 pages. Includes results in foreign countries.

Death penalty and homicide. American Journal of Sociology, Chicago, July, 1910. 28 pages; also published in Japanese, Journal of Statistical Society of Tokyo. It is mainly a statistical study, including foreign countries.

Criminal statistics in Germany, France, and England. Journal of American Institute of Criminal Law and Criminology, Chicago, 1910.

Entwickelungsfehler der kinder. Jahrbuch für Kinderheilkunde, Berlin, 1910. Presents results of study of abnormal children in the public schools of Washington, D. C.

Mattoids (cranks). Medical Fortnightly, St. Louis, April 25, 1911. 12 pages. The mattoid is abnormal, with want of balance, eccentric, egotistical, and often in the intermediate zone between sanity and insanity.

Eccentric literature. The Monist, Chicago, July, 1911. 12 pages. Written mostly by mattoids.

Statistics of congressional life and activity (plan of). Hearing before the Committee on Printing, House of Representatives, August 12, 1911. Government Printing Office, Washington, D. C. 14 pages.

Mental ability in relation to head circumference, cephalic index, sociological condition, sex, age, and nationality. Journal of American Statistical Association. Boston, December, 1911. 9 pages, 8°. It is a summary of results from Washington school children (see "Experimental Study of Children" above).

Assassins of rulers. Journal of American Institute of Criminal Law and Criminology, Vol. II, No. 4. Chicago, November, 1911. 16 pages, 8°. Assassins of our Presidents are specially studied.

Sur la creation d'un laboratoire Fédéral de criminologie aux Étais Unis, Archives d'Anthropologie Criminelle, Lyon et Paris, 15 Mars, 1911. 3 pages, 8°. Difficulty of establishing a Federal laboratory due to misapprehensions.

Studie über verbrechen jugendlicher. Archiv für Kriminalanthropologie und Kriminalistik. Band 46, Leipzig, 1912. 7 pages.

Study of criminal man, in connection with the author's letter, sent out by the State Department to foreign countries. Criminal Law Review, February, 1915, Madras, India. 10 pages.

Mentality of nations, in connection with patho-social conditions. Bibliography. The Open Court, Chicago, August, 1912. 11 pages; also published in Scientific American, New York City; Archivos de Pedagogia y Ciencias afines, Mayo de 1912, Buenos Aires; and in Nature, November 14, 1912, London; also in Archiv für die gesamte Psychologie, XXXIII. Band, 3. u. 4. Heft. Leipzig, 1915. A comparison between nations as to their intellectual products; a statistical study.

Humanizing criminal law. Case and Comment, vol. 18, No. 12, 1912. Rochester, N. Y.; also published in Bulletin de l'Union International de Droit Pénal, Vol. XIX. Advocates use of penal and reformatory institutions for scientific study of normal humanity.

Statistics of physical measurements and anomalies of criminals. Alienist and Neurologist, St. Louis, February, 1912. 38 pages; also in Indian Medical Journal, Calcutta, February, 1912. Gives the main results of scientific study of criminals in all countries.

The would-be assassin of Theodore Roosevelt. Medical Times, New York City, April, 1914. 15 pages. Gives physical and mental analysis of assassin.

Scientific study of base ball. American Physical Education Review, Springfield, Mass., March, 1914. 22 pages. More complete statistics of the game are advocated; also fine points as developed by best players are given. The anthropological study of the player himself is also suggested.

A study of Congress (plan proposed). Lawyer and Banker, New Orleans, December, 1914. 7 pages. A proposed scientific and statistical investigation of congressional life and activity; legislative ability; Senatorial standards, etc.

Principles of criminal anthropology. Medico-Legal Journal, special historical sketches, November, 1914, New York City. 5 pages; also in Pacific Medical Journal, San Francisco, California; Maryland Medical Journal, Baltimore, December, 1914; Alienist and Neurologist, St. Louis February, 1915; Educational Foundations, New York City, January, 1915, etc.

War and criminal anthropology. Pan American Magazine, New Orleans, February, 1915. 8 pages, 8°; also in The New Age (Masonic), Washington, D. C., April, 1915, 4 pages; Pacific Medical Journal, San Francisco, April, 1915. 11 pages.

Exceptional children, including the results of investigations in the public schools of the United States and foreign countries (in course of preparation). U. S. Bureau of Education, Washington, D. C., 1915. The exceptional child is one who by its mental or physical organization, or through its environment, is rendered incapable of profiting from the ordinary methods of instruction, education, or discipline in the regular schools.

Patriots and War.

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON,
OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. HUDDLESTON. Mr. Speaker, the awful horrors of the European conflict have brought home to us the great lesson that no war should be entered upon except in the necessary defense of national honor. Those who would lightly urge a declaration of war without first carefully counting the cost and weighing the necessity for the action are not as they would like to class themselves—patriots—but are betrayers of our country and are to be classed with its enemies. They do not deserve to be lauded, but to be condemned; not praised but despised. They are not fit to lead public opinion and their vaporings should be scorned by all high-minded citizens.

TRUE PATRIOTS AND FALSE PATRIOTS.

There is more than one kind of patriot. The true patriot—the best patriot of all—is he who loves his country and would make any necessary personal sacrifice for its welfare. He is usually quiet and unpretentious. It is his part to act, not to mouth noisily in public places. He is chiefly concerned with justice, and respects the rights of other nations as well as those of his own. He is calm and thoughtful. He considers the awful cost of war, cost in blood, in money, in spiritual and political considerations. He would avoid war if possible by any means consistent with honor. He does not urge others to fight, but is himself ready to shoulder arms. He seeks neither glory nor profit, but is willing to lay down his life for American ideals and institutions. He counsels patience and is slow to take offense, but once we are committed to war he serves with self-sacrifice and heroism to the bitter end. Usually he is a man of humble station, whose heart beats in kindness and has not been hardened by the oppression of others. He tries in his plain way to apply the principles of Christianity to the everyday affairs of nations and men. I am proud to believe that this description fits the great body of our people and that they hold America, with liberty and justice, as dearer than life and all earthly things.

But there is another kind of patriot, a false patriot, a creature whose regard for his own selfish interest is supreme. He is a patriot for profit, for honors, and salaries, for profits from war munitions and supplies. He is out of harmony with the ideal of equal justice and opportunity for all, but secretly longs for the return of the old conditions of master and serf, of a privileged class riding upon the shoulders of the masses. He prates of the sacredness of property but has no word for the rights of humanity. He clamors for established order, meaning thereby a condition in which he shall have some advantage over his fellows. He loves America, not because it is the land of the free but because of the opportunity which it gives for heaping up wealth and reaping dividends. This false patriot I do not love; but, alas, he is strong in our land, not strong in numbers but strong in wealth, influence, and prestige. His hoarded gains command for him the best of brains and cunning that the world affords. His schemes are contrived in secret and executed in darkness.

Always the true patriot is at war with the false. The former is a multitude and his adversary is a few, so that standing on equal ground the result would be quick and sure. But the false patriot is no fair fighter; he has his mercenaries of parasite newspapers and all the vicious elements in political and social life. He breeds revolt in the ranks of the true patriots. He divides them into factions and sets them to tearing each other. He deludes them with false counsel. He bribes their leaders, poisons their sources of supply, and by his nefarious schemes weakens them with dissensions until their strength becomes as a chain of dust.

The false patriot is active in our land to-day. He scents an opportunity for avarice in fat war contracts, in ships, munitions, and supplies, He demands the right to trade, and would sacrifice on the base altar of commercialism the liberties and ideals for which our ancestors laid down their lives.

THE AWFUL COST OF WAR.

The European war presents a terrifying spectacle. Humanity stands aghast at it. Like an awful conflagration, one nation after another has been drawn into the raging flames until it seems that the whole world will be engulfed. Only one great nation has remained out of the conflict. It is America, our own fair land. If we shall be drawn into the war the few remaining neutrals can scarcely be kept out, so that the whole wide world will be engaged in the awful conflict.

Europe has already poured out its rivers of blood and trembles on the verge of bankruptcy and ruin. Literally millions of men have been killed and mangled on the battle fields. Millions more crouch in muddy trenches ready to spring at each others throats, and in homes without number white-faced women mourn their loved ones and starving children reach out their little hands in vain for bread. But it is not in blood and treasure that the bulk of the awful cost of war must be paid. It is in the sacrifice of liberty and of moral and spiritual ideals. The three years of the war have cost the people of Europe the gains of centuries in religion and morality. Europe has been thrown back countless generations in ethical standards. And what of human liberty! The word is a mockery in the warring nations. Even the English have slipped back to the conditions of the dark ages. Our own country if it shall enter the conflict must share in these dire consequences.

Already America is paying a part of the cost of the war, its economic cost, its spiritual and moral cost. Even our liberties are threatened. Only a few days ago the Senate of the United States passed an espionage bill—a more drastic restriction on liberty than any measure ever before passed by Congress even in time of war. This bill and others now pending would make of our boasted freedom an empty name and of our old ideals, a vanished dream. If we shall enter the war as an active participant, we must pay our part of the awful cost in suffering and money. But more than all I dread the conflict, for the effect which it will have on our institutions. No man can foresee where the consequences will end nor what the final effect will be upon America, its institutions, its liberties, and its form of government.

A democracy can not make efficient war on a large scale. It can not be a great military power. A military nation must have a strongly centralized government, it must have its cabinets with power to form secret plans, make secret treaties, conceive in secret, fell designs for the use of its armies and navies. It must be able to strike without warning and suddenly. It must be prepared without consulting its people to spring upon its unsuspecting foe. It must have its cheap conscript armies to which no free people will submit; its military treasure levied without consent of taxpayers. If we are to aspire to great military power then let us make up our minds to give up our liberties. If we are to compete with the great military autocracies of earth we must put ourselves on an equality with them in form of government and in the powers of their rulers.

If humanity be not gone stark mad it will learn out of this horror how to avoid war, and in the end the great good will come that there shall be an end of war, and mankind will find a juster, saner way to settle its differences than by mutual murder.

THE MILITARISTS AND JINGOES.

The people of America should be made to know the facts. There is a faction in this country, small but powerful, which wants war for its own sake. War for war's sake is what they desire. War with Mexico, with Germany, with Japan; war with anybody, so it is war. They are the militarists, the military satrapy, the munitions makers, the selfish financiers, the war contractors, and their parasite press. They want war for its promotions, its profits, and its influence on our social and political life. They have laid their plans for vast armies and navies, on universal conscription for cheap soldiers, and to teach the people servility and obedience. No liberty-loving people has ever submitted to their conditions except under dire necessity, and they cunningly plan by forcing the Nation into war to find an opportunity to carry out their schemes.

I warn the people against the influence of the militarists. They are much more powerful than many may believe. They control the press of the great cities and a multitude of newspapers scattered over the country. Their organs reiterate daily the false arguments of their masters, carry on their propaganda, color and distort every news item of importance, and criticize without scruple or regard to truth any champion of the liberties of the people who may have the courage to protest.

The influence of the war faction can not be overestimated. It comprises all that wealth may buy, cunning can devise, and prestige accomplish. They have their echoes and tools in every corner of the land. Those who now clamor for war with Germany a few months ago demanded war against Mexico. Now, with a bumptious pretense of patriotism, they shout, "Stand by the President"; then they condemned him from

every housetop as a pusillanimous coward. They seek to break down, by abuse and dishonest criticism, whatever reason can not touch. Their epithets and coarse denunciations are dinned into the ears of the honest and brave men who refuse to submit to their dictation.

These vicious forces are so powerful and well organized that they have been able to taint the sources of the people's information and to mold public opinion to their will until many true patriots have been intimidated, and those who do not think for themselves have taken up the false halloo. Under the spur of this simulated public opinion Congress has been led into a policy of vast military expansion, to the end that the present Congress has appropriated $535,000,000 for the Navy against $312,000,000 last year and $145,000,000 the preceding year. We are spending more on our Navy than prior to 1914 was spent by all the other nations of the world combined. This simulated public opinion has not only influenced Congress but has swayed the Chief Executive. Under it our soldiers were sent into Mexico and the National Guard spent months on the border, all in an aimless and fruitless campaign. "Declare war on Germany," the militarists demand, and, knowing that the President loves peace, they agitate for the arming of merchant ships, hoping that out of such course they will achieve their desire for war.

THE CONSTITUTION, CONGRESS, AND THE PRESIDENT.

Under our Constitution our Government is divided into three independent branches—the legislative branch, composed of the two Houses of Congress, to make the laws; the judicial branch, composed of the courts, to construe the laws; and the executive branch, composed of the President and his subordinates, to execute the laws. The founders of the Republic intended each of these branches of Government to be a check upon the other, and sought to preserve a balance between them, so that their functions might be exercised independently. In the form of government this is fundamental Americanism. It is as improper for the President to dictate to Congress what laws should be passed as for him to dictate to the courts what judgments should be rendered. Congress has no more right to delegate its functions to the President than the courts to delegate their functions to him. It has been predicted by eminent students of government that if the Republic shall ever fall it will be on account of the Executive gaining such ascendency over Congress as to make that body his tool.

The exclusive power to declare war is, by the Constitution, vested in Congress, which has no right to delegate that power to the President. Members of Congress have the constitutional function and responsibility laid upon them to decide when war should be declared. As for myself, I shall not shift my duty to the shoulders of the President. He has his constitutional duties to perform and I have no wish to interfere with them. I also have my constitutional duties, and them I have sworn to discharge. I will not shirk. I will not delegate them. I will for myself, upon my solemn oath, recognizing my responsibility to my country, decide whether there is sufficient cause for war. Our President is a great and wise man. His love for peace is as sincere as my own. I am sure that he has no desire to assume my responsibility just as I have no willingness that he should do so. His opinions should be given great weight as those of a wise and partiotic man, but Members of Congress who accept his judgment instead of their own are unfit to perform their representative duties. In this crisis the cry should not be "Stand by the President," but should rather be, "Stand by our country." The sole question for a conscientious citizen to consider is, "What is for the best interest of America?"

CAUSES OF WAR.

I will not at this time analyze the causes of the European war further than to say that it was caused primarily by greed; not the greed of the masses but the greed of the few, they who to their own countries are what our false patriots are to ours. The great masses in the warring nations fight blindly and heroically for their respective ideals. All no doubt are patriotic, and perhaps equally so. All are our brothers, since America has drawn some of her blood from the veins of every nation of Europe. My heart goes out to them in their sufferings, and my prayers are for all of them that their woes may soon end. It is for us to stand aloof as true neutrals, as well-wishers of all, reserving for ourselves the Christlike office of mediation. We should not exaggerate our incidental discomforts and inconveniences, but should bear them with a patience so long as our national honor is not assailed.

It can not be denied that both parties to the war have given us cause for offense. Germany has sunk merchant ships whereby American passengers lost their lives. The British have not willfully destroyed the lives of any of our citizens, but they have rifled our mails, laid mines in seas which were the public highways of the world, blockaded neutral ports both against the egress and ingress of our commerce, seized our ships, cut us off from friendly nations, and demoralized our commerce. That no American lives have been lost because of illegal British acts is rather due to our own forbearance than to British favor, for we have submitted to dictation and at Britain's behest have withdrawn our commerce from places where it might legally go. Had we sent our ships into the areas of illegal British mines undoubtedly many lives would have been forfeited.

But while we have had sufficient legal cause for war with both combatants, I have been for peace. I have realized that they were grappled in a life and death struggle, that all the nations were anxious to be on good terms with our strong and rich Nation, and that no intentional affront had been given us. I know that both combatants have been anxious for our friendship. Such inconveniences and wrongs as they have put upon us have been merely incidental to their own struggle for existence. They have been fighting for their lives, and some of the blows intended for their adversaries have accidentally fallen on us. In my philosophy war is justifiable only in defense of national honor, which can not be involved by an accidental and unintentional wrong. I have thought that we should be forbearing toward both parties. It is not the extent of the injury that should control a decision for peace or war; it is the intent with which it is done. Germany's wrongdoing has cost American lives; British wrongdoing might have cost the same but for the exercise of our prudence and forbearance. If there has been cause for conflict with one of the warring groups, there has also been cause for war with the other. But I have felt that there was real cause for war with neither, and that we should await their cooler, saner moments for the peaceful redress of our injuries and for appropriate apologies.

From the very beginning Germany has bitterly complained that we were supplying the British with arms and ammunition which by reason of Germany's position she could not obtain. We had the undoubted legal right for our munitions makers to sell arms and ammunition to the belligerents. This was a right belonging to the private individual, however, for our Government could have made no such sales consistent with neutrality. The vast quantities of munitions exported to Britain have given color to the German complaint, and coupled with the vast loans granted to the entente powers by our bankers have undoubtedly pushed us close to the brink of unneutrality. Recent developments indicate that the German people regard the United States as having already joined their enemies with our material resources, which constitute the sinews of war. There has been a strong demand by the German public for unrestricted submarine activity, which would stop the traffic in the implements of war. The German submarine campaign is in response to this sentiment.

THE SHIP-ARMING BILL.

As an answer to Germany's threat that she would cut off commerce between the United States and her enemies our militarists and their parasite press demanded an immediate declaration of war. They had demanded war when Belgium was invaded, when the *Lusitania* was sunk, and on other occasions. Being unable to thrust our country at once into the conflict, they brought such pressure of simulated public opinion to bear that the President requested authority to arm our merchant ships. He stated that he was of opinion that he already had such authority, but wished first to secure the sanction of Congress to its exercise. I believe that if mere authority to arm the ships had been asked for, it would have been unanimously granted by Congress, but when the bill was introduced it was found that it went a great deal further, and was believed by many to confer upon the President the sanction of Congress to go to war with Germany. The bill was quite broad in its terms, but being informed that the President did not interpret it as giving him authority to go to war I was willing to waive that point. The bill made no exception as to the classes of ships to which our Government's protection was to be given. It seemed inadvertent to extend governmental protection to ships loaded with arms and ammunition; this would have made the United States a party to the munitions traffic, and would have been in itself an act of war against Germany. I unsuccessfully sought to amend the bill in committee so as to except munitions ships from governmental protection, and when the effort failed I joined with other Members who were of my way of thinking in a minority report on the bill, as follows:

VIEWS OF THE MINORITY.

An unsuccessful effort was made in committee to amend section 1 of this bill so as to except from its provisions ships engaged in carrying cargoes consisting in whole or in part of arms and ammunitions.

It would be manifestly unneutral for our Government to arm and protect ships engaged in the munitions traffic with belligerents.

It is true that there is no international law imposing a duty on neutrals to restrain their citizens from selling arms and ammunitions to belligerents. But the belligerent against which such arms and ammunition are intended to be used has a right to capture the same in transit on the high seas.

If the Government of the United States should arm and protect a ship carrying arms and ammunitions consigned to a belligerent, thus itself becoming a party to the traffic, it would commit an unneutral act—an act of war.

Those who joined in the minority report were at once assailed with epithets and vituperation by the militarist newspapers, who sought by foul abuse to intimidate us and to forestall our efforts for calm justice and fairness. We believed that had the bill been amended so as to except munition ships from governmental protection, Germany would have viewed the American position as being one of neutrality and good faith. Germany would perhaps have relaxed her submarine campaign so as to permit the free passage of innocent ships. The adoption of the amendment seemed the proper way in which to convince Germany of our good faith and thereby to avoid war.

During the consideration of the bill in the House those of my opinion again sought to amend the bill, and 125 Members of the House so voted. When the amendment was lost it then became a question as to what course we who dissented should take. It was obvious that the bill would be passed. To me it seemed best that if it must be passed it should receive as nearly unanimous support as possible. With many misgivings and with much hestitation I voted for the bill on its final passage. I hoped that notwithstanding it clothed the President with authority to perform acts which would inevitably lead to war he would not avail himself of the authority and that peace would be preserved. In voting for the bill I consciously chose what I regarded as the lesser of evils. It seems best in this case that I should accept the judgment of the majority though I acquiesced with the greatest reluctance.

PEACE LOVERS ARE PATRIOTS, NOT COWARDS.

I am for peace, but not for peace at any price. I would not have personal peace at the expense of my own honor, nor would I have national peace at the expense of the national honor. I look on war as I would on an exceedingly hazardous surgical operation—as something to be entered on as a last resort. My sentiments upon this subject were well expressed when the ship-arming bill was under discussion in the House in the speech of Hon. JAMES L. SLAYDEN, of Texas, when he said:

Now there are differences of opinion, as there ought to be among so many men, as to what is the wisest and most patriotic course for them to follow. Some believe that we ought to exhaust every possible avenue of hope and of opportunity to avoid war. I agree with those gentlemen, and I resent the insults of those who declare that a man who is a pacifist is a coward. Men who say those things are fools and liars.

It is not true, and they know it is not true. There is nobody here that I know of or in the whole country who is what they call, with a sneer, a "peace-at-any-price" man. I have never known a Member of the American Congress in my 20 years of service who was not willing to make any personal or national sacrifice for the honor and the security of his country.

Mr. Chairman, there are 300,000 or more Americans in my district. All of them are loyal to the country; and, so far as I know, none of them wants war as long as it can be honorably avoided; and they do not want peace a moment longer than it becomes necessary to defend the honor and the rights of the country. But they have their views about how we should approach this great question, and I think men indulge in extravagance and intemperance of speech who denounce those who do not agree with them as lacking in patriotism or in courage.

Those people are not cowards; yet 49 out of 50 of the communications I have received since these days of agitation have come on have been prayers for peace, and the writers of those communications have not thought it necessary to protest their patriotism. They do not doubt it themselves, and their neighbors do not. Yet, sir, when the call comes for a sacrifice, I venture to say that the district which I have the privilege of representing in this body will respond with as many men who will cheerfully undertake the hardships and hazards of war as any other in this country.

In looking around over this House I see only two other Members who served with me in the Fifty-fifth Congress, during all those exciting days just prior to the Spanish-American War. At that time a fury had seized upon the people; a frenzy had possessed them. They were clamoring for war, the people and the press alike; but that is not the case now. The people are wiser, calmer now, and they prefer to investigate. They would rather reason now than shout.

Yesterday in an interview with Miss Jane Addams the President said: "I have done, I am now doing, and I shall continue to do, all I possibly can to keep the United States at peace."

If that is an honorable and proper course for the President, why is it not also an honorable and proper course for Members of Congress and citizens generally? It is honorable, and in taking such a position the President does himself honor.

I still hope for peace. I know the awful cost of war and I would avoid it if possible. The time to talk against war is before it is declared. Once a war is entered upon our country must present a united front to the enemy. I love peace, but if war shall come, and God grant that it will not, I shall do all I can for the success of American arms. After war is declared I shall not question its propriety. I am perhaps a pacifist, but I am willing to fight if need be. I was a pacifist in 1898 when we entered upon our unnecessary war against Spain, but did not hesitate to shoulder my gun as a private soldier in the ranks. I wonder if many jingoes, militarists, and their ilk will be found fighting in the ranks as common soldiers if we shall have war with Germany.

I particularly fear a war with one of the Europeon nations just at this time on account of the entanglements which may result from it. I fear that the United States may be committed to alliances which will plague us through generations to come. I fear that if we enter war with Germany we will sit around the table when peace is made and be a party to the peace treaty which would bind us to go to war to enforce it if necessary. Now is the time for us to heed the advice of the fathers of the Republic. I remember what George Washington said in his Farewell Address.

Against the insidious wiles of foreign influence the jealousy of a free people ought to constantly awake; since history and experience prove that foreign influence is one of the most baneful foes of republican government; but that jealousy to be useful must be impartial; else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side, and serve to veil, and even second, the arts of influence on the other. Real patriots who may resist the intrigues of the favorite are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people to surrender their interests.

The great rule of conduct for us in regard to foreign nations is in extending our commercial relations, to have with them as little political connection as possible.

Europe has a set of primary interests, which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns.

I also remember the words of Thomas Jefferson when he said:

I am for free commerce with all nations, and political connections with none; I am for not linking ourselves by new treaties with the quarrels of Europe; or entering that field of slaughter to preserve their balance or join in the confederacy of Kings to war against the principles of liberty. The first object of my heart is my own country.

If we must drink the bitter cup of war, let us drink it bravely, but if we may do so with honor, let us be not too proud to put it aside.

The Philippine Scouts.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. WILSON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. WILSON of Illinois. Mr. Speaker, the officers of the Philippine Scouts desire retirement pay as officers and permanent commissions, the same as other officers of the Army, a right they are not accorded now, owing to nonexistence of a law giving them that right.

They request it as a matter of justice, basing their claim on service and proved efficiency and laws governing retirement of other officers.

The national-defense act gives permanent commissions to the former pay clerks, Quartermaster Corps; permanent commissions to veterinarians in the service on the passage of this act, with provision for promotion to captain after 15 years' "governmental" service, very little, if any, of which need have been with the Army; permanent commissions to the dental surgeons, with provision for promotion to major after 24 years' service (commissioned service not specified). It also reorganizes the Medical Department so as to eliminate the provisional or temporary officers of the Medical Reserve Corps and provide permanently commissioned officers only. Officers of the Porto Rico Regiment of Infantry, although already having permanent commissions and retirement with pay of their grade, were given most liberal promotion and were made eligible for detached service in the United States proper and which has been denied the Philippine Scouts.

The only benefit that Scout officers are to receive from the national-defense act is retirement with the pay of an enlisted grade, and while this is a material benefit, the retirement is not with the pay of the grade held at retirement, as was the

case of the pay clerks prior to the passage of the national-defense act. Nevertheless the pay clerks without previous commissions were given permanent commissions while Scout officers of 15 years' commissioned service are to continue to hold provisional commissions only, and reexamined at the end of every four years.

From remarks attributed to representatives of the War Department when the abolition of the Medical Reserve Corps was under consideration, it would appear that the War Department desired the abolition of the Reserve Corps on the ground of inexpediency of temporary commissions as tending to kill esprit de corps in that branch in view of the transitory character of their commissions and the absence of prospects for their future advancement.

The national-defense act has provided for the provisional commissioning of the new officers entering the mobile army, but has fixed the limit at two years, while Scout officers continue to be commissioned provisionally indefinitely. When the national-defense act is in full force, there will be in the Army enlisted men, provisional officers, and permanent officers. All provisional officers except Scout officers will be given permanent commissions after two years' service or else eliminated from the service. It would seem only fair that Scout officers be also given permanent commissions after a two-year provisional appointment.

Undoubtedly the Clark amendment providing for withdrawal from the Philippines within four years was responsible for the fact that the Scout officers were the only officers not given permanent commissions. Now that the amendment has been defeated there would seem to be no reason for denying Scout officers the rights and privileges of permanent officers.

As an example, here is one who enlisted January 7, 1893, and was commissioned February, 1905, at the age of 33 years. There was a number of officers in the mobile army who were as old or older when they were commissioned than he was when he was commissioned. He has every reason to believe that all of his service has been entirely satisfactory to his military superiors; surely, then, he deserves a commission as captain; that his right is as good in every way as that which may be given a veterinarian after 15 years' service, little, if any, of which need have been military service.

Since concessions have been made in favor of all officers except Scout officers, I beg first that all Scout officers receive commissions without regard to age; if that be considered inexpedient, then that those officers who were commissioned before they were 35 be allowed to take the examination, and if that be not approved, then those that were not over 30 when commissioned be allowed to take the examination; all those officers not permitted to take the examination and those who fail to pass the physical examination to be retired with the full retired pay of the grade held.

If after 15 years' service, which has all been in the Philippine Islands, Scout officers are incompetent, they should certainly be eliminated in such a way as to do them justice, but, nevertheless, eliminated; and if the system of appointing Scout officers has failed to obtain officers as good as those of the mobile army, it would seem advisable that no more Scout officers, as such, be appointed, but that all future appointments be made to the mobile army, and that the present Scout officers be absorbed by the mobile army or eliminated so that in the future there will only be one kind of officers commanding mobile troops.

It must be borne in mind that the entire service of the Scout officer must be in the Philippines.

All medical authority, so far as health is concerned, have always adversely reported on long service in the Tropics. The Surgeon General of the Army, acknowledged to be the best authority, less than two years ago advocated a two-year tour in the Tropics, and no more. From a humane standpoint when an officer is required to serve 25 or 30 years in the Tropics he has left little or no vitality for the rest of his life, which no doubt is shortened by years, when all he has gained by the present bill is the rank taken by him into retirement. The Scouts represent the highest types of men; men who by some misfortune—not being vacancies, and so forth—have failed to secure commissions in the Regular service and turned through their loyalty to the Scouts.

For Congress to give after 20 to 30 years' actual field service in the Tropics the rank and pay would only be a fair compensation for that service. It must be remembered that the 25 or 30 years rendered is the best part of a man's life, from 21 to 50 years, and then send him home an old man, which any man is after this service.

And now as to the service rendered by the Scouts—

The fighting side by side with their white brothers in arms of Ghurkas, Sengalese, Pathans, and the various colored native contingents of the allies on the battle fields of Europe lends interest to the fact that the United States possesses a native force that might, in the event of war, be called on to take its part on the battle line.

This small but highly trained and efficient force, consisting of 12 battalions—four complete companies each—of 441 enlisted men to the battalion is known as the Philippine Scouts.

It is composed, as to the enlisted personnel, of Filipinos exclusively. There are a few Filipinos among the officers, but the majority are Americans.

The Philippine Scouts had their crude beginning in the early days of the Philippine insurrection, when pro-American Filipinos were employed by the Quartermaster's Department for scouting service with the Regular and Volunteer troops. So valuable were their services that in 1901 Congress authorized the enlistment of not to exceed 12,000, and their organization into companies or troops and battalions or squadrons.

No mounted troops are organized now, all of the units being Infantry, but in the early days scout organizations mounted on Filipino ponies gave a splendid account of themselves.

To-day, in the Philippines, aside from Manila and its vicinity and four posts in Luzon outside of Manila, the only armed representatives of Federal authority are the Scouts. Mindanao, Jolo, Cebu, and Panay shelter garrisons of Scouts ready to take the field on short notice.

The Scout is trained along the same lines as the American soldier. In skill with the rifle, ability to march, to endure hardship, to utilize every device promoting comfort and welfare under adverse conditions in the field, he ranks high. Loving a soldier's life, easily disciplined, a natural soldier, he combines a fatalistic courage with a devotion to his officers remarkable to a great degree.

Composed of practically all the tribes in the Philippines, the Scouts would be in a bad way for service together in organizations speaking different dialects, or with American troops, were it not that English is understood and spoken by practically all the men. Instruction in English is as much a part of their training as shooting, and all commands and orders are given and instruction and administrative work carried on in English.

Many who were in the Philippines in the early days take with a grain of salt the assertion now often made that English is more generally used by the Filipinos than was ever Spanish, but a concrete case in connection with the scouts recently demonstrated it in rather a convincing way. In a recruiting camp for Scouts, where hundreds of Filipinos were assembled, after being enlisted, to get the typhoid prophylaxis before being distributed to their organizations, it was found that English was the only practicable means of communication by the officers with the men and was used almost altogether by men of different tribes in their own intercourse. Rarely was a recruit sentinel found who could not explain his orders in English, and not often was one found who could explain them in Spanish.

A strong point for the Scouts as a part of the military establishment is their economy. The enlisted men draw a little less than half the pay of Regular soldiers, and their ration costs about 10 cents less a day per man.

The organic law authorizing the Scouts places no restriction on the place of their service; so, like their white companions, when the War Department says go they go. Their use outside the Philippines has been contemplated in various contingencies, and they may yet be seen pumping good American lead at enemies of the United States on foreign soil.

I quote here two letters, written by Maj. Gen. Thomas H. Barry, United States Army, while commanding the Philippine Department, also engagements participated in by the Scouts, showing casualties, and so forth:

HEADQUARTERS PHILIPPINE DEPARTMENT,
June 9, 1914.

TO THE ADJUTANT GENERAL OF THE ARMY:

1. Since the organization of the Scouts—General Orders, No. 9, Headquarters of the Army, Adjutant General's Office, Washington, February 6, 1901—no officers of the United States Army have endured greater hardships or performed without let-up more hazardous field service. This is emphasized by the list of casualties among the Scouts herewith appended.

2. Existing laws in respect to their retirement are inadequate, eminently unjust, and ungenerous. Those who were fortunate enough to have been enlisted men when commissioned in the Scouts can now, under existing law, resign with a view to their appointment and retirement as noncommissioned officers, and even then they have to beg somebody to appoint them. Many of these deserving officers however, were not enlisted men, and were appointed officers in the Scouts from officers of volunteer service. There is absolutely no way for this latter class of deserving officers to be retired.

3. The case of Capt. H. R. Drake, referred to within, emphasizes the inadequacy and injustice of existing law affecting the retirement of these officers. There are other Scout officers who have been seriously

wounded in action and who are unable to properly perform service in the field and who are being held for such service as they can perform with the hope that Congress may some day properly provide for their retirement. Two such officers now within my recollection are Lieuts. Gunn and Rackley.

4. Captain and lieutenants of Scouts are officers of the Army, and therefore existing laws affecting the retirement of captains and lieutenants of Infantry and the Porto Rico Regiment of Infantry should be made applicable to them.

5. It seems that the following phraseology inserted in that part of the act making appropriations for the support of the Army which provides for the pay of Philippine Scouts, might cover the case:

"That hereafter captains and lieutenants of the Philippine Scouts shall have the same pay, rights, and allowances provided by law for Infantry officers of similar rank in Army of the United States."

T. H. BARRY,
Major General, Commanding.

HEADQUARTERS PHILIPPINE DEPARTMENT,
Manila, P. I., January 21, 1916.

From: The Major General Commanding.
To: The Adjutant General of the Army.
Subject: Transfer of Philippine Scout officers to the Infantry arm of the service in the event of reorganization and increase of the Army.

In the event of increase of the Regular Army I earnestly recommend that provision be made for transfer to the Infantry, or other arms, of qualified meritorious Philippine Scout officers; and I urge that in their cases the age limit, provided in the law or otherwise, be waived. Many of these officers had long service as enlisted men, some were officers of volunteers, and many have unusually deserving and gallant field-service records. They are now in the Army, and their transfer to the Infantry (or in specially qualified cases to other arms) with the rank they now hold would not materially affect officers of like grades therein, because the great majority of these Scout officers are older than officers of corresponding grades in the Army, and many of them would soon be retired for age or length of service.

Should it not be deemed advisable to transfer them as of their present grades they should at least have prior claim on transfer to the Infantry or other arms to the vacancies that may occur therein in the grades of second or first lieutenants over any other candidates for those positions.

It is noted that Senator CHAMBERLAIN's bill provides for the transfer of the Porto Rican Regiment to the Infantry arm of the service. By reason of unusually gallant field service there is no question whatever that many Philippine Scout officers are much more deserving than officers of the Porto Rican Regiment. The transfer or appointment of these officers to the Infantry or other arms, under any reorganization measure that may be enacted, would make them eligible for retirement as officers with pay and allowance as such to which they are entitled.

Waiving the age limit need not necessarily apply to the junior officers of Scouts who have, say, less than 10 years' service therein or in the Army. The said junior officers, if they desire transfer or appointment in the Infantry and are qualified, should be given opportunity to come in, and should be appointed prior to any candidates from civil life or elsewhere as the law may provide, because of their service as commissioned officers in the Scouts, which is service in the Army.

There may be meritorious Philippine Constabulary officers now holding grades therein of field officer and captain, with former service in the Army, who may desire to come in the lower grades of the Army under any act looking to its reorganization and increase. They should receive like consideration as to waiving the age limit.

Any of the younger constabulary officers who may desire to take the examination for appointment to vacancies in the lowest grade that may exist under such reorganization act should be privileged so to do.

I am clearly of the opinion, however, that meritorious Scout officers, being of and in the Army already, should have priority of claim over the constabulary or any others.

I recommend proper presentation of this to the chairman of the Military Committees of the Senate and House, with such suggested phraseology as will enact it into law.

T. H. BARRY.

Cablegram sent.

MANILA, P. I., *January 21, 1916.*

AGWAR, *Washington:*

If any increased, urge provision made for transfer qualified meritorious officers Philippine Scouts. Many have unusually gallant field record. More deserving than officers Porto Rican Regiment.

Casualties in the Philippine Scouts from 1901 (date of organization) to June, 1914.

HEADQUARTERS PHILIPPINE DEPARTMENT,
Manila, P. I., June 11, 1914.

OFFICERS.

Killed in action	7
Died of wounds	3
Wounded	13
Died, other causes	17

Memorandum: The 13 wounded included the 3 that later died of wounds. The 17 dying from other causes include Maj. Foster, who was on Scout detail from captain, Nineteenth Infantry.

ENLISTED MEN.

Killed in action	110
Died of wounds	7
Wounded	157
Died, other causes	574

Memorandum: The 157 wounded included the 7 that later died of wounds. Wounds in both classes (officers and enlisted men) include all wounds received in action—gunshot, spear, bolo, etc.

The Late Representative Michael F. Conry.

MEMORIAL ADDRESS
OF
HON. ISAAC SIEGEL,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. SIEGEL. Mr. Speaker, in the death of Representative MICHAEL F. CONRY the city of New York has lost a valuable public servant, and the Nation at large will miss one who gave to it the best that was in him to further its best interests.

Although only 46 years of age, in the prime of life, and with a future most promising, he exercised and wielded a power far greater than most men acknowledged during his lifetime. Few

men from the city of New York in Congress have given deeper and more thorough consideration to the important questions of the day; and on account of his physical condition, he spent the major part of his time in research work.

It was due to his personal and untiring efforts that the Philippine bill, which would have brought shame to the cheeks of the American people in years to come, was beaten.

MICHAEL F. CONRY first saw the light of day at Shenandoah, Pa., on April 2, 1870. After following the vocation of schoolteacher for seven years, he graduated from the University of Michigan in 1896. He then commenced the practice of law as an assistant corporation counsel in the city of New York, and the people of New York City, recognizing his ability, made him a member of the Sixty-first, Sixty-second, Sixty-third, and Sixty-fourth Congresses, and then reelected him to the Sixty-fifth Congress.

He was one of the best read men in the House, could tell and always enjoyed a story about himself and had a wit and humor about him that endeared him to all who came in contact with him. He loved men for what they represented from the point of culture and education. He neither had nor worshiped wealth. He was patriotic in the fullest sense of the term. He admired America, the same as an infant loves its mother. He exemplified true home life in every way. He was devoted to his wife and children, and in their company he found rest and pleasure.

If the accumulation of wealth constitutes success, then he was a failure. But to my mind, Mr. Speaker, he was truly successful, both as a public and patriotic servant and also as a loving father and devoted husband. He was a living exemplar of the man described in the poem "Success," by Henry Victor Morgan:

SUCCESS.

I hold that man alone succeeds
Whose life is crowned by noble deeds,
Who cares not for the world's applause
But scorns vain custom's outgrown laws;
Who feels not dwarfed by nature's show,
But deep within himself doth know
That conscious man is greater far
Than ocean, land, or distant star;
Who does not count his wealth by gold,
His worth by office he may hold,
But feels himself, as man alone,
As good as king upon a throne;
Who, battling 'gainst each seeming wrong,
Can meet disaster with a song,
Feel sure of victory in defeat,
And rise refreshed the foe to meet;
Who only lives the world to bless,
Can never fail—he is success.

United States Shipping Board.

EXTENSION OF REMARKS
OF
HON. JOSHUA W. ALEXANDER,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917,

On the bill H. R. 21009) to amend an act entitled "An act to establish a United States Shipping Board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with its Territories and possessions and with foreign countries; to regulate carriers by water engaged in the foreign and interstate commerce of the United States; and for other purposes," approved September 7, 1916.

Mr. ALEXANDER. Mr. Speaker, the following statement prepared by the Shipping Board in support of above bill and showing the emergency nature of the proposed legislation should be of great interest to the Congress and to the country, as it bears directly on the present high cost of living, and particularly to our Atlantic coast cities and the means that would be provided for relief; and in this connection I will also insert a press dispatch that appeared in the Washington Post of February 25, entitled "Food in Plenty Awaits Cars."

That this bill should have failed of passage at the session just ended is to be deplored:

STATEMENT OF SHIPPING BOARD.

RELATION OF PRESIDENT'S PROCLAMATION OF AN EMERGENCY ARISING FROM A SHORTAGE OF SEA TONNAGE AND AMENDMENTS TO THE SHIPPING ACT INDORSED BY HIM TO THE RISE IN PRICE OF FOODS AND TO OUR MILITARY NECESSITIES.

For the last six months we have watched with growing apprehension the congestion arising from the overcrowding of overland transportation throughout the United States. Freight cars and other transportation facilities, scarcely adequate to serve the needs of the country in normal times, have proved entirely inefficient in the presence of the unusual demands created by the war in Europe. Already the police are being invoked to quell disorders in our cities due to the dangerous increase in the cost of living.

The natural growth of our internal commerce had been prevented from exhausting the car supply by the very large increase in steamship tonnage carrying the products of the great States lying west of the Rocky Mountains through the Panama Canal to our eastern coasts and other destinations. The war in Europe added heavily to the burden of our land transportation facilities, both between points of manufacture east of the Mississippi and the Atlantic coast, and in the carriage of manufactured articles and raw material across the continent to the Pacific coast ports for export to Russia and Japan. The same extraordinary war necessities have during the last two years drawn away, almost in their entirety, the fleets bearing products from the Pacific coast to the Atlantic points of consumption into other channels of trade. The combined increased demand thereby created upon the freight-car resources of the United States and the resultant decreased car efficiency by the crowding of freight yards has invaded the supply required to bring food and the necessaries of life to the great centers of population east of the Mississippi River. This in large part has assisted in causing the rise in the price of food and other necessaries.

While we have not been at war ourselves, the war abroad has been inflicting on our citizens a rise in the cost of living comparable with that created by the warfare actually in our midst at the time of the secession of the Southern States. So far as the need of the man of small income in our great cities is concerned, he is as badly off as if ours were in fact a belligerent Nation.

It was to assist in part in preventing an increase in this distress that the proclamation of February 5, invoking the law preventing the further transfer of our tonnage to foreign nations which refused to return any tonnage to our flag, was issued. The depletion, however, had already become so great that the commerce across the Pacific under our flag had almost disappeared.

At the same time the facilities of our shipyards, which had greatly expanded during the war, were to a very large extent being utilized by the citizens of these same nations who were refusing to permit the vessels to return to our flag. Once under the foreign flag, the pressure of their Governments to serve their needs will prevent a large portion of this tonnage ever returning to carry either to our own or foreign consumers the products stored in the already congested granaries, packing houses, flour mills, lumber yards, and cotton warehouses of our great interior and seaboard distributing centers.

To prevent this drain during the emergency legislation was presented to Congress aiming to bring under our flag during that period the tonnage which otherwise would flow out of the yards into the fleets of alien nations and serve in large part needs disassociated from our own. The problem was to bring these vessels under our flag with the least disturbance to the business of the yards and the expectations of the foreign investors in these ships under construction, to the demand of whose capital the expansion in our yard facilities was in part due. The plan devised required that these vessels should remain under the American flag in American corporations in which the stock and control remained in the foreign investor, and, as in many cases the officers for the ships had already been provided from the country of the alien, and in some cases these officers owned a part of the vessels, they were to be permitted to command them during the period of the emergency. In this respect the measure was similar to that permitting foreign officers on the ships brought in under the Panama Canal act.

In the absence of this legislation, such American-built vessels in such corporations are already entitled to enter into the coastwise trade. The only compensation given to the foreign investor for the disappointment of his hope to put the vessel under his own flag is this right to use these officers. As the number of the American officers is already scarcely sufficient for our own tonnage, there will be no disturbance to the Americans in this provision, and since the number of these vessels which will go into the coastwise trade could not be expected to exceed the number of American vessels which had deserted it, there will be no serious competition between those vessels entirely officered by Americans and this new temporary class. Even should the competition of the foreign-officered ship make a *slight* reduction in the profits of the American who had not forsaken the coastwise trade, the rise in coastwise rates during the shortage in tonnage and absence of competition, a rise borne by the consumer of the products carried, has far offset it.

The military gain in adding this tonnage, by careful estimate shown to be between 750,000 and 1,000,000 tons, to our merchant fleets is obvious. If the Norwegian capitalist owning a ship through one of these American corporations were to send his vessel on a voyage crossing the Indian Ocean, and our munition makers should be in need of a cargo of nickel, we could commandeer the tonnage for this service at some point near the place of production. The vessel would, up to the moment of coming under the Government's order, be pursuing her normal vocation and earning her profit for her owner.

The government of our foreign shipbuilding competitors have shown no such solicitude for aliens contracting for tonnage from their yards, when their need required increased facilities for their own maritime trade. American ships partially completed have been lying on the stocks of these alien competitors of our yards for from 12 to 18 months, the labor having been commandeered for the building of other vessels.

The measure now before Congress is demanded by our obvious need, even in the absence of actual war. It is gratifying, however, to find that a number of yards have expressed their appreciation of our attempt to minimize the disturbance of their organization, and that the representatives of many millions of foreign capital engaged under contracts for these vessels, have cordially approved this solution of the problem.

While the relief of the congestion due to the car shortage through the agency of this new tonnage in the coast-to-coast trade will not be immediately large, the rapid increase in tonnage as these vessels and their successors come off the stocks will be of material assistance to us in the not very remote future. Our hopes are that the whole situation may be cleared up by the restoration of peace throughout the world. But we can not be blind to the fact that the causes now contributing so considerably to the high cost of living in our great cities may continue for a long period of time. We may have to invoke other agencies to lessen our distress, but the increase in facilities for overseas carriage demands our instant attention.

The broadening of the Shipping Board's functions of inquiry, in amendments to sections 21 to 27, is necessary for quick action in preventing evasions of the emergency provisions, and in gathering data relative to our inadequate insurance resources, which may suggest relief to our merchants and shippers.

FOOD IN PLENTY AWAITS CARS—THOUSANDS OF TONS HELD ON PACIFIC COAST FOR BUYERS AND SHIPMENT.

SAN FRANCISCO, *February 24.*

Thousands of tons of foodstuffs on the Pacific coast are awaiting purchase and shipment East, commission men said here to-day. Of rice alone there are 125,000,000 pounds and the price is lower than it has been for several years—so low in fact that millers have been holding it.

Authorities also said there are millions of bushels of potatoes and beans besides canned and dried fruit, and vegetables a plenty.

A traffic expert of the chamber of commerce estimated California could export between 200 and 300 cars of foodstuffs a day if the proper cars were available.

Mr. Speaker, as showing the work of the Committee on the Merchant Marine and Fisheries in the Sixty-fourth Congress, I wish to insert the following in the RECORD:

BILLS REPORTED FROM THE COMMITTEE ON THE MERCHANT MARINE AND FISHERIES WHICH HAVE BECOME LAWS.

[Sixty-fourth Congress.]

H. R. 8816. Authorizing the Commissioner of Navigation to cause the sailing vessel *Golden Gate* to be registered as a vessel of the United States.

H. R. 13112. To amend section 14 of the seamen's act of March 4, 1915.

H. R. 15455. To establish a United States Shipping Board for the purpose of encouraging, developing, and creating a naval auxiliary and naval reserve and a merchant marine to meet the requirements of the commerce of the United States with its Territories and possessions and with foreign countries; to regulate carriers by water engaged in the foreign and interstate commerce of the United States; and for other purposes.

S. 4401. To conduct investigations and experiments for ameliorating the damage wrought to the fisheries by predacious fishes and aquatic animals.

S. 4760. To authorize the change of name of the steamer *Normania* to *William F. Stifel.*

H. R. 16647. S. 6375, to authorize the changing of the name of the steamship *Aroline*, substituted for same on the floor of the House.

H. J. Res. 63. S. J. Res. 47, authorizing the Secretary of Commerce to sell skins taken from fur seals killed on the Pribilof Islands for food purposes, substituted for same on the floor of the House.

H. J. Res. 218. Authorizing the acceptance of the gift of the Berkshire Trout Hatchery, Berkshire County, Mass.

H. R. 13831. To amend section 4464 of the Revised Statutes of the United States, relating to number of passengers to be stated in certificates of inspection of passenger vessels, and section 4465 of the Revised Statutes of the United States, prescribing penalty for carrying excessive number of passengers on passenger vessels, and section 4466 of the Revised Statutes, relating to special permits for excursions on passenger steamers.

H. R. 11474. Authorizing the Secretary of Commerce to permit the construction of a public highway through the fish-cultural station in Unicoi County, Tenn.

S. 8252. To authorize the change of name of the steamer *Charles L. Hutchinson* to *Fayette Brown.*

S. 5985. Authorizing the Commissioner of Navigation to cause the steamship *Republic* to be enrolled and licensed as a vessel of the United States.

H. R. 19903. S. 7779, to grant authority to the Reiss Steamship Co., of Duluth, Minn., to change the name of its steamer *George W. Peavey* to *Richard J. Reiss*, was substituted for same on the floor of the House.

H. R. 19904. S. 7780, to grant authority to the Reiss Steamship Co., of Duluth, Minn., to change the name of its steamer *Frank T. Heffelfinger* to *Clemens A. Reiss*, was substituted for same on the floor of the House.

H. R. 19901. S. 7781, to grant authority to Reiss Steamship Co., of Duluth, Minn., to change the name of its steamer *Frederick B. Wells* to *Otto M. Reiss*, was substituted for same on the floor of the House.

H. R. 19902. S. 7782, to grant authority to Reiss Steamship Co., of Duluth, Minn., to change the name of its steamer *Frank H. Peavey* to *William A. Reiss*, was substituted for same on the floor of the House.

H. R. 17605. S. 8079, to amend the first and seventh paragraphs of section 4414 of the Revised Statutes of the United States, as amended by the act of April 9, 1906, was substituted for same on the floor of the House.

H. R. 13001. To provide additional assistants in the Bureau of Fisheries, Department of Commerce, for the purpose of aiding in the development of the shellfish industries, was reported from the committee, and included in the sundry civil bill.

H. R. 21037. S. 8300, to authorize the change of the name of the steamer *Fred G. Hartwell* to *Harry W. Croft*, was substituted for same on the floor of the House.

H. R. 21038. S. 8301, to authorize the change of name of the steamer *Harry A. Berwind* to *Harvey H. Brown*, was substituted for same on the floor of the House.

BILLS REPORTED FROM THE COMMITTEE ON THE MERCHANT MARINE AND FISHERIES WHICH HAVE PASSED THE HOUSE BUT HAVE NOT PASSED THE SENATE.

[Sixty-fourth Congress.]

H. R. 15617. To establish fish-hatching and fish-cultural stations in the States of Alabama, Louisiana, Florida, Georgia, South Carolina or North Carolina, Maryland or Virginia, Oregon or Washington, Texas, Oklahoma, Illinois, Washington, Arizona, New Mexico, Michigan, Idaho, Missouri, Pennsylvania, Delaware or New Jersey, and Minnesota.

H. R. 13223. To provide for appeals from decisions of boards of local inspectors of vessels, and for other purposes.

H. R. 11623. To permit the use of certain refined products of petroleum as stores on steam vessels carrying passengers.

H. R. 6097. To ratify the compact and agreement between the States of Oregon and Washington regarding concurrent jurisdiction over waters of the Columbia River and its tributaries in connection with regulating, protecting, and preserving fish.

H. R. 4786. To provide for the appointment of certain assistant inspectors, Steamboat-Inspection Service, at ports where they are actually performing duty, but to which they are at present detailed.

H. R. 4784. To provide for a change in the designation of the Steamboat-Inspection Service, and for other purposes.

H. R. 449. To provide for the appointment of 11 supervising inspectors, Steamboat-Inspection Service, in lieu of 10. (This bill is in conference).

An Unwarranted Attempt to Confer Power to Create New Offices by Removing Federal Judges Contrary to a Plain Constitutional Provision.

EXTENSION OF REMARKS

OF

HON. JOSEPH WALSH,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. WALSH. Mr. Speaker, I am unalterably opposed to the passage of this measure—Senate 706.

To my mind it is an inexcusable attempt to place the judiciary of the Nation subject to the whim of the executive department of the Government.

It is sought to do indirectly that which can not be directly accomplished, owing to the provisions of the Constitution.

An examination of the proceedings of the convention of 1787, when the Federal Constitution was framed and adopted, discloses the fact that in each of the several plans submitted to the convention the tenure of the judiciary was "during good behavior."

The framework of government submitted by Mr. Hamilton contained these identical words, as did also the plans proposed by Mr. Randolph and Mr. Patterson, and this tenure was fixed in the document finally presented to the States and ratified by them.

It was pointed out by Mr. Gorham, one of the delegates from Massachusetts, that the tenure, "during good behavior," had been established in the old Commonwealth for a great many years, and had been found to be satisfactory. And, Mr. Speaker, that tenure has continued in Massachusetts to this day.

Only one other suggestion was made in the Constitutional Convention relative to the tenure of judges, and that on motion of Mr. Dickinson, who on August 27, 1787, sought to secure the adoption of a provision giving the power to the Executive to remove judges on the application of the House and Senate.

This invoked an interesting discussion, during which Mr. Gouverneur Morris stated that it would be a contradiction in terms to say that the judiciary should hold office during good behavior and yet be removable without a trial, and that it was fundamentally wrong to submit judges to such arbitrary authority.

Mr. Rutledge, Mr. Randolph, and Mr. Wilson opposed the suggestion made by Mr. Dickinson, and it was not adopted.

It is, in my opinion, most unwise to place the judges of the inferior Federal courts in a position where they will be subject not only to arbitrary action but to humiliation as well by the determination of fact on the part of the Executive.

I appreciate fully the very plausible arguments put forth in favor of this bill, and realize that there may be isolated instances where judges are now eligible to retirement, but decline, for reasons best known to themselves, to take advantage of the very liberal statute providing for their retirement; but you can not force retirement on them by any such piece of legislation as this. If it is to simply get rid of members of the judiciary who stubbornly decline to step down, then each instance of this sort should be considered separately by the Congress and appropriate legislation enacted.

How easy we make it to create new offices, for that is exactly what we do in the proposed bill. We supplement the appointive power with power to remove. Oh, yes; I know it is claimed there is no removal, because the old justice is authorized, under this measure, to sit as judge and to hold court in some other district. How considerate to leave him, who has been found to be permanently incapacitated by reason of mental or physical disability, this mere shadow of judicial prerogative.

What else is such a provision, Mr. Speaker, than a plain declaration of intention by the proponents of this measure that the power of indirect removal is provided. What party, plaintiff or defendant, what attorney, or what justice not so tainted by this Executive finding of fact would care to participate in any judicial proceedings, where a judge, on whom this doom of mental incapacity had been pronounced by the Executive, was sitting in judgment with his associates?

It is indefensible, and it must be because of some most pressing need of the party in control that they undertake now at the close of their four years of power, and following their long list of newly created offices, boards, and commissions, to strike this blow at the judicial department of the Government.

We can not delegate the power of legislation to either the Executive or the judicial branch of the Government and we can not circumvent the plain meaning and intent of the Constitution in this way, however great the need for purposes of political expediency.

This method set forth in this bill is even more vicious than some of the crazy schemes we were wont to hear much of not long since, providing for the recall of judges and repudiation or ratification of judicial decisions.

It would be a most dangerous power to place in the hands of any Executive and would tend gradually and surely to weaken the independence of the judiciary.

We have not yet reached the stage where we ought to say that the Constitution ought not to count in preserving the integrity and independence of the judges. If this great power be such a desirable thing to confer on the Executive, why not apply it to the Supreme Court as well as to circuit and district courts?

I ask that the measure be defeated and that the Congress be left free in the future to deal with individual instances where relief may be needed, and in which we can, by appropriate legislation, furnish the means to ameliorate the condition without putting the provisions of the Constitution into the discard.

The Late Representative Michael F. Conry.

MEMORIAL ADDRESS

OF

HON. CHAMP CLARK,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. CLARK of Missouri. Mr. Speaker, "It is appointed unto men once to die and after that the judgment." The rule is universal, inexorable. Our good, kind-hearted, industrious, able, and patriotic friend and fellow servant, MICHAEL F. CONRY, was no exception. Death took him while he was yet a young man, and he is sincerely mourned by all who knew him. He was a peculiarly lovable man. He was capable, level headed, and prompt in the discharge of duty. He was a rising man in the House.

I was first attracted to him by hearing him sing old-time songs and hymns. He was blessed with a highly musical voice of much beauty and pathos.

I began calling him to the chair when the House was in pacific frame of mind and he presided with grace, dignity, and fairness. I encouraged him to study parliamentary law, which he did successfully. One day I asked him if he thought he could pilot one of the great appropriation committees through the Committee of the Whole House, and he replied that he thought he could if I would risk him—which I did. He performed that onerous and difficult task to the satisfaction of all. By practice, study, and observation he became a good presiding officer.

He was not a frequent or prolix speaker. His style was clear, harmonious, forceful. He was the soul of courtesy, true as steel, firm as a rock. No man ever did him a kindness that he did not repay. His death is a loss to his State and to the Republic—inexpressibly sad to his multitude of friends.

Some Achievements of the Sixty-fourth Congress.

EXTENSION OF REMARKS

OF

HON. ROBERT M. McCRACKEN,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. McCRACKEN. Mr. Speaker, I regard the work of this Congress as being more important in many particulars than that of any Congress which has assembled since the outbreak of the Civil War, and I want to call attention to some of its achievements.

ADOPTION OF PREPAREDNESS MEASURES.

The great outstanding accomplishments of the Congress is the adoption of the preparedness measures and the huge appropriations for the Army and Navy as compared with anything in the history of the Nation. In the Navy 118 new crafts of all kinds have been provided for and the three-year plan of construction adopted, which, in my judgment, will make us the greatest naval power in the world. The total amount appropriated for the Navy in the Sixty-fourth Congress is $831,000,000 as compared with $149,000,000 appropriated by the Sixty-third Congress. The amount appropriated for the Army in the first session of this Congress was $267,000,000, which makes a grand total for the Army and Navy of over one billion of dollars. Had the Army bill, which passed the House carrying $279,000,000 and which was pending in the Senate at the close of this Congress, become a law there would have been a grand total for the Army and Navy of $1,367,000,000. I voted for all of these measures, because I thought that we should prepare this country to take care of itself against any conspiracy of any group of powers to plunder or to invade it. I used to think that the civilization of the world had advanced so far that it was idle to think that the United States would ever be likely to have war with any nation on earth. But since I have been a Member of the Congress of the United States I have seen evidences on every hand of foreign intrigue to influence legislation at Washington, and, therefore, I conclude that we can not be too vigilant for the safety of our country from enemies, both within and without our boundaries. As an American I am for the perpetuity of our institutions, and I stand ready at all times to do my part to support and maintain them.

RECLAMATION AS A MEANS OF PREPAREDNESS.

Practically all Members of Congress from the West voted for the preparedness bills, and now it is up to the East to begin building up her storehouse, which consists of the great arid West. There are millions of acres of land in Idaho and other western States which only need water to make them blossom as the rose, and which will afford homes for millions of people yet unborn. We can not wage war unless we have men and munitions, and experience has proven that wheat, oats, potatoes, horses, and cattle are just as essential to the success of an Army and Navy as great guns, powder, and ammunition. I am sure that $500,000,000 would reclaim practically all of the land of the West which is susceptible of irrigation. The products from these lands would feed an Army and Navy of 5,000,000 men and take care of their families besides. Therefore, from this time on I shall advocate this as a new measure of preparedness. The Government can afford to reclaim these waste lands and sell them below the cost of the irrigation works in order to increase its food supply and thus reduce the cost of living. One thing is certain and that is: That the money invested in irrigation is not lost or placed in machinery which wears ouf, or from which there is no return. I sincerely hope that henceforth the slogan of our Representatives from the West will be: "A new irrigation project for every new battleship."

CONSTRUCTION OF RESERVOIRS ON SNAKE RIVER.

During my residence in Idaho, which covers a period of over 25 years, it has been apparent to me that the Snake River Valley is to become one of the richest valleys in the world. A necessity exists now for increasing its water supply so that there may be no shortage anywhere in that great valley. It is the opinion of the Reclamation Service in Washington that that portion of the valley lying north of American Falls can be guaranteed sufficient water for dry seasons by the construction of several reservoirs at the headwaters of Snake River, and to this end I introduced a bill on the first day of the opening of this Congress which reads as follows:

A bill to authorize the construction of reservoirs on Snake River and its tributaries in the State of Idaho, and for other purposes.

Be it enacted, etc., That the Secretary of the Interior be, and he hereby is, authorized and empowered, in his discretion, to construct on Snake River and its tributaries, in the State of Idaho, the Swan Valley Reservoir at an expense not exceeding $300,000; the Teton Reservoir, at an expense not exceeding $1,000,000; the Island Park Reservoir, at an expense not exceeding $1,000,000; and the Henry Lake Reservoir, at an expense not exceeding $100,000.

SEC. 2. That for the purpose of enabling the Secretary of the Interior to carry into effect the provisions of section 1 hereof there is hereby appropriated out of any moneys in the Treasury not otherwise appropriated $2,400,000, to be immediately available, and to be available until expended, reimbursable out of the proceeds from the sale or lease, or both, of water, surplus or otherwise, impounded in said reservoirs, or any of them.

AMERICAN FALLS RESERVOIR SITE.

The Reclamation Bureau has a plan for augmenting the supply of water which can be made available for the purposes of irrigation to a large part of the Snake River Valley below American Falls, particularly the North Side Twin Falls project and other lands south of the river in the vicinity of Hollister, Hansen, and other communities. The construction of a great reservoir at this point would mean the opening of that vast acreage under the proposed Bruneau project, which has been

the dream of so many people in southern Idaho for a decade. In my opinion the Federal Government should not longer delay the construction of these reservoirs. The rights of way in the vicinity of American Falls can be purchased for much less money at this time than at a later period. In order that action might be taken upon this matter at this term of Congress, I introduced H. R. 302, which provided for an appropriation of $200,000 to enable the Secretary of the Interior, in his discretion, to make a detailed investigation as to the most feasible site for the location of a reservoir on Snake River in the vicinity of American Falls and to acquire title thereto and to rights of way for use in connection with the operation thereof. These bills were referred to the Committee on Irrigation of Arid Lands, but owing to the depletion of the reclamation fund the committee felt that it could not take any action on the bills in this Congress. Many other bills designed to meet a similar need in other States were also introduced and met the same fate. Therefore I feel that the West should demand that a large appropriation be made to meet this condition.

THE KINGS HILL PROJECT.

In the early days of the first session of the Sixty-fourth Congress I introduced a bill providing for the reconstruction and rehabilitation of the Kings Hill irrigation system. After long and tedious work on the part of the Idaho delegation in the House the Committee on Appropriations incorporated a provision in the sundry civil bill for $200,000 to begin the work of reconstruction. This bill passed the House of Representatives but failed in the Senate because of the filibuster which was carried on in that body in the closing hours of the session. In my opinion its passage in the next Congress is a certainty.

BLACK CANYON IRRIGATION PROJECT.

In my judgment the Black Canyon irrigation project is one of the most promising in the West. The Reclamation Bureau thinks that the project is too expensive. I can not agree with their conclusion as long as it is based upon mere guesswork. I believe that a survey should be immediately made to ascertain its feasibility, and to this end I introduced H. R. 10646 on February 2, 1916, which reads as follows:

A bill directing the Secretary of the Interior to make a survey of the Black Canyon irrigation project in southern Idaho to ascertain its cost and feasibility.

Be it enacted, etc., That immediately after the passage and approval of this act the Secretary of the Interior and the Reclamation Service of the United States are hereby directed to make such reconnoissance and investigations as may be found necessary to determine the cost and feasibility of the construction of what is known as the Black Canyon irrigation project in southern Idaho; and for the expense of such reconnoissance and investigation to be so made as herein directed there is hereby appropriated, out of the Treasury of the United States, such sum or sums of money as may, in the judgment of the Secretary of the Interior and of the Reclamation Service of the United States, be found necessary.

This bill was referred to the Committee on Appropriations. That committee refused to give consideration to the bill because the money in the reclamation fund was hardly sufficient to take care of existing projects, and that Congress ought not to take on any new irrigation schemes, however meritorious. I believe that the time will come when the Black Canyon project will be established.

APPROPRIATION FOR GOOD ROADS.

I am happy to have had a part in securing the passage of the bill providing for an appropriation of $85,000,000 to be expended in the construction of good roads in the United States. Ten millions of dollars of this appropriation are set apart for the construction of roads and bridges in the national forests of the United States, and as Idaho has a good percentage of her area inclosed within national forests she will receive approximately $1,000,000 of this fund. Of the appropriation for rural post roads $960,000 will be allotted and expended in Idaho in the next five years, which makes a grand total for highway improvements by the Federal Government of approximately $2,000,000.

FARM-LOAN ACT.

In my opinion the passage of the farm-loan act is the most important piece of legislation which has been enacted in this Congress. The Federal land-bank system is designed to do away, as far as practicable, with the disadvantges of the present farm-mortgage system. No loan will be permitted under the new system at a rate of interest exceeding 6 per cent. The law contemplates that the net profits made by a Federal land bank, after paying expenses and setting aside the required reserve, will be returned to the local national farm-loan associations to be distributed among the borrowers. One great advantage thus expected to result from the new system is a substantial lowering of interest rates to farmers. Not only is the interest rate limited to 6 per cent but provision is made so that the farmer will escape the annoyance and expense of bonuses and commissions. He will pay only such extra charges in connection with the making of a loan as are approved under the rules and regulations of the Federal farm-loan bank. The loans must be made for relatively long periods of time, running not less than 5 nor more than 40 years. After the loan has run for 5 years the borrower is given the option of paying any additional sum on the principal at any interest date.

FARM-LOAN ACT IMPORTANT TO AMERICAN AGRICULTURE.

When I voted for the farm-loan act it was with the hope that tenants and other landless men might be able to purchase farms and that the borrower, who is already carrying a heavy load, might be able to pay off his indebtedness and take a new start. Also, that our farmers will be enabled to make needed improvements which they have hesitated to undertake before on account of the difficulty of obtaining loans on acceptable terms. After appropriating almost $1,000,000,000 for the Army and Navy we then appropriated the sum of $50,000,000 for agriculture. While I am willing to go any length that is right in the matter of preparedness, I feel that we now have a right to demand that the food supply of our country should be increased, and I know of no better way to augment the food supply of the country than by making liberal appropriations for the encouragement of agriculture.

PENSIONS FOR INDIAN-WAR VETERANS.

Upon the opening day of this Congress I introduced H. R. 295, which was a bill extending to the surviving officers and enlisted men, or their widows, who served in the Indian wars of the western frontiers of the several States and Territories the provisions of the pension acts. A bill embodying practically the same language as my bill was finally passed and is now the law. This bill was amended in the Senate so as to give a pensionable status to a large number of men who had served in Indian wars but who were unable to show any certificate of discharge, but who nevertheless participated in many Indian campaigns. I have voted for every pension bill which has come up for action in this Congress, because I feel that we can not do too much for the brave men who came to the rescue of the Government in its hour of peril. My father was a Union soldier and his death was due to the effects of wounds which he had received while in the service. Therefore I have a double reason for my action in pension matters.

OLD-AGE INSURANCE.

Since the Revolutionary War this country has paid over $7,000,000,000 in pensions to its soldiers or their representatives. Our people have not felt the burden even though the pension system has not been built upon an equitable foundation. But modern society is facing a condition in the Nation to-day which demands that we evolve some plan to care for those who have become dependent because of old age. With this idea in mind, I have introduced H. R. 20351, which proposes the appointment by the President of a commission to study the question of the advisability of adopting a pension or insurance system for aged people. I believe that dependent old age should not be obliged to find refuge in the poorhouse and private charitable institutions, but that it is possible to give relief by means of a pension system which my bill proposes to discover through a proper investigation. I am hopeful that a future Congress will pass some such legislation.

VOCATIONAL EDUCATION.

I am glad that I was assigned to membership on the Committee on Education, for the bill for vocational education was drafted by this committee. I shall always count my work upon this committee as well worth while. Much interest was manifested in the bill by educators from all parts of the country. It received the indorsement of President Wilson in his message to Congress last December. The bill provides for the training of teachers in agriculture, the trades, industries, and home economics. It also provides for the training of the men and women of the cities who are unable to afford the expense of special training in a particular vocation or trade. The chief value of such education to anyone is that he can become more proficient in his line of work and thereby earn a larger compensation. The tradesman not only profits, but his employer profits still more, by the additional learning which the man has acquired.

PROHIBITION IN THE DISTRICT OF COLUMBIA.

Some months ago a great hue and cry went up from the citizens of Washington when it was proposed to require them to pay more than one-half of their taxes. It was argued by them, and I think rightly so, that this is the Nation's city; that it does not belong to the people of the District of Columbia, but

to all the people of the United States; and that all the people of the United States should take special pride in it. But now, after the representatives of all of the people of the Union have agreed to pay one-half of the taxes of the inhabitants of the District, and after the expenditure by previous Congresses of nearly $100,000,000 in beautifying the city of Washington, and after definite plans are laid to expend still greater sums of money in further improvements, it is argued by some citizens of the District of Columbia that upon the single question of prohibition those persons only who are "inhabitants" of the District shall be permitted to determine whether the district shall be wet or dry. Upon that question even the Members of Congress and their families shall have no voice, but it must be left to a few people who have been so fortunate as to be called inhabitants of the District. I can not agree with any such proposal.

I find that for every dollar that is paid for a barroom license in the District of Columbia must be matched by another dollar from the Federal Treasury, and that my constituency pays for the support of the District the sum of $21,939 annually, which is divided as follows:

Schools, $5,660; streets, sewers, and water mains, $2,147; police, $1,806; improvements and repairs, $4,088; salaries and health, $1,470; interest sinking fund, $1,726; lighting, $823; fire department, $1,181; charities and corrections, $2,472; miscellaneous, $566.

Yet, according to the argument of these people, who have been clamoring for a referendum, the people of my State have no right to say through me that this city (which, according to the argument of the same gentlemen, is also the city of my people) shall be wet or dry. The Constitution of the United States has given to Congress the right to legislate for the District of Columbia. I expressed by my vote in this body the sentiment of the major part of my constituency which I know to be in favor of making the Capital of the Nation a saloonless city.

Upon investigation I find that last year there were 9,394 arrests made in Washington City for drunkenness in public places. A part of the costs of making those arrests was borne by the people of my State, and I should have been false to my trust if I had voted to take the power out of their hands to remove the one thing which is responsible for drunkenness. I am for a dry District of Columbia, and I do not favor delegating the right to say that it shall be so or not to a few residents of Washington as long as my people are called upon to support and maintain it. I count it a high privilege to have cast my vote in this body for a saloonless Capital of the United States of America.

NATIONAL PROHIBITION.

I deeply regret that no opportunity was given to this Congress to pass upon the joint resolution known as the Sheppard-Webb bill for the submission of an amendment to the Constitution of the United States prohibiting the manufacture and sale of intoxicating liquor for beverage purposes anywhere in the United States. It appears to me that the tide for national prohibition is now so strong that the passage of such a bill in Congress is near at hand. There is no doubt about its ratification by three-fourths of the States very soon after its submission. I am firmly of the opinion that the people of this Nation want to abolish the liquor traffic, and I think it is the duty of Congress to speedily submit the amendment.

The Late Senator James P. Clarke, of Arkansas.

MEMORIAL ADDRESS
OF
HON. OTIS WINGO,
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 18, 1917.

The House had under consideration House resolution 512, as follows:

"*Resolved*, That the business of the House be now suspended, that opportunity may be given for tributes to the memory of Hon. JAMES P. CLARKE, late a Senator from the State of Arkansas.

"*Resolved*, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of the exercises of this day, shall stand adjourned.

"*Resolved*, That the Clerk communicate these resolutions to the Senate.

"*Resolved*, That the Clerk send a copy of these resolutions to the family of the deceased."

Mr. WINGO. Mr. Speaker, in the death of Senator CLARKE our State has not only lost a very distinguished citizen, but the United States Senate has lost one of its most powerful Members and this country has lost a man who, I venture to assert, by his thought, his force, and his actions touched and shaped its destiny with an influence equal to that of any man who lived in his day and generation. It has been very well said that whether you liked or disliked Senator CLARKE, he compelled both your respect and your attention. His friends relied upon his ability and courage, his enemies respected and feared both.

To my mind the most striking thing about Senator CLARKE was his hatred of all pretense and sham. If there ever was a man in public life who absolutely had the courage of his convictions, who, having conscientiously decided upon a course, then became indifferent to what the public or his critics might say of him, it was Senator CLARKE. I say he had the courage to stand alone, and he did that at times, Mr. Speaker, when it seemed almost treason to those who are wont to abjectly kneel at the feet of power; but his actions were the result of the compelling force of his convictions and of his loyalty to his sense of duty and what he thought he must do in order to retain his self-respect. I think it is unfortunate for the country that there are not more men of that character and of that courage in both ends of this Capitol. He was intellectually honest, too, Mr. Speaker. JAMES P. CLARKE never undertook to deceive himself. He never undertook by the devious ways of intellectual gymnastics to make something appear right which intuitively and with that quick decisiveness of his mind he knew was wrong.

He was one of those men who were exasperated by the little details of public life upon which modern politics and modern customs in American politics have forced its representatives in both bodies to devote a good deal of their time and energies, instead of giving their time, their thought, their study, and their patriotic efforts to the bigger and better things for which Senators and Representatives are supposed to be sent to this Capitol.

I repeat he not only had the courage of his convictions, but he was willing to stand alone, and that is something that few men are willing to do. I once heard it said that JAMES P. CLARKE would rather face a howling mob and chant the requium of defeat and know that he was right, or believe that he was right, than to hear the plaudits of the multitude and yet have the sickening sense in his heart that he was undeserving of the misguided approval of his fellows. And that was typical of the conception that most men had of Senator CLARKE who came in close touch with him.

With Senator CLARKE, as with all great men, as time goes on we will learn to appreciate more his high character and splendid qualities. Unfortunately for him, and I think unfortunately for the country, his seeming indifference to public approval, his sometimes seeming rudeness to the representatives of the press, was a regrettable thing, which prevented the American people from learning more of his high character and splendid abilities, which they would have learned if he had pursued the course that it is customary for most men in public life to pursue, and that is to court the greatest amount of publicity and the greatest amount of friendly utterances on the part of the representatives of the press in the Capital of the Nation. But he did not do that. He went his way, and more nearly than any other public man who has ever lived in this Capital, he made you think of these lines:

It matters not how strait the gate
How marked with punishment the scroll;
I am the master of my fate,
I am the captain of my soul.

Wage Increases During the Months of November and December, 1916.

EXTENSION OF REMARKS
OF
HON. HENRY T. RAINEY,
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. RAINEY. Mr. Speaker, under the general leave to print I herewith present for insertion in the CONGRESSIONAL RECORD a statement made by the Department of Labor showing wage increases in the United States during the months of November and December, 1916.

The statement is as follows:

TABLE 1.—*Summary of wage increases, establishments involved, and employees affected, November, 1916, by States.*

State.	Total number of wage increases noted.	Reports showing establishments involved.		Number of reports not showing the number of establishments involved.	Reports showing employees affected.		Number of reports not showing number of employees affected.	Reasons for increase.			
		Number.	Total number of establishments.		Number.	Total number of employees.		Agreement.	Strike.	Voluntary.	Other reasons and not reported.
Alabama	1	1	1		1	20,000					1
Arizona	1			1			1	1			
Arkansas	1			1			1	1			
California	7	3	3	4	1	200	6	4	1	2	
Colorado	5	2	2	3			5	4			1
Connecticut	7	3	3	4	4	995	3	2	3	2	
Delaware	1	1	1		1	100			1		
Florida	2	2	10		2	1,830			2		
Georgia	1			1			1			1	
Illinois	14	10	10	4	6	36,040	8	6	4	3	1

State of Washington Pledges Its Support for Protection of American Rights.

EXTENSION OF REMARKS
OF
HON. ALBERT JOHNSON,
OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1917.

Mr. JOHNSON of Washington. Mr. Speaker, under leave granted to me I desire to place in the RECORD a resolution of the Fifteenth Legislature of the State of Washington, by which the State pledges its men and resources to the President of the United States for the full protection of the lives, property, and just rights of American citizens on sea and land:

Senate joint resolution 14.

Whereas the United States of America is face to face with a grave national crisis revealing a foreign conspiracy to invade our country after the repeated murder of our citizens on the high seas, the driving of our ships and commerce from the ocean and practically establishing a blockade of our ports: Therefore be it

Resolved, by the Senate and the House of Representatives of the State of Washington in legislative session assembled, That the State of Washington be pledged to stand by the President to the limit of its resources in men and money for arming our merchant ships and in support of all other measures, ways, and means which the President believes to be necessary or expedient for the defense of the country and the full protection of the lives, property, and just rights of American citizens on sea and land.

The secretary of state is hereby instructed to prepare copies of this resolution and transmit the same to the President of the United States, the senate and house of representatives, and the members of the Washington delegation to the United States Congress.

Passed the senate March 5, 1917.

LOUIS F. HART,
President of the Senate.

Passed the house March 5, 1917.

GUY E. KELLY,
Speaker of the House.

[Indorsed.]

STATE OF WASHINGTON, *ss:*

Filed in the office of secretary of state 10.40 a. m., March 7, 1917.

I. M. HOWELL, *Secretary of State.*

The Bottom Out of Dr. Cook's North Pole Pretensions.

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. FESS. Mr. Speaker, two years ago to prevent Congress the embarrassment of being involved by Dr. Cook as an advertisement for his performances on the vaudeville stage and to expose his efforts to pervert an important incident of American history, Admiral Robert E. Peary's discovery of the North Pole, I laid a brief summary of the entire North Pole matter before Congress, including extensive quotations with respect to the rejection of the Cook claims by the University of Copenhagen, the forum of scientists Dr. Cook had himself selected to pass upon them, and also with respect to his expulsion from various organizations of American explorers. I also included quotations of the most important portions of the report of our congressional committee which a number of years ago investigated the Peary proofs and reported Peary reached the North Pole April 6, 1909, and recommended that he be raised to the rank of rear admiral and which resulted in his receiving that rank and the thanks of Congress. All this in the form of an "Extension-of-remarks" speech embraced but six and a half pages in the CONGRESSIONAL RECORD of March 4, 1915, under the title "The North Pole Aftermath," and may be found in the permanent bound edition of the CONGRESSIONAL RECORD, Sixty-third Congress, third session, at pages 658–664 of the appendix volumes. Happily this presentation of the salient facts served to prevent Congress becoming involved in the Cook self-advertising propaganda.

My remarks, however, were the subject of some criticisms from Mr. HELGESEN, of North Dakota, and others whose credulity had been imposed upon by the Cook propaganda. It, perhaps, need only be said, as an illustration of the methods employed, that in order to seem to give character to his remarks, Mr. HELGESEN inserted at the very commencement of his first speech printed in the CONGRESSIONAL RECORD a quotation from Dr. Charles W. Eliot, the emeritus president of Harvard, and in a way to give the impression that that brilliant scholar was a supporter of Mr. HELGESEN's position, and he most appropriately referred to the distinguished President Eliot as "universally recognized as one of the leading, if not the leading educator of the world." This appeared in the CONGRESSIONAL RECORD for March 15, 1915.

PRESIDENT ELIOT DENOUNCES DR. COOK.

As soon as President Eliot heard, on March 30, 1915, that his name was being used in connection with the Cook propaganda, he wrote:

From the first, I have maintained that Dr. Cook was an arrant liar and rogue, and am still of that mind. I have never said anything which could be quoted in support of any of his assertions. On the contrary, I have recently testified in a letter to a Member of Congress, who wrote me on the subject, that I considered Dr. Cook a completely untrustworthy person.

President Eliot also at the same time sent for a copy of the CONGRESSIONAL RECORD containing Mr. HELGESEN's mention of his name, and when received, April 6, 1915, President Eliot again wrote:

On August 6, 1914, I received a letter from Hon. Thomas C. Thatcher, inquiring whether an extract from my letter of December 29, 1913, which had been sent to him by a person named E. C. Rost, was correctly quoted. The quotation was much abbreviated. I replied to Mr. Thatcher's inquiry in the following letter:

"AUGUST 10, 1914.

"DEAR MR. THATCHER: The joint resolution (S. J. Res. 144) is preposterous. Frederick A. Cook never discovered the North Pole; and no competent scientific authority in any part of the world now admits his claim that he did so.

"It is highly improbable that I made, on December 29, 1913, the statement alleged to have been made by me in the letter to you signed by E. C. Rost, dated August 3, 1914. * * * I have never felt any doubt whatever that Dr. Cook was an arrant impostor.

"Sincerely, yours,

"CHARLES W. ELIOT."

President Eliot also said:

On January 30, 1915, Mr. Thatcher asked if he might make public use of the letter I had written him; and I replied on the 1st of February that he was welcome to make public use of my letter to him. On February 6, 1915, Mr. Thatcher informed me that he had made no public use of my letter of August 10, 1914, but said that the Committee on Education had voted that it would give no further hearings or take any further action on the bill before the committee asking for an investigation by Congress relating to the priority of the discovery of the North Pole.

A FURTHER ILLUSTRATION OF COOK METHODS.

Mr. HELGESEN embodied in one of his undelivered speeches in the CONGRESSIONAL RECORD attacking Admiral Peary some 2,000 words quoted here and there from the minority report of the congressional committee which passed upon the Peary proofs, and which extracts from this minority report, signed by a single member of the committee, and prepared for the purpose of explaining why the committee had made so thorough an examination of the proofs, were printed by Mr. HELGESEN in a way to give the impression that the minority report was in opposition to the findings of the committee in favor of Admiral Peary. And Mr. HELGESEN, where he dropped out portions, did so without indicating by asterisks or otherwise the parts left out, and he deliberately omitted the concluding paragraph of the minority report, but six lines in length, showing that the minority report concurred in the finding of the majority report that the evidence established Admiral Peary's claim that he had reached the Pole.

This method of answering Mr. HELGESEN's contentions of various sorts with respect to the Cook propaganda could be continued almost indefinitely, but is unnecessary in view of the fact that Mr. HELGESEN himself later on (in December, 1916) exposed Dr. Cook and his methods.

ABUSE OF THE CONGRESSIONAL PRINTING PRIVILEGE.

In his various speeches and extensions of remarks, the gentleman from North Dakota [Mr. HELGESEN] and his collaborators, in both defending and later in attacking Dr. Cook, including Mr. HELGESEN's criticisms of Admiral Peary (but not including Mr. HELGESEN's syndicated press articles arguing that the Pole was really attained some 200 or 300 years ago by a Dutch fishing boat which he says reported no ice near the Pole and a voyage of "fine, warm weather," etc.) These speeches in the CONGRESSIONAL RECORD, not including Mr. HELGESEN's newspaper articles, embraced during the last two or three years more than 280,000 words, which I may say, by way of graphic illustration, more than equal the total number of words in Roosevelt's African Game Trails combined with President Wilson's The New Freedom; indeed, in the single year 1916 Mr. HELGESEN occupied more space on this subject in the CONGRESSIONAL RECORD than would have President Wilson's book if printed four times. There has rarely, if ever, been such a misuse of the printing privilege so freely accorded

Members of Congress on the supposition that it will not be abused, though this abuse was fully equalled by Mr. HELGESEN in the preambles he printed to his Riker resolution of December 5, 1916 (H. Res. 380). I do not reprint it here owing to reflections upon committees and officials, which I think wholly unjustified.

DR. COOK'S CONGRESSIONAL "ATMOSPHERE" AGENT.

It is of especial interest to record that last fall the man who had been supplying Mr. HELGESEN with material favorable to Dr. Cook—E. C. Rost, the same person mentioned by President Eliot in the correspondence quoted above—sued Dr. Cook for an alleged unpaid balance for attempting to create a pro-Cook "atmosphere" in Congress. As it throws a vivid light upon some of Dr. Cook's recent methods, I quote the report of the matter as printed in the New York Tribune for October 24, 1916:

DR. COOK SUED FOR ATMOSPHERE "MADE TO ORDER" AGAINST PEARY—CONTRACTED FOR $4,655 WORTH, PAID ONLY $2,900, WASHINGTON PRESS AGENT ASSERTS—GUMDROP EXPLORER SAYS WORK WAS POOR AND HE LEFT CAPITAL.

Suppose you ordered $4,655 worth of atmosphere—the very best kind of atmosphere, understand—and got only $2,899.62 worth, and poor stuff at that, would you pay for the whole lot?

Now, listen a minute! Suppose the atmosphere you got was so—well, so unsavory—that you couldn't live in it and had to get out of town; and suppose, further, that that unsatisfactory atmosphere kept following you around, no matter where you went. Would you hasten to write your check covering the whole atmospheric order, or would you tell the atmosphere specialist to go to—see your lawyer?

That's what Dr. Frederick A. Cook did, and now the lawyer has brought suit against the gumdrop explorer for the money. Ernst Rost, an artist, of Washington, is the unpaid atmosphere purveyor, and Gilbert & Wessel are working on the doctor's defense in their law offices at 45 Cedar Street.

Rost in his complaint declares Dr. Cook owes him $2,787.02, with interest from June 1, for services in connection with the production of atmosphere favorable to the doctor. The total bill, according to the complaint, was $4,655, but Dr. Cook paid $2,899.62. In addition, Rost claims that he "expended at the instance of the defendant" the sum of $1,031.64, for which he has not been reimbursed.

"Dr. Cook employed Rost at $30 weekly to create an atmosphere in Washington favorable to the doctor," said Harry A. Wessel, of the law firm, yesterday. "Rost was to have acted as Cook's representative in Washington and to have supplied all information required by the congressional committee which was passing upon Peary's right to a pension and the title of rear admiral.

"Rost did this for a year and got his money, but the atmosphere he created was not satisfactory to Cook, and at the end of the year the doctor discharged him. There was no contract, and we shall enter a general denial of the claim, which is absurd on the face of it."

Dr. Cook could not be found last night. He was reported to be lecturing "somewhere in Ohio."

STILL ANOTHER CONTRADICTION.

It is of interest also to note that as Members of Congress were furnished some time ago not only with copies of Dr. Cook's book setting forth his alleged claims but also with a book upon the same subject published by one of Dr. Cook's supporters, named Edwin S. Balch, the New International Encyclopedia, published in 1914, and the current issue of Who's Who in America, edition of 1916, both state in their sketches of Dr. Cook that he is the author, with Mr. Balch, of the book in question. The latter, we should also here note, sent out a circular in November, 1916, declaring in large caps, "This statement is not true."

MR. HELGESEN AT LAST EXPOSES DR. COOK, BUT ADMIRAL PEARY REFUSES IN ANY WAY TO PARTICIPATE IN SUCH A CONTROVERSY.

Finally Congressman HELGESEN, evidently to save if possible his reputation in connection with the Cook matter, last December printed in the CONGRESSIONAL RECORD still another extension of remarks, this time containing a long exposé of Dr. Cook's claims, and showing up many of his inconsistencies, but renewing his criticisms of Admiral Peary, commenced at a time when he—Mr. HELGESEN—was supporting Dr. Cook's contentions, so I wrote Admiral Peary as follows:

You have noted, no doubt, certain insertions in the CONGRESSIONAL RECORD by Congressman HELGESEN making statements derogatory to your recognition by Congress for the work in the Arctic areas.

You probably will recall my exposure of Dr. Cook's propaganda in which it was falsely published throughout the country that our Committee on Education had opened his case. I did this on behalf of our committee, which had refused to have anything to do with the matter, and was being placed in a discreditable light before the country by the persistent efforts of this man and his friends.

Under leave to print granted by Congress, I expect to insert in the CONGRESSIONAL RECORD, in order that the same may be indexed in connection with the proceedings of the session just closed, a statement with respect to the recent efforts of Dr. Cook and friends to give the impression, as an advertising aid to his performances on the vaudeville stage, that Congress had dignified his long-discredited claims by an investigation through a congressional committee.

Although I have never talked with you on the subject, nor indeed have ever had the pleasure of meeting you, it has occurred to me that in case you thought it worth while to dignify Mr. HELGESEN'S attack upon you, begun at a time when he was defending Dr. Cook, by answering any of his points printed in the CONGRESSIONAL RECORD during the last two years and which, of course, emanated from Cook sources, I will be glad to print in connection with my remarks any communication of moderate length you may care to send me upon the subject.

Realizing in full the character of the methods used by the Cook partisans, including Mr. HELGESEN, at the time he was defending Dr. Cook, I do not mean to suggest that there is anything in what he said that ought to be answered, but I simply wish you to have the opportunity to do so should that be your desire.

To this Admiral Peary replied, as follows:

[National Aerial Coast Patrol Commission, United States Coast Survey Building, Washington, D. C., Central Committee, Rear Admiral Robert E. Peary, chairman.]

Hon. S. D. FESS, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN FESS: The kind offer contained in your letter is much appreciated, yet I prefer to continue the course I have consistently followed for years in refusing to enter into any controversy emanating from the sources mentioned.

The material inserted in the CONGRESSIONAL RECORD by Mr. HELGESEN and circulated under his congressional frank I at first attempted to read, but owing to his garbling of quotations and misrepresentations I threw it down in disgust.

To attempt to read through, much less to discuss, a mass of material prepared thus would be a waste of time.

I greatly appreciate your interest. Accept my heartiest congratulations that the country will continue to have at its service your high abilities and courage.

With best regards,

Very sincerely, PEARY.

A TYPE OF THE MISREPRESENTATIONS MADE.

Mr. HELGESEN at various times, in voicing the sentiments of Dr. Cook and his "atmosphere" agents, has endeavored to make it appear that Admiral Peary's statements with respect to conditions in the North were inaccurate, although as a matter of fact they have always been verified by subsequent expeditions. One notable instance is Mr. HELGESEN'S effort to make it appear that the MacMillan expedition sent out by the American Museum of Natural History, and now in the far North, had discredited Admiral Peary's statements with respect to what has been referred to as "Crocker Land," whereas, on the contrary, that expedition has resulted in a complete verification of what Admiral Peary had said.

All that Admiral Peary ever recorded upon that subject in his many books upon the Arctic regions is the following reprinted from his "Nearest the Pole," published in 1907, two years before his discovery of the North Pole. At page 203, describing in detail conditions as he saw them in 1906 from the summit of Cape Colgate, he said:

North stretched the well-known ragged surface of the polar pack, and northwest it was with a thrill that my glasses revealed the faint white summits of a distant land which my Eskimos claimed to have seen as we came from the last camp.

Then, at page 207, Peary again, as follows, described conditions as he saw them a few days later:

The clear day greatly favored my work in taking a round of angles, and with the glasses I could make out apparently a little more distinctly the snow-clad summits of the distant land in the northwest above the ice horizon. My heart leaped the intervening miles of ice as I looked longingly at this land, and in fancy I trod its shores and climbed its summits, even though I knew that that pleasure could be only for another in another season.

The above is the sum total of all that Peary said with reference to the supposed land, yet to indicate the uncertainty as to the entire matter he placed a question mark opposite this supposed land in his book—see chart in the back of Peary's book "The North Pole," published in 1910.

THE HEAD OF MACMILLAN'S EXPEDITION ALSO DESCRIBES THE SO-CALLED "CROCKER LAND."

The head of the MacMillan expedition has completely verified what Admiral Peary had so clearly described, and it is most unfortunate that any Member of Congress should have been misled into giving a contrary impression. Dr. MacMillan, after having returned from being out 150 miles over the Arctic Ocean, in his article upon the expedition thus describes, at page 928 of the November, 1915, Harper's Magazine, what he saw when standing at the same elevation upon which Peary stood in 1906:

Eagerly we now turned to an examination of the Polar Sea. At this spot Peary stood in June, 1906, and from this very spot he saw what resembled land. The day was exceptionally clear, not a cloud or a trace of mist; if land could ever be seen it could be now. Yes; there it was! It could even be seen without a glass extending from southwest to north-northeast. Our powerful glasses, however, brought out more clearly the dark background in contrast with the white, the whole resembling hills, valleys, and snow-capped peaks to such a degree that had we not been out there for 150 miles we would have staked our lives upon it. Our judgment then, as now, is that this was a mirage of the sea ice.

ARCTIC MAPS.

Mr. HELGESEN having endeavored by some of his extension of remarks speeches to make it appear that the withdrawal of certain Arctic maps by the Hydrographic Office of the Navy was a reflection upon Admiral Peary's Arctic explorations, I talked with that office and was assured that the withdrawal of the charts was in no sense either a repudiation of or a reflection on Admiral Peary's claims, but that the withdrawal of maps in order to perfect them was a matter of frequent occurrence.

An examination of the maps of Greenland used in the Polar regions during the last 50 years will show the maps of the intricate coast line frequently changed to conform to the work of triangulation surveys, such as made on the northeast coast by Erichsen and Koch.

THE EDUCATION COMMITTEE'S CONSISTENT STAND.

My interest in the North Pole discovery is entirely impersonal. It matters little to me what American won the honor for this Nation.

What I refuse to do is to permit without protest an effort of any lobby in the interest of any man to use our Committee on Education either as an advertising medium to secure engagements with vaudeville houses at so much per appearance or as an agency to attempt to discredit a distinguished Arctic explorer in an effort to rob him of an honor well established by impartial tribunals, both American and foreign, and upon proofs upon which Congress also extended him recognition. It is this conviction that induced our Committee on Education consistently to refuse to take up the claims of Dr. Cook.

CONCLUSION.

For the benefit of Members of Congress during future sessions, that they may be on guard against being misled by some of the plausible pro-Cook arguments foisted upon the public by Dr. Cook and recorded by Congressman HELGESEN in the CONGRESSIONAL RECORD before he repudiated Dr. Cook, and which have misled many good people not personally conversant with all the facts, I record this brief summary of events since my speech in the CONGRESSIONAL RECORD of March 4, 1915, and drop the subject.

Armed Neutrality Means War.

EXTENSION OF REMARKS

OF

HON. JOHN M. NELSON,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. NELSON. Mr. Speaker, the House having granted leave to print for 10 days after the close of the session, I avail myself of this opportunity of explaining my position on the subject of armed neutrality.

Respecting the patriotic motives, the sincere convictions, and the lofty purposes of those who differ with me, I ask only for the same courteous consideration. No person has a title to absolute infallibility.

President Wilson asked Congress for authority to arm merchant ships and to convoy them with our war vessels through a zone of blockade, stating at the same time that he has the authority without action of Congress. Inasmuch, however, as the President asked Congress for authority, it became my sacred duty as a Representative, under my oath to support the Constitution, to decide what was for the best interests of the people upon whom the burdens of war must fall. Surely I have no right to authorize the President to exercise a power which the Constitution vests in Congress, nor should I shirk my own responsibility as a Member of the legislative branch of the Government. He has under the Constitution neither the power to make nor to declare war.

Moreover, I could not be blind to the fact that the President is but a man surrounded by temptations and influences that actuate normal human beings; that in numbers and council there is more wisdom than in one man; and that in a desperate situation such as confronts the world to-day the responsibility for war should be shared by Congress.

I am also strongly persuaded that the awful war that is now consuming Europe was brought upon those countries because the power to make war was exercised by the heads of Governments, foreign ministers, kings, and emperors.

It also seemed to me that if the fateful decision of war was left to the discretion of the President, war might be brought about not only by a mistake of judgment on his part but also by the act of some irresponsible captain of a merchant vessel upon which the United States Government had placed guns and gunners. For these reasons I deemed it my sacred duty to decide for myself what would be the probable effect of the policy of armed neutrality proposed by the President. Would it promote peace or make for war?

Long ago I took my stand for peace. I care not how much I am abused as a pacifist. I am resolved that my hands shall not be reddened nor my soul stained with the blood of my fellow men, be they Germans or Americans or both—certainly not to protect the commercial rights of men who supply war materials for profit, and to one side only of the European belligerents.

I can not bring myself to glorify war; it is altogether horrible and inhuman, never justifiable, in my opinion, save when waged for the defense of home and country. I believe in the practicability of the precepts of the Prince of Peace. If this European war illustrates anything, it demonstrates to my mind that the world must return to the ethics of Jesus Christ. For the law of retaliation, "an eye for an eye, a tooth for a tooth," He substituted the law of "love your enemies," "resist not evil," and turn the other cheek. He taught mankind to say "Our Father," and to Him humanity was a brotherhood. He said, "If you forgive not men their trespasses, neither will your Father forgive your trespasses." He said to Peter, "Put up again thy sword into his place: for all they that take the sword shall perish with the sword." Men of the world may sneer at these precepts as impractical, but the history of the past, as the history of the present, abundantly proves that no other system of ethics really works. It is as true of nations as of individuals, exemplified strikingly in Europe to-day, that to make war is to perish by war.

A study of the bill presented to the House investing the President with this tremendous power of waging warfare upon the sea and the discussions had upon the bill convinced me that armed neutrality meant war and not peace. Indeed, strong supporters of the measure declared that they knew it meant war. Is it not human nature that men who strongly sympathize with one side, or bankers who have loaned billions to one side, or manufacturers of war material who have sold billions of dollars' worth of munitions to one side, desire to see that side win with whom they have cast their lot? "Where your treasure is, there will your heart be also." The newspapers of Washington published in flaring headlines, "Wall Street Wants War."

A study of the provisions of the bill reported to the House, together with the discussions upon them, clearly discloses the fact that it delegated to the President the power to make war.

(a) It was unmistakable that the bill gave the President power to place American gunners upon American vessels, and Senator LODGE admitted that this gave merchant ships the character of vessels of war.

(b) It was never denied that the President was given the power to arm with guns and equip with gunners a merchant vessel carrying ammunition and contraband consigned to a belligerent—an act of war.

(c) It clearly gave the President the power of using our Navy, our dreadnaughts, cruisers, torpedo boats, airships, and submarines to convoy these merchant vessels loaded with munitions and contraband of war.

(d) Moreover, it undoubtedly gave him the power, general and indefinite but certain, to use our Navy to convoy even English and French ships if Americans were aboard, no matter if they carried munitions and contraband.

In short, the power conferred upon the President by this bill was practically unlimited. If the provisions were to be carried out they could result in nothing but war.

Indeed, Senator LODGE declared:

> Mr. President, in my opinion for us to arm a vessel loaded with contraband or to convoy a vessel loaded with contraband would be an act of war.

Senator FALL declared:

> Mr. President, we might as well face the proposition involved. In the event the Senate bill is passed the action of Congress in passing that bill is, in my judgment, a declaration of a limited war.

Senator POINDEXTER declared:

> Now, that is an act of war, is it not, on the part of the United States against Germany? It seems to me that is what it amounts to. I do not say that in order to create any impression that I am not in favor of giving the President the authority which is provided by these bills, but only in order that we may get as accurate an idea as possible of the policy on which we are about to launch ourselves. * * * Mr. President, I have stated the consequences of what we are about to do. It means a limited war against German submarines.

These Senators, avowedly for war, were arguing for the President's policy of armed neutrality, declaring they intended to support it.

The purpose and the character of the bill may be better understood when we consider the amendments that were voted down.

The first amendment offered provided that no ship carrying arms and munitions consigned to belligerents should be armed or convoyed. This was defeated.

Another amendment was offered providing that there should be no discrimination made on account of the ports or countries to which the vessels may be bound when armed and convoyed. This was also defeated.

Another amendment prohibited the issuing of passports to American citizens intending to take passage on ships bound for foreign ports carrying arms and munitions of war. This was voted down.

Another amendment was offered providing for the right of visit and search before shooting the submarine on sight, an avowedly hostile act. This was voted down.

An amendment was offered providing for strict neutrality in the use of armed and convoyed merchant vessels. This was voted down.

A committee amendment was adopted refusing insurance by the United States of consignments of arms and munitions of war to belligerents, but an amendment seeking to make the section consistent by also refusing to convoy or arm ships that could not be insured was defeated. "Our dollars were considered of more value than our people and their substance."

In view of the stand taken in the House by the supporters of the President's policy of armed neutrality, it was clear to me that merchant vessels would not only be armed but convoyed to Europe through the zone of blockade, even though loaded down with contraband and munitions of war; that all semblance of neutrality was thrown to the winds; and that the inevitable consequence would be the loss of lives, property and, finally, end in war.

If the purpose of this bill was to declare war, why beat about the bush? But the President said in his message that up to that time there were no grounds for war. Why blindfold ourselves and walk right into war?

The plea is made that we must stand by the President to protect our national honor, our national rights. What is this honor and what are these rights? No one seems to define them. Are we to fall down and worship mere words? For honor's sake the duel was fought. What is the honor now that is at stake? What are our rights? It is known to everyone that these rights now involve heaped up stores of contraband munitions of war that are awaiting shipment to the allies.

Technically we have the right to trade with England and with Germany, but if we respect the zone of blockade that England has made effective through mines, because it means the loss of lives and ships, why are we not equally bound to respect the blockade that Germany has designated about England, which she has given notice she will enforce with submarines? Are we blind in one eye? Are we deaf in one ear?

It is folly in the presence of a world catastrophe to stand for technical trade rights. The allies and the central powers alike are fighting for their very existence as nations, their liberties, their rights, their national honor and all that they hold dear in life and death. When allied nations are engaged with other allied nations in a grapple to the death, they are not going to be scrupulous in recognizing technical, indefinite, and uncertain rules of international law.

In committing this folly our Government stands alone among the neutral countries of the world. Holland declines to follow the United States. So does Switzerland, Greece, Spain, Denmark, Norway, and Sweden. Even the South American Republics will not act with us. Argentina proposed a plan to end the war by a league of neutral countries, but the United States was not invited to participate because the Argentine Government considered America no longer neutral. In this Argentina was supported by Chile, Brazil, and Peru. These nations protested against the zone of blockades as violating their trade rights, but they were too wise to involve their countries into war. Have they by not entering this war forfeited their national honor? By no means. They have safeguarded the lives and properties of their people and their existence as nations when this cruel world war shall be over.

If we insist on enforcing certain questionable rights, let us at least save our women and children by adopting the policy of Australia, Canada, and India, three of England's greatest colonies, who have passed laws prohibiting the embarkation of any woman or child for any English port. Surely by so doing we would lose nothing of national honor.

It is a marvel to me that the belligerent nations have respected our rights as completely as they have up to the present time. All vessels sunk have been foreign-owned vessels carrying contraband of war.

I hold no brief for any nation; I am neutral. I am against no other nation, but I am for my own country.

If we are neutral as a nation we may make less money, but even now our banks are filled with gold representing the profits of our purveyors of war materials. We can afford to be content with our present ill-gotten gains. Making the house of Morgan richer will not add to the happiness of our country.

The whole world is war mad; but wisdom dictates that the Steel Trust and the other large factories of war materials devote their plants to the products of peace at home and that the foodstuffs that are now being shipped to Europe be used to feed the starving, rioting mothers and children in our great cities.

England is trying to starve Germany to death, mothers and children; Germany retaliates by trying to starve England to death, mothers and children; and we, in order to enforce "honor" and "rights," are permitting the Beef Trust and other food trusts to starve American women and children in order that they may make a big profit in sending contraband upon American vessels, armed and convoyed by Uncle Sam through a zone of blockade at the risk of involving us all in this world war.

Who can read the future in the event we plunge into this war? To whom has Providence disclosed the exact number of American boys that will be butchered on land and sea? Who has counted the billions that will drain the resources of the country to set afoot a war navy and war army? Who can foresee the terrible suffering that will come to a large part of our population, whose hearts will be rent because of their devotion to their native land, compelled to fight against the Fatherland? Who can foresee the consequences of our failure to remain the great neutral nation and as such to lead the other nations back into the pathways of peace?

Patriotic men tell us to stand by the President, but Mr. Woodrow Wilson is only a man. To stand by the President may seem good, but is it not far better to stand by our country? I thought, as I voted, of our country plunging into this horrible European war, of the awful cost of it, the terrible slaughter of our boys on land and sea, and the dreadful after effects, domestic and foreign.

Standing by the President may seem good, but standing by the Constitution is better. I thought of my oath to defend the Constitution. As a lawyer I know the power to declare war is not in the President, but in Congress. How can I delegate to him a power to do that which is an act of war? He has not the power under the Constitution to make war, and I have not the power under the Constitution to delegate to him the authority to make war.

Standing by the President may be good, but is it not better to stand by justice? England prevents our trading with Germany as Germany is now trying to prevent us from trading with England. The President protests feebly against England and does nothing more, but he holds Germany to strict account. To me both are in the wrong. But this measure avowedly is directed at Germany alone. Germany has been ruthless in destroying lives by submarines, but England, too, has been ruthless in the use of mines, though so many lives have not been lost, because England's blockade of Germany has been made effective by mines and warships. If we do not enforce our rights to trade with Germany, why should we do so in the case of England? Why not treat them alike? Is our justice no longer blindfolded? Should we not hold the scales with an equal hand? Is war better than justice?

Standing by the President is good, but I believe it is better to stand by the God of our fathers. He commands, "Thou shalt not kill." He proclaims the fatherhood of God and the brotherhood of man, and rather than follow President Wilson in waging even a limited war upon Germany, I prefer that we as a people follow the precepts of the Christ in the spirit of Christianity as it was exemplified in its early history before the Christian church was contaminated by the war spirit of the nations of the earth. Are we no longer a Christian Nation?

Standing by the President may be good, but is it not better to stand by humanity? We are the last great nation that is neutral. We are made up of peoples of all the lands of the earth. It seemed to me that for America to plunge into this horrible war would be the last gasp of death of the nobler instincts of a common humanity.

We all love our country. We will all stand for national honor really at stake. We will all stand for vital American rights when really jeopardized, but we must not be stampeded by selfish interests, waving American flags and appealing to national honor. We must keep clearly in mind the exact issue that is presented, and, fellow citizens, in this crisis the issue is very plain: Are we willing to risk peace by arming vessels or convoying them with our warships, laden with contraband and munitions of war, through the zone of blockade? Are we willing to enter into this war in order that some of our citizens may continue a profitable trade in contraband and munitions of war with the allies? On this issue when the roll was called I answered "nay."

In conclusion, let me say that I was not unaware of the storm of criticism that would break upon my head, but there was no escape. I must be loyal to my conscience, my convictions, and the noblest sentiments of my soul. I must be loyal to the best

interests of the people I represent, true to the principles of the Constitution to which one-man power is abhorrent, and firm amidst the clamor for war that is threatening to engulf us all in a mounting flood of race prejudice and hate. During my 10 years of congressional experience I have often had to vote alone or with a few, and I find solace in these words of James Russell Lowell:

They are slaves who will not choose
Hatred, scoffing, and abuse
Rather than in silence shrink
From the truth they needs must think;
They are slaves who dare not be
In the right with two or three.

High Cost of Living.

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1917.

Mr. BUCHANAN of Illinois. Mr. Speaker, I voted against the Borland amendment to the sundry civil bill, which provided an appropriation of $400,000 to enable the Federal Trade Commission to conduct an investigation of the causes of the present high cost of living. I did so for the reason that we have an abundance of information on that subject showing that it is due to a combination of combinations creating a monopoly in violation of the Sherman anti-trust law. The Department of Justice is now spending large sums of money for investigation work, but the time of our investigators is being wasted prying into the affairs of private citizens who have violated no laws, but whose opinions and activities in behalf of the masses of the people of the country differ from those who seem to be in control of the affairs of our Government. This is true in my own case, as I have been indicted in New York on trumped-up charges that are based upon scraps of misinformation that have been dug up and manufactured by these agents and investigators who for months have been scrutinizing my bank accounts and other personal matters hoping thereby to find something upon which they can hang the false and malicious charges that have been made against me.

There is no need of any further investigating. If we had had an earnest and sincere Attorney General at the head of our Department of Justice, who would have used the powers of his office in the interests of the people of the country instead of the special privileged crowd whose headquarters are in New York, and who would have enforced the law against these high-handed manipulators, we could have avoided these abnormally high prices for the necessaries of life and saved our people from the sufferings of cold, hunger, and want. However, inasmuch as our Federal administration has acquiesced in the crimes of these monopolistic combinations by its inactivity against them and its neglect and refusal to enforce the laws, the only immediate relief that could have been given to our suffering people would have been to put an embargo upon the shipment of all foodstuffs and other necessaries of life until the wants of the American people were provided for at a reasonable price. While the cost of food has steadily increased during recent years, due to the speculation of these monopolistic combinations, the recent sharp rise in the cost of food products is attributable in a large measure to the vast quantities of foodstuffs that have been shipped to Europe, thereby materially reducing our supply and, of course, causing an advance in price.

For example: In the first nine months of 1914 the United States exported breadstuffs valued at $172,000,000; in the first nine months of 1916 the United States exported breadstuffs valued at $337,000,000; in the first nine months of 1914 the United States exported in dairy products, butter, cheese, condensed milk, and eggs valued at $5,800,000; in the first nine months of 1916 these products exported amounted to over $29,000,000; in the first nine months of 1914 the United States exported meats valued at $97,000,000; in the first nine months of 1916 these exports amounted to over $201,000,000.

Is it right that the consumer in Europe should be preferred to the consumer of the United States? Is it our duty to feed foreign nations when by doing so we oppose our own people? Is it just that we should call upon our people to go to war and offer up their lives to uphold a proposition which takes their bread from their own mouths and the mouths of their children? Again I say that an embargo is the only thing that could bring immediate relief to our people, but the influence of the war traffickers was so great that it was impossible to secure such legislation; and as long as our resources are permitted to be used as they have been by the allied belligerent nations, and the activities of our Federal Department of Justice are paralyzed and no steps are taken to enforce the laws against these criminal combinations, I can see no hope for relief for the American people from the present abnormal high prices and the scarcity of foodstuffs and other necessaries of life.

An extended investigation at a cost of $400,000 is not going to give the people the relief they are entitled to before such an investigation is made; but if the machinery of the Department of Justice were used against the monopolistic trusts and the antitrust laws enforced in the letter and spirit as Congress passed them, the people would secure some degree of immediate relief from their oppression. The power, however, which enables these trusts to collect a tribute of billions of dollars from the American consumers is due to private ownership of our transportation facilities, our natural resources, and control of our currency, and when the people wake up to the real causes of their distress they will overthrow the men in public office who approve of such practices and relegate them to the political scrap heap and elect men who will legislate and administer the laws of the country to destroy the power and privilege of the criminal corporations to extort abnormal and unjustifiable high prices from the masses of the people.

I desire to insert here an editorial written by William Randolph Hearst, with which I am in hearty accord and which in the main expresses my judgment and sentiments; also an editorial in the Johnstown (Pa.) Democrat of March 1, and one from the New York World of March 2:

REDUCE EXCESSIVE PROFITS TO LOWER LIVING COST, DECLARES MR. HEARST.

FEBRUARY 22.

To the EDITOR OF THE EXAMINER:

I read your recent editorial on the high cost of living with much interest. I agree with you in great part, but I certainly do not think that we ought to pin our dependence for a lower cost of living so firmly upon one or two minor measures, such as the extension of the parcel post and State and municipal markets. These measures might minutely improve matters, but I do not think they would largely improve them.

I agree with you that good prices to farmers and also that good wages to workers are not only elemental justice but are essential to prosperity. I agree, too, that the manufacturer is worthy of his legitimate profit. So is the furnisher of raw material and the legitimate producer of any kind.

I agree, too, that a certain reasonable profit must be paid to the transportation agencies. I even go further and believe that the middleman, where he is necessary—and he generally is necessary—is entitled to his profit.

Then you say, How are we to decrease the cost of living after having allowed profit to every instrumentality that enters into the production and distribution of food supplies or any other supplies?

The answer is that the way to reduce the excessive cost of living is to reduce excessive profits.

Excessive profits are brought about through combinations for extortion, through the inflation of stocks and bonds, and such methods of what are popularly called trusts in wresting extortionate and illegitimate gains from all the public.

There are various forms of trusts—manufacturing trusts, transportation trusts, distribution trusts, and sometimes even labor trusts; that is to say, there are combinations among manufacturers, among railroad and steamship lines, among middlemen of all kinds, for purposes of extorting undue prices or for purposes of stock inflation, which eventually compel undue prices to pay dividends on watered securities.

The laborer is worthy of his hire and the producer is worthy of his profit—the transporter is worthy of his percentage of gain—and when all such are properly and legitimately rewarded for actual service rendered there is general prosperity without any excessive cost of living.

But modern society is in a transitional state. We are going from an age of competition into an age of combination. We have developed the advantages of combination for those in the combination, but not for the public in general. And, not having realized as yet the possible advantages of combination for the public in general, we have failed as yet to regulate combination in interest of the public in general. Profit should be the reward for service, and yet the greatest profit under present conditions is secured not in return for benefits conferred upon the community but for actual injury inflicted upon the community.

The combination which eliminates competition and establishes a virtual monopoly does not use its economic advantages to reduce prices as it could and should, but employs its power of monopoly to extort excessively high prices and generally, in addition, to supply an inferior product.

In other words, society is at present so ill organized that the individuals who inflict the greatest damage upon the community are encouraged to do so by the greatest financial reward.

The extortion of these combinations or trusts makes everything high. It makes the high cost of living, because it makes first a high cost of producing.

Everything which the farmer buys or which the manufacturer buys that is supplied by combination is supplied at extortionate prices.

The farmer, the manufacturer, and all the producing classes, therefore, start with an unnecessary high cost of production.

Then come the railroad trusts with their excessive inflation and with the necessity of paying interest on enormous issues of stocks and bonds. The charge for transportation is therefore extortionate, and another unnecessarily high price is added to the product of the country before it reaches the distributor.

Then comes combination among the distributors—trusts of middlemen—and another excessive profit is added to the price of the product before it reaches the hands of the consumer. If, unhappily, the consumer belongs to the poorer classes and can buy only in small quantities, there is another retail combination to take advantage of his weakness and extort the highest price of all from those who are the least able to pay.

Just see what a trust can do in the thing with which we are best acquainted—the paper business. Within six months after the Paper Trust was formed the price of print paper was increased 50 per cent.

The investigations of the Government show that there was practically no increase in the cost of manufacture; indeed, if the combination had been made on beneficially economic lines the cost of manufacture would have been reduced. But the combination was made for the purpose of extortion, and consequently the price of the product was enormously increased.

What is the result? Every manufacturer of newspapers or periodicals or books or other publications is immediately disturbed by this robbery and compelled to seek a greater income from those upon whom he depends by increasing the cost of his product.

Papers throughout the country are doubling their price, magazines are increasing their price, books are being increased in price, and the general public is being made to pay a great deal more than it formerly did for the same published product.

Now it is easy to see how great is this injury, especially in a republic.

The people's funds being depleted on every side by extortionate trusts, the people are compelled to buy less of every product. The people are told how to buy less food and live on an egg and a potato a day; and, of course, they also buy fewer books and fewer publications generally.

Those who are poorest and probably most in need of information and education which magazines and books supply suffer most and are able to buy the least of the information and education.

In a republic successful conduct of government depends upon the information and education of the masses; depends on their ability, through this education, to vote intelligently and conduct the government successfully.

Thus we see the trusts prey upon the people from all sides, attacking their food supplies, their educational supplies, and in fact, depriving them of a certain proportion of all the necessities and luxuries of civilized existence.

We will never have a properly low cost of living until we prevent trust extension; or, to put it more in detail, we will never have the low cost of living that we can have and should have until we encourage the economy and efficiency of combination and prevent the extortion of combination.

This is the big broad question which requires our attention, and no minor measures are going to do much to solve the situation. Supplying food by mail direct from the farmer is only going to help a little. The mail has to be transported on the railroads and the railroads have to be paid, and they have to be paid in proportion to their overcapitalization.

The farmer who produces the food is still subject to the cost of production, and the cost of production is increased by every trust which is formed and which supplies him with implements, clothes, building material, or any other material which enters into his life or his business.

The Government might distribute some food products in central markets for the general advantage, but the Government can not take the place of every middleman and it is not desirable that it should do so.

There can and should be public ownership of public utilities such as the railroads, and that will largely solve the transportation problem, but there can not possibly be public ownership of every business. And yet there can be and almost surely will be a trust in nearly every business, and combination conducted mainly for extortion unless it is regulated and compelled to employ the advantages of combination in the public interest—unless it is compelled to allow the public to share through reduced prices in the superior economy and efficiency of combination.

WILLIAM RANDOLPH HEARST.

[From the Johnstown Democrat, Thursday, Mar. 1, 1917.]

WHERE THE FAULT LIES.

"It would be difficult to exaggerate the gravity of the condition confronting the people of the United States resulting from a complete collapse of our privately operated transportation system. In our large cities and industrial centers the producing classes are actually starving in the midst of abundance. The Secretary of Agriculture in his annual report states that this country is amply able 'not only to supply itself with food but increasingly to meet the needs of the world.'

"But this is of no avail when our railroads refuse to discharge their duties as common carriers. There are millions of bushels of grain in western elevators awaiting shipment to the starving people in the East, but the railroads positively refuse to furnish cars necessary to transport it.

"J. P. Griffin, president of the Chicago Board of Trade, in a telegraphic dispatch to the Interstate Commerce Commission, says:

"Despite all your assurances, no relief has been afforded to move grain and other food products out of Chicago. The present scarcity of supplies borders on famine in many communities, with the consequent inflation of values directly chargeable to the failure of railroads to meet the national emergency. None of the cures offered by the commission or the railroads themselves have been or can be effective. It is a fact beyond dispute that industrials generally are operating from 200 to 300 per cent above normal and securing such equipment as needed. It is very apparent therefore that preference is given to freight paying the greatest revenue.

"He also predicted 'rioting, anarchy, and bloodshed if the intolerable and indefensible high prices were not reduced forthwith by an efficient operation of the railroads,' and charged that 'eastern roads are using a disproportionate number of cars for munition shipments, preventing grain and other foodstuffs shipments from the West.'

"The Interstate Commerce Commission, in reply to the above charges, states that Chicago had been getting 200 cars a day for eastbound grain. The president of the Chicago Board of Trade denies this and declares that 'for 30 days Chicago has been shipping four or five cars a day; that's all. We had, it is true, cars of western roads to load, but we couldn't get them hauled east. Now we are informed that we must get our cars from eastern roads. That practically shuts us out of the eastern market entirely.'

"January 18, 1917, Mr. McChord, of the Interstate Commerce Commission, after an exhaustive investigation of the car shortage, stated:

"The present conditions of car distribution throughout the United States have no parallel in history. In some territories the railroads have furnished but a small part of the cars necessary for the transportation of staple articles of commerce, such as coal, grain, lumber, fruits, and vegetables. In consequence mills have shut down, prices have advanced, perishable articles of great value have been destroyed, and hundreds of carloads of food products have been delayed in reaching their natural markets. In other territories there have been so many cars on the lines of the carriers and in their terminals that transportation service has been thrown into unprecedented confusion; long delays in transit have been the rule rather than the exception, and the operation of established industrial activities has been made uncertain and difficult. These conditions have made necessary a far-reaching investigation by the commission and now urgently demand prompt, decisive action.

"But, amazing to relate, the commission has made no effort to relieve the situation, which it had declared demanded prompt and decisive action. The only thing the Government has done so far was to send secret agents into the artificially famine-stricken districts to ascertain some evidence of an imaginary German intrigue or an I. W. W. plot in face of the obvious and indisputable facts that the railroads are permitting food speculators to use their yards and terminals as a basis for forestalling food products.

"If this isn't a conspiracy in restraint of trade, in flagrant violation of the Sherman antitrust law, and demanding that the criminal conspirators be prosecuted to the full extent of the law, then nothing is. Apparently it is up to the Department of Justice to do its plain duty in the premises."

[From the New York World, Friday, Mar. 2, 1917.]

DO COURTS DEFY THE LAW?

"One bill in Congress appropriates $6,000,000 to relieve the food situation, however that may be done, and another sets aside $400,000 to pay for an investigation of high prices.

"Before either of these measures becomes law the World suggests that serious attention be given to these words of Attorney General Gregory in a letter addressed to Senator BORAH:

"The executive department alone can not enforce the antitrust law. It must have the cooperation of the Federal courts. I regret to say that a number of Federal judges have been and are still apparently reluctant to enforce the Sherman Act. I do not mean to charge that they deliberately attempt to obstruct the will of Congress. I assume that their views of public policy do not agree with those of Congress as expressed in the Sherman Act, and that unconsciously they permit their own views as to what the law should be to affect their construction of the law as it is written.

"The food situation and the high prices result either from inexorable economic law or from conspiracies which the Sherman Act and its amendments were designed to prohibit or punish. If the Federal courts, consciously or unconsciously, refuse to enforce these laws, the question as to food and many other things becomes of secondary importance. The authority of Government itself is put to the test, and there can be no relief from extortion in any quarter until a sovereignty defied or ignored shall have asserted itself in every court in the land.

"We do not know how necessary the proposed appropriations of $6,000,000 and $400,000 may be for the purposes named, but if what the Attorney General of the United States says of the Federal courts is true, sums ten times as great would be well spent in reasserting in these tribunals the supremacy of law."

The war trust and its press, pulpit, and politician advocates are insisting that we should rush into the European war at once because in the course of that war some of the belligerents have in their mad struggle for supremacy caused the loss of some American lives in enemy ships.

It is urged by these same mouthpieces of the warmongers that Congress and the executive branch of the United States Government should put aside all other public business and devote all their energies to preparing for foreign war.

Now, it is an undeniable fact that the great criminal trusts of the United States have caused the loss of more lives of American citizens and have robbed the people of our country of more property in a single month than we have lost through the operations of the belligerents on the high seas in two and a half years of the European war. Therefore, there can be no question but that judged by the comparative loss of life and property which the American people have suffered from the operations of the European belligerents on the high seas and that suffered from the operations of the lawless and rebellious monopolies on land within our own territory, right here at home in the United States, we have twenty times as much reason and provocation for making war on the criminal trusts of the United States as we have for declaring war on any of the belligerents of Europe.

To put an end to this destruction of American life and property inflicted by the war of conquest which the monopolistic trusts are waging against the people and Government of the United States, it is not necessary for Congress to enact any law or even vote a declaration of war. On July 2, 1890, the United States by act of Congress declared war on all monopolistic trusts and invested the Attorney General with full power and authority to make war upon and exterminate every one of these lawless and rebellious trusts whose war of conquest waged against the American people, is costing us every month the loss of more lives and more property than the European war has cost us in two and one-half years.

The following are extracts from editorials of some of the leading newspapers of the United States:

[From the New York American, Dec. 14, 1916.]

"During Attorney General Gregory's administration the criminal trusts have not been prosecuted, and, worse than that, they have known that they would not be prosecuted.

"As a result of this maladministration of the Department of Justice the United States is as full of civilian bandits as Mexico is of military bandits.

"Our Carranzas, Villas, and Zapatas do not murder, it is true, but they do loot the business interests of the United States; they do rob the people of the United States day and night.

"Among these bandit trusts and criminal conspiracies there is none that is more ruthless or more criminal than the unlawful conspiracy and criminal trust which robs the newspapers.

"The whole country groans under the extortions of these criminal trusts, they rob everybody, they rob the business man, and they rob the workingman. Their thieving fingers are in the till of every store and in the pantry of every housewife. No one is safe from their criminal activities. We have laws to punish these criminals, to put an end to their robberies, to put them in jail, where they belong. Nothing is needed but the enforcement of these laws.

"We do not need embargoes. We do not need new legislation. We need only just, honest, and vigorous prosecutions of these conspirators by the Department of Justice."

—

[From the New York World, Feb. 23, 1917.]

WHY NOT APPEAL TO LAW.

"In view of the amazing food situation it is remarkable that no public prosecutor takes the center of the stage.

"There are laws, State and National, that cover every phase of monopoly, conspiracy, forestalling, and extortion. Even restraint of trade is a misdemeanor. * * * If commercial crimes on an extensive scale have been committed, it is the duty of State and Nation to proceed against their authors with all possible vigor. Of conspiracies so widespread, it ought not to be difficult to obtain evidence. * * * It was to protect the people from just such unconscionable combinations, and encouraged by just such emergencies as we see to-day, that these laws were passed. They ought to be enforced all along the line."

—

[From the Philadelphia North American, Dec. 21, 1916.]

"That there are grounds for the suspicion that the recent increase in the price of coal was the result of an 'artificial and illegal combination' was the statement made to-day by George W. Anderson, United States attorney at Boston.

"When there are indications that the movement of coal has been checked, not only on railroads, but at terminals, there is reason to suspect that such action probably is the result of an artificial and illegal combination designed to reap extortionate profits through a speculative market.

"When you find coal brokers and coal dealers reconsigning coal cars over and over again, so as to delay delivery and thereby create a panic, you find a prima facie case."

—

[From the Washington Herald, Feb. 23, 1917.]

VOICE OF THE PEOPLE.

"That in the high cost of living the country is facing a crisis which may surpass even the seriousness of the war situation is becoming more apparent daily. * * * A food riot in any community is a national problem. It is the voice of the people, and unless the lawmakers of this country awake and enact legislation that will remedy the condition and punish those responsible, these United States may find themselves facing a civil or socialistic war of far greater proportions than any international conflict.

"If the condition is abnormal through the action of any individual or group of individuals, punishment commensurate with the enormity of the offense should be dealt without favor."

—

[From the New York World, Feb. 24, 1917.]

LAW OR VIOLENCE.

"If it be true, as the Interstate Commerce Commission announced yesterday, that no actual food or fuel shortage exists anywhere in this country, there can be but one conclusion as to present conditions. The necessaries of life have been cornered in defiance of law and in contempt of officers sworn to enforce the law. It is a sorry outcome of legislation and litigation extending over a quarter of a century that at the first comprehensive test to which our many enactments against monopoly and restraint of trade have been subjected there is no hint of prosecution for crime. * * * The food supply being ample, it devolves upon State and Federal authorities to liberate it from the control of speculators and plunderers. This may be done by law or it may be accomplished by violence, but in the long run society will profit most by law."

—

[From the New York Sun of Feb. 17, 1917.]

"Some of the most prominent men in the produce exchange say they have not received carloads of foodstuff loaded last October and consigned to New York. This delay, which results, of course, from the tie-up on sidings in Chicago, Buffalo, Pittsburgh, and other main freight terminals, is attributable to the preference that has been accorded by the railroads to export goods, the produce men charge. They pointed out that this export trade is competitive; that all the roads of the country have sought the rich profits to be made from it. It has been awarded on a basis of quick delivery; therefore, say the produce men, the roads gave this class of freight the right of way. * * * This, according to the Sun's informant, explains why the domestic traffic was put at a disadvantage."

[From the Washington Times, Feb. 19, 1917.]

BORAH CHARGES LAXITY—SAYS LAWS AFFECTING FOOD PRICES ARE NOT ENFORCED PROPERLY.

"Charging the Department of Justice had been derelict in the administration of laws affecting food prices, Senator BORAH on the floor of the Senate to-day suggested that the Attorney General recommend additional legislation if such was necessary. Senator BORAH said he was convinced 'a proper administration of existing laws' would bring down the cost of living.

"The Department of Justice, Senator BORAH said, had readily enough prepared supplemental legislation to enforce espionage laws which the administration desires."

—

[From the New York World, Mar. 26, 1916.]

ARMOR-PLATE MAKERS HAVE BEEN "ROBBING" THE GOVERNMENT FOR 20 YEARS, TILLMAN CHARGES.

"For 20 years," said Senator TILLMAN, chairman of the Committee on Naval Affairs of the Senate, to the World correspondent, "I have fought the Armor Trust, which has robbed the United States out of millions of dollars in contracts for the Navy. * * * I speak advisedly when I say that all these years (21) during my service on that committee (Naval Affairs) the United States Government has been robbed unmercifully by the armor makers.

"In the first contest, in 1896, I was working shoulder to shoulder with the Hon. W. E. Chandler, the Senator from New Hampshire. Credit is due him for offering the first resolution in the Senate to investigate the price of armor, and it was on his amendment to reduce that price from $400 to $300 that the first debate on the price of armor occurred in the Senate."

—

[From the Washington Post.]

PAPER MAKERS YIELD.

"News-print paper manufacturers, facing criminal prosecution in the United States courts for alleged combination in restraint of trade, proposed to the Federal Trade Commission yesterday that it fix a reasonable price for the output of the principal plants of the United States and Canada. The commission announced last night that it had the proposal under consideration and would reply immediately. It is generally believed the answer will be an acceptance.

"Although nothing has been said concerning the continuance of grand jury proceedings in New York, it is well understood the manufacturers' move was predicated on the assumption that there would be no criminal prosecution."

—

[From the New York American, Feb. 24, 1917.]

THE ESPIONAGE BILL IS SIMPLY THE INFAMOUS ALIEN AND SEDITION LAWS UNDER ANOTHER NAME.

"We wonder how many of you Democratic Senators who voted for this espionage bill know how the Democratic Party originated.

"Why, Senators, the Democratic Party originated in the opposition of Thomas Jefferson and James Madison to just exactly such laws as this un-American law.

"Those laws were the alien and sedition laws, passed in the year 1798, during the Presidency of John Adams.

"The alien and sedition laws provided that the President could arrest and order out of the country any foreign-born person he might consider dangerous, and made it a crime punishable by fines and imprisonment to publish any scandalous or malicious criticism of the Government of the United States or either House of Congress or of the President, or to stir up sedition or opposition to any act of Congress or of the President, or to aid the designs of any foreign power.

"This infamous and tyrannical law, which aroused the people to fury when put into execution, is practically copied in every detail and then broadened and made more tyrannical and destructive of all liberty in the infamous measure concocted by Attorney General Gregory.

"And we most earnestly warn you, Democratic Members of the people's House, that if you permit yourselves to be persuaded or coerced into passing this infamous espionage bill you and your party will meet—and deservedly meet—the same fate that the American people visited upon the Federalist Party when it enacted the exact prototype of this law and was swept out of power and out of existence in two short years.

"There is no need of this law.

"It is a creature of the brain of Attorney General Gregory—the most inefficient and incompetent Attorney General the country has ever seen.

"For two years this man has been obsessed by his silly nightmare of German spies.

"He sees one behind every lamp-post.

"He has no more sense in this matter than the ridiculous individual from North Carolina who told the Senate the other day that there were 100,000 German spies in our country to-day—as if Germany had $100,000,000 to spend yearly upon a spy system in America—for we presume a spy would require at least $1,000 a year by way of wages.

"Or as if Germany needed a single spy to find out anything about our Army or Navy or Government proceedings, when they are all as open to inspection as the day and all have been described over and over again in dozens of American newspapers and periodicals.

"This 'spy' talk is the most supremely silly bugaboo with which silly persons ever tried to frighten themselves and their neighbors.

"Yet, as we say, it is an obsession of this man Gregory. He eats, sleeps, and talks only German spies, and probably looks under the bed for them before he climbs in.

"For two years past he has put the whole energies of the Department of Justice at the command of the British Government, to act as a detective and messenger force—a truth for telling which he would doubtless try to put us in jail if he had his espionage bill safely passed.

"The business of the American people has been wholly neglected by him and his subordinates. Criminal trusts have practiced their extortions without a single prosecution. They have robbed the poor and raised the prices of food until the mothers of hungry children have rioted right here in the streets of New York.

"No industry and no person has escaped their extortions and not one of these criminals has been even hindered in his crimes, to say nothing of being punished.

"While hundreds of thousands of industrious American working people are being brought to the edge of actual hunger by these villainous and criminal combinations, Mr. Gregory and his district attorney and his secret agents have been chasing phantom spies, arbitrarily and illegally searching Americans going abroad and taking from them articles the British Government has forbidden Americans to carry on shipboard—though such a thing is absolutely forbidden by our fundamental law—and carrying on futile and mostly ridiculous prosecutions of alleged spies.

"The best commentary upon the silliness of this waste of public money is the fact that in two years Mr. Gregory's department has not succeeded in obtaining convictions in as many as 10 cases of this kind—and in not two of that small number would an intelligent juryman, upon his oath, have voted for conviction on the evidence.

"And while the Department of Justice has thus been made ridiculous and useless to the country by this absurd 'spy' obsession, little children are without food and fathers and mothers deny themselves ordinary necessities because the real and active and relentless and cruel enemies of the people—these villainous conspirators who create extortionate prices for the necessities of life—have not even been disturbed by so much as a subpœna.

"Now we say again to you Members of the House that the people are in no mood to see you put unheard-of tyrannical powers into the hands of an Attorney General who has proved himself so utterly unfit to exercise his rightful powers.

"This espionage bill which Mr. Gregory has drawn up and which the Senate has most unfortunately indorsed is a villainous attack upon the liberties of all of us.

"Under such a law no man would be safe.

"Any understrapper of the Department of Justice, any underling with a grudge, could swear away the liberty of the best man in the country.

"No man with money or property enough to tempt the cupidity of scoundrels would be safe from blackmail.

"We free men and women, the sons and daughters of the soil, if this infamous bill is enacted, would be no freer and no better protected from official and private oppression than are the wretched moujiks or the more wretched Jews who live in trembling fear of the Russian jail or the Russian knout.

"Here in this very land, which our fathers and mothers dedicated to their own and their children's freedom forever, and whose grasses and flowers of the spring are about to burst and bloom above the graves of so many thousands who died that that freedom might be permanent and secure, you representatives of the people are asked to enact legislation that destroys every man's freedom.

"Why, gentlemen of the House of Representatives, it is not a cannon shot from where you sit to-day to Arlington.

"The dead who sleep there in honor faced dangers beyond any we know to-day; faced war such as never had been waged on all the earth; faced powerful antagonists in front while

treason lurked in the rear; they knew well that the land was full of spies that were not the nightmares of silly brains—and do you think they would have endured to have such legislation as this imposed upon their people, even in that time of stress and deadly peril?

"No; not for ten thousand times ten thousand Gregorys!

"If you men of the House pass this bill, you can only do so with the assistance of a majority of the Democratic Members. And the Democrat who votes for this espionage bill is as false to the traditions and the examples of the Democratic Party as he is false to the traditions and the guaranteed rights and liberties of his people.

"Senator CUMMINS said to the Senate:

"This measure is the most stringent and drastic law ever proposed to curb a free people in time of peace or war. The Government would have absolute power in war time to suppress newspapers and prevent debate in Congress. It might even be held a criminal offense for two citizens to discuss with each other questions of military policy. Under such a law the agitation could never have taken place in England which led to the assumption of the premiership by Lloyd George."

In 1916 the Senate Committee on Naval Affairs said:

"As long as present conditions continue, the armor manufacturers are in a position to force the United States Government, in the language of the highwaymen, 'to stand and deliver.'"

The House committee said:

"The Government finds itself in such position as to be forced to contract for armor plate at the price submitted by the companies."

The foregoing statements clearly demonstrate that the administration of justice is inefficient to enforce the trust laws that were enacted to protect the people against the vicious combinations that are robbing and plundering them, and that even Congress, which is much more responsive to the interests of the people, seems to have its activities paralyzed by military hydrophobism that seems to be prevalent in the Capital of the Nation, and it seems that they only respond promptly to the call of militarism, which is resulting in hundreds of millions of the people's money being wasted under the name of preparedness for war, and therefore, the great masses of consuming and producing people should arouse themselves to concerted and organized activity and demand relief from the present extortionate high prices by insisting upon the enforcement of the antitrust laws by the Federal and State administrations, and also demand, if necessary, that special sessions of our National and State legislative bodies be called for the purpose of enacting laws that will give them immediate relief and protect them from like conditions that might arise should the present practices be continued and further destitution and hardships forced upon the people as the result of the robbery of these criminal combinations.

Military Highway (El Camino Sierra).

EXTENSION OF REMARKS

OF

HON. JOHN E. RAKER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. RAKER. Mr. Speaker, on July 5, 1916, I introduced a bill (H. R. 16788) known as the national defense military highway and post roads bill. The road contemplated lies along the east base of the Great Sierra Range. It is designated and known as the El Camino Sierra. On July 11, 1916, the San Francisco Examiner had a strong editorial on the construction of this road and the needs and necessities of same, likewise setting forth the benefit to be obtained by the Government from the construction of such a highway. This editorial is as follows:

NATION SHOULD BUILD SIERRAN HIGHWAY.

Three important considerations urge the approval by Congress of the bill introduced by Representative RAKER to provide $3,500,000 for the construction of a Sierran highway from Los Angeles north to the Oregon line, along the east base of the great California Range.

Such a road would add mightily to the popularity of California as a tourist resort, for it would join by broad and smooth highways the wonderful scenic points of California—Mount Lassen, the Feather River country, Lake Tahoe, Yosemite, and Mount Whitney.

Such a road would benefit the 12 neglected mountain counties it would traverse by affording them easy intercommunication by motor truck and teaming; it would make possible the development of great timber areas and mining properties and make accessible fertile mountain meadows now too remote from trade routes for profitable agriculture.

Such a road—and this argument should appeal to the Nation—would have a tremendous military importance should the vulnerable Pacific slope fall before an invading army from the Pacific. If the seacost of California were in possession of a hostile fleet, and if a hostile army occupied the cities and valleys, the Sierras would afford the screen behind which the national Army must form to drive out the invaders. With a highway along the eastern slope of the Sierras available for swift motor transport, the national forces could shift rapidly from pass to pass until an open gateway into the California plains would be discovered and the enemy repelled.

The mountain counties of California have contributed prodigally to the wealth of the nations. At the time of the Civil War the California placers furnished much of the gold that sustained the national credit, and yet the Nation has done little or nothing for them in the way of development.

Furthermore, in the great counties through which the proposed Sierran highway would pass—Modoc, Lassen, Plumas, Sierra, Nevada, Placer, El Dorado, Alpine, Mono, Inyo, Kern, Los Angeles—are great national parks, national monuments, and national forest reserves, which the Federal Government has taken from the State without local protest or complaint. Since these mountainous empires have been appropriated by the National Government, it would be reasonable for the Government to add to the accessibility of its imperial holding by the construction of suitable highways.

It is a land of glorious possibilities, of a generous past, and an enviable present, which would be developed by the construction of the Sierran highway provided for in the Raker bill now before Congress.

Mr. W. G. Scott, vice president of the Midland Trail Association for California, writing to the San Francisco Examiner under date of January 21, 1917, has the following to say on this national-defense military highway:

EXAMINER ROAD PLANS PRAISED.

[By W. G. Scott, vice president of Midland Trail Association for California and member of council national advisors in National Highways Association.]

It seems to me that the power of the press has never been more effectively demonstrated than now, as the direct and immediate result of the espousal of the cause of the California national-defense military highway by the San Francisco Examiner.

This great highway originally projected and for several years strenuously advocated by the Inyo Good Road Club, although a short time ago adopted in major part by the State as a trunk highway, and recently accorded the signal honor of recognition in the House of Representatives, has, owing largely to lack of proper understanding and indifference on the part of some, not received until now the State-wide attention its importance demanded.

The action of the Examiner in dispatching a special Chevrolet motor car to the capital city, Carson, carrying a communication from the governor of California to the governor of Nevada and sundry important documents to the legislature of the latter State relative to cooperation, is not only a mark of approval, country wide in its effect, but it is a distinct stroke of journalistic enterprise that evinces a keen sagacity and alertness in matters vital to the future of this State and Nation.

I am prompted to say this by the numerous expressions of approval and sympathetic support spontaneously tendered me by some of the foremost advocates of highway improvement, by prominent national organizations in the same sphere of activity and by the notable number of commendations received from officials prominent in both State and National legislative affairs, all evincing strong interest in the Raker military highway bill, in which is crystallized the great project now being so forcefully presented.

The Legislature of the State of California duly passed assembly joint resolution No. 6, by Mr. Dan E. Williams, indorsing the building of this national-defense military highway and the same was telegraphed to me by the Hon. B. W. Boothby, chief clerk of the assembly, which telegram from the California State Legislature is as follows:

SACRAMENTO, CAL., *March 2, 1917.*

Hon. JOHN E. RAKER, Member of Congress,
Washington, D. C.

In compliance with the provisions of assembly joint resolution No. 6, by Mr. Dan E. Williams, adopted finally in the senate yesterday, herewith find a copy thereof:

"Whereas the Hon. JOHN E. RAKER on the 5th day of July, 1916, did introduce a measure for the building of national-defense highways and post roads for the general good of the State of California over the El Camino Sierra: Therefore be it

"*Resolved by the assembly and senate jointly,* That our Senators in Congress be instructed and our Representatives requested to use all reasonable means to secure the passage of said measure establishing a military national-defense highway and post road for the general good that will be accomplished."

Owing to the fact that Members of Congress are no doubt returning to their homes I would deem it a great favor if you will arrange to have the above resolution conveyed to the Congressmen and Senators from California.

B. O. BOOTHBY,
Chief Clerk of Assembly.

The Lakeview Commercial Club, of Lakeview, Oreg., likewise the Commercial Clubs of New Pine Creek, Silverlake, and Paisley, Oreg., unanimously passed the following resolution:

LAKEVIEW COMMERCIAL CLUB,
LAKEVIEW, OREG.

Whereas the Hon. JOHN E. RAKER, Congressman from the second congressional district of California, has introduced a bill (H. R. 16788) "To acquire, construct, and maintain a military and national-defense highway and post road, extending from Los Angeles, through Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Mono Lake, through Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake through the towns of Fairport and New Pine Creek, all in California, to Lakeview, Oreg.; and from Alturas, Cal., down Pit River to connect with the California State Highway at Redding, Cal."; and

Whereas at Lakeview, Oreg., the highway will connect with all highways throughout central Oregon and also with the famous Columbia River Highway, having connections with all points in Washington and the northwest: Therefore be it

Resolved, That the Lakeview Commercial Club use every possible cooperative effort in assisting the passage of the bill, through the assistance of the various commercial clubs of Oregon and through our representatives in the State Legislature now in session, and through the assistance of our Senators and Congressmen in Washington, and further, assist by bringing the matter before the Spokane Chamber of Commerce; and therefore be it further

Resolved, That copies of these resolutions be mailed to Senators CHAMBERLAIN and LANE and Congressmen SINNOTT and HAWLEY and MCARTHUR, and that copies be sent to Senator Baldwin and Representatives Burdick and Forbes and that they be asked to secure an indorsement by the Legislature of Oregon for this bill; that copies be sent to the Commercial Clubs at Bend, Prineville, Madras, Burns, The Dalles, Hood River, and Portland.

THE LAKEVIEW COMMERCIAL CLUB.
By E. H. SMITH, *President*.

Attest:

LYNN F. CRONEMILLER,
Secretary.

The State Association of Supervisors of the State of California, in convention assembled in Sacramento, Cal., on February 23, 1917, unanimously adopted the following resolution:

Resolution passed at convention of State Association of Supervisors, in Sacramento, Cal., February 23, 1917.

Whereas there is pending in the Congress of the United States H. R. 16788, being an act introduced by Congressman JOHN E. RAKER for the construction of a military-defense highway connecting the several natural passes and roads of the Sierra Nevada Mountains for defense purposes; and

Whereas material preparedness is the best preservation of peace; and

Whereas the construction of such proposed military-defense highway will entail an amount which will only equal one-half the cost of a modern dreadnaught, the usefulness of the latter being limited to about 15 years and can be sunk in 15 minutes, while the national-defense highway will exist for all time as a source of joy for the people, an aid for prosperity, a support for the State, a security for the Nation, and a cynosure for the world; and

Whereas the early completion will aid in deterring aggressive attitudes on the part of certain world powers: Therefore, be it

Resolved by the State Association of Supervisors, That we urge the early enactment of said H. R. 16788; and be it further

Resolved, That our Senators and Representatives in Congress are hereby urged and requested to use every proper means to have said law passed and enacted without delay; and be it further

Resolved, That the secretary of this association mail to each of our Senators and Representatives in Congress a copy hereof.

The following correspondence was had by and between W. G. Scott, executive secretary Inyo Good Roads Club, and Hon. Emmett B. Boyle, governor of Nevada:

SAN FRANCISCO, CAL., *January 29, 1917*.

To his excellency Hon. EMMETT D. BOYLE,
Governor of Nevada, Carson, Nev.

ESTEEMED SIR: By the time you receive this communication, doubtless there will be delivered to you by Mr. A. G. Waddell, a special courier dispatched for the purpose by the San Francisco Examiner, a sealed packet containing three letters, one addressed to your honor by the governor of California requesting your cooperation in the matter of highways, one addressed to the president of the Nevada Senate, and one addressed to the speaker of the Nevada Assembly.

The latter two indicated by the writer, who is officially allied with sundry interested highway organizations.

The purport of this is to secure from the Legislature of Nevada a resolution of indorsement and request for enactment of H. R. 16788, introduced in Congress by Hon. JOHN E. RAKER, of California, copy of which, together with further descriptive literature, is inclosed herewith.

In connection with such indorsement and request, expressed approval of your excellency is deemed the essential element.

You are by this respectfully solicited to grant such approval.

The reason why the highway lies west of the Nevada line is purely one of military expediency, determined solely by strategical and topographical conditions from a military standpoint.

It needs but brief consideration to reveal the vital importance of this highway to Nevada and the Nation at large.

I am informed that this measure received the ratification of the California Legislature shortly before its temporary adjournment, and am just this day advised from Oregon that widespread and energetic efforts are being put forth to secure the indorsement and approval of that State, with every indication of success.

Both of which items I communicate with much satisfaction.

On behalf of the various widespread interests identified with the welfare of the Raker military highway bill, I have the honor to subscribe myself, with profoundest respect and esteem,

W. G. SCOTT,
Executive Secretary, Inyo Good Road Club, Vice President National Midland Trail Association for California, Chairman Division of National Parks in Council of National Advisors, National Highways Association.

—

STATE OF NEVADA,
EXECUTIVE CHAMBER,
Carson City, January 30, 1917.

W. G. SCOTT, Esq.,
Hotel Terminal, San Francisco, Cal.

MY DEAR MR. SCOTT: I am in receipt of your letter of the 29th instant, together with a copy of H. R. 16788, a bill to acquire, construct, and maintain a military and national-defense highway to extend from Los Angeles, Cal., to Lakeview, Oreg.

As yet Mr. Waddell has not arrived in Carson, but is expected daily, and on receipt of the communications which he bears I will take the steps necessary to initiate proper action by our State legislature.

Very truly, yours,

EMMETT D. BOYLE, *Governor*.

Mr. W. G. Scott, executive secretary Inyo Good Road Club, vice president National Midland Trail Association for California, chairman division of national parks, and member of council of nationl advisors of National Highways Association, has prepared a valuable article on this proposed military highway. It is so well presented and contains so many important matters I deem it advisable and worthy of insertion in the CONGRESSIONAL RECORD, which monograph advocating the national-defense military highway of California, by Mr. Scott, is as follows:

EL CAMINO SIERRA, MASTER KEY TO THE PASSES OF THE SIERRAS—A MONOGRAPH ADVOCATING THE NATIONAL DEFENSE MILITARY HIGHWAY OF CALIFORNIA, AS OUTLINED IN BILL TO CONGRESS BY HON. JOHN E. RAKER, MEMBER OF HOUSE OF REPRESENTATIVES FROM THE SECOND CONGRESSIONAL DISTRICT OF CALIFORNIA.

[By Wisner Gillette Scott, executive secretary Inyo Good Road Club, vice president National Midland Trail Association for California, chairman division of national parks in council of national advisors of National Highways Association.]

The 12 counties of California mentioned herein are greater in area than either Ohio, Kentucky, or Indiana, and are larger than Maine and Massachusetts combined.

Their united area is more than five times that of New Jersey and more than twenty times that of Delaware.

They comprise a territory more than one and one-half times the size of Greece, over two and one-half times the size of Switzerland, and more than three times as large as Belgium.

These comparisons are solely to illustrate physical importance.

As to economic importance perhaps sufficient references are the financial centers of American and Europe—San Francisco, New York, London, Paris, Berlin, or Petrograd—where some of the Sierra counties are familiar names.

From the foregoing it may be inferred that it is not without due sense of responsibility that this brochure—in which is crystallized the unanimous public sentiment of the region indicated—has been prepared to vouch for the proposed national-defense military highway and to affirm its merit as a factor of national strength and as an element in world power.

EL CAMINO SIERRA (THE MOUNTAIN ROAD).

This wonderful highway has exceptional claims to consideration because of its distinctive three-fold character:

1. Civil.
2. Commercial.
3. Strategic.

It is about 800 miles in length, extending from Lakeview, Oreg., near the boundary line, southward along the eastern base of the Sierra Nevada Mountains to Los Angeles, constituting the easternmost main trunk highway of California, approximately paralleling the other two State highways—the valley and the coast lines west of the Sierras.

It traverses 12 counties—Modoc, Lassen, Plumas, Sierra, Nevada, Placer, El Dorado, Alpine, Mono, Inyo, Kern, and Los Angeles—which combined have an area of 41,888 square miles, or 26,808,320 acres, embracing a territory greater than one-fourth of the entire State, with a population of 803,243, as shown by legislative authority in 1915, which represents nearly one-third of the population of the State, with property valued at considerably more than one thousand millions, or to be exact, $1,007,099,016.

This statement is made to indicate in a general way the physical importance of the territory traversed by El Camino Sierra—now proposed for a national defense military highway.

Because of the adjacent territory on the west in California and on the east in Nevada, with interwoven relations of almost equal weight, it is fair to add to the foregoing figures 50 per cent to show the enormous interests associated with this great highway; the improvement of which is to render the Republic invincible along one-half of its western border.

In order to convey a proper idea of the characteristics that give to El Camino Sierra its diversified supereminence, brief allusion only is necessary.

I. ITS CIVIL OR SOCIAL CHARACTER,

which includes its incalculable worth as a medium for closer connection between homes and schools, uniting neighborhoods and communities in more intimate bonds for mutual strength and betterment, amalgamating the desirable features of town and country in a manner not otherwise possible; bringing, as it were, into closer contact the people and the land, which conduces as naught else can to thrift, progress, and national vigor.

This highway unites 12 cities and important towns—each the county seat of its respective county—and each a metropolis proportioned to its environment.

The greatest asset of the Golden State is its *scenic wealth, and this* is in no sense depreciative of any other of its world-famed resources.

It is said that before the European war, American tourists expended abroad annually $400,000,000.

And this to visit scenic regions that without the admirable roads and inns would be inferior to those of their own country.

The greatest scenic assets of California are in the Sierra Nevadas, embracing an area of approximately 10,000 square miles, including four wonderful national parks—Lassen, Yosemite, General Grant, and Sequoia—each of its own peculiar attractiveness unexcelled.

El Camino Sierra is the one thoroughfare that meets in best degree the demands of transportation for all the trans-Sierra region.

It is strictly within the bounds of conservatism to state that the improvement of this great road to the extent necessary for a national defense motor-truck military highway would be a dominant factor in retaining in the United States for distribution at home at the very least considerably more than $100,000,000 annually.

Alluding directly to this subject, Hon. Franklin K. Lane, Secretary of the Interior, in his Annual Report for 1915, says:

"It would appear from the experience of this year that the real awakening as to the value of these parks has at last been realized, and that those who have hitherto found themselves enticed by the beauty of the Alps and the Rhine and the soft loveliness of the valleys of France, may find equal if not more stimulating satisfaction in the mountains, rivers, and valleys which this Government has set apart for them and for all others.

"It may reconcile those who think that money expended upon such luxuries is wasted—if any such there are—to be told that the sober-minded traffic men of the railroads estimate that this year more than a

hundred million dollars usually spent in European travel was divided among the railroads, hotels, and their supporting enterprises in this country. * * *

"There is no reason why this Nation should not make its public health and scenic domain as available to all its citizens as Switzerland and Italy make theirs.

"The aim is to open them thoroughly by road and trail and give access and accommodation to every degree of income. * * *

"It is the destiny of the national parks, if wisely controlled, to become the public laboratories of nature study for the nation. * * *

"If Congress will but make the funds available for the construction of roads over which automobiles may travel with safety (for the parks are now open to motors) and for trails to hunt out the hidden places of beauty and dignity, we may expect that year by year these parks will become a more precious possession of the people holding them to the further discovery of America, and making them still prouder of its resources, esthetic as well as material."

It is judicious to carefully consider an asset that yields annual revenue of more than one hundred millions.

At 10 per cent it represents an investment of one thousand millions.

Automatically maintained by nature.

A perpetual inspiration.

A legacy to humanity that is an imperishable pageant of Omnipotence.

Were this great asset the property of a well-managed corporation—awaiting improvement as it is, to yield annually more than 100 per cent dividend—there would be no hesitancy, no discussion, no public comment.

Quickly the improvement would be effected.

The dividend of one hundred millions, underestimated as it is, is a tangible, practical reality, without tinge of sentiment or ideality.

Cut it in half—cut it in half again; cut it again, and again—and you have surely exceeded demands of the most radical conservative, and you still have a dividend that greatly exceeds each year the entire original outlay, represented by the cost of improvement, for which appropriation is hereby asked.

This highway will provide the dividend, which will be at once put in circulation in the State and on the coast, to ultimately flow through all the veins of the Commonwealth.

II. ITS COMMERCIAL OR INDUSTRIAL CHARACTER.

The 12 counties through which this great highway is routed contain 3,977,853 farms, to say nothing of the numerous herds of horses, cattle, and sheep, and the myriad other dependencies that form part of an extensive rural domain.

The possibilities for future development are of even greater immensity.

In Modoc County alone 550,000 acres of arable land lie idle, chiefly because of inadequate means of transport.

And so mention might be made in detail of vast areas of fertile land in similar condition in the respective counties that only require improved medium of conveyance.

As to water supply, so vital to soil cultivation and industry, it need only be said that in all the highland counties are mountain streams of a beauty that no terse expression of words can describe, and a bounty that provides facts and figures of astonishing interest.

The industrial sphere is scarcely less important than that of tillage of the soil—rich in opportunities—but retarded by lack of facilities for transportation.

The Sierra Nevada Mountains are the home of the pine.

Eight thousand square miles is the approximate area covered by this valuable timber, and the larger proportion of it is comprised within the 12 counties named.

Lassen County alone has 1,000,000 acres of commercial forest.

Development of this great resource is held in abeyance.

A motor-truck highway would solve the problem.

It would be of greater public benefit than a railway.

It would belong to the people.

It would be controlled by the people.

The large and constant expenditure of money incident to travel and transportation would be distributed direct to the people, and afterwards by them put into general circulation.

So much for agricultural and forest conditions.

As to minerals, it must be borne in mind that the bulk of the mineral wealth of California is in these 12 counties.

Much has been removed, but still vaster quantity remains to be extracted when improved transportation affords the requisite encouragement.

The 12 counties mentioned are all at present mineral producing.

Two of the counties, Mono and Inyo, low in population, each in the last census accredited with seven-tenths of an individual to the square mile, but despite their fractional inhabitants equal to others in natural resources, although isolated to large degree from the outside world through lack of transportation, have in the last three and one-half decades, notwithstanding their stupendous handicap, jointly produced over $50,000,000 in new, clean wealth, taken out of the earth and given to the country.

Placer County, while ranking ninth in area in the group herein designated, has yielded $75,000,000 in gold.

Sierra County, next to the least in area of the 12 subdivisions, has yielded more than $200,000,000 in gold, from a district comprised within a radius of 20 miles from its county seat, Downieville, which town was founded in 1849, and out of the main street of which in early days gravel was taken that yielded $300 to the wheelbarrow load.

From one small area inside of the town limits $5,000,000 in gold was shoveled into the miners' boxes and carried away.

This region is awaiting a main trunk motor-truck highway.

Nevada County, tenth on the list in area, has contributed more than $275,000,000 in gold to the resources of the Nation.

These are figures that would be very largely increased by complete review of all minerals produced.

This golden tide is not confined to a past period, for it has not ceased to flow.

Kern County, which ranks second in area in the group, from its oil wells has within little more than a decade added $200,000,000 to the Nation's wealth.

Within the last four years prior to 1916 the counties enumerated gave to the Nation by official compilation $148,832,433 in mineral wealth alone, not counting the millions from other sources.

And this stream is still pouring forth with practically undiminished volume.

These counties have given to the Nation many hundreds of millions and are still contributing with unabated spirit, despite the possible depletion of their own abundance.

What happened in the dark days of the Civil War, when the strength of this Nation was reduced by financial weakness to a point that menaced its existence?

The mountain counties of California came to the rescue and tendered their vitalizing hundreds of millions for transfusion into the arteries of the Republic—and now these counties, having never before requested recognition, feel justified in asking for the construction of their motor truck highway, in order that their resources may be made more available in the future than in the past.

Trans-Sierra California is willing to rely upon the merit of its request for an appropriation of $3,500,000 for construction of a national motor-truck military highway, after careful, candid, and just consideration shall have been given to all the facts involved.

Hundreds of millions have been produced in the past for the national life.

A mere pittance in comparison is asked, in order that the production may continue.

III. ITS STRATEGIC VALUE.

Important as are the civil and commercial aspects of the great highway, that of its strategic value in a military sense is of even greater consequence.

The future of the Pacific coast offers to the student of affairs a prolific field for conjecture.

Grave and intricate international problems are liable to suddenly appear and require equally sudden determination.

The Panama Canal, by its shortening of distance between the two great oceans, permitting ships to accomplish in hours what formerly occupied as many weeks, has converted the Pacific into an arena of unwonted commercial activity, in which oriental enterprise has already acquired maritime supremacy.

A strange manuscript can only be read as it is unfolded, and world progress can only be interpreted as time unfolds the future, but recent world events unmistakably premonish that this country, to preserve its peace, should avail itself of every reasonable measure of preparedness to resist unwarranted encroachment.

And in considering such preparedness, sound judgment demands that not alone success, but possibility of reverse be anticipated.

For illustration, we will suppose that an enemy invader should succeed in landing upon the coast of California, an event which is by no means an impossibility.

Because—and it is merely for the purpose of illustration that the fact is mentioned—there is one country in the Orient that can disembark upon the California coast in 60 days 350,000 highly trained soldiers, equipped in the most modern manner, outfitted for three months' campaign.

This estimate, made in 1915, is based upon a fleet of 95 steamers available for transport service, and does not include passenger steamers.

Since the time of estimate 40 additional steamers have been built and 160 more are nearly completed.

This country in 1915 had 10 transports, with capacity for about 16,000 men afloat on both oceans—4 on the Pacific.

An invader having succeeded in landing, the seizure of coast railways and highways would immediately follow.

The defenders would then establish a main base of operations along the railway and highway lines in the great valleys of the interior.

Assuming again for the purpose of further illustration that the defenders are once more forced back, the next main line of operations would be established along the east base of the Sierra Nevada Mountains, on the third main trunk State highway, which is here proposed for conversion into a national defense military road.

The enemy would find itself confronted by a mountain range of lofty height and rugged topography, a stupendous barrier that would compel an advancing army, with all the impedimenta incident to war transportation, to abandon an extended front formation, avoid the abrupt slopes, yawning chasms, and precipitous summits, and contract into a comparatively narrow column for movement through the existing passes, which partake of the character of defiles and which would at once become what is termed in military parlance "critical areas"—chief centers of activity around which universal interest would thenceforth concentrate.

The most important of these passes or "cross Sierra" routes are already extensively used for motor-car travel and are 13 in number, popularly known as Pitt River, Lassen, Feather River, Downieville, Truckee, and Placerville routes, and Kit Carson, Ebbitts, Sonora, Tioga, Walker, Tehachapi, and Tejon Passes.

Brief reflection shows the overwhelming advantage afforded by control of these cross-mountain roads.

A comparatively small army advantageously placed would be able to check the advance of a force greatly superior in numbers, and if a forward movement should be further attempted, annihilation would likely result.

The Dolomite Alps, the Vosges, and the Carpathians in Europe have afforded instances where control of a pass has compelled change of an entire campaign.

The passes of the Sierras are the national entrances along the west cost of the Republic.

Who holds them and the highway connecting their mountain terminals, holds the keys that control admittance from the Pacific.

The fact is here emphasized that the proposed national-defense highway along the east base of and behind the great Sierra range is already used extensively for automobile travel, although it is mostly unimproved.

If put in prime condition for motor-truck transportation, 10,000 out of the 200,000 motor cars owned in California, commandeered for the purpose, could rush an army of 50,000 men from one pass to another a hundred miles away, between sun and sun.

With this main trunk highway properly improved, protected as it would be for hundreds of miles by a towering parapet of granite thousands of feet in height, and the passes controlled as they would be by all the resources of military skill, the Nation would have an inner line of coast defense that could be made impenetrable against any army.

Gibraltar at the Mediterranean entrance, although of comparatively few miles extent, has for generations received the eulogy of historians, the approval of strategists, and the deference of nations.

The national-defense military highway here proposed will render available for the United States an incomparably greater Gibraltar, with extent of almost a thousand miles.

Preparedness more substantial can not be devised.

If war be forced upon this country it must be regarded probable that slight interval will elapse between the declaration thereof and the striking of the first blow, hence the necessity for the most thorough preparedness in advance to resist invasion.

The most remarkable thing about preparedness is that it should be necessary to urge its adoption when the situation abroad is so vividly portraying what war means.

Where it is besmirching civilization, befouling history, and debauching mankind with its loathsome horrors.

Where the accumulated intelligence of 20 centuries is exhausting mechanical and scientific knowledge to destroy human life.

Where 5,000,000 men, representing the culture, the bravery, and the physical perfection of their respective nationalities, mangled by torrential rains of lead and shrapnel, are bunched in unmarked graves.

Where seventy-five thousand millions of dollars are subverted to the brutalization of humanity.

One has to pause to grasp the meaning of such facts.

The cost of the war in Europe, gathered from high authoritative sources, is $105,000,000 per day.

Add to this the ruthless destruction of industry and commerce.

Add the ghoulish demolition of homes and personal property.

Add the millions of millions of heart pangs and tears.

Then include the mental, moral, and physical ravages that will linger for generations to come.

And the result staggers the intellect and gives rise to an involuntary prayer for peace and the preparedness that will insure its preservation.

War is a national disaster.

To seek it is a crime.

To avoid it is good fortune.

To be immune is a blessing.

Preparedness by ample measures for defense is the closest approach to immunity from war ever discovered by man or revealed by God.

Peace is devoutly to be desired, but to secure it requires more than specious words, diplomatic protestation, or written page.

It is all very well to say peace.

But there is no peace separated from power.

A power that is revered by the just.

That is respected by the intelligent.

That is feared by the malicious.

Conceivably, the cost of a battleship may be fifteen millions.

It may, with circumstances favoring, efficiently endure 15 years.

It may be sunk and forever lost in 15 minutes.

For the national-defense highway herewith considered less than one-fourth the cost of such a ship is asked.

And when completed the highway will remain forever an indestructible defense and an imperishable testimonial to the wisdom of its builders.

A source of joy for the people.

An aid for prosperity.

A support for the State.

A security for the Nation.

A cynosure for the world.

Every minute of every hour of every day through all the years to come its service and its benefit will be ever ready and awaiting, constant and unfailing, whether in day or in night, in sunshine or in storm, in peace or in resistance against invasion.

The Appian Way in Italy was built before the time of Christ; to-day the road is as available for the Italian Army as it was for the Roman legions 2,000 years ago.

The most critical examination of the civil, commercial, and strategic features of this proposed national-defense highway serves but to emphasize its value—

For the defense of the country.

For the increase of its wealth.

For the maintenance of its institutions.

And for the preservation of its peace.

The structure of this Republic is assuming proportions that exceed its original design.

Its foundation requires attention.

Measures to strengthen are imperative.

The first measure is preparedness.

A preparedness for defense that deters war and provides the most effective aid to patriotism.

Such preparedness is the improvement of the national-defense military highway of California.

The highway that will form an invulnerable link in the defense system of the Pacific coast, where strenuous rivalry of national policies is inevitable.

The highway that means to the world a road that no hostile alien invader may ever hope to cross.

The highway that means to the Nation a pathway for progress.

Leading to a future brilliant as the midday sun.

Inspiring as the stars that glorify the flag.

Here are civil, commercial, and strategical advantages such as do not exist elsewhere along the entire seaboard of the United States.

Which by the improvement of this highway will promote industrial peace, prevent alien invasion, and insure the lasting welfare of the Pacific coast and the Nation.

Mr. Speaker, the country is interested in building national-defense military highways and post roads for the general good that will be accomplished. I have introduced a bill for this purpose. This military national-defense highway is proposed to be built where it will be of inestimable value.

The bill introduced by me on July 5, 1916, is known as H. R. 16788, and is as follows:

A bill (H. R. 16788) to acquire, construct, and maintain a military and national-defense highway and post road extending from Los Angeles, Cal., through Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Lake Mono, through Bridgeport, Markleeville, Tallac, Tahoe, Truckee, Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake past the towns of Fairport and New Pine Creek, all in California, to Lakeview, Oreg.; and from Alturas, Cal., down Pitt River to connect with the California State highway at Redding, Cal.

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized and directed to cause to be constructed a suitable military and national-defense highway and post road of 60 feet in width, with necessary bridges, out of such materials as may be found most suitable and best fitted, between Los Angeles, Cal., and Lakeview, Oreg., and Alturas, Cal., connecting with the California State highway at Redding, Cal., following the most convenient and feasible route between said points, using, improving, and reconstructing the present highways between said points when convenient and feasible.

SEC. 2. That said military and national-defense highway and post road shall commence at Los Angeles, Cal., passing Mojave, Freeman, along the east base of the Sierra Nevada Mountains, through Lone Pine, Independence, Big Pine, Bishop, along the west side of Lake Mono, through Bridgeport, Markleeville, Tallac, Tahoe, Truckee, Downieville, Quincy, Susanville, and Alturas; thence along the east side of Goose Lake past Fairport and New Pine Creek, all in California, to Lakeview, Oreg.; and from Alturas, Cal., down Pitt River to connect with the California State highway at Redding, Cal.

SEC. 3. That said military and national-defense highway and post road shall connect with the various highways that lead from the great valleys through and over the passes east of the Sierra Nevada Mountains, and in addition to serving the general use of the public through commerce and the mining interests to be adapted to the general requirements of general military defensive purposes, such as transportation of troops, arms, ordnance, munitions, supplies, and to the utilization of the many strategical advantages pertinent thereto.

SEC. 4. That the Office of Public Roads and Rural Engineering of the Department of Agriculture and the highway engineers connected therewith shall make all necessary surveys and superintend its construction (with the use of such available machinery as may be possessed by the Department of Agriculture), under the direction of the Secretary of War.

SEC. 5. That the Secretary of War is hereby authorized to accept on behalf of the United States the free offers of all necessary rights of way, material, and other assistance for the construction of said military and national-defense highway and post road that may be offered; and that the work of construction shall begin as soon as possible after the passage of this act. That the rights of way for the said military and national-defense highway and post road shall be acquired from the States of California and Oregon and the several counties through which the said highway runs on conditions satisfactory to the Secretary of War.

SEC. 6. That the sum of $3,500,000, or so much thereof as may be necessary, be, and the same is hereby, appropriated, out of any funds in the Treasury not otherwise appropriated, for the purpose of carrying out the provisions of this act.

SEC. 7. That in addition to the said military and national-defense highway and post road being used as a military and national-defense highway and post road, the same shall be open to the use of the general public free of tolls and under State control except when used for military and national-defense purposes. That the Secretary of War shall establish rules and regulations for the use of said military and national-defense highway and post road not inconsistent with the provisions of this act.

Education of Aliens Who Desire to Become Citizens of the United States.

EXTENSION OF REMARKS
OF
HON. FRANK P. WOODS,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. WOODS of Iowa. Mr. Speaker, I desire to insert in the RECORD a communication from Hon. D. F. Coyle, of Humboldt, Iowa, with reference to the item in the sundry civil appropriation bill providing for the education of aliens who desire to become citizens of the United States. The judicial duties of Judge Coyle bring him in close contact with aliens applying for citizenship. This, together with the fact that he is a close students of social and economic problems, makes the suggestions set forth in his communication worthy of consideration.

The communication is as follows:

POCAHONTAS, IOWA, *January 18, 1917.*

Hon. FRANK P. WOODS, M. C.,
Washington, D. C.

MY DEAR SIR: Permit me to call your attention to an item in the sundry civil appropriation bill now before Congress, increasing the appropriation for the field service of the Bureau of Naturalization of the Department of Labor $30,000 over the appropriation for the present fiscal year, which was $275,000.

This branch of the Government service has administrative control of all matters pertaining to the naturalization of aliens. The field force of this bureau—the naturalization examiners—investigate all applications for naturalization papers and report the result of their investigations to the various courts exercising jurisdiction in these matters, thus aiding very materially in the enforcement of the law in an efficient manner.

During the past year this bureau has taken upon itself the huge task of providing instruction and training in citizenship of applicants for citizenship, and otherwise helping our foreign friends qualify upon a higher standard of American citizenship. The public school authorities are being prevailed upon to institute night classes in which foreigners are taught to speak, read, and write in our tongue, and trained to understand our system of government so that they may become intelligent voters. As a result some 800 or more such night schools have already been established in the cities and towns throughout the country.

We must concede that this is a very laudable undertaking, which should be encouraged and supported to the utmost. The cost of this constructive and humanitarian work is indeed small when compared to the benefits accruing to the Nation as a whole. The most striking feature of this Americanization movement is the fact that it can be carried on without any expense to the Government. It does not cost the citizens of the United States one cent. It is all paid for by the foreigners admitted to citizenship. The nominal fees paid by them for the great privilege of acquiring citizenship defray the expenses of

the good administration of the naturalization law as well as the expense of this great Americanization movement, and still an average of over $65,000 a year is being turned into the Federal Treasury. There would seem to be no good reason, therefore, why the $30,000 increase asked by the Secretary of Labor for this branch of his department should not be granted. Without this additional fund the work of the Naturalization Bureau will be seriously hindered.

It does not seem entirely just and proper that the money paid by foreigners for their naturalization should be used as revenue for the maintenance of the General Government, especially since it can be used to much better advantage in the patriotic endeavor of educating the foreigners in their civic duties and responsibilities.

Might I ask, therefore, that when the sundry civil bill comes up for consideration this particular appropriation for the Bureau of Naturalization receive your valuable support and indorsement? I understand that the following item in said bill relates specifically to the appropriation for the field force of this bureau: "For promoting instruction and training in citizenship of applicants for naturalization, including personal services in the District of Columbia, attendance at educational and citizenship conventions by the officers and employees of the Bureau of Naturalization and members of its field force, and other necessary expenses incidental thereto."

I have no intimation that any opposition exists to this appropriation. Certainly there could be no danger of its rejection if the pressing need for this additional appropriation were generally understood.

Very truly, yours,

D. F. COYLE,
Judge of the District Court,
Fourteenth Judicial District of Iowa.

International Commerce Commission.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. RAKER. Mr. Speaker, I desire to place in the RECORD as a part of my remarks a concise statement of the needs and necessity of an international commerce commission. This statement shows a splendid record on this great subject, and the facts therein contained are a monument to the able, efficient, active, and intelligent work of Hon. David Lubin, of Sacramento, Cal. I think the information contained in this statement by Mr. Lubin will be of great value to the Members of the House and to the general public as well.

The statement is as follows:

"Unfixed rates of ocean carriage for the staples disturb and impede the whole mechanism of exchange, affecting adversely the economic status of the people, not only in one country, but in every country of the world."

FURTHER PAPERS ON THE RESOLUTION PASSED BY THE CONGRESS OF THE UNITED STATES FOR AN INTERNATIONAL COMMERCE COMMISSION.

[By David Lubin.]

IS NOT OCEAN CARRIAGE A PUBLIC UTILITY? IF SO, SHOULD IT NOT BE UNDER PUBLIC CONTROL?

INTERNATIONAL INSTITUTE OF AGRICULTURE,
Rome, Italy, December 1, 1916.

Hon. JOSHUA W. ALEXANDER,
Chairman Committee on Merchant Marine,
House of Representatives, Washington, D. C.

DEAR MR. ALEXANDER: I take pleasure in handing you herewith a further document on the proposal under House joint resolution 311 for an international commerce commission on ocean carriage, which proposal, as you know, is to come up for international action at the close of the war.

This document is the outgrowth of a series of meetings which I recently had when in London with leading British officials and shipowners.

As copies, when printed, are to be circulated among farmers for public reading in meetings of the granges, National Farmers' Union, and other farmers' associations, it was deemed advisable to cast the main arguments in dialogue form in an attempt to make the presentation the clearer.

Knowing the keen interest taken by yourself and your committee in the proposal I am prompted to hand you the document in the confident hope that you will give it the attention its merits may deserve.

With high esteem, I have the honor to be,

Yours, very sincerely, DAVID LUBIN,
Delegate of the United States,
International Institute of Agriculture, Rome, Italy.

"The disadvantages of the system [of shipping rings] are those which are usually inseparable from a monopoly not subject to control." (British Report on Shipping Rings, p. 79.)

INTRODUCTORY NOTE.

Quite a few years ago, accompanied by a friend, I went to see some land in Inyo County, Cal., situated in the northeastern part of that State, on the eastern slope of the Sierra Nevada Mountains. We found plenty of land available, of good quality and at low prices.

"You seem to have it quite dry here," I remarked to the land agent who met us on the journey.

"Oh, yes; this is substantially a rainless region. We can raise nothing here without irrigation." Pointing some distance ahead, he said: "Yonder is the Owens River; plenty of water there; we bring it down in the irrigating ditches."

"Does the water go free with the land?"

"No; you pay for the water as you use it."

"To whom?"

"To the company which owns the water right."

"What do they charge for the water? Do they contract to furnish it at a fixed rate?"

"They are not ready yet; their engineers are just making surveys; but I do not think their rates will be very high."

I thought the matter over and came to the conclusion that uncontrolled ownership of water rights is wrong; it gives the owner of those rights power to exert social, economic, and political pressure over the water users. It is dangerous to permit the uncontrolled use of such power.

Expand Inyo Valley to the size of an extensive country with a great company owning the irrigating waters, and what have we got? A tyranny pure and simple. And what is here said of the danger of uncontrolled water rights may be said of the danger of uncontrolled ocean carriage.

OCEAN CARRIAGE IS A PUBLIC UTILITY; IT SHOULD BE UNDER PUBLIC CONTROL.

Concentrate the business of ocean carriage in the hands of shipping rings, and what have we got? We have also got a tyranny pure and simple, for the shipping ring may likewise exert social, economic, and political pressure, pressure exerted not merely over a few farmers, a few exporters or importers of the staples, but over all the farmers of the land, and over all the people of that land. Nor is this all. As the business of ocean carriage is from country to country, international, this pressure can be exerted not merely over one country but over every country.

We talk of the "freedom of the seas," but if that means freedom from the restraint of law, then such freedom may mean the enslavement of the people. Every vessel that plies the seas as carrier of passengers or carrier of merchandise should be bound under law as rigorously as the railways are under the Interstate Commerce Commission. The carrier should not have the right to operate under the ordinary laws of commerce, under unrestricted competition, nor should he be permitted the right of operating under uncontrolled shipping rings. Carriers all, whether they be street cars or railways, or ships, carriers by land and carriers by water, whether within the country or in international trade, should be under law, with rates of carriage fixed and made known in advance, not merely for home traffic but, and above all, for international traffic.

Unfixed rates for the ocean carriage of the staples, rates that vary "from day to day and from hour to hour," bring into play factors which dislocate the equities in the world of commerce and industry, and consequently form a deep-rooted cause of economic injury the world over. What poison is to the human body, that uncontrolled ocean carriage is to the body politic; as the corruption of the blood by poison throws out of harmony the normal functions of the body, so does uncontrolled ocean carriage set awry the equities in the mechanism of exchange.

Does this statement seem too broad, too sweeping? Then I would beg the reader to go over the few pages in this booklet carefully; let him compare the generalizations contained therein with the facts as set forth in the report to Congress on shipping combinations and in the British report of the royal commission on shipping rings, and then let him give his answer.

On all sides it is recognized that at the close of the war there will be many readjustments. The control and regulation of ocean carriage through an international commerce commission should be among the first of these readjustments.

THE INFLUENCE OF THE COST OF OCEAN CARRIAGE IN DETERMINING THE HOME PRICE OF THE STAPLES.

PROPOSAL FOR AN INTERNATIONAL COMMERCE COMMISSION.

The Congress of the United States in September, 1914, passed the following resolution (H. J. Res. 311):

"*Resolved*, etc., That in accordance with the authority of letter (f) of article 9 of the treaty establishing the International Institute of Agriculture, which provides that it 'shall submit to the approval of the Governments, if there be need, measures for the protection of the common interests of farmers,' the American delegate to the International Institute of Agriculture is hereby instructed to present (during the 1914 fall session) to the permanent committee the following resolutions to the end that they may be submitted for action at the general assembly in 1915, so as to permit the proposed conference to be held in Rome during the fortnight preceding the session of the general assembly of the institute in 1917:

"Resolutions: The general assembly instructs the International Institute of Agriculture to invite the adhering Governments to participate in an international conference on the subject of steadying the world's price of the staples.

"This conference shall consist of members appointed by each of the Governments adhering to the institute and is to consider the advisability of formulating a convention for the establishment of a permanent international commerce commission on merchant marine and on ocean freight rates with consultative, deliberative, and advisory powers.

"Said conference to be held in Rome during the fortnight preceding the session of the general assembly of the institute in 1917."

This resolution was accordingly submitted to the International Institute of Agriculture on February 27, 1915. After due deliberation it was ordered that it be part of the program of the next general assembly, which is to convene on the termination of the war.

THE LONDON CONFERENCES.

On returning from the United States to Rome, for the 1916 autumn session of the institute, I took the occasion of a few weeks' stay in London to go over the proposal embodied in this resolution with representative British officials and shipowners. In this I was favored by the assistance of Sir James Wilson, the British delegate to the institute.

Through the kind offices of the American and Italian Embassies, an audience was arranged with the president of the board of trade, the Right Hon. Walter Runciman. The subject was also gone over with the permanent secretary of the board of agriculture, Sir Sydney Olivier, and with Mr. Hipwood, assistant secretary of the mercantile marine department of the Board of Trade.

On October 2 the proposal was discussed with Mr. Finlay, secretary of the Baltic Exchange, at whose suggestion I saw the president, vice president, and secretary of the British Chamber of Shipping.

Valuable assistance was given by Mr. J. P. Mackinder, Member of Paliament, who was instrumental in interesting Sir Owen Philipps, a leading shipowner, who called at the hotel, when the subject was taken up in detail.

On October 9 I addressed a meeting on the proposal at the school of economics of the University of London. A general discussion followed.

On September 29 Mr. Middleton, of the intelligence department of the Board of Agriculture, accompanied by Sir James Wilson, came to see me by appointment. During our conversation Sir Norman Hill, secretary of the Liverpool Steam Ship Owners' Association, called, when as a result of general discussion Sir Norman proposed to arrange a meeting with the leading shipowners of Liverpool and to notify me further.

On October 9 I received the following telegram from him:

"LIVERPOOL, *October 9.*

"Representative Atlantic lines can meet you on Thursday at 1a Cockspur Street, London, at 3 p. m. Please wire if day and hour suit you."

I replied in the affirmative, and the meeting was accordingly held on October 12 at the office of Mr. Harold Sanderson.

The following lines were represented:

Allan Line, Canadian Pacific, Furness Withy, Associated Lines, White Star Line, American Line, Cunard Line, Harrison Line, Wilson Line, Atlantic Transport Line, Dominion Line, Leyland Line, and Mr. Schofield.

The meeting convened at 3 p. m. and terminated at 4.45. The British delegate to the International Institute of Agriculture was present by invitation and made an introductory statement. I was asked to follow, and presented the case for an international commerce commission as a means of furthering the equities in the price formation of the staples.

The presentation was, in substance, on the lines set forth in the debates before Congress (see CONGRESSIONAL RECORD, Sept. 1, 1914) when House joint resolution 311 (quoted on p. 4 of this paper) was *up for passage*. Supplementary to this I handed in a paper (hereto attached as an addenda) outlining a tentative plan of procedure were the proposal adopted.

A majority of the shipowners at the conference seemed to be opposed to changes in the present system, expressing doubts as to the need and practicability of an international commerce commission. It was, however, apparent toward the close of the meeting that the interest of some had been arrested to an extent which inclined them to consider the proposal tentatively.

That, of course, was about all that could be reasonably expected at a first hearing of the case. It took, as we all know, many hearings to win over the railway people in favor of the Interstate Commerce Commission. Some were never won over, and yet the Interstate Commerce Commission is here and the fears expressed by the railway magnates as to the jeopardy to the value of their shares and bonds were proven groundless. Before the advent of the Interstate Commerce Commission their shares and bonds wabbled in the markets at times on the low level of "wild cat." Now, under the commission, these shares and bonds are "gilt-edged," not alone at home but in the markets of the world.

THE ARGUMENTS PRO AND CON.

It seemed to be assumed by some that the ships are deserving of the main consideration; that as a glutted market with consequent price depression in the producing countries would ensue unless ships were available to export the surplus, therefore the ships "hold the fort," the ships are primary.

It was, however, pointed out that without the "bulk freight," without the staples, the ships would soon be forced into bankruptcy: It would thus seem that the staples are, in reality, primary, not the ships.

It was also argued that shipowners have a right to control their own property in their own way, especially so if that way indirectly promotes the interests of British manufactures by bringing in cheap supplies for the British workman.

In reply it was submitted that if that "way" were to generate a power to throttle, a willingness to throttle, and lead to the act of throttling, it would not be nearly as profitable as it might appear to be. This seems obvious, for as the producing nations are customers of British manufactures it must follow that if they are impoverished through forced depressions in the price of their staples, they can not be nearly such good customers as they might otherwise be, nor could they then afford such a profitable field for the investor.

Besides, it may be seriously questioned whether the present "way" really does give "cheap supplies" to the British workman so long as those supplies are only permitted to filter down to him through the hands of the speculator, the shipper.

And here it may be well to explain the sense in which the term "shipper" is used in this paper, and the position which this "shipper" occupies in relation to the subject before us.

As may be seen from the American and the British reports on shipping rings and combinations, there are two classes of shippers: First, shippers of the merchandise, known as "package freight"; and, second, shippers of the staples of agriculture, known as "bulk freight."

"Package freight" covers about 200 out of every 900 tons of freight carried, and goes at fixed rates. "Bulk freight" represents 700 out of every 900 tons, and goes at unfixed rates.

The shippers of "package freight" are mainly manufacturers, merchants, and shipping brokers. The shippers of "bulk freight" are mainly buyers who are speculators in the staples of agriculture. In this paper the term "shipper" is used to designate these buyers and speculators in the staples.

During the London conferences some of the shipowners contended that it is not they but these "shippers" of the staples, these speculators, who favor the present system of unfixed rates. Indeed, it was stated that so far as the shipowners are concerned, they would be as strongly in favor of fixed rates on "bulk freight" as manufacturers and merchants are for fixed rates on "package freight." This is an important admission for our case.

As to the speculators in the staples, the "shippers," it is easy to see why they want unfixed rates for ocean carriage. The element of uncertainty through unfixed rates, and the rare opportunities for price manipulation which it affords, are in reality the stock in trade of these speculators. Remove this uncertainty and the speculator would then be transformed into a mere broker; he would then be rendered harmless.

Under the present system ocean freight rates are jumped highest when the bulk of the crop is changing hands, thus correspondingly lowering the home price at the time when the speculator is buying. With a large proportion of the crop bought and stored in warehouse and elevator, and for the time being outside the reach of changing hands, ocean freight rates are down, when, as a result, the home price of the staples is forced up; and this is the time when the speculator lets out the product to the consumer. So then under this system of unfixed rates for ocean carriage, this system of uncertainty, the speculator seems to play a game of "heads I win, tails you lose."

The influence and bearing of the cost of ocean carriage on the home price of the staples will be presently shown.

OCEAN CARRIAGE A WORLD PROBLEM.

As to the solution of this problem it was made evident that no mere national action can be effective, for the factors that operate are international, not national. As Mr. Hipwood, the assistant secretary of the marine department of the British Board of Trade, stated to me:

"The question of ocean freight is a world problem, and one of very great importance to all countries. As a world problem it can not be settled satisfactorily by any one nation nor by any one interest acting alone."

Substantially, the same opinion was expressed several years ago by Sir Sydney Olivier, permanent secretary of the British Board of Agriculture.

Reflection will also make it clear that the limited scope open to attempts at coercive national action for the control and regulation of international shipping is inadequate for the ends in view, for coercive measures against foreign ships in home ports could be effectively counteracted through adverse action of the shipping rings in foreign ports.

In substance, this was the stand taken by Mr. ALEXANDER, chairman of the House Committee on Merchant Marine, when speaking in support of House joint resolution 311 (see p. 4) and concurred in by Congress. Mr. ALEXANDER then said:

"It is true that our Government would be impotent to enforce reasonable rates or stabilize rates on farm products in international trade in the absence of an international agreement. * * * It is an international problem and can only be solved by international agreement."

As no stenographic report of the proceedings in the London conference was made I purpose to set forth the general trend of the arguments offered pro and con during the various discussions. And as this document will be largely read by farmers, a technical form and technical terms have been avoided. So as to make the presentation the clearer it has been cast in the form of a colloquial dialogue. Most of the points dealt with were brought up in the London conferences.

FARMER BROWN'S PERPLEXITIES—THE DIALOGUE.

Farmer Brown, a member of the Farmers' Education and Cooperative Union of America, had just harvested his crops when he was visited by a buyer, and the following conversation took place between them:

BUYER. I have the pleasure of addressing Farmer Brown, I believe. May I hand you my card? I am Jones, of W. M. Thompson & Co., wheat buyers. I understand that you have some wheat for sale. If so, I should like to see some samples.

UNION FARMER. Yes; I have 2,000 bushels for sale, and shall be pleased to submit the samples to you.

BUYER (examining the samples, which he finds satisfactory). How much do you want a bushel?

UNION FARMER. Well, what are you paying?

BUYER. I can offer you 73 cents.

UNION FARMER. How's that? I hear that wheat is worth much more this season.

BUYER. How much?

UNION FARMER. Oh, I don't know, but some considerable more. Why, last week I read in the papers that it was bringing 85 cents on the New York wheat pit.

BUYER. Well, you know the prices are changing right along. I can assure you that 73 cents is as high as you can now get anywhere. The longer you wait the less you are likely to receive.

UNION FARMER. Well, I don't think I'll sell to-day, anyhow. I am going to New York in a day or two, and you may call again in a couple of weeks if you like.

A few days later Farmer Brown arrives in New York and goes the round in an endeavor to find a buyer at a higher price, but he is unsuccessful. On returning to his hotel he falls in with an acquaintance of his, Mr. White, a manufacturer and exporter, with whom he goes over his morning's experiences. Mr. White is of the opinion that there should be no difficulty in disposing of so staple a product as wheat.

UNION FARMER. Oh, I can sell it easily enough; there's no trick in doing that. The point is to get the right price for it, and that, I can assure you, is no easy matter.

MERCHANT. Well, of course, I am unfamiliar with the details of your business, but I suppose you are right. I wish I could be of service to you, but I am afraid I can not. But wait a minute; I see a friend of mine, Senator Grey, at the other end of the room. I understand that he was interested in a measure that was up in Congress on the price formation of the staples. Maybe he can throw some light on the subject.

WHAT MAKES THE HOME PRICE?

Presently all three are seated together and the matter is brought up.

SENATOR. I am certainly interested in your problem, for, as Mr. White may have told you, not long ago a measure was pending in Congress which had a bearing on the subject. While my time did not then allow of my going into the details as thoroughly as I should have wished, I was nevertheless sufficiently impressed to aid its passage by voting in its favor. As that measure was, however, but preliminary to further action, I am glad of this opportunity of learning more about the subject. Now, let me see; you want to know what the price of your wheat should be, and if I remember correctly, to arrive at the home price of a staple we should first ascertain the world's price, the Liverpool price, and then deduct therefrom the cost of delivery from the point of export to Liverpool.

UNION FARMER. But of what use would all that be to me? I am not selling for export; I just want to sell on the home market as I always do.

MERCHANT. Yes; I really fail to see what Farmer Brown had to do with getting wheat to Liverpool. That may be all right for an exporter, but Brown is not exporting. He just wants to sell right here; he wants to know the home price, as I do when I sell my furniture. If I sell 100 dozen kitchen chairs, in arriving at their price—say, $7 a dozen—I do not have to inquire what chairs are selling for in Liverpool nor into the cost of ocean carriage, so why need Farmer Brown inquire?

SENATOR. Well, I will try to state some of the explanations which were given when the measure I have referred to was pending in Congress. You will then see why.

Observe: Your furniture, in common with almost all manufactured goods, is sold by private sale. That is, it has no standard world price. But with the staples of agriculture it is different. They are sold at public sale, just as bonds and shares and stocks are; their prices are continuously quoted on the bourses, pits, and exchanges of the market centers of the world; and their home price in the exporting country should be the price ruling in the world's importing center, say, Liverpool, less the cost of delivery from the place of production to that center.

Therefore, let me repeat, to know what price Farmer Brown should be getting for his wheat on the home market, whether the 73 cents he has been offered or whether 80 cents or 90 cents, he should first find out what is being offered per bushel at Liverpool; he should first find out the world's price. So, let us look that up in the paper. Yes; here we are: They are offering a dollar a bushel at Liverpool. And now, in the second place, we must find out what it costs to deliver the wheat from New York to Liverpool, so we must find out the cost of ocean carriage. We will then deduct that cost from the Liverpool price, and we shall thus know pretty nearly what the home price at the port of New York ought to be.

UNION FARMER. And how am I to find that out?

THE UNKNOWN FACTOR.

MERCHANT. Oh, that's easy enough; there is no trouble in that. I think we can find it out right away from my friend the secretary of the chamber of commerce. Let me see; there's a telephone. Let us call him up.

"Hello! Chamber of Commerce? Are you there? The secretary? Well, then, I am Mr. White; can you oblige me with a schedule of the ocean freight rates for the staples of agriculture? What! You say there are no fixed rates for the ocean carriage of the staples? How's that? I know there are fixed rates on 'package freight,' on furniture and other merchandise. Yes; but not on wheat? Do you mean to tell me that 'freight rates for agricultural products change almost daily and sometimes several times during the day'? That there are no fixed rates for the carriage of the staples? Indeed, is that so? Thank you for the information."

UNION FARMER. So, then, the cost of carriage can not be ascertained in advance? That's curious, isn't it?

SENATOR. So it would seem.

MERCHANT. There must surely be some mistake. I can not understand it at all. Why, how could a wheat buyer for over-sea export calculate the "lay-down" price if there were no fixed rates for ocean carriage? If an export buyer wants 100 dozen kitchen chairs to sell at $1 each in London, and if he knows that the cost of delivery will be 10 cents on each chair, he can well afford to pay $7 a dozen for them. But supposing there were no fixed rates; that the rates were to fluctuate from "day to day and from hour to hour," so that it would be a chance whether the chair would bring him a loss or a profit, how could the buyer determine the "lay-down" price? He would not be able to determine it at all. He would have to guess the price in buying and guess the price he would have to sell at; he would then be a speculator.

Now, if there are fixed rates of ocean carriage for kitchen chairs, there must surely be fixed rates of ocean carriage on such an important staple as wheat. I think that the secretary of the chamber of commerce must have been mistaken in his information.

SENATOR. It strikes me that the secretary is not mistaken. If I remember rightly, when the measure I have referred to was up in Congress it was then shown that fixed rates of ocean carriage do not apply to the staples, but only to general merchandise, to what is known as "package traffic."

UNION FARMER. Well, one thing is beginning to make itself clear to me, anyhow. The farmer, not knowing at the time of selling his products what the cost for their ocean carriage will be, is confronted by an unknown quantity, by an unknown factor in price formation. Whether this factor is also unknown to the shipowner is another question. So, then, under present conditions it is clear that the farmer, at least, is bound to come out at the small end of the horn.

MERCHANT. You would seem to be right in your conclusion as things now stand, but I am glad of our talk anyway. It is clear to me that the question is well worth looking into.

SENATOR. Indeed it is. I must be going now, as I have an appointment, but I should be sorry to let the matter drop here. Could we not each of us make further inquiries for the facts in the case and arrange to meet again before long to see what conclusions we are led to?

MERCHANT. That is a good idea. I also must be going now, but should be pleased to come if the meeting you suggest is arranged.

UNION FARMER. I like the suggestion very much. How would it suit you, gentlemen, to come down for the short end of the week to my farm at some time in the near future?

SENATOR. That would suit me first rate, and if this be agreeable to our friend Mr White I will also arrange to come.

The meeting then adjourned.

CONTINUATION OF THE DISCUSSION.

Some time thereafter our friends reconvened in the house of Farmer Brown, who opened the meeting by introducing a neighbor, Mr. Platt.

UNION FARMER. I wish to introduce my friend Mr. Platt, a member of the Grange. I have gone over with him the subject of our discussion, and he expressed a desire to be present. I thought you would be pleased to have him come.

SENATOR. I am sure that we shall be glad to have him present and take part.

GRANGER. Thank you; I am of course keenly interested in the matter to come before us. It happens curiously enough that Mr. Brown and I may be said to represent at this meeting (of course unofficially) two of the leading farmers' associations. I am, as he told you, a member of the Grange, while he is a prominent member of the Farmers' Educational and Cooperative Union of America.

UNION FARMER. Well, gentlemen, I am glad we have met at last. As you, the long interval which has elapsed since we adjourned is due to the several requests by Senator Grey for postponements.

SENATOR. Yes, you are right; but we have thereby had a chance to look the matter up.

UNION FARMER. That is so, and I am quite anxious to hear the results of your inquiries. Of course we all understand that we are not here to talk about the disposal of my 2,000 bushels of wheat. We realize that it forms but a mere incident in the inquiry in which we are all so deeply interested. But as it was instrumental in bringing up the subject before us I think you will be interested to hear my subsequent experiences. After our meeting adjourned I made further efforts to dispose of my wheat, and finally heard that buyer Jones was around again. As nothing better had offered I decided to hunt him up, but what do you think? Instead of quoting a higher price, as I had hoped he would, he said that wheat had declined, and so I had to accept 70 cents instead of the 73 cents he had offered me before. Evidently the buyer has the upper hand in the game.

SENATOR. So it would seem. And now, so as to start the ball rolling, I would suggest that our friend the merchant open the discussion for us.

GUESSWORK AND SPECULATION.

MERCHANT. You may remember that shortly before we adjourned we were informed that there were no fixed rates for the ocean carriage of the staples. I had occasion to bring this matter up at a meeting of merchants, when the statement was received with surprise and incredulity. As you may know, legitimate business is not primarily interested in high rates or in low rates for carriage, but in fixed rates. Ocean rates might even be so low as to cause a loss to the carriers, and yet if they were unfixed they would cause such uncertainty in commerce as to knock all business calculations into a cocked hat. We can all see clearly that with freight rates "changing from day to day and from hour to hour" legitimate merchandising business could not be done. All would then be guesswork, speculation. Merchants would not stand for such a system for a single day.

UNION FARMER. The remedy would then seem to be fixed rates for the ocean carriage of the staples, and why should not Senator Grey be the man to introduce national legislation toward this end?

GRANGER. If you will permit me I would suggest that we go slow on this fixed-rate business. The agricultural interest is too great and too important to be jeopardized by spasmodic attempts at imaginary reform. The Grange had some such experience in the early seventies when reformers jumped to the front to brush aside the middlemen, and got the Grange at work starting banks, and loading ships with grain, and doing the exporting on its own hook. And what became of all that? Why, it was all a whirlpool of loss, loss, loss. One such trial ought to be enough. It does not take much of a calculator to know that fixed rates mean high rates, and we also know that high rates for ocean carriage mean a low home price for the farmer. So what would be the benefit of our knowing the rate in advance if we also knew in advance that the knowledge will bring us a low home price for the product? I think that we had better leave good enough alone. The laws of trade generally adjust themselves all right if left to themselves.

SENATOR. That there is an element of truth in the generalized statement just made may be readily granted, but is it the whole truth? We shall see. But before proceeding further I wish to revert for a moment to the reason for my past requests for postponements.

You may remember my statement at our former meeting that I aided in the passage of a measure in Congress which had a bearing on this subject. The measure called for an international conference on a proposal for an international commerce commission. I have since gone over the data and the arguments then submitted in the House and have also looked up other avenues of information. Crystalizing all this I have brought some of the documents with me, to which we may refer, among them the British Parliamentarly Report on Shipping Rings, and the American Report to Congress on Shipping Combinations.

Now, to return to Mr. Platt's statement that the laws of trade "adjust themselves" if let alone let us see if they do. Were it so, there would be little need for law courts, legislative bodies, boards of trade, chambers of commerce, and the efforts of individuals or of corporate bodies, for all these activities are largely directed toward the reduction of friction in commerce, toward the point of least resistance, toward the attainment of the equities in exchange.

THE DILEMMA.

Now let us see how the case stands with ocean carriage. Let us take, for instance, the following brief historic outline in the British Report on Shipping Rings, page 75:

"In the days of the sailing ship the date on which a ship was likely to arrive could not be predicted with any certainty, nor was there any certainty as to the date at which she would sail. The substitution of steam for sail rendered possible the supply of organized services of vessels sailing and arriving at fixed dates. * * * With the development of the steamship there arose * * * the establishment of services of regular lines. * * * It is the function of the liner to provide a continuous and organized service on a particular route."

The system of regular lines, of regular sailings thus made possible by steamships was, of course, an improvement; but this improvement led to a condition which worked a hardship on the shipowners. There was the "cutthroat competition" of the lines among themselves, and tramp units, representing but a nominal investment, adroitly exploited the ocean from port to port, thus jeopardizing the returns on the vast sums of money invested in the liners. This condition was overcome by combination, as may be seen from the following (British Report, p. 76):

"In the course of time the competition between the regular lines became so keen that, after serious loss, they found it necessary to draw together with a view to mitigating and regulating the severity of their competition with one another. This object was attained by the establishment of shipping conferences or alliances of existing companies."

We thus see that a change in the mode of carriage from the sailing vessel to the steamship brought about a new condition adverse to the shipowners, resulting in an effort on their part to right themselves through shipping rings. Now, this may "adjust" the situation all right for the carrier, the shipowner, but does it "adjust" it for the producer and the consumer? Does it adjust it so far as the staples are concerned?

I think not, for it is obvious that if the function of rate fixing be exclusively vested in the shipowners they are likely above all things to consider their actions from the standpoint of their own special interests, even if these conflict with those of the producers and the consumers; and besides, the shipowners would thereby acquire a sphere of influence in the determination of prices altogether disproportionate to their importance.

THE LAW OF CARRIAGE.

GRANGER. We, of course, know that sailing vessels were the carriers before the steamships came along, but are not steamships also subject to the laws of trade, to the law of competition? It is said that the staples are governed by the law of supply and demand; that when the supply is above the normal the price will be below the normal, when the supply is below the normal the prices will be above the normal.

Now, then, as I understand it, the same law operates in determining the cost of ocean carriage. When the supply of freight is above the normal the price of carriage must be below the normal; and does not this give us the lowest rate for carriage at the time when the largest amount of the staples are changing hands, at the time when the farmers are selling their products?

SENATOR. Believing as he does, it is perfectly natural for Mr. Platt to come to the conclusion he has arrived at. But what are the facts in the case? We find that in ocean carriage the case stands differently. While the price of the staples is low when the supply is high, the price for ocean carriage, on the contrary, is high when the quantity for shipment is high; the reason being, the demand for space is high, therefore the cost of carriage is high.

GRANGER. All right; but will not that create a demand for other ships, when the cost of space will come down and cost of carriage adjust itself according to the law of supply and demand?

SENATOR. Which, of course, means unrestricted competition among the ships. And here let me read you what the American Report has to say on this subject. On page 1407 of volume 2, we read:

"Unrestricted competition is expensive and detrimental in the long run."

And again, on page 295 of volume 4:

"Unrestricted competition in ocean freight rates, based on the survival of the fittest, tends to restrict the development of the lines, and in the end must result in monopoly."

And on page 300 of the same volume:

"Competition in freight rates was regarded as the demoralization of trade; as the means of introducing uncertainty instead of certainty."

UNFIXED RATES DEMORALIZE TRADE.

MERCHANT. Yes; I agree to that; unrestricted competition in carriage would be the "demoralization of trade." It is not difficult to see how it would work. Take the case of street cars: Supposing unrestricted competition determined their daily and hourly rates of fare! Supposing the rates of passenger traffic on railways and steamers were subject to change "from day to day and from hour to hour"! Would not that be absurd? And it seems to me even more absurd to have freight rates subject to such constant changes. And so we see that right here the municipal, State, and National law steps in to control, regulate, and fix the rates of street car and railway carriage. Unrestricted competition may be all right in other branches of commercial and industrial activity, but I fail to see its beneficial bearing in the business of carriage. Such competition, by causing freight rates to jump up and down "from day to day and from hour to hour" would make an end of all legitimate buying and selling.

SENATOR. What has just been said seems to me logical, and the more strikingly so when applied to the carriage of the staples of agriculture. For if unfixed rates tend to demoralize trade in such goods as shoes, typewriters, hats, or hosiery, worth by weight as much as $1 per pound and upward, how much more must such unfixed rates demoralize the business in the staples worth only 1 cent or a few cents per pound, with their very much lower ratio of value between bulk and price?

UNION FARMER. It seems to me that we can now clearly see that unrestricted competition in the rates of ocean carriage must result in injury to commerce. But I previously understood you to say that shipowners had done away with all that by forming shipping rings?

SENATOR. Yes; you are correct. Let me give you some evidence on that head. Let us turn to volume 4, page 304, of the American Report:

"By resorting to the use of the 'fighting ships' or to unlimited rate cuttings, the conference lines soon exhaust the resources of their antagonists."

And here let me quote from the findings in the British Report, page 36:

"The chief aim of the system of shipping conferences and deferred rebates has been generally achieved. The conference lines are protected from the competition which might otherwise arise. The system has tended toward and resulted in a monopoly; though a monopoly subject to considerable limitations."

UNION FARMER. But where do the farmers come in in all this?

MERCHANT. They do not seem to "come in" at all; they seem to come out—to come out at the "small end of the horn."

SENATOR. It seems to me that you are right, but what does it all mean? Is the farmer only concerned? I am beginning to feel that the question is one of importance not only to the farmer but to all of us. It is certainly deserving of the most thorough study.

Having this in mind I have brought with me a little device which, as it were, brings out in kindergarten fashion some of the phases of the problem before us.

THE DEVICE.

GRANGER. I am sure we should all be pleased to see it.

SENATOR. Well, here it is. On the right side of the device you see "gauge e-e" showing "cost of ocean carriage." On the left is "gauge f-f" showing the "home price of the product." In the space between these two gauges is a triangle representing a total production of, say, 900,000,000 bushels of wheat, 600,000,000 for home use and 300,000,000 for export. The triangle swivels on "pivot c, unrestricted competition in carriage." As it moves "indicator A" finds its way into one or other of the notches on "gauge e-e" indicating the cost of ocean carriage, while "indicator B" should find its way into its corresponding notch on "gauge f-f," showing what the home price of the product ought to be.

Supposing the world's supply of wheat as shown by the crop reports of the International Institute of Agriculture would justify offering $1 a bushel for it at Liverpool, how much should that wheat be worth in New York? It should be worth the Liverpool price less the cost of ocean carriage to Liverpool. Thus, if "indicator A" were at the 10-cent notch, "indicator B" should point to 90 cents as the home price, but if "indicator A" were at the 5-cent notch, "indicator B" should then point to 95 cents as the home price.

WHAT IT MEANS.

Let us see how this would operate. Let us say that there is a total production in the United States of 900,000,000 bushels of wheat, and that the Liverpool price for wheat is $1 a bushel. The value of this crop at the Liverpool quotation would be $900,000,000. Let us now see how its value on the home market would be influenced by the cost of ocean carriage.

When the normal average ocean carriage rate per bushel is—	Then the normal average price at the point of export will be—	The deduction from the total value of crop on account of cost of carriage will be—	The total value of the crop on the home market will be—
1 cent	99 cents	$9,000,000	$891,000,000
5 cents	95 cents	45,000,000	855,000,000
10 cents	90 cents	90,000,000	810,000,000
15 cents	85 cents	135,000,000	765,000,000
20 cents	80 cents	180,000,000	720,000,000
25 cents	75 cents	225,000,000	675,000,000
30 cents	70 cents	270,000,000	630,000,000
35 cents	65 cents	315,000,000	585,000,000

We can thus see the great influence which the cost of ocean carriage exerts on the home price of the staples, and how necessary it is to make certain that this cost is determined and published in advance and in a manner consistent with the importance of the equities involved.

GRANGER. It would seem to me that we are straining at a gnat and swallowing a camel. We are talking of ships and cost of carriage and exports. Now, during all the many years that I have been a farmer I do not remember one occasion on which I have sold my products for export. There may be some that do, but what are they compared to the great mass of farmers who sell at home to the hundred million consumers in the United States? The Grange, of which I am a member for many years, and which is supposed to understand this thing, says that it is Wall Street and its speculators who are the destroyers of the equities; that it is they who are eating us up. The Grange has for years past been urging legislation against them, and I think that the Grange is right.

UNION FARMER. I confess that I was of the same opinion as my friend the Granger before we held our first meeting. Since that time I have looked into the matter, and I now see that as the staples are not sold like ordinary merchandise by private sale, as they are sold on the world's bourses, pits, and exchanges at public sale, like bonds, stocks, and shares, therefore they have a world's price. It is clear that the exporter will pay no more than the price ruling on the home market. Should the home price, when increased by the cost of carriage to the importing center, be higher than the world's price it would then, of course, put a stop to exporting. But there would soon be a glutted home market, when prices would fall, which would again permit of exporting. I can now see clearly that the home and the export price of the staples are the same, therefore the cost of ocean carriage influences not merely the price of the quantity exported but the price of the entire production.

HOW IT WORKS.

SENATOR. If we have made anything clear as the result of our discussion it is this: That the cost of ocean carriage exerts a decisive influence on the home price of the entire production.

The merit, then, of our debate will center in showing how this influence is exerted, its deteriorating effect on values, the proposed modification, its practicability, and its economic value.

And now let us return to our device and see if it will not illustrate the operation of this influence.

Let us set the device pivoting according to the law of unrestricted competition in carriage, according to the law of supply and demand for cargo space. How, then, does "indicator A" find its way into, say, the 25-cent notch? Why is it not in the 35-cent one or in the 10-cent one? Because the law of supply and demand for cargo space determines the notch into which "indicator A" should go; when the supply of cargo space is above the normal the price of carriage will be below the normal; when the supply of cargo space is below the normal the price of carriage will be above the normal.

GRANGER. But what influence would such a mode of determining freight rates exert on the price of the staples?

SENATOR. As unrestricted competition implies continuous fluctuations it would render the cost of ocean carriage an unstable, unknown factor in the price formation of the staples. And right here is where the mischief comes in. For this affords the opportunity for the speculator to step in and battledore and shuttlecock the home price to his liking. In other words, while "indicator B" should point to the 90-cent notch when "indicator A" is in the 10-cent notch, how would the case stand if "indicator A" were subject to constant fluctuations?

Clearly the actual or potential rapidity in the movements of "indicator A" precludes the seller from using it as a basis for calculating what his price should be. An opportunity is thus afforded the buyer, the speculator, to make use of this uncertainty to force "indicator B," the home price of the product, down to his liking.

THE TOLL OF THE SPECULATOR.

It may thus be seen that the present system of unfixed rates works right into the hands of the speculators. Every cent advance in the cost of ocean carriage on a bushel of wheat during buying time means, say on a 900,000,000 bushel crop, a ratio of $3,000,000 additional to the shipowners for the carriage of the 300,000,000 bushels which are exported, and a ratio of $6,000,000 in the pockets of the speculators on the 600,000,000 bushels remaining on the home market, which they have bought and stored in warehouse and elevator. And this is the first toll they levy, the toll on the producers.

Nor is this all. It is but a beginning. If these speculators export the grain they have stored, they will do so at the time when they have forced the cost of ocean carriage down to their liking. And this gives them their second toll, the toll levied on the shipowners.

Last, but not least, with ocean freight rates forced down, and with the corresponding rise in the price of the product on the home market, the speculators are then ready to levy their third toll, the toll on the consumers.

Obviously it would be a futile task to try to legislate these speculators out of business so long as the present unfixed rates for ocean carriage render it so profitable for them to operate. To remove the speculator we must remove the cause, the unfixed rates.

It will thus be seen that unrestricted competition in ocean carriage with its fluctuating rates is injurious to the interests of the farmer.

MERCHANT. But the British and American reports which you quoted to us state that the shipowners have done away with unrestricted competition; that the rates are now given out through the shipping rings.

SENATOR. Yes; but how? How, then, are the rates for the staples devised? How are they given out? As to the first question we may infer our answer from the following, which is from the British report, page 20:

"Conference agreements, pooling arrangements, and other documents of a confidential character have only been supplied to us on the understanding that their contents are not to be disclosed."

And on page 293 of volume 4 the American report says:

"Care has been exercised to prevent agreements and understandings from becoming public."

THE ROOT OF THE EVIL.

As we were told when we rang up the secretary of the Chamber of Commerce in New York, the rates on the staples are given out from "day to day and from hour to hour," and the Chamber of Commerce of San Francisco, in a communication, says:

"Rates fluctuate from day to day, and a rate reported to-day might be twice as high or half as low to-morrow."

These statements are confirmed in the American report, volume 2, page 1373:

"Ocean freight rates vary not merely from month to month but from day to day and from hour to hour, especially with reference to the great staples which are traded in on the exchanges."

So the evils of unfixed, fluctuating rates for the staples are still here. And now let us see the extent of the evil and the amounts involved. Let us take the statement of the New York Chamber of Commerce:

"Rates change almost daily, sometimes several times during the day. * * * Rates quoted to-day would only be for refusal for 24 hours.

* * * Frequently wheat has been carried between the United States and London free of any charge, being simply used for ballast in the steamers, and at other times the rate has been advanced to 10d. and 12d. per bushel."

Let us, then, for purposes of illustration, take rates fluctuating from 1 to 24 cents per bushel, and we find—what?

A rate of 1 cent a bushel for ocean carriage on a 900,000,000 bushel crop means $9,000,000 to be deducted from its total value on the home market; a 24-cent rate means $216,000,000 to be thus deducted. And right here is the opportunity for the shipping ring to force "indicator A" (cost of ocean carriage) up as "high as the traffic will bear."

It can thus be seen what vast sums of money the speculator is in a position to subtract from the farmer by playing on this unknown factor. Nor does the loss stop here. With his stocks in warehouses and elevators the speculator is now in a position to lord it over the consumer, thus doubling up the margin squeezed out of the farmer.

But we have so far only considered the question as affecting one staple and the production of one country. It applies, however, to all the staples and in all the countries of the world, whether they be exporting or importing countries, or countries which neither export nor import, and whether they be under protection or under free trade.

Thus in the unfixed rates for ocean carriage we have one of the greatest sources of economic inequity in all the world.

IS THIS THE REMEDY?

GRANGER. I begin to see just what this thing means. But since the shipowners now have the matter in their own hands, can they not, through their shipping rings, do away with the fluctuating, unfixed rates, replacing them by rates fixed for stated periods of time, just as is done by the railways? Why could they not be petitioned to do so?

MERCHANT. I agree to that; the shipowners should give rates fixed for stated periods on the staples of agriculture (bulk freight) just as they now give them on general merchandise (package freight). That would seem to be the proper course. That would surely settle the difficulty.

SENATOR. There are serious objections to that kind of a settlement. Were it adopted, it is likely that it would not remove the present evils, and it might lead to others yet more serious.

In the first place, even supposing the shipowners were willing, could they give the fixed rates? It may seem a simple matter to fix rates on bulk freight, but is it so? By no means. Before fixed rates can be given out in advance on bulk freight much has to be done which it would not be in the power of the shipowners alone to do. There must, first of all, be a sound basis for rational calculations as to what the rates should be, and for their terms and conditions, calculations not merely for the purpose of conserving the economic welfare of farmer and consumer, but also for conserving the economic welfare of the shipowner, for clearly the quality of service rendered by the carrier will be dependent on the security of his investment and the volume of his net returns.

To obtain authoritative, trustworthy data for all these calculations there must be world-wide ramification and centralization of effort. All this requires economic cooperation on an international basis. We are therefore confronted by one of two alternatives. Either we must permit, as now, the system of shipping rings with their unfixed rates and consequent adverse economic conditions for producers and consumers the world over, or we must work for the general welfare on the basis of economic cooperation through international effort.

But there is another objection to leaving the matter to the shipping rings.

The shipowners now see the advantages they can derive from coalescing; they have had a taste of those advantages, and they are not likely to be slow to profit thereby, nor will they fail to avail themselves of the still greater advantages which may accrue to them through the elaboration of that system. We can thus see that it would never do to place in the hands of an uncontrolled monopoly a power which could mold our economic conditions as easily as a potter can cold the clay.

For these reasons it can be seen that the stand taken by Congress, to which I have already referred, was the sound one. That stand, embodied in House joint resolution 311, for which, as I previously told you, I voted, calls for the establishment of an international commerce commission on ocean carriage. This, it is evident, is more on the line of a sound, practical solution of the problem than is the suggestion that the matter be left in the hands of the shipowners. It is in the hands of an international commerce commission, with delegates appointed under the authority of an international treaty, that this matter should be placed.

UNION FARMER. But that would be placing the shipowners' property under the control of outsiders; it would be socialism, and I think we are all opposed to that.

OCEAN CARRIAGE A PUBLIC UTILITY—IT SHOULD BE UNDER PUBLIC CONTROL.

SENATOR. Let us see whether we are. If you mean by socialism that kind of collectivism under which all the means of production would be turned over to Government ownership, then I am with you; I would also be opposed to that; but if by socialism you mean Government control of public utilities, then I am not with you. But I do not think you mean that, for you are certainly not opposed to public sidewalks or highways, to municipal control of tramcars, nor to national control of railway rate charges by the Interstate Commerce Commission. You know as well as I do that it is this latter kind of socialism, this control of public utilities, which makes possible the greatest measure of free individualism. And the needs for such public control are nowhere greater than in the sphere of carriage. We now have this control in the case of the street cars; we now have it in the nation-wide railways; and it is even more essential that we should have it for the international carriers, the ships.

MERCHANT. But why should this control be international? Why not enlarge the powers of the Interstate Commerce Commission and place this matter in its hands?

SENATOR. Because the purpose here contemplated could not be achieved through the Interstate Commerce Commission. A foreign ship, like an embassy, has substantially to be considered as foreign territory. United States officials are not in a position to dictate what British or German or French shipping corporations should do, nor the rates, terms, and conditions of their charges. And supposing that United States officials could fix the rates, terms, and conditions of ships leaving United States ports, would that serve the purpose aimed at? I think not, for if such rates did not also apply to ships sailing from ports in other countries this would give our competitors in those countries an undue and unfair advantage. They would then know just when and where to beat us in the game. Indeed, the offended shipowners could readily turn against us any supposed advantage secured through forced concessions; they could do this on incoming cargoes in the first place, and, in the next place, by the forced disturbance of the world's price in other ports, hence correspondingly perturbing our own home price.

It is well for us to understand, first as last, that we are dealing here with a question that is international, which can not be settled in any other way than through international means. Once settled on that basis and it will afford a legitimate scope for the Interstate Commerce Commission and similar organizations in other countries to perform their allotted share in this international task.

THE FINDINGS.

UNION FARMER. While the Senator was speaking I jotted down a few points which now form my opinion as the result of our discussion. With your permission I will read them:

(1) The staples have a world's price which is the basis for their home price.

(2) The price for the entire production in the home market, whether for export or for home use, is directly influenced by the cost of ocean carriage.

(3) The home price is also indirectly influenced by the cost of ocean carriage in foreign ports.

(4) At present ocean carriage rates on the staples are not given out for stated periods in advance; they are given out from day to day and from hour to hour, thus giving rise to uncertainty and fluctuation.

(5) This uncertainty affords the opportunity for the operations of the speculator.

(6) These operations result in an economic injury to the producer and to the consumer.

(7) The remedy should be equitable rates, terms, and conditions fixed for stated times, and made known in advance.

(8) This should be done through an international commerce commission.

GRANGER. I must confess that I have been brought over to those conclusions, and I now unhesitatingly give them my approval.

MERCHANT. It is clear that the matter before us is not a mere question between farmer and shipowner, but is a question of great national importance, for the consumers are equally concerned. It should receive the close attention of all right-minded citizens in the Commonwealth. I for one shall certainly favor the proposal for an international commerce commission.

SENATOR. Gentlemen, I am, as you have already perceived, in entire agreement with your conclusions.

THE LOGIC OF THE CASE.

From the foregoing we seem justified in coming to the conclusion that the problems involved in ocean carriage, especially so in the ocean carriage of the staples, can no longer be safely relegated to the sphere of unrestricted competition between the carriers, nor can they be left to uncontrolled combinations of shipowners in shipping rings and conferences. Nor can these problems be relegated for solution to counter-combinations of shippers, nor can they be solved by mere national legislation. The time has come for the handling and solution of these problems on broad international lines. The time has come when there must be an awakening to the fact that ocean carriage is a public utility just as much as the street car or the railway. The time has come for that broader mode of world-wide action which an international commerce commission would permit of; that broader action which should in the first place afford stabler and securer compensation to the shipowners' investment, but which, above all, should promote the economic welfare of the producer and the consumer.

I will now conclude this paper by some deductions which present themselves to me. It would seem that unrestricted competition having proved an economic injury the shipowners are doing away with it by joining their forces, by the formation of combinations and shipping rings.

Supposing these combinations continue and follow to their fullest ilmit the example set in the progressive elaboration of other great trusts, and what would it be likely to lead to?

In its findings on shipping rings and combinations the British report (p. 79) states that "the disadvantages of the system are those which are usually inseparable from a monopoly not subject to control." Let us see what are the latent possibilities inherent in such a monopoly.

AN IMPERATIVE NECESSITY.

We talk of Alexander, Hannibal, Cæsar, Napoleon as overshadowing figures of ingathering and dominating power in the world of conquest; we talk of the Rockefellers, the Rothschilds, the Morgans, whose genius enables them to toss hundreds of millions hither and thither as readily as a child may toss a toy; we talk of the steel trusts, the meat trusts, the oil trusts, and we marvel at their power of centralization and mobilization, rendering plastic and dynamic fabulous sums, sums great enough to serve as ransoms for nations. And yet the power wielded by all these would be a mere trifle when measured by the possibilities latent in a control of ocean carriage centralized in the hands of an irresponsible monopoly, "a monopoly not subject to control."

Once permitted the right of way for its growth and development, and it would not be difficult to predict the ultimate swaying force of such a monopoly.

Using its rate-fixing powers as a lever, this monopoly could, with ease, raise and lower the home price of the staples in any and all of the ports of a country. It could, at will, raise and lower the home price in any and all of the ports of the world. By this means it could obtain indirect control over the products carried as well as direct control over the ships. Having obtained this control it could then proceed progressively, as other great trusts have done; it could proceed to exploit the many direct and indirect avenues of advantage which this field would open up. Nor is this all; it could then influence at will the shifting values of shares and stocks and bonds on the bourses of the world. In short, such an overpowering monopoly could then make or break a nation at will.

Control of ocean carriage by an international commerce commission is thus seen to be an imperative necessity.

THE ADDENDA.

The following is a tentative outline of a plan of procedure for the proposed international commerce commission on ocean freight rates. It is the outcome of discussions during the past two years on the resolution passed by Congress in September, 1914 (H. J. Res. 311).

The object of the international commerce commission is to steady the price of the staples of agriculture by removing the uncertainty and consequent price fluctuations caused by unfixed rates for their ocean carriage.

This tentative outline was submitted to the conference recently held in London with the Atlantic Line representatives and others. It is herewith presented in the hope that it may assist in ultimately evolving a practical working plan.

TENTATIVE OUTLINE OF A PLAN OF PROCEDURE UNDER AN INTERNATIONAL COMMERCE COMMISSION ON OCEAN FREIGHT RATES.

(1) After the ratifications by the Governments of a treaty establishing the international commerce commission certain committees shall be appointed. Among them shall be (a) a central clearance committee for ocean traffic; (b) a national clearing committee for ocean traffic in each of the adhering countries; and (c) a local clearing station for ocean traffic in each of the principal ports in the countries, all under the international commerce commission.

The national clearing committees may work in their respective countries under the jurisdiction of such bodies as the Interstate Commerce Commission of the United States.

FUNCTIONS OF THE CLEARING COMMITTEES.

(2) Synchronizing incoming and outgoing freights: Under the direction of the central and national clearing committees the local clearing stations shall obtain data from the chambers of commerce within their districts, and work in conjunction with them for synchronizing incoming and outgoing freights, and shall send in their estimates to the national clearing committees at stated times, who shall assemble, coordinate, and summarize these local reports, and at stated periods send them on to the central clearing committee.

(3) Booking: Liners and tramps shall at stated times book their available tonnage at the central clearing committee. Priority in the assignment of freights will be given first to liners in the order of their importance, and second to tramps in order of importance. The ships *shall be booked* under their respective classification, giving their dates of sailing, their available space, and the ports at which they intend to call. Transfers of space or cargo shall be effected only through the clearing committees concerned.

(4) The central clearing committee: After estimates of the nature and volume of the freight to be carried to and from the ports of the several countries have been arrived at, and after ascertaining the available tonnage, the central clearing committee shall submit to the international commerce commission a draft schedule of rates, terms, and conditions for ocean carriage, together with the estimates of freight and tonnage above referred to upon which said rates, terms, and conditions are based.

From all the above and additional data the central clearing committee shall, at stated periods, give out the probable tonnage that will be required by the principal ports of the world; the nature of this tonnage to be classified under certain headings so as to designate the character of ship and cargo, with the fixed rate to correspond.

(5) The international commerce commission shall pass upon the schedule prepared by the central clearing committee and upon the bookings, from which it shall fix the rates, terms, and conditions of ocean carriage for a stated period, subject to certain changes by sliding scales and other adjustments.

(6) Adjustment fund: The rate paid by the shipper shall be a given point higher than that received by the carrier. The fund obtained by this higher charge shall be deposited in the treasury of the central clearing committee. It shall be apportioned to the several ports concerned in accordance with the actual volume and class of freight shipped from each.

(7) Whenever the volume of freight from a given port varies in excess of the normals given out by the commission, or for other valid reasons, payments shall be made from this adjustment fund to each of the carriers concerned in accordance with an equitable mode of apportionment.

(8) Shippers: Shippers shall book at their local clearing stations, stating space required, nature of freight, date of shipment, and ports of destination. Transfers and reapportionments of space and cargoes shall only be effected through the clearing stations concerned.

(9) Expenses: The expenses under this system shall be paid by a fixed percentage on the freights shipped and shall form part of the fixed rates.

(10) Premiums and fines: Premiums shall be awarded to ships and shippers for early booking, and fines shall be incurred for transfers, deferred booking, and such other causes as may be determined upon.

Zebulon Baird Vance.

SPEECH

OF

HON. CLAUDE KITCHIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 29, 1916.

The House had under consideration Senate concurrent resolution (S. Con. Res. 24) accepting on the part of Congress a bronze statue of the late Senator Zebulon Baird Vance, presented by the State of North Carolina.

Mr. KITCHIN. Mr. Speaker, it is almost a holy, yes, a holy pleasure to join with my colleagues on this occasion in paying tribute to North Carolina's most illustrious son.

I shall not detail the inspiring story of the career of Zebulon B. Vance, which has been so delightfully told in this presence; how at the age of 28, overcoming a 3,000 majority against his party in the preceding election, he was elected to Congress from the mountain district by a still larger majority; how he entered the Confederate Army in May, 1861, as captain and within three months was elected colonel of the famous Twenty-sixth North Carolina Regiment; how the people of the State in 1862, looking about to find the best fitted man to guide her destinies through the gravest crisis of her life, selected him at the age of 32 and made him governor, reelecting him in 1864; how as such governor he made the splendid record which earned for him the title of "The Great War Governor of the Confederacy"; how, in 1876, in the expiring days of reconstruction he redeemed the State by again being elected governor; how, though once refused admission, he was four times elected to the United States Senate, finally dying in the service of the State and Nation as a Member of that body.

I shall content myself by adding to that of others my estimate of him.

Vance was North Carolina's finest product. Of all her distinguished men, living and dead, he stands out in the admiration and esteem, in the confidence and affection of her people the central figure. None other approaches him. The people of

the State loved him; he loved them. Each had implicit confidence in the other. Nor did either ever doubt the other.

I venture the opinion that no public man in any State was ever as much beloved by his people as Vance was by the people of North Carolina. Almost every home in the State, of rich and poor alike, irrespective of political affiliations, has upon its walls the picture of Vance. Sons of families in every section and of every party bear his name.

His statement of a fact was to the people of North Carolina complete demonstration. His opinion of a public measure or question was to them absolute conclusion.

His public life more nearly represented the mind and heart of North Carolina than that of any man, living or dead.

Vance possessed the elements of greatness, the qualities of statesmanship. He was a big man—big in body, in mind, in heart. He was United States Senator for 17 years, from 1877 to 1894. They were days of giants—days of statesmanship. Among his compeers in the Senate were men like Thurman, of Ohio; Bayard, of Delaware; Beck, of Kentucky; Vest, of Missouri; Voorhees, of Indiana; Morgan, of Alabama; George, of Mississippi; Daniel, of Virginia; Ransom, of North Carolina—Democrats; and Edmonds, of Vermont; Sherman, of Ohio; Harrison, of Indiana; Hoar, of Massachusetts; Logan, of Illinois; Ingalls, of Kansas; Quay, of Pennsylvania—Republicans.

In ability, in wisdom, in patriotism, in courage—in all the elements of statesmanship, these men were never surpassed by men in any tribunal of the world. They were giants. Vance was the equal of the biggest and the best. He stood in the forefront of this splendid galaxy.

His was a captivating, commanding, majestic presence, and to it every one, the lowest as well as the highest, ever had a welcome, and in it, all felt at home.

He drew all men to him. His personality was overwhelming. His presence was sunshine, his voice music. He cheered and charmed, he entertained and instructed all about him.

He was without guile. He never schemed. He never held whispered, closed-door conferences of political machinations. He built up no political machine. He had no personal organization. He had no special friends in this or that county to "look out for his interest." He had no political favorites. The people were all for him and with him, and he was for and with and of all the people.

Sycophants and courtiers did not swarm about him. They knew he had no special favors to bestow. His big, open, manly nature intuitively repelled them.

He was the incarnation of candor, sincerity, truth, courage, kindliness.

He had no enemies. No public man ever had fewer critics. In the days of bitterest partizanship in our State no candidate or member of the opposite party ever defamed Vance. His motive was never impugned.

His wit and humor, in which he excelled all public men, were irresistible. But his speeches and debates were full of logical, analytical argument and wide research. On account of his abounding wit some thought that he was not given to study and investigation. The contrary is the fact. No public man was a more diligent and profound student. His discussion of any question furnished the fullest evidence of this. He was master of every subject he touched. He captured and controlled every audience he faced.

Dead now nearly a quarter of a century, the mention of his name anywhere in the State is still the rallying inspiration of all that is good and brave and true in her citizenship.

In life and in death he was, he is, North Carolina's largest asset.

Long, long will be the time before another Zeb Vance will be raised up for the State.

God bless the minds and hearts of her people with his memory forever.

Mr. Speaker, I forbear to conclude without expressing great pleasure in hearing my distinguished colleague, Maj. STEDMAN, express the hope, which I, together with thousands of her citizens, have long entertained, that our State will place in Statuary Hall beside that of Vance the statue of Matt W. Ransom.

Ransom is full worthy a place in this Hall of Fame. Renowned as a soldier, an orator, a diplomat, a statesman, he reflected the greatness and the glory of his State and added fresh luster to her fame in every position of trust and honor he held during a public life of nearly 40 years. For 17 years he and Vance were colleagues in the United States Senate.

No State was ever represented in that august body with more marked ability, wisdom, patriotism, loyalty, courage than was North Carolina when Ransom and Vance were her Senators.

If our State should place Ransom by the side of Vance in Statuary Hall, and if bronze or marble could portray the imposing appearance, the commanding presence, the charming and inspiring countenance of these two men, as in life they looked, the tens of thousands that yearly visit this Capitol would seek them out and linger long in admiration and homage about them.

North Carolina would with exulting pride match them with the hall-famed favorites of any State.

The Mobilization of Agriculture.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 2, 1917.

Mr. RAKER. Mr. Speaker, I desire to place in the RECORD as a part of my remarks a statement on the mobilization of agriculture, as prepared by David Lubin, delegate of the United States International Institute of Agriculture. That statement is as follows:

THE MOBILIZATION OF AGRICULTURE AS EMBODIED IN SENATE BILL 5973 (64TH COONG., 1ST SESS.).

SOME ARGUMENTS IN FAVOR OF THE REINTRODUCTION AND PASSAGE OF THIS MEASURE.

Until recently the Old World and the New kept the even tenor of their ways, seeming to travel along the pathway of peace, when, with the suddenness of a cyclone, the whirlwind of war enveloped the Old World in its deadly sweep.

Billions of rifle bullets, millions of cannon shells continuously fly on their deadly errand, bringing in their train grievous sorrow which, like the onrush of a mighty flood, overwhelms all in its path.

The sinewy laborer, harnessed to his daily task, is bound, pledged to years of serfdom, toiling to ransom bonds and their interest.

As a hungry cat greedily laps up milk, so the consuming flames of war are lapping up the wealth of nations, undermining the structure of our passing civilization.

In times gone by it was said "The King is dead! Long live the King!" Presently there may be cause to say "Civilization is dead! Long live civilization!"

And so we live in a time of crisis, not merely a crisis of death but a crisis of birth, the death of the old civilization and the birth of the new.

But what manner of civilization shall that be?

Shall it not be a civilization which shall hurl down the old, decrepit, foxlike and parasitic political idols shrined in the nitches of the social structure? Shall not these be replaced by the simple and the truthful? Shall it not be a civilization in which chauvinistic national advantage shall shrink and shrivel before the penetrating rays of God's most intimate servant, Justice?

But what of the quality of the reconstructive power? Aye, that's it, and the manner of its direction? Its clearness of head, its steadiness of hand, its nobility of heart, upon these rests the case.

And where are we to find these qualities? Among the combatants? Behold them! Like infuriated bulls with locked horns they are tightly braced, blinded by hate and drunk with destruction.

But beyond the great sea, peacefully and powerfully majestic, stands the mighty American Republic. Is it not there that we should find the clear head, the steady hand, the noble heart?

Is not the American Republic elect for this very purpose? Then let her press on in the work of reconstruction, reconstruction that shall evolve for the world the newer, grander Democracy, the Democracy which shall rest upon the principle that individual welfare is best served by promoting the general welfare, that the welfare of the individual nation is best served by promoting the welfare of all the nations.

But is the political force which shapes the course of the Republic properly charged for the accomplishment of this task? How can it be so long as this force is of the cities alone, of the capital of the cities, and of the labor of the cities? Are not each of these politically swayed by preconceived notions? Are they not working tooth and nail to shape things theirward?

No, these two are not the forces which alone should guide and direct. There is another force, the force of the country, the agricultural force which must be brought into play, a force potentially great as a political factor but now dormant. Once to the front and the simpler, worthier ideals of this force will act as a driven wedge, riving asunder the egotistical political materialism of the city forces.

The world conflict now going on will not have been in vain for America if it serve to remind us of Rome's ancient cry: "See that the Republic receive no harm!"

And the first thing for us to "see" is the contrast between the political strength of the cities and the political impotency of the country; the defenseless feebleness of the country and the armored strength and craft of the cities, the craft that can sway legislation by a wave of the hand, the craft that can transmute the land-owning farmers into renters, the craft that can corral, lasso, and gobble up the products of the farm and then gingerly deal them out to the consumers as if they were costly drugs.

If the political driving force is to remain thus one-sided would it not be mere mummery to say that the Republic can supply "the clear head, the steady hand, and the noble heart" for the solemn service of reconstruction?

But need this driving force remain one-sided? No; for by adopting the Landwirtschaftsrat system, as embodied in Senate bill 5973 (this measure for a National Chamber of Agriculture, originally known as Senate bill 5687, was taken up in detail at a convention of the State commissioners of agriculture which met in Washington in May, 1916, for that purpose. The bill as amended by the commissioners was submitted by them to the President at a conference on May 5. The

President commented upon several of its leading points. These comments resulted in some final amendments, when the bill was indorsed by the commissioners. It was then reintroduced on May 12, 1916, as Senate bill 5973, but too late for passage that session. It should now be again reintroduced and acted upon during the present session of Congress), the agricultural industry can be so effectively organized as to achieve solidarity, a solidarity free in its constituent parts yet politically and economically effective as a whole.

It is largely the sysfem here proposed that has rendered the agricultural industry the most effective political and economic institution in Germany. It is largely this effectiveness which has proven to be the power behind the throne in the German Empire; a power which has rendered Germany almost invincible. This is the secret of the strength, the "long hair" of the modern Samson.

An organization in the United States on these lines would:

First. Mobilize the agricultural industry, rendering it an efficient and an essential factor in strengthening the Nation;

Second. It would weld the agricultural industry into a homogeneous solidarity, a solidarity free in its individual constituents, yet politically and economically effective as a whole;

Third. It would be effective as a means of insuring the equitable distribution of farm products, thus proving of inestimable benefit to the consumers as well as to the producers;

Fourth. It would, above all, be the means which would give the American farmer his "place in the sun" as a political entity, thus completing the essential elements in the political force of the Nation.

This, and this alone, will make possible "the clear head, the steady hand, and the noble heart" required if the Republic is to perform her part in the work of world reconstruction, reconstruction which "shall evolve for the world the newer, grander democracy, the democracy which shall rest upon the principle that individual welfare is best served by promoting the general welfare, that the welfare of the individual nation is best served by promoting the welfare of all the nations."

DAVID LUBIN,
Delegate of the United States,
International Institute of Agriculture.

ROME, ITALY, *January 2, 1917.*

Buy American Bonds.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, of course we can not indulge in war without imposing additional burdens upon the people. Great sums of money must be massed for war purposes, just as large armies of men must also be brought together. The Federal Reserve Board has facilities for massing large sums of money from all sections of the country, and is supposed to have relieved Wall Street of certain of the powers heretofore attributed to that great money center. Several months ago, when foreign bonds were having a wide sale in the United States, the Federal Reserve Board issued a statement which was severely criticized in London and New York. In that statement it was suggested that American investors, particularly American national banks, should go slow on the purchase of the bonds offered by certain belligerent powers. The inference was that those purchasing these foreign bonds might be taking an element of risk which should not be assumed by those over whose funds the Federal Reserve Board exercised a certain jurisdiction. Many Americans who read between the lines suspected that the time might come when American investors would be expected to invest in American bonds, the purchase of which would be more serviceable to the United States and more conducive to patriotism than the acquisition of foreign bonds issued by countries whose success or failure in war would affect the value of the securities issued by them.

MODIFIED ATTITUDE OF FEDERAL RESERVE BOARD.

It was therefore of considerable interest to observers to note a modification of the action of the Federal Reserve Board with respect to these foreign securities. From the Washington Herald of March 2 I quote the following statement of the new position assumed by the board:

BOYCOTT OF FOREIGN SECURITIES DEPLORED—FEDERAL RESERVE BOARD MODIFIES WARNING AGAINST EUROPEAN INVESTMENTS.

A marked modification of the policy of "hands off" foreign securities, which was promulgated by the Federal Reserve Board last November, was announced yesterday by the board. In November the board issued a general warning to American banks not to invest too strongly in foreign securities, with the effect that Great Britain canceled arrangements to sell a huge quantity of short-term exchequer bills in this country.

The board's statement yesterday declares that the public went too far in its conception of what the warning meant, indicating that the board has information of a practical boycott of foreign securities in this country. The financial body asserts that it does not mean to reflect on the value of foreign securities generally or upon the value of any particular security, but that its warning was issued only as a precaution against loading up by American banks with foreign obligations which might not be readily negotiable.

There is no material alteration in this policy, the board says, but explains that the "hands off" attitude should not be carried to an extreme point. Investment in foreign securities to a proper degree is desirable to settle balances and stabilize foreign trade, it is stated.

Bearing in mind that the money in the Federal reserve banks of the United States comes up from all classes of depositors, who may or may not be interested in knowing how their money is invested, the foregoing modification announcement is worthy of perusal, especially as the United States Congress, under spur of the administration, has entered upon a $2,000,000,000 career, and is now preparing for an extensive issue of United States bonds that may come into competition with the foreign bonds that have already been absorbed in the United States or that are now being offered to investors.

THE "FURY" DIRECTED AT CONGRESS.

That the bond question will soon reach an acute stage in the United States is quite probable. The big newspapers do not say much about what Congress is doing except to find fault with it, but they do tell us much about what is going on in the financial world. One of the Munsey papers, the Washington Times, which jabs Congress almost as viciously as it insists upon war, contains an interesting article, under date of March 11, headed "Wall Street prepared to aid Government—Bank resources kept liquid to meet financial demands in event of war—Another problem faced—Effect of warlike preparations on business, commerce, and securities considered."

The article starts out quite breezily, like this:

Whatever its likes and dislikes may be with respect to public servants at Washington, Wall Street is essentially patriotic, and will stand solidly behind the Government in a crisis. This has been demonstrated again and again. Hence it was with the greatest indignation, bordering on fury, that the current week was ushered in, entirely reflective of the feeling throughout the length and breadth of the country.

It then proceeds to show how Congress passed appropriations totaling upward of $1,350,000,000 but neglected to pass appropriation bills exceeding $500,000,000 more, and having spent its "fury" on Congress, it gets back to Wall Street thusly:

Two main considerations which Wall Street has before it are Government financing and the effect of warlike preparations on business, commerce, and the securities markets. The bond market has naturally been in a subdued state for some time. Transactions have been relatively few and prices generally depressed, although within narrow limits. The effect of a big Government issue of bonds on the prices of existing issues now being traded in is sufficiently problematical to have a deterring influence which perforce operates to cause hesitation and caution. It is reported that the Government contemplates issuing $150,000,000 in one-year notes to bear 3 per cent. It is proposed to issue these notes in small denominations in order to give the flotation a popular character.

It is doubtful in some quarters if an enterprise of this sort would meet with the popular success which the Government seems to expect. There are, doubtless, many investors who would consider it their patriotic duty to subscribe liberally, and it may be that enough might be found to take the entire issue. It may be presumed that banks would also be prepared to subscribe liberally, despite the fact that the Government has not found it necessary to confer as yet with the banking fraternity.

The brilliant financial writer does not say so in so many words, but he rather intimates that 3 per cent bonds may not be very popular in the centers where money is concentrated. Foreign bonds, as is well known, have been coming over to the United States with interest rates at 5 and 6 per cent, until probably $2,000,000,000 worth of them have been taken here for investment. No one can deny that the people abroad, whose countries are at war, have also been investing heavily in these securities, and that the populace is induced to buy them is shown in the photographs of great meetings in London, that have been coming to the United States during the last few days. A reproduction of a scene in Trafalgar Square, when the Lord Mayor addressed the meeting a short time ago, shows the intensity of the Government's activity in this regard. A great throng frequents the square and on the Nelson Monument and in front of great buildings facing the square are immense signs reading "Only one day more; Germany is watching," "Go to your bank before to-night," "Don't leave it to others," "You! Have you bought your war loan? Germany is watching," "Do your share to-day."

AMERICAN BONDS ARE COMING.

Mr. Speaker, under leave to extend, I draw attention to this matter of bonds because it is important that American investors, whether in Wall Street or elsewhere throughout the country, should purchase the bonds of the United States. The fact that we shall not offer as high a rate of interest as is offered by foreign countries is accounted for by the superiority of the bonds which the United States will offer. This country is not at war and there is no likelihood of its being impoverished, even if it is forced to go to war. The American bond, therefore, is not subject to the financial risk that may apply to the bonds of other nations struggling for existence.

The Congress of the United States has already authorized the issuance of United States 3 per cent bonds to the extent of $472,000,000, and if the armed-neutrality bill passes the Senate in the near future the issuance of another $100,000,000 will be authorized, making a total of $572,000,000 of 3 per cent bonds that will soon be available. To this grand total may also be added a new issue of $63,945,460, for which the authority of Congress will be asked to redeem bonds authorized June 13, 1898, that will mature August 1, 1918. An amendment providing for this refunding loan has been offered to the Army bill, which is now pending in the Senate. Of course, this loan must be authorized in due course to keep the Government's faith.

American investors who are anticipating war and who want to "stand by the President" will soon have the opportunity of proving their patriotism when the Secretary of the Treasury begins to issue these American securities. The bonds now authorized include $222,000,000 of Panama Canal bonds, $100,000,000 authorized in the revenue act, and $150,000,000 provided for in the Kitchin resolution for speeding up the naval program. This makes a total of $472,000,000, exclusive of the $100,000,000 provided for in the pending armed-neutrality bill, and includes expenditures for the following purposes: For the nitrate plant, $20,000,000; for the ship-purchase act, $50,000,000; for the Danish West Indies, $25,000,000; for the armor-plate plant, $11,000,000; for the construction of the Alaskan Railway, $35,000,000; and to meet the expenditures incident to the Mexican situation to June 30, 1917, $162,418,000. Notwithstanding these authorized issues, there will still remain about $81,000,000 of Panama Canal bonds that can be issued by the President.

Under these circumstances, is it not opportune to let the people of the United States know that they will soon have the chance to invest their money in the bonds of their own country? Each investment of this sort is a patriotic investment, which means that the purchaser has confidence in the United States of America and is willing to take his chances with it.

Valedictory.

EXTENSION OF REMARKS

OF

HON. MICHAEL K. REILLY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. REILLY. Mr. Speaker, in a few hours, after a service of four years in this House, I will retire to private life, to take up again the lines of my profession laid down on assuming the duties of a Representative in Congress from the sixth Wisconsin district.

My retirement from this body is not voluntary. I go back to the ranks of the private citizenship in obedience to the verdict of the people of my district, as expressed at the recent election. While I would have preferred to have remained in public life, I bow cheerfully to the will of my constituents. Every man who enters upon the uncertain career of politics is subject to the alternating hopes and fears of victory and defeat, and the man who is not prepared to accept defeat with cheerfulness should avoid the pathways that lead to public service.

The membership of this House is continually changing. Men of big influence and little note come and go with the passing of time. This body is interested not in the past but in the present and the future, giving but little concern to the going from this Chamber of the individual Member or Members.

One of my regrets, if not my chief regret, in taking leave of this body is that it means the separating of myself from colleagues and friends for whom I have developed a sincere attachment, and I am pleased to be able to state that these friends are found on both sides of the center aisle of this House. As I go forth from this body to private life I am certain that I will find much comfort and consolation in the pleasant memories of the associations that I have enjoyed and friendships developed during my membership in this House—friendships that link my thoughts with every section of the Republic.

As a Member of this House I have enjoyed a rare opportunity to study men and measures, hear brilliant efforts, and witness dramatic and thrilling scenes that amply compensated me from an educational standpoint for all the trials and tribulations of a political career that made it possible for me to have the honor of occupying a seat in this the greatest legislative Chamber in the world.

I have undoubtedly made mistakes in my endeavor to discharge the duties of a Representative of my people, but the mistakes that I have made have been mistakes of the mind and not of the heart. I have tried to be a real servant of the people, and in every vote and every act as their Representative I have endeavored to serve the many and not the few.

I am profoundly grateful to the good people of my district for their kindness in twice commissioning me as their Representative in Congress, thereby permitting me to play a humble part in the making of the greatest legislative record in the history of this country. The Sixty-third and Sixty-fourth Congresses will go down in history as representing a four-year period during which, as a result of legislative enactment, the old order gave way to the new, a period in which more legislation was written in the interest not only of the common man but of all classes of our citizens than in any 25 years since first our Republic began its eventful career.

The welfare of the farmer, the banker, the merchant, the manufacturer, the professional man, the laborer, in fact the workers in every field of human activity have been the controlling factors in the broad and constructive legislative program that breathes the spirit of the brotherhood of man, and that will be accredited in history to Wilson's first administration. In addition to some twenty-odd laws designed to benefit the condition of labor, to brighten the joys and lessen the sorrows of the toiling masses, we have now as the result of Democratic rule in Washington United States Senators elected by a direct vote of the people; national income tax and inheritance-tax laws that put an equitable share of the burdens of Government on the wealth of the country; a parcel post that has saved millions to the people in transportation charges; a tariff law written in the interest of the people and not in the interest of monopoly; a corrupt-practice act controlling expenditures in national elections; a banking and currency law that has destroyed the power of the Money Trust and set business free from the thralldom of Wall Street, which law though viciously fought during its consideration in Congress is recognized to-day by all fair-minded men as the greatest single legislative enactment passed by Congress in half a century; a Federal Trades Commission having supervision of big business and designed to eliminate unfair methods and practices in the business world; antitrust laws that will make the business world more free from the blighting influence of monopoly; a rural-credits law that will enable the farmer to secure long-time loans as advantageously as the business man or the manufacturer; a nonpartisan tariff commission, legislation that the business world has been demanding for a quarter of a century, and the meaning of which is that the tariff will be taken out of politics and treated as a business proposition and not a political issue; a law providing for a shipping board, which constitutes the first real step taken by Congress having in view the restoration of our merchant marine; a law providing for a Government armor-plate factory, as the result of which the Government will be freed from the extortions of the Armor Plate Trust; a law providing for a Government nitrate plant, an important piece of legislation from the standpoint of national preparedness and the agricultural development of our country; an Alaskan railway law that means the retention for the use of all the people of the country of the natural wealth of Alaska, constituting as it does the greatest unlocked storehouse of natural resources in the world; conservation legislation designed to prevent the giving away of any more of the natural resources of the country and the conserving of the same for the use and benefit of all of our people; the Shackleford good-roads law and the Lever agricultural extension laws that will make for better agricultural conditions and will prove to be powerful factors in making a success of the stay-on-the-farm movement that means so much for the industrial and economic developments of our country; the grain-grading bill; the warehouse act; and the cotton-futures act, three laws of vital importance not only to the producing but also to the consuming masses of our country; the Sherwood service pension bill and the widows' pension act, constituting two of the most liberal pension acts ever passed by Congress.

The foregoing enumeration comprises the most important legislative acts for which the Democratic Party is responsible, touching all phases of our industrial, social, and economic life, making a record for President Wilson's first administration unparalleled in the legislative history of our country.

The most remarkable and gratifying feature of this legislative achievement is the fact that practically all of these measures were so good as to command liberal support from the Repub-

lican side of this House. To be able to legislate so as to secure the united approval of a party is a record of considerable merit, but to be able to legislate upon many important subjects so as to receive the approval of not only the members of the party writing the legislation, but also the approval of a large element of the party in opposition, is a triumph seldom achieved by a political party.

In many political campaigns in the past the charge has been made that there was no use putting the Democratic Party in power, because it was simply a party of criticism and destruction and not a party of construction; that it had no leaders or statesmen capable of legislating upon the many pressing problems knocking at the door of Congress for consideration; and that there was nothing else for the people to do but to leave the Republican Party in power, no matter what that party might do or fail to do, because it was the only party that understood how to legislate and how to run the Government.

The long constructive legislative record of President Wilson's first term forever disposes of the charge that the Democratic Party lacks leaders and statesmen having the ability to outline and enact constructive legislation of the highest order, and likewise has President Wilson's first term demolished the argument that the Democratic Party would be unable to run the Government of the United States, for during its lease of power it has successfully met and coped with every emergency that has confronted this Government in four of the most troublesome years since the period of the Civil War, and I am certainly pleased that it was my privilege to serve as a Member of this body during two memorable Congresses covering President Wilson's first term, and to assist in a small way in the enactment of so much good legislation designed to bring about an era of social justice in this country, when our Government will be a real Government of the people, by the people, and for the people.

The Late Representative Michael F. Conry.

MEMORIAL ADDRESS

OF

HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. BENNET. Mr. Speaker, "We beseech Thee for the soul of Thy servant Michael." Gravely and softly the good bishop said it, yet as a man asking that for which he had an assured right. We in the pews who had known MICHAEL F. CONRY knew that this prayer would be granted. Our late colleague had lived the life which leads to certain salvation.

It had been a solemn and beautiful service.

The symbolic mass, the rich music, and then the impressive eulogy by the black-robed Jesuit father. All that he said we knew to be true. "It is given to all men once to die," said he. But to him the death of the righteous was triumph, not tragedy. We recognized this fidelity of his description of CONRY as a man who had been true to himself, to his family, to his country, and to his God, and who had really shortened his days by attention to the public service.

And for whom was this eulogy? In whose honor were Senators of the United States and 30 Representatives in Congress, headed by their honored Speaker, gathered?

Were the mitered bishop, the princely monsignor, and the reverend clergy gathered to do honor to wealth and hereditary power?

Did six personal friends bear on their shoulders one who living had enriched them by his largess?

None of these natural assumptions is true.

The sweet flowers, tributes of affection from real friends, blossomed for a simple Irish lad.

The life of MICHAEL F. CONRY is one of solid satisfaction to those who knew him, and a tribute to our country's opportunities. Not yet 50, he had risen by his own talent, ability, and exertions from a breaker boy in a coal mine to be a leader in the National House of Representatives. He had triumphed over grievous physical injuries.

Years ago an accident in a coal mine had lamed him for life. The accident that ended his career as a miner turned him to the profession of the law and success on a wider field. He had triumphed over a great apparent injustice. Nominated for Congress as the representative of his fellow workmen of Scranton against a man of great wealth and power, the nominee of both leading parties, he apparently won, even over such great odds. He was not seated in the House. Disappointment neither soured nor spoiled him. Leaving the city of Scranton he came to New York City and soon was in Congress under circumstances which made leadership inevitable and place and service secure. His judgment was serene and sound. Whenever a question came up which affected New York City every one of us, sooner or later, asked "What does MIKE CONRY think about it?" He was on the most distinguished committee of the House—Ways and Means. Happy in his beautiful home life with wife and children; surrounded by a wealth of friends, both within and without the circle of his kinsmen; daily more powerful in his party councils.

Then disease struck him down.

All last summer we saw him failing; this winter we noted his waning strength.

And then he was gone.

In the whole membership of the House he left not a single enemy. He had done his duty, he had fought his fights, but he fought fair and left no bitterness. To his family he will always be a fond recollection, for he was loving and true; to his friends a tender memory, for he was staunch, sympathetic, and helpful; to the Irish people, of whom he was proud to be one, a notable example of a true Irishman; to the church of which he was a faithful member, a source of justified pride.

This was the man for whom the bishop prayed and the eloquent priest delivered the eulogy of truth, sympathy, and power.

This was the man whom statesmen honored and whom friends mourned.

He had lived and loved, toiled and served; had seen good fortune and bad; had looked the great of the earth in the face unafraid, and had been proudly of the plain people. So they who honored him were wise, and they who mourned him were well advised. For he, thus honored and thus mourned, had been a greater than prince or potentate. He had lived and died wholly and completely a true, loyal, and honest man.

A Prophecy Fulfilled.

EXTENSION OF REMARKS

OF

HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. HELGESEN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I herewith present a verbatim copy of a pamphlet, quoting Francis Delaisi, member of the French Chamber of Deputies.

This material was originally published in May, 1911, more than three years before the outbreak of the European war, and is the best exposition of the events leading to that war which has come to my attention.

As we are experiencing the selfsame conditions that are portrayed in this pamphlet, I deem it of paramount interest at this time.

The article is as follows:

A PROPHECY FULFILLED—THE PRESENT WAR PREDICTED IN 1911—SECRET DIPLOMACY EXPOSED IN LA GUERRE QUI VIENT (THE COMING WAR).

[By Francis Delaisi, member French Chamber of Deputies. Published in Paris in May, 1911, three years before the war.]

PREFACE.

In 1911, that is, three years before the outbreak of the European war, there was published by the Paris periodical La Guerre Sociale an article by Francis Delaisi, member of the Chamber of Deputies, entitled "La Guerre qui Vient" (in English, "The War to Come"). It is of minor importance to what extent his warnings against "secret diplomacy" and political intrigues, as exposed therein, were heeded by the French people at that time. But it is highly interesting and of transcendent importance now to follow the author through his exposures of conditions prevailing in French administrative circles from 1903 until 1911, and which, three years later, precipitated the most terrible war in all history.

Nothing which has been written so far comes nearer picturing the real causes of the present war or as near being a prophecy as "The War to Come," because Delaisi, with deep penetration, saw clearly that the conspiracies of some of France's leading

politicians and financiers, who used the battle cry "revenge" to cloak their scheming for private profit, would lead inevitably to a crisis. If Delaisi had succeeded in making his compatriots see that crisis as it appeared before his own vision, if they could have sensed, as he did, that England's friendship for France was only the child of its determination to crush a commercial rival, perhaps there would have been no war.

The author of "The War to Come" shows conclusively how little, if anything, the public really knows of what is going on behind the diplomatic scenes; how the "dear people" are purposely kept in ignorance of the plots hatched out there by grasping special interests, plots which may have the most disastrous consequences in shaping the destinies of nations.

THE COMING WAR.

To speak of a possible, a probable, or an approaching war sounds fatuous at first thought.

We have for a long time fondled ourselves with dreams of peace! We have so often pictured to ourselves the power of democracies and parliaments as a check on the warlike ambitions of Governments; we have accustomed ourselves to count upon the desire of the masses for peace!

Certainly if public sentiment only were consulted in all countries of the globe, there would be nothing to fear.

It is quite evident that the mass of the German people has no desire to shoot our people, just as the great mass of English people want only to till their fields and work in their shops and factories in peace; and, as for the French, whether laborers or peasants, poor or well-to-do, international socialists or radical patriots, they have only one desire—peace.

Then all would be well and we could rest securely if the people were the masters of their destinies.

Unfortunately, in every country of the world the people do not direct their foreign policy.

That function is the exclusive privilege of a very small number of functionaries, who are addressed as diplomats. These individuals, carefully selected, all belong (and also in our Republic) to the titled nobility or the aristocracy of wealth. All are subservient to the financial and industrial oligarchy and strive to obtain for them foreign loans or foreign orders for their goods; the ambassadors in gold braid are to-day no more and no less than the agents of the banks and the great commercial institutions.

"But," you say, "above them stands the minister of foreign affairs, who is their chief, and who is himself responsible to Parliament."

Oh, yes; a fine responsibility that is! When a Representative asks any question about an incident of foreign policy, the Government invariably makes solemn declaration about "peaceful intentions," "the balance of power," etc.

If the interrogator insists and demands exact details, the answer may be known in advance: "Diplomatic secrets."

Thanks to this system, neither people nor Parliament know anything and may thus be entangled, without suspecting it, in the gravest of conflicts and be driven into war by a few men.

DELCASSE'S COUP.

This we saw clearly in 1905. At that time M. Delcasse had governed 10 years, without interruption, the foreign policy of France. He had so well secured the confidence of the Chamber of Deputies that they approved all his statements without discussion. And this "little" man had become so conceited with pride that he no longer consulted the other ministers—his colleagues.

In that way he, during 1904 and 1905, in conjunction with the English cabinet, and without informing anyone of his doings, manipulated the "isolation" of Germany. He endeavored to detach Italy from the triple alliance, negotiated with St. Petersburg, intrigued at Constantinople, and schemed that Germany, after being isolated, should be crushed by England, with the help of France.

Naturally, William II was not slow to see through this maneuver and brusquely dictated an ultimatum through the mediation of Prince Radolin.

We remember the excitement and surprise which spread through the whole country at the time. One beautiful morning in June all the newspapers appeared with maps of the frontier on the first page—on one side we saw little black squares representing all the German army corps, on the other side little black squares for the French army corps. And everyone asked himself that morning if he would have to take his gun and knapsack and go break his head in the Vosges.

In the Chamber they passed an hour of veritable madness. The deputies, who knew that the Moroccan affair was of little importance, understood perfectly the fact that some unsuspected intrigue must be behind all this. They wanted to hold a session to cross-question Rouvier and to overthrow the ministry.

But it must be said that Rouvier himself was the most surprised of all, and demanded an explanation from Delcasse.

There was held at the Elysée a council of the ministers which will remain historic. For two hours by the clock the little man disclosed to his stupefied colleagues his intrigues, and with audacious calmness declared himself plainly in favor of a continuance of the policy of "isolation," for a military alliance with England, and for war with Germany.

Rouvier and his colleagues were unanimous in their determination to get rid of this dangerous man, and the relations with Berlin gradually assumed normal conditions.

But it is, nevertheless, true that a single man, without consulting anyone, had the power to involve millions of beings in a dangerous policy and without the knowledge of the chambers, and even of the other ministers, to bring a whole people, against their will, upon the verge of war.

So much is true that even under a democratic government the people are not the master of their own destinies.

THE SERVILE PRESS.

"But," say you, "we have newspapers which should warn us of danger."

Ah! The press is well prompted!

In the first place, the dispatches of the Agence Havas, which are the newspapers' source of information, are carefully gone over by the minister of foreign affairs. They are so meager that the great newspapers which keep posted on the foreign policy must apply to the foreign news agencies.

Le Matin receives the dispatches of the Times; L'Echo de Paris those of the Daily Telegraph, etc. What is more, they are all supplied from English news agencies, so that we in France never see the situation except through English eyes.

Concerning the articles and the commentaries written by the newspapers on these dispatches, that is very simple.

There is at the ministry of foreign affairs a press bureau. There daily a very amiable functionary receives the reporters. Very gently he expounds to them what they should "think" about the foreign policy.

Naturally he says only what conforms to the views of the minister. All the newspapers repeat the interview the next morning, and the mass of people who have no other source of information believe what is told them.

One may judge by this whether the public is well informed. As a result of such procedure the Russo-Japanese War had broken out while the entire press was announcing that it would not take place; also that the whole world considered the Moroccan affair of no importance on the very day which nearly brought on the war; and, finally, at this very moment, all Europe knows that the Franco-Russian alliance is virtually dissolved, whereas our public alone believes it to be as solid as ever.

In short, our foreign policy is shaped without deference to either public opinion or Parliament; it is sometimes even beyond the control of the Government.

In our suspicious democracy it depends upon a single man and a small coterie of financiers and men of affairs to unchain a war and embark this country upon a series of the most perilous adventures.

THE REAL DANGER.

But now this is not a hypothetical danger. At this very moment Delcasse's intrigue recommences. He is ready to repeat the coup of 1905.

A terrible war between England and Germany is preparing. In all parts of the globe the two adversaries are measuring and threatening each other.

The affair of the Bagdad Railway and the question of the fortifications of Flushing show to what degree the crisis has become acute.

But for fighting the two powers need the assistance of France.

Germany lacks capital and needs our money.

England, which does not have compulsory military service, needs our army.

Our Government is accordingly the master of the situation. If it refuses William II our gold and George V our soldiers, peace is almost assured.

But here Cruppi negotiates a military alliance with England.

If it is signed, we shall be compelled to fight on the plains of Belgium in order to assure to the gentlemen in London the possession of Antwerp; and we shall then at one stroke be exposed to all the dangers of a German invasion.

And so this veritably astonishing thing happens. All the foreign newspapers are talking of this military alliance. All the great French newspapers are reproducing the comments of the foreign press. Not one has dared to say that the news is incorrect.

Nevertheless no one in France has said anything. Not a single deputy has risen to ask that the Government make a denial or give an explanation. Not a single Socialist leader, in the presence of such serious reports, has dared to even question the minister of foreign affairs.

A single voice has been raised to call attention to the danger. Merrheim, of the C. G. T., recently a delegate at the International Metallurgical Congress, could see with his eyes how acute the Anglo-German situation has become. On his return from Birmingham he signaled the danger in the Vie Ouvriere.

But no one budged.

THE ANGLO-GERMAN DUEL.

Very well! Here Mr. Delcasse returns to power.

The man who in 1905 nearly involved us in a war without consulting either public opinion or Parliament, or even his own colleagues, again takes over the direction of "our" foreign policy. For no one in Europe is deceived. M. Cruppi, former magistrate, will be only a straw man at the Quai d'Orsay. Moreover, M. Delcasse, the minister of the marine, will then be more at ease to conclude the military treaty which must bind us to England.

In a few weeks perhaps our financiers will have sold the skins of a hundred thousand Frenchmen to their colleagues in London in exchange for a few Turkish or Ethiopian railways.

It is time for those who do not want to see themselves treated as dumb brutes to open their eyes, to consider calmly the European situation, and to see the dangerous intrigue in which our financial oligarchy is about to engage.

THE COMMERCIAL WARS.

Formerly the nations were peoples of peasants, and naturally their leaders pursued an agricultural policy; their dream was to expand their territory and to annex their neighbors' fields. That is why their conflicts were frontier conflicts and their wars for annexation and conquest. Victorious Napoleon took possession of Belgium; the conqueror Bismarck annexed Alsace-Lorraine, etc.

But to-day all this is changed. The great European nations are governed by men of affairs—bankers, manufacturers, export merchants. The aim of these men is to seek everywhere markets for their rails, their cotton goods, their capital. Throughout the whole world they struggle for the control of the railways, loans, and mining concessions, etc. And if, perchance, two rival groups can not agree on the exploitation of new countries they appeal to arms.

Thus we saw the Japanese fight with the Chinese in 1895 for the exploitation of Korea; in 1898 the Americans battled with the Spaniards for the exploitation of Cuba; in 1899 England fought with the Boers for the possession of the Transvaal mines; in 1900 all Europe invaded Pekin to impose their railways upon the Chinese; finally, in 1904, the Japanese and Russians slaughtered each other for 18 months to find out who should have the right to exploit Manchuria.

Five wars in ten years! The triumph of pacifism! None of these wars resulted in conquest. Manchuria will always be a part of the Celestial Empire; China has kept its Emperor; South Africa is an autonomous political unity; and Cuba is an independent Republic. But their railroads, their loans, their import duties are all the booty of the victors.

Our great modern financial oligarchies are not looking for subjects, but customers; they do not engage in "patriotic" wars after the old fashion.

These men of affairs wage commercial wars.

THE ENGLISH INDUSTRY V. THE GERMAN INDUSTRY.

But now a conflict is preparing itself, compared to which the horrible slaughter of the Russo-Japanese war will be child's play.

At all points over the globe the English capitalists are struggling with the German capitalists, and one can see no other way out but war, provided the working classes of both countries do not revolt.

During the entire nineteenth century England was the undisputed queen of the industrial world. It was said of her: "She is a block of iron on a block of coal." She had an abundant supply of minerals to manufacture engines and the coal which is necessary to drive them. She could, therefore, ahead of all other nations, develop an incomparable industry. And the sea, which completely surrounds her, permitted her to build a navy without equal.

And thus during a century the spinners and weavers of Manchester and the steel mills of Birmingham spread over the whole world their cotton goods, cloths, hardware, their rails and locomotives, realizing without great effort magnificent profits.

Only France, already much in arrears, offered a weak competition; it is on that account that our capitalists formerly preached to the people of the hatred of "perfidious Albion."

Finally in 1898, at the time of the Fashoda incident, France—i. e., the oligarchy governing France—gave up its pretensions to great power. And England believed herself the undisputed mistress of the world's commerce.

But there an unexpected rival arose. Up to 1870 Germany was an almost exclusively agricultural country, but her soil was poor, and 300,000 Germans emigrated every year to distant America, seeking a more fertile soil, which would support them.

After the war insensibly all this changed. Bismarck, whom our chauvinists picture to us as planning continually to charge his Uhlans against us, had only one idea—to make of his country a great industrial nation like Great Britain.

Little by little, on the banks of the Rhine, in Westphalia, in Saxony, in Silesia, there arose great blast furnaces, steel mills, and forges; millions of spindles turned in the cotton mills; woolen mills, chemical industries, and great shipyards sprang up as if by magic. The railways of all the small States were placed under one management; the Government dredged or canalized the streams; the admirably constructed harbors were fitted up in first-class order, and a merchant marine, becoming gradually stronger, carried the flag and the merchandise of the Empire to all quarters of the globe.

Then the English began to grow uneasy. At first they had regarded the efforts made by the heavy Saxons to copy their industry with a disdainful smile. They asserted and believed that the Germans manufactured nothing but trash.

Yet this "trash" overwhelmed them. To relieve themselves of it they enacted a law that all articles of German manufacture should bear the trade-mark "Made in Germany." They sought thus to discredit their rivals.

But what was their surprise when they discovered that a very large number of excellent articles which had been previously accepted as the best products of English industry came directly from Westphalia, Saxony, or Silesia! Thus it appeared that the astute German manufactured better and cheaper wares than the English!

Instead of discrediting them, they had given them a very effective advertisement! This caused a veritable commotion amongst the coterie of Glasgow, Birmingham, and Manchester capitalists.

At the same time, from all the principal markets of the globe, the English consuls, who watch international commerce, sent disquieting reports to London.

From everywhere they reported the presence and activity of German traveling salesmen, engineers, and promoters, who were taking all the orders and securing concessions and loans.

A consul in Syria wrote to his Government: "Formerly all the European products used here were purchased in England. To-day I am writing to you on a table manufactured in Germany, with a German pen, on German paper. Soon there will be nothing English left but myself."

On all sides the progress of British commerce was declining, while that of German commerce was increasing with disquieting rapidity.

THE BAGDAD RAILWAY.

Naturally the Kaiser supported the efforts of his merchants and bankers with all the forces at the disposal of his diplomacy. Everywhere his ambassadors endeavored to obtain concessions and orders for his countrymen.

Colonies were founded in Africa; they built railways across China; the mines of Chile were exploited, and so forth.

But it was especially upon Turkey that the people of Berlin cast their eyes.

In 1903 William II obtained from the Sultan Abdul Hamid the concession of the Bagdad Railway, about which so much fuss is made at present by our great newspapers.

It runs for a stretch of 2,800 kilometers (about 1,700 miles), from Constantinople to the head of the Persian Gulf. It is a matter of nearly $200,000,000. One may easily imagine the great returns such an enterprise will yield to the bankers, ironworks, and promoters on the other side of the Rhine.

But it was found that this German railroad terminated in Mesopotamia in a region which the English always considered as a reservation for their own commerce. And, besides, this railway can in a few days transport Turkish troops into the neighborhood of Bombay and threaten the British domination of India.

THE APPEAL TO ARMS.

At this the English capitalists took fright. Their first surprise was changed to uneasiness and later into fury.

To-day in all parts of the globe, in the Balkan Peninsula, in Turkey, from Persia to China, in Central America, in Brazil, in the Argentine Republic, and in Chile, the bankers of Berlin and London, the shipowners of Liverpool and Hamburg, the

industrial magnates of Glasgow and Essen, are involved in a struggle.

To defend at least the colonial commerce, Mr. Chamberlain, the head of the Birmingham steel industry, proposed a protective tariff, but the English workingmen unanimously rejected the same, as this project would have increased the cost of living. After this the great capitalists who govern England saw only one solution.

It would be necessary at all costs to do away with this unexpected rival who was threatening British dominance in all the markets of the world. Since the industrial competition could not be settled by peaceful means, recourse would have to be had to dreadnaughts and an appeal to cannon.

Toward this goal the English Government is working with marvelous cooperation.

That is how in our capitalistic societies the struggle between groups of rival financiers embroils nations in war.

THE ISOLATION.

So England, feeling herself beaten in the industrial fight, decided to appeal to the fortune of arms.

Her plan is a double one:

(1) To encircle Germany by a system of ententes and alliances which will leave her isolated in the heart of Europe without military or financial support at the time of danger.

Thus we saw Edward VII in 1903 approach France and conclude with our financiers the entente cordiale and abandon Morocco—which, by the way, did not belong to him—to them.

Soon after he reconciled himself to the Czar by making some concessions in Persia and the Balkan States; he sought to detach Italy from the triple alliance by offering her Albania; he aroused the traditional hatred of the Germans by the Hungarians; aided the young Turks with money and advice to overthrow Abdul Hamid for being too closely allied to William II. And soon we could see the day when Germany would be completely surrounded by hostile powers, finding herself alone in facing her redoubtable enemy.

THE ERA OF THE DREADNAUGHT.

(2) At the same time they committed themselves in London to formidable armaments.

The English engineers constructed the first dreadnaught, these gigantic vessels of 18,000, 20,000, and 22,000 tons, carrying mounted in their turrets 34-centimeter guns, throwing enormous shells of melinite 9,000 meters.

Then all the principal battleships cruising in all the oceans of the world for protecting the empire "on which the sun never sets" were recalled and concentrated at the naval ports of the mother country.

These naval bases were changed. The principal ones had formerly been located at Plymouth, facing France, the ancient enemy.

They are now at Dover and Rosyth (Scotland), both commanding the entrance to the North Sea, the one in the south, the other in the north; both face toward Germany.

To stimulate the warlike feeling of the English people and arouse them to support the enormous cost of the naval programs, the entire fleet was drawn up in the Thames two years ago, from the mouth to the port of London, to crystallize enthusiasm by the grand spectacle of the naval strength of the nation.

Finally journalists and ministers of the distant colonies were brought from all parts of the globe—from Australia, South Africa, Canada, and New Zealand. They were shown what heavy costs the mother country had imposed upon herself; they were solemnly told that British preponderance was threatened. They were asked to contribute their share of the costs and to vote some battleships.

This was done. To-day they build dreadnaughts for account of the colonies, which also recruit, train, and arm corps of volunteers.

All the forces of the Empire in the five continents are to-day being strained in one immense effort to be ready for war.

Naturally enough the Germans, in the presence of this terrible menace, have not remained inactive.

But suddenly the Emperor sounded the alarm. In 1898 he uttered the famous words, "Our future lies on the water." Then he set to work designing and planning battleships and asked the Reichstag to vote a naval program.

At first the representatives did not understand and refused. But soon, thanks to the efforts of the navy league, merchants, manufacturers, and financiers were apprised of the threatening danger.

And thereafter program followed program. Superdreadnaughts were added to dreadnaughts; the great shipyards of Bremen, Hamburg, and Stettin worked with feverish activity.

In order to meet these colossal expenses the good-natured Germans consented, not without regret, to having taxes imposed even upon their beer and tobacco.

In 1914, when these programs will have actually been carried out, England will have 30 dreadnaughts, Germany 26.

The forces will be almost equal.

THE WAR OF FACTORIES.

What kind of a war will this be?

It is here we must depart from traditional ideas. It will not be a question of England's landing 100,000 men on the coasts of Hanover for marching on Berlin.

Nor will it be a question of Germany to hurl a landing force against London.

With the present development of naval forces this is nearly impossible; and, moreover, it would serve no purpose.

It is not a war of annexation or conquest which they would wage, but a commercial war. That is why there will be a return to the old methods of preying upon shipping and continental blockades.

What does England want? To ruin the German industry. A good way to do so is to deprive her of raw materials and prevent her exports.

That does not appear impracticable.

These great factories of the Rhine, of Saxony, of Silesia; these steel mills, cotton and woolen mills, which have carried on against their competitors of Birmingham and Manchester such terrible competition, with what do they operate?

They work iron ores which come from Spain and Sweden, cotton coming from the United States and Egypt; wool from the Cape, from Australia and Argentina. And all these indispensable raw materials arrive by sea, notably through the two great ports of Bremen and Hamburg.

And when they have manufactured in enormous quantities the rails, locomotives, machines, cotton goods, cloths and fabrics which have partly supplanted English products, whence are they shipped? To Turkey, to Africa, to North and South America, to China, and also to Japan. It means that the greater part of Germany's exportations goes by sea, and principally from the two great ports of Bremen and Hamburg.

Very well: Suppose these two harbors and their neighbors on the North Sea are blockaded by an English fleet; immediately no more iron ore, cotton, or wool can reach the factories along the Rhine, in Saxony, and Silesia. The finished products can not be exported, thus encumbering warehouses; no more can money come back to them; the dividends cease, and idleness becomes a harsh taskmaster. Grain and meat, which they bring in quantities from America, can no longer arrive, and the price of foodstuffs rises. Misery gradually bears down upon all the people.

It may be said that these merchants will endeavor to export and import by rail, and to make use of the foreign railways and ports, such as Dunkerque, Genoa, and Trieste.

But this means of transportation is infinitely more costly than that by boat; it would suffice to hamper German industry during the entire extent of the war. In the meantime, supposing, which is probable, the ocean trade to be open to British ships during this time. The British products will little by little regain their former preponderance in all the great markets of the globe.

The London Government will take advantage of its military superiority for making treaties and tariff agreements with various countries, will offer inducements for orders for rails, for concessions for railways, and wherever it can will create private "spheres of influence," like Morocco and Egypt.

When the war is over Germany will find her place taken, and the German industry will find itself in an inferior position for perhaps a century.

Thus bottling up the harbors of the North Sea will be the aim of the future war.

THE ENGLISH MANEUVERS.

And so that it may not be said, "These are all hypotheses, ingenious, probable perhaps, but after all only plain suppositions," it must be recalled that the object of the great English naval maneuvers two years ago was interception of merchant vessels passing between Spain and Ireland.

Over all this vast stretch the Admiralty had strung an immense line of battleships and cruisers, barring the entrance to the channel. And all the British merchant vessels (in case of war they would, of course, have been German vessels) which undertook to break through this line were halted and captured.

Likewise, here is the object of last year's maneuvers: "Supposing a hostile fleet in the Atlantic, another in the North Sea, could an English fleet in the Channel prevent their union?"

It is known that, notwithstanding a strict watch, the squadron representing the German fleet coming from Bremen succeeded

in breaking through the Straits of Calais and passing through the Channel.

This caused a shiver of fear in all England and resulted in a vote of four additional battleships.

Therefore, according to the British Admiralty, the object of the next war must be to blockade the German ports and cut off the German merchant fleet, to prevent supplies from reaching its factories and the exportation of German products.

It is a kind of continental blockade that we shall see, as in the time of the great duel between Napoleon I and England.

And now, since that is established, we can understand what rôle will be played by France in this merciless struggle.

To destroy by force the German industry, which troubles England, England has but one means—to cut off her sources of raw materials and shut off her exports by blockading her ports.

Suppose that the London Cabinet has decided on the blockade.

Some dark night, without warning anyone (for nowadays war is started and declared afterwards), an English squadron will cross the North Sea and station itself at the mouth of the Elbe, stopping all ships coming from Hamburg. Another squadron will station itself at the mouth of the Weser and bar the way for ships coming from Bremen. They can pass no more.

At the same time a fleet of cruisers will patrol the Channel and another will cruise between Scotland and Norway, stopping one after another all the merchant ships destined for Germany.

The enemy's industry is blockaded.

Will all then be lost? And will the proud Kaiser be forced to capitulate?

Not at all.

THE BACK DOORS OF GERMANY.

I have just said that the manufacturing establishments on the Rhine, in Saxony, and in Silesia supply themselves with raw materials solely through Bremen and Hamburg. That is not exact.

There are two other ports that play almost as important a rôle in the economic life of Germany.

They are Rotterdam and, still more, Antwerp.

Rotterdam, situated on the Rhine not far from its mouth, receives by thousands the boats which, ascending that stream, bring to the blast furnaces and cotton mills of Westphalia the iron ore, cotton, and wool necessary for their business.

Likewise Antwerp, on the large estuary of the Scheldt, is much nearer to Essen than Bremen. From there, by railway and the Belgian canals, the Rhenish industry obtains a large part of its raw materials. And it is by this route that it exports and distributes over the world the greater portion of its *finished products.*

Rotterdam and Antwerp have also become two great depots of the German industry. They are, commercially speaking, two German cities.

Only politically are they two foreign cities, Rotterdam being located in Holland and Antwerp in Belgium.

This is a fact of capital importance.

In effect, at the first sign of war, what will the Germans do? All of their ships finding themselves in foreign harbors at that time will denationalize themselves. They will hoist the Belgian, Dutch, Norwegian, Danish, and French flags. Then quietly they will sail for Rotterdam or Antwerp.

What can the English Navy do? Nothing at all, because they are neutral ships sailing for neutral harbors.

All these ships will unload their wares at the wharves of Antwerp, whence they will be carried by the Belgian canals and rivers to supply German factories. At the same time they can load finished products arriving for them from Westphalia, Saxony, and Silesia and quietly pass under the noses of the enormous English warships, which can not fire their formidable guns at them, for they are theoretically Belgian wares carried in Belgian ships.

One can then understand the international importance of these two ports. Antwerp and Rotterdam are the back doors of the German fortress, by which she will continue to communicate with the outside world. As long as they are open England may well blockade Bremen and Hamburg; she may well patrol the seas with her monstrous dreadnaughts; all her efforts will be in vain; she will see under the very mouths of her cannons the German industry resupply its factories and distribute as before its products all over the world.

That is why the Kaiser is using all his power to keep open Rotterdam and Antwerp.

For the same reason the Government of George V is using all its power to close them.

THE BELGIAN NEUTRALITY.

As to Rotterdam, this will, perhaps, not be difficult. Holland has for a long time been drawn into the circle of influence of German politics; her railways are in part under the control of Berlin; her Government follows willingly the suggestions of William II.

In case of conflict, whether she wills or not, her cities and harbors would probably from the first hour be occupied by Prussian troops.

England could then treat her as a belligerent power and try to take Rotterdam by force of arms.

But it is not so with Antwerp.

Belgium, they say, is a neutral country. By a solemn treaty all the neighboring powers have agreed in case of war to respect her territory. At the same time if one of them should undertake to march its troops through Belgium, all the others must arm themselves to prevent it.

This is a great obstacle for England, because it is simply indispensable for her to have Antwerp closed, and she can not accomplish this without violating treaties and running the risk of starting a European war.

Happily there is a means of circumventing this obstacle. Antwerp is not directly on the sea; it is like Rouen, Nantes, and Bordeaux, a river port located 70 kilometers inland. Therefore to block its access it is not necessary to land there; it is sufficient to station a squadron at the mouth of the river to bar the passage for merchant vessels.

THE QUESTION OF FLUSHING.

Only here a new difficulty arises.

The mouth of the Scheldt is within Dutch territory and is dominated by a Dutch city, Flushing. Now, the Government of Queen Wilhelmina—evidently prompted by William II—decides to fortify that city.

Suppose that this project is carried into effect; that formidable batteries are trained on the mouth of the Scheldt, and that a German fleet be stationed under its protection. Thus having provided a good naval base it would force the English dreadnaughts to keep at a distance; and they would try with all their forces to keep open the navigation of the Scheldt, the entrance and exit of the port of Antwerp, and there are chances that they would succeed.

Now one can understand the rage which took possession of all the high officials in England at the news that the Dutch Government was going to fortify Flushing! Not only has this small place considerable importance of itself, but it is the key to the port of Antwerp. And if Antwerp is not "bottled up," then it is all up with the cabinet of London's project of blockade imposed by the imperious logic of facts.

Then the entire English press strove to overwhelm Holland with threats. And the serious Times itself, the official organ of the minister of foreign affairs, declared, repeating a famous saying: "Flushing fortified is a pistol pointed at the heart of England."

Intimidated perhaps by these threats the Dutch Government and Parliament have not yet put their plan into execution. But from now on the question is a serious one and one of the gravest confronting Europe.

It is necessary for England's triumph over Germany that Antwerp be closed; to enable Germany to resist, Antwerp must remain open. It is a vital question for both.

It is, therefore, around Antwerp that the fate of the two empires will be decided; and it is on the plains of Belgium that the economic domination of the Old World will be determined between the two great nations.

But the neutrality of Belgium has been guaranteed by France. That is why each of the two powers is endeavoring at this moment to draw us into this serious conflict.

"Very well," you say, "if England and Germany absolutely insist on fighting, let them do so! As for us, let us keep out of the quarrel and remain neutral."

That is wisdom itself; unfortunately it is not practicable, for each of the two adversaries want to involve us in the conflict.

England needs our Army; Germany needs our money. Both are pulling us; one this way, one that.

And this is the secret of the chauvinistic agitation which the press is fomenting at present. It is only a beginning. Very good reason for investigating the situation with cool heads.

ENGLAND NEEDS OUR ARMY.

England, as I have shown, in order to throttle German industry, must absolutely blockade Antwerp. But she must also reckon that the Kaiser will *not* permit her to do this without resistance.

At the first sign of war—and even before the official declaration—it is probable that a German fleet will station itself at Flushing under the protection of the Dutch forts, and that a Prussian Army Corps will advance with forced marches to occupy Antwerp.

If this maneuver succeeds and an English squadron can not take the first step, then Antwerp must be taken by land.

But there the method of operation changes; the sea blockade will be superseded by continental war.

England must disembark troops in Belgium; it is necessary that these troops bar the route of the Prussian Army and throw it back upon the Rhine or Meuse.

That is why Lord Kitchener, the great English general, spoke these famous words: "The frontier of the British Empire in Europe is not the Straits of Calais, but the line of the Meuse."

A strange formula, which shows what neutrality counts for, in both camps!

But with what troops will England occupy this frontier? This is where the London Cabinet meets with difficulties.

It is well known that England does not have compulsory military service. She alone in Europe has declined to place the heavy burden of a "national army" upon her citizens. Secure in the power of her fleet, she has been content until now with a small army of professional soldiers and a reserve of 200,000 volunteers, brave men, but without training or discipline, and which the Secretary of War, Mr. Haldane, himself denounced as insufficient.

We know what a sad figure this army cut in facing the Boers.

However, if war should break out with Germany, England would have to measure itself, not with peasants, brave but undisciplined, having no knowledge of tactics, but with a regular army, perfectly equipped and trained, splendidly organized, and which is considered to be the best in Europe.

We can see the London "volunteers," with their parade officers, in battle after six weeks' fighting with the German Army!

In the presence of this great danger the general staff sounded the alarm. In Parliament, the commander in chief, Lord Roberts, made the following statement: "There is only one remedy for the present situation: Compulsory military service for all Englishmen."

Unfortunately this remedy appeared not to be quite to the taste of the English people.

They have always believed it a considerable advantage not to be obliged to spend two years of their lives in the barracks in fatiguing and unproductive drill.

Of course, chauvinistic ideas are just as strong there as they are on the Continent. The imperialism of the "great English" is all the more belligerent, since everyone well knows that he is not required to spill his own blood for the glory of the Empire.

But if all had to shoulder gun and knapsack and fight in the plains of Belgium to insure the victory of Mr. Chamberlain's ideas, it is probable that the English chauvinists would lose many of their followers.

Liberals and conservatives are aware of this powerful opposition of the popular sentiment. They know that by imposing compulsory military service on the citizens of free England they would forever ruin their belligerent policy. After several fruitless attempts in the House of Lords the measure was rejected.

* * * * * * * *

But nevertheless they have to get troops to occupy Belgium and throw the Prussians back on the Meuse.

Then not finding them at home, they thought of France.

"We lack soldiers," they said, "but France has them. Over there beyond the Straits of Calais is a numerous army, well trained, well disciplined, well equipped, capable, in one word, of resisting Germany. The French are brave, they are aggressive; they like war and know how to wage it; if we can impress them with the catchphrases 'national honor,' 'the highest interest of patriotism' and 'civilization,' they will march. Let us try to interest the French Army with us.

"That will not be so difficult. French democracy is for show. The people are in reality governed by an oligarchy of financiers and steel magnates who control the press and politicians.

"Let us bargain with these people. Let us promise them some large war loans, whereby their banks can earn high commissions. Let us bind ourselves to obtain for them some orders of railroads in Turkey and some large concessions in Syria, Ethiopia, and Morocco.

"And, for which few millions they will sell us the French Army."

* * * * * * *

Thus reasoned these brave people, and their politicians started to work.

In 1903, immediately after the close of the Transvaal war, Edward VII went to Paris, and all the amiable dunces who had so often cried "Long live Kruger" were now bought by the press to cry "Long live England."

In order to recompense us for Egypt, where we held financial control, the London cabinet generously gave us Morocco, which did not belong to them.

And at all our financial banquets they acclaimed the "entente cordiale."

But that did not suffice.

Delcasse, who in 1905 wished to involve us in a war with Germany, having been overthrown, England saw that she would have to act with prudence.

She waited until that friend and companion of Edward VII came back into power. As if by chance he is appointed minister of marine, and, also as if by chance, on the eve of his success it was announced that negotiations were under way between London and Paris for the conclusion of a military treaty.

This treaty, let it be well understood, will be defensive. But it will be easy for the British Government in blockading Antwerp to force Germany to declare war.

And then we, the French, will have to do the fighting on the Belgian plains, not for the King of Prussia this time but for the King of England!

* * * * * * *

That is what is in reality being engineered in the twilight of diplomatic correspondence and the silence of the parliaments.

England has always had need of a soldier on the Continent. Formerly, during the struggle with Napoleon, she paid the Austrian and Prussian troops to march against France. To-day she wants to send our national infantry against the Prussians.

The rôles have been changed, but the play is the same. It remains to be seen if we will play the game.

FRANCE AND GERMANY.

I know a great many brave Frenchmen who imagine that Emperor William every morning when taking his chocolate asks himself whether he shall not give the order for mobilization and launch his uhlans against Nancy.

They believe that the only desire of the Prussians is to hurl themselves upon us. And it must be confessed that great newspapers do all they can to sustain this fear.

It is indispensable for our steel magnates to secure votes for great numbers of cannon and battleships to enrich their stockholders. Without the fear of the German bogyman what would become of the dividends of Creusot's gun works?

Furthermore, it must be recognized that the Berlin Government plays exactly the same game with the German people. Since 1871 every time that Bismarck and his successors wished to procure from the Reichstag a new military septennate and modern armaments, they took two or three articles from La Patrie and a speech by Deroulede and dished up the whole with great bursts of eloquence in order to raise the specter of Revanche; and they obtained for their steel magnates all they wished. (We must not forget that the Emperor is one of the principal stockholders of the Krupp firm.)

Thus we have on both sides the same game of threatening talk and stage effects.

But how can we distinguish if these threats are sincere or a mere "metallic" bluff?

To do so it suffices to examine the economic interests of the two powers. In Germany, as in France, as in all the great European nations, it is these interests—and not the caprice of monarchs—which dominate the foreign policy and decide for peace or war.

NO ECONOMIC CONFLICTS.

For 40 years there has been no lack of opportunities for the Germans to attack and conquer us. That she has not done so is not because of any sympathy for us. It is because the Germans have been entirely absorbed by the idea of making a great industrial nation of their country.

In the La Force Allemande I told how, by patient, continuous, methodic efforts, they have succeeded.

To-day their very success makes them rivals of Great Britain.

But have they any reasons for entering into a conflict with us?

From a commercial point of view Germany sells almost as much to France as she buys from her. For 20 years exports and imports have been almost balanced.

As for the other part, the Germans export to all the markets of the world products of current use—machines, hardware, cotton goods, etc. We, on the other hand, export none but articles of luxury—Paris wares, dresses, jewelry, etc.—wherein the German taste can not compete with ours.

There is thus neither commercial competition nor any economic conflict.

"But," some one may say, "there are our colonies. Germany has none; would she not take ours?"

Those who entertain such ideas I advise to read the report of Mr. Violette. They will see the lamentable condition of our

colonies. Only one is self-sustaining—Indo-China—and the system of Doumer has so burdened it down that it is on the eve of a general revolt.

Moreover, just before a grave conflict with England, William II can not afford to multiply his vulnerable points on the face of the globe. He prefers rather to colonize Turkey in Asia under the cover of Ottoman independence.

There remains the conquest of a French Province. Alas! Germany is still suffering from the abuse of its annexations—in 150 years she has not been able to digest Poland; Danish Schleswig and even Hanover give her nothing but trouble; and she was compelled to grant self-government to the Alsace-Lorraines, whom she has not been able to govern.

There is only one piece of territory which she might want. The Empire has no iron ores. But just on the frontier, in the Department Meurthe-et-Moselle, have been discovered large deposits, some of the richest in the world. The industrials beyond the Rhine might be tempted to demand their annexation.

But it is quite superfluous, because our capitalists themselves have ceded to their German rivals, by liberal consents of participation, a considerable portion of their concessions. Why should William II exert himself to take by force a treasure which our great patriotic steel magnates daily deliver to him of their own accord?

In truth I have searched for reasons why the Germans should attack us; I have not found them.

THE FRANCO-GERMAN SYNDICATE OF 1902.

On the other hand, I see plainly the reasons they have for treating us fairly.

Primarily, and that is the essential point, they need our money.

To create an industry, capital is necessary, and Germany has not enough money. No doubt she realizes great profits every year. But she is a relatively new country; she has not the strong reserves of the old nations, like England and France, with industries one or two centuries older, and who have accumulated billions in their traditional "stockings."

Every year the creation of new factories absorbs the national savings, and the more the country develops the more money it needs.

Where find this money except in France, in the country of capitalists without initiative, who do not know how to use this richest treasure of the world, and do not know any better than to lend it to foreigners?

In 1902 William II tried to make a financial alliance with our banks. He had just succeeded in obtaining from the Sultan of Turkey the concessions of the Bagdad Railway, which excited the envy of all Europe to a high degree. But Germany was just coming out of a commercial crisis and had no available capital.

The Kaiser then approached our banks. A Franco-German syndicate was formed; it had for its president Arthur von Gwinner, president of the Deutsche Bank, and for vice president, M. Vernès, the partner of Rothschild in the Compagnie du Nord and the Compagnie du Midi, manager of the Banque de l'Union Parisienne, of the Banque Ottoman, of the Saloniki-Constantinople Railway, etc. After these came Rouvier, G. Auboyneau, etc.

The agreement made between the financiers, a diplomatic reapproachment became inevitable. And already M. Jules Lemaitre—he had not yet become nationalist and "camelot du roi"—was preaching friendship with Germany and to forget the past. No doubt if the financial combination had succeeded we would to-day have an entente cordiale with Germany.

THE VISIT OF EDWARD VII.

But soon England became disquietened.

In this economic struggle with Germany she has only one advantage—an abundance of capital. If France were to lend hers to England's rival, the British supremacy would be definitely compromised.

Soon, at the beginning of 1903, Edward VII came to Paris in great pomp.

The stupefied Parisians, who two years before had shouted, "Long live Kruger! Down with Chamberlain!" had suddenly to learn that they must henceforth cry, "Long live Edward VII!"

What took place between the King and Delcasse, Vernes, and some others, history alone can tell. One fact is certain: The following day after the departure of the King for London, the financial agencies announced that M. Vernes and his group had retired from the Bagdad Railway enterprise and that the Franco-German syndicate had been dissolved.

One year later the entente cordiale was concluded with England.

In return for giving up entirely the financial control of Egypt, and to reimburse our capitalists for their participation in the Bagdad project, the London Cabinet made us a present of Morocco. They gave it all the more willingly since it did not belong to them, and we can see to-day from what happened at Fez that a bearskin can not be bought before the bear is killed!

However that may be, M. Delcasse, henceforth inseparably allied with the fortunes of England, soon committed himself to a policy of encircling Germany and dragging us into a war with her.

We know how he was ousted by Rouvier in 1905.

THE EFFORTS OF WILLIAM II.

At this moment William II had a fine opportunity to attack us—our entire Nationalist press is unanimous in declaring that our invincible generals would have been beaten then.

The Kaiser did not do it. Oh, not for sympathy for France. It is simply because his interests counseled him to forbear.

Far from attacking us he tried everything to renew the relations with our business men. Ever since 1906 in Asia Minor, in the Ouenza syndicate, in the Union of Moroccan Mines, he planned to associate the German capitalists with the French capitalists. He had constituted officially a small Franco-German syndicate at Glarus, Switzerland, for the issuance of stock for the Bagdad Railway, his banks borrowed every four months large sums at high interest from the Credit Lyonnaise. Through all these means he endeavored to restore matter to the condition of 1903, before the visit of Edward VII to Paris. Have we not seen at the time of the famous accident to the dirigible Patrie that the Kaiser was first to send wreaths to the funeral of the killed officers?

Once more these manifestations of friendship were not disinterested. If William II tried by all means to secure reapproachment between our two countries, it was because he needed us. It is because his industry requires the assistance of our capital in order to promote its development. And that alone is already a guaranty that Germany does not try to make war on us.

But it is especially in case of an Anglo-German conflict that the French savings would become necessary to the Kaiser. And it is that which makes the situation of our country so delicate.

THE SALVATION OF THE EMPIRE IS AT THE PARIS BOURSE.

It is two years since at Hamburg there was held a congress of German bankers, where all who counted for anything in the financial circles of the country attended.

The report said: "Our military mobilization has been made and well made; but our financial mobilization is not ready. A war with England would cost at least five billion francs a year and would last probably two years."

These ten billions—where is Germany to find them? Evidently not in London or New York. There are only the two Austrian and Italian allies, who can not furnish this money—they have not enough for themselves. And she will no more get it from the Czar of all Russians! Then it remains for France, this rich country which does not know what to do with its savings, the France which this year subscribed loans for 6,000,000,000 francs (4,400,000,000 are foreign securities). It is the French bondholders who recently loaned two billions to Russia which made it possible for her to resist the assaults of Japan for two years.

If they should deign to do as much for Germany! Then the war loans subscribed at Paris would go to replenish the war chests of Spandau; then the Kaiser would always find the sums necessary to repair his battleships, to equip his troops, and feed his soldiers. There would be no industrial crisis and no financial crisis. Germany, without exhaustion, could sustain the English attack.

The salvation of the Empire lies at the Paris Bourse!

That is the immense service that France solely by means of her savings can render her proud neighbor. And now we comprehend all the efforts of William II to draw her with smiles and threats, willingly or not, into his sphere.

Unfortunately, a loan of money to Germany would estrange us from England. The London cabinet would never permit that France should furnish money to the Berlin people to pay for the shells to bombard the English fleet. And it is a known fact that in the whole world admittance of German securities to the official exchange of Paris would lead to an immediate rupture of the entente cordiale.

Thus we are placed in a delicate position. Each of the two adversaries seeks to engage us one against the other—the one needs our money, the other our Army—and we can not give our assistance to the one without exposing ourselves to the reprisals of the other.

There is one good solution, which is to remain neutral and to give neither military nor financial assistance to either one.

But can we do it? Will Germany not try to take our money by force if we refuse her the loans which she needs? It is a serious problem, which must not be decided without due reflection.

DOUBLE WAR, DOUBLE COSTS.

Assume the fight started between the two industrial rivals, and imagine that France remains neutral.

At the very first news of the declaration of war—so writes Mr. Riesser, former president of the Bank of Darmstadt—in all Germany orders will be canceled, commércial transactions stopped, and transportation facilities seized by the troops. Manual labor being scarce, the price of the necessaries of life will rise, that of luxuries fall; the capitalists will withdraw their deposits from the banks, the credit establishments will see their chests become empty.

Now, then, just at that time the State is obliged to issue, step by step, loans for hundreds of millions to meet the expenses of the war. To attract the capitalists it will offer its obligations at very low prices. The German investors, in order to buy them, will sell their industrial securities, which will suffer a considerable depreciation.

Gold becomes scarce at the moment when there is great need of it. A compulsory course for exchange will have to be declared for the bank notes. A financial crisis will be imminent.

However, it might be that by keeping cool and by confidence in their Government, German capitalists, especially if their fleet is not immediately vanquished, will succeed in averting this crisis.

But suppose that France, bound by her military treaty with Great Britain, is compelled to fall in line.

Soon the scene changes. It will suffice no more to send two army corps against Antwerp; the entire army must be mobilized, a million men launched against the Meuse and the Vosges, must be transported, equipped, and fed. This is no more one war, but two wars, which will have to be fought; the one on the sea, the other on land—and the latter will be at not the less cost.

Frankly, does anyone believe that Germany, which has not enough money for a naval war, would readily take upon herself the enormous burden of a continental war, if not compelled to?

That would be madness. And the German statesmen, and, above all, the bankers who guide their policy have shown us that they know how to figure.

FRANCE TAKEN AS "HOSTAGE."

Oh, I know well that the chauvinistic journals beyond the Rhine—they exist there as well as with us—utter ferocious threats. The notorious Prof. Schiemann, the German Deroulede, said: "In case of war with England we shall take France as hostage!" And the old Bismarckian Maximilian Harden declared: "We shall invade France, we shall impose upon her a war indemnity of 20,000,000,000 francs, and with this money we shall defray the expense of the campaign against the English."

This is a simple bluff like our Nationalists like to use, which will not bear inspection for five minutes. Then before they can take away from us ten or twenty billions they first must have made headway against us. Even if the French Army is as inferior as is assumed, it will resist easily for at least six weeks, just as the Austrians did at Sadowa and the troops of Napoleon before Sedan. But I learned from a general, who consented to discuss the subject with me at the Ecoles des Hautes Etudes Sociales, that during the first months of hostilities each army will spend from one to one and a half billion francs.

At the precise time when Germany would need all her resources against England she would be compelled to use up a billion or two to wage war against France. It is very imprudent to chase two rabbits at one time, especially two rabbits of such size.

"But," you will say, "with the war indemnity the Kaiser will get back his outlay and he will still have remaining a large sum to make war against England."

Thus reason those who know nothing of financial matters. But do they really think that ten or fifteen billions can be paid in "a turn of the hand" like a bill at the grocer's?

After the disaster of 1870 it took us more than two years to pay the five billion francs to Germany; and all of Europe, even the Prussians themselves, considered this a remarkable showing of strength. It is admitted that to-day France is richer than she was then. But if ten, fifteen, or even twenty billions were demanded of her, it would be very good if she took only three or four years to pay them. Even the first billion could not be raised before one or two years. And just then the war with England would already be over and the French money would come too late.

It is precisely this they are counting on in London. They do not give themselves to any false illusions about our military strength. They think we will be beaten on the plains of Belgium and will meet perhaps another Waterloo there. But we will have compelled Germany to meet simultaneously the expenses of a double war, on sea and land; we will have forced her to spend a billion or two for her army instead of employing this money to repair or replace her battleships. We will have contributed thus toward emptying her treasury.

But, as Louis XIV said: "The victory depends upon the last 100-sous piece." The Kaiser, weakened by his efforts on the Continent, and not having enough capital to rehabilitate his fleet, will be obliged to capitulate. And that will be the triumph of George V.

In truth, France will probably have been invaded, pillaged, burdened for a whole generation by an enormous war indemnity; but England will have vanquished her rival. Confronted by a conquered Germany and a weakened France, she will again attain and strengthen her absolute preponderance of the world. "Rule Britannia!"

Those are the risks of a combination which tends to transform the entente cordiale—an excellent idea—into a military alliance—a dangerous thing.

Germany has no interest in making war on us.

Are we interested in binding ourselves to her adversary to attack her?

It is this last point which remains to be examined.

NEUTRALITY IS POSSIBLE.

Two attitudes are possible:

We may take sides with one of the two powers, or we may remain neutral.

To take sides with Germany is very dangerous. Without doubt the Kaiser would not demand of us either ships or soldiers; he needs only our money. But the registry of German loans at the stock exchange would inevitably result in the rupture of the entente cordiale. And that would be the recommencement all over the world of this policy of pin pricks, which in 1898 led us to Fashoda. Never would any clear-headed Frenchman consent to that.

To take sides with England is still more dangerous. The first regiment to cross the Belgium frontier for marching to Antwerp would unchain against us a formidable war. All of the French officers with whom I have consulted assure me that after the measures taken by the German chief of staff the shock of German attack would be of a suddenness and violence unheard of.

What is to be done?

Guard neutrality?

That is easy. England has only one means of forcing us to march on Antwerp, and Germany can not compel us by force to lend her our savings. For once more, she is financially not in a position to maintain two wars at the same time. The theory of France being held as a hostage is a boast of the German Derouledes.

Under these circumstances only one attitude seems possible, reasonable, prudent, conforming to the interest of the country, and for the good of universal peace.

The French Government must say to the English: "You shall not have our army."

And to the Germans: "You shall not have our money."

Therefore, you will not fight each other, and France will not only have served her own interests but also those of humanity.

Or, well, if you absolutely insist on massacreing each other, very good; go ahead. But don't count on us to help you. In such fratricidal strife not one centime of French money nor one drop of blood shall we shed.

We shall say to the one as to the other—not a penny, not a soldier.

That is doubtless what France would say, if she were consulted.

THE MAD WHIRL OF ABSOLUTISM.

Unfortunately she is not asked for her advice. In spite of democratic appearances, it is known that the people do not govern and do not control their governors. A small band of capitalists has seized control of the administration and of the great financial associations; they hold in their hands the banks, mines, railways, steamship companies, water, gas, and electric companies; in fact, all the economic utilities of France. In the Guerre Sociale I have shown how they dominate the Parliament, dispose of the ministers, and have taken into their pay the great newspapers which mold public opinion. Skillfully hidden behind the democratic scenes they are in reality the masters of the destinies of the country.

But what kind of madness seems to have taken possession of these men—madness of absolute power, the same which carried

away Louis XIV and ruined Napoleon. Rarely does such temptation offer itself to any single man or any class. Consider that France could really be the arbiter of the world. If she lends her soldiers to England the German colossus may collapse; if she lends her money to the Kaiser, the Prussians will have the best of it; and it is perhaps the British Empire which will be dismembered and fall. What a temptation for an oligarchy without counterweights and without control to throw its sword into the balance and to decide which shall be the world empire. Why would not such a rôle intoxicate Delcasse, a great "big head" with a small soul, whom his courtiers compare to the great ministers of the past, and who wants to impress on history his name as a Richelieu?

THE FINANCIERS AND ALSACE-LORRAINE.

I have mentioned the good people who, before the imminence of an Anglo-German conflict, caught themselves dreaming of "revanche."

Ah! Alsace-Lorraine! I give assurance that our financiers never thought of it; never in their calculations, never in the combinations of our diplomatists can we find a trace of this idea—would it pay us to reconquer Alsace, and what effect would it have on the dividends of our great banks?

But there is more: Wonderful cotton mills have developed at Muhlhausen; powerful steel works, admirably equipped, have come into existence all along the frontier. Since they are superior to ours, we had to protect ours against theirs by an import tariff. Suppose that the frontier were again set back to the Rhine, all these factories would make disastrous competition to Creusot, and the cotton mills of the Vosges, Lille, and Rouen. They must remain outside of the line of customhouses. Not only have our business men not thought of taking Alsace-Lorraine back again, but if the Kaiser should offer it to them they would not want it. That is why they are allowing the dream of revenge among the people to be lulled to sleep.

THE PRICE OF BLOOD.

But what do they want, anyway?

Just this:

1. It is known that our business men received from England as a prize for the entente cordiale, Morocco; they had to have the monopoly of the loans and public works, the railroads, harbors, telegraphs, etc. Compelled to go to Algeciras, they can not console themselves for having to share all their concessions with Germany. A war would be a good way to oust an embarrassing partner and to recover the monopoly promised by England.

2. Germany wishes to make of Turkey a preserve, where the mines, loans, and railways will be reserved for her own citizens. It is a fine bait of which the Vitalis, the Auboyneaus and Revoil of the Banque Ottomane, Rouvier of the Banque Francaise, and Schneider of Creusot used to have first choice and the biggest share. Helping England to crush Germany would be a nice way to get rid of a serious competitor. They would then have only England with whom to share the lucrative honor of civilizing the Turks.

3. In case of war several billions would be borrowed in Paris, as much for account of London as for France. And our great banks cherish the memory of big profits realized in 1871 and 1872.

These are the advantages which the financial oligarchy can draw from an intervention in the conflict.

Of course, I know very well that in present day capitalistic circles it is necessary to develop commercial markets. But does that justify a war? Compare the mining concessions of Morocco, rich though they are, with the ravages of a war in France. Place on one side of the scale 600 miles of Turkish railway, and in the other the horrible massacre by our engines of war, the suffering of the wounded, the grief of the wives and mothers, and the misery of the orphans, and tell me if the dividends of Creusot are worth the blood of 200,000 young Frenchmen.

That is all the benefit which our country could receive from such an adventure. I defy anyone to prove the contrary.

But these people are not the master of their own destinies. A small, irresponsible, but powerful coterie exerts all its efforts on diplomacy and drags them along.

They are the ones who involved us in the Morocco adventure. And we know that our generals more often obey its orders than those of the Government. M. Ribot himself publicly complained of this.

They are the ones who supported Delcasse in 1905 when he brought us to the point of war with Germany. They are the ones who to-day have returned him to power and seek to transform the entente cordiale into a military alliance.

England knows their power, and that is why, without caring about Parliament or public opinion, she treats with these men and in every way associates them with her affairs.

THE PLOT.

Shall we be able to recognize any of the threads of this intrigue?

Let us follow the strange affair of Bernard Maimon, which it seems now is to be suppressed.

A journalist, M. Andre Tardieu, allied with the family of Waldeck-Rosseau, formerly secretary of the embassy, a high official of the ministry of the interior, editor of the foreign politics department of the Temps, the confident of the ministers, with access to their private offices at all hours, is considered all over Europe to be the official mouthpiece of the ministry of foreign affairs. It is from his articles that the other French newspapers, the foreign press, and even the European cabinets try to learn of the intentions of the French Government.

Now, England, to put a check on the German railway from Constantinople to Bagdad, is planning to build another road from Homs in Syria to Bagdad.

An administrative committee is formed. Whom do we find? Sir Babington Smith, the right-hand man of Sir Ernest Cassel, the former banker of Edward VII; Cherif Pascha, a Turkish general, who in Paris combated vigorously the policy of the Comite Union et Progres; and besides these, M. Andre Tardieu.

The latter has made this enterprise a personal matter. He is exerting himself to obtain the support of the French Government.

However, M. Pichon hesitates to follow. Thereupon M. Tardieu, in the Temps, though he had previously supported our ministry faithfully, sharply criticized his policy.

At the same time, through a mere coincidence which should, however, be mentioned, his partner in the Homs-Bagdad Railway affair, the Levantin Bernard Maimon, through the mediation of young Rouet, protégé of Tardieu, made away with secret documents stolen from the Quai d'Orsay. A London paper of which he is correspondent published a résumé, likewise secret, of the negotiations which had taken place at Potsdam between William II and the Russian Minister Sasonow.

At once the Parisian bankers refused the Czar the loan of 1,200 million francs already announced at the Bourse; Nicholas II responded by withdrawing his troops from the German border. And in spite of the official denials, all Europe is asking itself to-day what is left of the Franco-Russian alliance.

That is an example of what the little coterie of business men which surrounds and penetrates our ministry of foreign affairs can do.

In the present state of the Old World, when a match can set fire to all Europe, a few brawlers attracted by the bait of a railway concession in Turkey can involve France in a horrible cataclysm.

THE PLAN.

But, they say, in admitting that these people want war, can we believe for a moment that the French people would let them do this? How could they persuade them to let themselves be massacred for such futile ambitions?

The plan is simple; it is all arranged, and we can follow its realization every day.

1. They are negotiating at this moment a military treaty with Great Britain. In case of war with Germany the British fleet would protect our channel coast and our troops would march on Antwerp.

It is well understood—this is to reassure public opinion—that this treaty is to be purely defensive.

But you have noticed that all modern wars are always defensive? If you ask a Frenchman who was the aggressor in 1870, he will tell you that it was Bismarck in falsifying the dispatches of Ems. And put the same question to a German; he will answer you with the same good faith that it was Napoleon, since it was he who declared the war.

In the same way all Russians are convinced that it was Japan who, by sinking the Russian ships in the harbor of Chemulpo, provoked the conflict; and all the Japanese will reply that the Czar by penetrating Korea threatened the independence and security of their nation.

In fact, when a war breaks out it is because the two hostile Governments equally wanted it; but each of the two peoples is equally convinced that they are only defending themselves.

Then, when it pleases the foreign office to make war, its diplomats will know how to arrange for placing the responsibility for the conflict on the adversary; and we will have to march by virtue of a "defensive" treaty to assist George V.

2. But if we want the French peasant to march with good spirit public opinion must be prepared. For such purpose he must be persuaded that the Prussians think forever of invading French territory. Then the servile press seizes upon the most trifling incidents, distorts and magnifies them, and disquiets the public. An incident in the foreign legion, such as the lawsuit

"La Lorraine sportive," or an aeroplane flight, are good stuff to arouse in us fear and hatred of Germany.

One large newspaper, which takes its news service by special wire from the Times office, excels in this game. And this is only the beginning.

3. And finally when the public will have been sufficiently aroused, when the idea of a German peril is sufficiently implanted in our minds, then some fine night the English fleet will sail full steam for Flushing. At the same time almost the Prussian regiments at Aix-la-Chapelle will embark on express trains on their way to Antwerp.

Also, according to custom, the French Government will seize all telegrams and letters which might give information of the movement of belligerent troops. Later an official note will be sent to the press. The next morning all newspapers will print in headlines as large as your hand these prophetic words: "The Belgian neutrality has been violated—the Prussian Army is marching on Lille."

For—such is the trap—they will not say that the objective of the corps from Aix-la-Chapelle is Antwerp; they will only say it is directed against the French frontier.

At this terrible news, repeated by the millions of voices of the press with great effect, the peasant of Brittany or Cantal, the little bourgeois patriot, the badly informed workman, persuaded that France is attacked, will shoulder their knapsacks. Without giving them time to reflect, they are shipped with all haste in cattle cars on their way to the Belgian plains. The German Army, hindered in its march upon Antwerp, will fall upon them.

And this is how, by the astuteness of a small group of financiers and diplomats, a great people will find itself drawn into a war entirely against its will.

THE LONE CHANCE FOR PEACE.

Is the war inevitable?

I do not think so.

If in the economic conflict so strenuously engaged in between England and Germany, vital interests are at stake, it is not the same for France. And we must always hope that a sudden awakening of public conscience and the fear of a revolution may deter these business men before the accomplishment of their dangerous intrigues.

But it is necessary to consider well, such a sudden awakening of the public conscience will not happen if the people are not warned in time.

The final poterie which are wirepulling in the back rooms of the chancelleries is not large, but holds the most terrible of trumps—the popular ignorance.

The great words "Honor, the Fatherland, the Flag, National Defense," in the names of which for centuries so many crimes have been committed, and so many unjust and useless wars waged, are always powerful to sway the masses.

To hinder the financiers from making use of them, it is necessary to arouse public opinion and to shake off torpid indifference.

And above all, the preachers of peace who hypnotize people into a false security must be defied.

That may please some politicians and some naive people who lull themselves to sleep with the fond hope of compulsory arbitration.

As a matter of fact, Germany has declared that she will not accept it; and Sir John Fisher, supreme chief of the English fleet and delegate to the conference at the Hague, announced with brutal frankness:

"In case of war, I should violate all the rules of all the peace conferences—I have but one purpose, and that is to win. The diplomats can negotiate afterwards."

It is, therefore, a dangerous illusion to count on the friendly regulation of international conflicts by arbitration.

At this very moment, moreover, there is evidence of a gradual wavering of the pacifist propaganda among the middle classes due to the pressure of the governments and the hostile financiers.

Even amongst the working classes formerly opposed to militarism an attempt is made to spread the militarist fever.

In Germany, Socialist politicians, and not the small ones either, declared in the Reichstag that in case of war not a German Socialist would be missed at roll call.

In England, a Socialist named Blatchford has published a thundering brochure, "The German Peril," which is a direct appeal to the chauvinistic passions. And the congress of the Labor party, with Hyndman, voted for the strengthening of the navy.

Even in France, Jaures, forgetting the traditional cry of his party, "Rather revolution than war!" under the pretext of organizing the new army, proposed to militarize our children of the primary schools, demanded that all our lawyers, doctors, and professors taken from the bourgeoisie, be made officers, and preached with his customary eloquence the return to the patriotic and warlike traditions of 1792.

It is against this revival of chauvinistic passions that we must now defend ourselves.

For this there is only one remedy: Instruct the people as to the true situation in Europe; accustom them to discern underneath diplomatic conflicts the intrigues of business men; show them beneath the spread eagle words Honor, Fatherland, and National Safety, the orders, concessions, and loans which are the real motives of war. And then when they are invited to go and shed their blood on the plains of Belgium to assure the Creusot dividends, there will be produced such a formidable arousing of popular feeling, not alone among the workmen, but also with the peasants and middle classes, that the financial oligarchy will recoil and these men of prey will halt on the threshold of their crime.

That is the only hope of peace left to us.

"To dare to tell the truth to men of courage!"

MAY, 1911.

Series of Letters From Leslie M. Shaw to a First Voter.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. BENNET,

OF

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. BENNET. Mr. Speaker, under leave to print, extended me by the House, I insert the following interesting series of 25 letters in a Socratic vein from former Secretary of the Treasury Leslie M. Shaw to a first voter:

YOUNG MAN: I congratulate you that you have come to man's estate and are to face a man's responsibilities. In these troublesome times sane, safe, and conservative young men are needed as seldom before in the world's history.

It is easier to talk and to write than it is to think, so I ask you to think. The hope of the Republic lies in a thinking electorate. Knowledge and wisdom, as I hope you already appreciate, are not synonymous terms, and capacity to think is not enjoyed by all.

It is my purpose to ask from time to time a goodly number of questions, wise answers to some of which the American people must write into practice or serious results will ensue. While they will reach you over my signature, all will have been passed upon and approved as vital and pertinent by men of legislative, executive, and business experience.

I will be glad to receive your views, and, while I may not reply directly, your answers will be tabulated, and later I hope to be able to give each the benefit of all virile suggestions that come from young men who, like yourself, are interested in our common country, and who, because they are of the same generation, will be associated, consciously or unconsciously, in the conduct of a gerat Nation and in legislating for a wonderful people.

I will write you again.

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

YOUNG MAN: Whoever contributes in any manner to the sum total of our production or to the grand aggregate of our commerce is a producer. This is equally true whether the energy be exerted in the kitchen, on the farm, in the factory, or at the directors' table.

All are consumers. We consume necessaries, or comforts, or luxuries, or extravagances. Looking at human conditions from your angle, do you think it would be preferable that legislation be had in the interest of the citizen as a consumer or in his interest as a producer?

In other words, would you, if it were in your power, secure for Americans the best market in the world in which to buy or the best market in the world in which to sell?

In answering the foregoing you should keep in mind that it is impossible to have high prices for the farmers' wheat and low prices for the laborers' bread, high-priced cattle and cheap meat, or a high wage scale and cheap products of labor.

What, in your judgment, would be ideal and practical market conditions?

Would you cheapen the cost of living or increase the ability to meet the high cost of living?

Cordially, yours,

LESLIE M. SHAW.

WASHINGTON, D. C.

YOUNG MAN: If you were legislating solely for the consumer as such, leaving out of consideration the producer, what would be the nature and character of the bills you would enact?

Would you fix minimum prices for labor and maximum prices for all products of labor, including food products, or would you abolish all tariff duties, thus inviting free competition within the American market for the products of the labor of all countries?

Can you formulate a policy satisfactory to yourself? Do you believe your plan would secure ideal industrial and economic conditions? Wherein would it be liable to fail?

Please give this proposition careful consideration, for it concretely states what is more or less nebulously occupying the attention of all.

I am submitting this matter to you and many other young men, fully appreciating that while wisdom comes only with years of thoughtful experience there is no good reason why men should defer thinking of public questions until they have reached mature years. Most men lose all interest in analytical thinking before they are 40. I choose to consult young and virile minds.

Cordially, yours,

LESLIE M. SHAW.

WASHINGTON, D. C.

—

YOUNG MAN: Perhaps you have discovered a tendency to minimize party differences. If you have been taught that the two great political parties are very much alike you have been grossly deceived.

It is true that the men composing political parties are much alike, and they are all very human; but parties as parties are absolutely unlike. This results from the fact that good and learned men may, and often do, radically differ on fundamental principles.

The Democratic Party always makes its appeal to the citizen as a consumer. It teaches that all he requires to make him prosperous and happy is cheap things to consume. It tells him he need never consider where an article is produced provided it is cheap. It promises to open wide the doors of trade so that if any foreign country will sell cheaper than America can produce its wares shall be welcomed and on equal terms with American products.

The Republican Party takes exactly the opposite position. It appeals to the same citizen, but as a producer. It tells him the thing most needful to his prosperity and happiness is a good market in which to sell his labor, or the products of his labor. It teaches that it is relatively unimportant what he pays provided the article be produced by his kinsfolks.

Incidentally, let me say that whoever loses sight of the fact that in this Republic each citizen is kin to every other has missed the theory upon which his Government was founded.

The Republican Party promises to compel the foreigner who would bring to your market the things which you produce, with intent to undersell you, to pay a portion of what he gets for his wares into your Treasury, to help pay the expenses of your Government, to the end that Americans shall have a material advantage in the American market.

The Democratic Party in its platform of 1916 says: "It has revised the tariff taxes downward in the interest of the consuming masses." The Republican Party always promises to construct its tariffs in the interest of the producing masses.

Recognizing as you must that you can not have the best market in the world in which to buy, and at the same time the best in which to sell, I ask you to consider whether it would be better for you personally to have a high-priced market in which to sell your services, and the things you produce, or a cheap market in which to buy your necessities? Second, do you think it would be better for the American people, as a people, to safeguard their grocery bills or their pay rolls?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN. The tariff plank of the Democratic platform of 1912 contains this language:

"We declare it to be a fundamental principle of the Democratic Party that the Federal Government, under the Constitution, has no right or power to impose or collect tariff duties except for purposes of revenue only."

This was reaffirmed in their platform of 1916, and the Underwood tariff law was "unreservedly indorsed as truly exemplifying that doctrine." The platform also declared that the party "had revised the tariff taxes downward in the interest of the consuming masses."

While the Underwood tariff bill was under discussion both its author and Senator SIMMONS, who had charge of the bill in the Senate, declared that it was not intended to protect any industry.

I desire to make it clear that, with respect to tariff legislation, the Democratic House, the Democratic Senate, and the Democratic President have acted in absolute accord with the Democratic platform. They have been consistent with their expressed belief that a protective tariff is a vicious thing, and that the Constitution gives no warrant for the enactment of such a tariff law. "Tariff for revenue only" is their watchword.

No one should complain of the belief of a great body of patriotic citizens or because they legislate consistently with that expressed belief.

The Republican Party is equally specific in its belief, and each party legislates in harmony with its convictions. The one revises the tariff in the interest of the consumer, and the other revises it in the interest of the producer of labor, the employer of labor, and therefore of the results of labor.

The Republican Party believes that the Constitution, while making no reference to the subject, is as comprehensive with respect to industrial preparedness as to military preparedness.

Query: Do you believe the Constitution which admittedly authorizes protection against military invasions, naval invasions, invasions of coolie labor, invasions of contract labor, and invasions of smallpox and yellow fever also permits protection against invasions of the products of cheap labor? Do you think it wise to protect against invasions of Japanese and Chinese laborers, for example, and unwise to protect against invasions of the products of the labor of these same people? Is it wholesome to protect our health, and our lives, and vicious to protect our industries?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN. Speaking before the National Grain Dealers' Association of Baltimore, September 25, 1916, the President of the United States used this language: "I want to see America pitted against the world, not in selfishness but in brains."

Thus aptly did he express the free-trade theory, for admittedly a protective tariff has its root in selfishness. Its very purpose is to afford the citizen a selfish advantage in his home market.

Japan has a population of 284 to the square mile and 70 per cent of her more than 50,000,000 population live by farming 16 per cent of her territory. Her remaining territory is untillable. We have a population of only 30 and Germany 60 to the square mile.

Japan needs and must have more industries and more territory. She has started with all the virile energy of that wonderful race for more industries, and some think she has also started for more territory. Leastwise she is even now constructing munition factories and artillery plants avowedly for Mexico and upon Mexican soil. She entered the field of competitive manufacture about 20 years ago, and to-day the single town of Osaka has more than 1,500 factories. For a number of years her people have been buying standard automatic looms in this country, and their recent purchases have been in trainload lots. They import raw cotton in million-pound consignments.

The latest available consular reports give the Japanese wage scale for men at an average of 30 cents per day of 12 hours, women from 12 to 18 cents per day, and children even less. There are no child-labor laws or limitations of woman's work in Japan. The commissioner of labor of Massachusetts gives the wage scale in that State—and it is practically the same elsewhere in this country—at approximately ten times that of Japan, and for a shorter day.

Japan exported to the United States during 1916, in round figures, an average of $500,000 worth of merchandise per day. This included the products of these American looms, clay goods, glass, toilet articles, brushes, baseballs, and many other articles of daily use wherein labor is the principal factor. With the exception of raw silk these exports to the United States were practically all competitive products. I was recently told that in a certain large notion store in New York there were not less than 25 Japanese engaged in picking up samples and making designs of articles which we consume and that Japan can manufacture.

QUERY.—Do you think the American manufacturer can continue to pay our scale of wages for work done upon identically the same materials, with identically the same looms and other appliances when "pitted against Japan, not in selfishness but in brains"? Do you think it wise to legislate unselfishly or should America legislate for Americans? What do you think of the German policy, "Germany works for all the world, but nobody works for Germany but Germans"? Do you think Germany's phenomenal commercial growth has been retarded or aided by that policy?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: At the close of the Civil War we occupied an unique position. We had matchless resources undeveloped and matchless resourcefulness untried. For 50 years a certain school of political belief controlled the policies of the Nation. During Mr. Cleveland's first administration, from 1885 to 1889, the "Old Guard" still dominated the Senate and prevented any material change in policy. During the first two years of Mr. Cleveland's second term his party also controlled both Houses of Congress, and our economic policies were reversed. Then William McKinley was elected in 1896 and former policies were restored.

With the exception of the one brief period, the Republican Party, therefore, is responsible for all that was done in those 50 years. It must bear the blame where blame is attachable, and is entitled to all credit where credit is due.

The policy of the Government during those 50 years was cooperation with business. The Government did not father but it fostered enterprises. It did not build railroads and ask the citizen to serve on a salary; it did not open farms and require the citizen to work by the month, or build factories and compel the citizen to live from weekly pay envelopes. Recognizing that man has always and will ever get his chiefest happiness out of his achievements, out of his creatorships, out of his sovereignties, the Government permitted the citizen to "achieve and be happy."

At the end of 50 years of protective tariffs, with but one break of four years, our farms were producing more than the farms of any other country on the map, our mines yielded gold by the trainload, silver more abundantly still; and we unloaded on the shores of Ohio alone more iron ore than any other country in the world produced. We had builded more miles of railroad than all Europe, and these roads in turn were carrying our freight at one-third the European rate. We were cutting from our forests 100,000,000 feet of lumber for every day of the calendar year; our domestic trade was five times as large as the aggregate international trade of all creation; our shops and factories were turning out more finished products than all the shops and all the factories of Great Britain and Germany and France combined plus five thousand million dollars' worth every 12 months, and we were paying out as much in wages as all the rest of the world.

Query: Does it occur to you that the pay roll of the United States, equal to that of all the rest of the world, is the most valuable asset we have and ought to be safeguarded above everything else?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: In a former letter I referred to our enormous pay roll, equal to that of all the rest of the world. I want to enlarge that thought and to ask you to consider its manifold relationships and effect upon each and every class and condition of our people.

Suppose a man earns $2.50. He spends this almost immediately for food and clothes. We all spend all we get. We spend it for necessaries, or comforts, or luxuries, or foolishness, or we expend it for a house, or a bond, or a share of stock, or for some other investment, or we deposit it in a bank and some one else uses it.

This supposed man buys food and clothes with the wages of the day and the merchant immediately pays it to the producer of food and clothes. The producer either keeps it as compensation or he pays it again to labor. The effect is the same, for in either case it goes to labor. How often do you think this $2.50 in wages reaches labor?

William McKinley expressed the belief that wages thus passed from labor to merchant, from merchant to producer, and from producer again to labor, and completed the circuit ten times a year. Conceding this to be conservative, $2.50 for a day's work is worth to labor at the end of the year $25, and it also swells our domestic trade $25. A million men, each earning $600, earn an aggregate of $600,000,000 per annum. This sum, passing to and from the merchant, to and from the producer, and again to labor ten times per year, is worth to labor $6,000,000,000 per annum and to our domestic commerce a like amount. A million men who last year earned an average of $600 each, if thrown out of work, will reduce our annual commerce $6,000,000,000.

To what extent do you think the present American pay roll is dependent upon the European war? In the absence of a protective tariff, what will become of this pay roll when peace is declared? Will the people of Europe produce less food than now? Will they consume more than now? If they produce more and consume less, they will certainly import less from the United States, and the American farmer, who spends or expends all he gets, will have less with which to buy lumber, nails, barbed wire, better clothes, and better everything, and if he buys less it will require less labor to supply his demands. Will European countries after the war manufacture less than they do now? Will they export less or more? Will it be necessary to protect against an invasion of manufactured goods if we intend to maintain the Amer-

ican pay roll? Do you think a political party that believes a "protective tariff is unconstitutional," under the leadership of a President who "wishes to see America pitted against the world, not in selfishness but in brains," can be trusted to make a systematic protective tariff law even if it should profess to try?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: Sir Hugh Bell, the great ironmaster of England, once told this incident in my presence. A laboring man said to him: "Sir Hugh, I ought to support my family on three days' work a week, and when I work six days per week I feel that I am robbing some poor fellow of three days' work." Sir Hugh replied: "Without discussing the question whether your happiness would be increased, or your culture improved, or your worth as a citizen enhanced by three idle days per week, I want to remind you that if you could support your family on three days' work a week and you actually worked six days per week, you would have money enough to hire some poor fellow for three days. Don't for a moment suppose that by remaining idle you are giving some one else work, but by remaining idle you are depriving some poor fellow of work."

You will notice that Sir Hugh proceeded upon the theory that there is a limitless amount of work to be done; and he was right. When all are busy at good wages they consume much, and this in turn makes work for others. The employment of a man shoveling gravel helps the merchant who sells food and clothing, and this in turn gives employment to those who produce food and clothing. Thus our industries go up and up and ever upward or they go down and down and ever downward. Yes, indeed, we are all kinsfolks.

The pay roll of the United States, equal to that of all the rest of the human race, affords the best market in the world for farm products; and the American farmer because of this unequaled market buys carpets, pianos, phonographs, and even automobiles, and his children, like the children in no other country, wear knit underwear, their clothes are never patched, and their shoes seldom mended. All this in turn affords employment for every class of labor.

Query: Do you think it wise or unwise to encourage this community of interest between producer and consumer? Can you imagine a condition where one class of our people can prosper and any other class suffer? I do not insist that profits from industry are or ever can be equitably divided. I only ask whether in your judgment it is better to have large returns from industries inequitably divided between employer and employed, or to have our unequaled home market divided between American and foreign manufacturers at the expense of American labor?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: If your study of the subject referred to in the preceding communications has led you to believe it is more to the advantage of Americans to have a high-priced market in which to sell their labor, and the resultants of their labor, than a low-priced market in which to buy their necessities, please consider how this desirable high-priced market in which to sell can be secured.

Our domestic trade is five times as large as the aggregate international trade of all the world. That is to say, while the people of one country are selling to the people of some other country $18,000,000,000 worth of products it is estimated that the American people sell among themselves (not including duplications) $100,000,000,000 worth.

If you were legislating in the interest of our citizens as producers would you require the foreigner who brings competing articles to the American market to pay into the Treasury of the United States a portion of what he gets for his merchandise, thus giving the American a substantial advantage in competitive products, or would you allow all the world to freely share our unequaled home market?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: In a previous communication I called attention to our enormous and unequaled domestic trade, estimated without counting duplications at $100,000,000,000, and with duplications at $500,000,000,000, while the aggregate export trade of the world is only $18,000,000,000.

Students of political economy entertain very divergent views with respect to international trade. Many learned men, including most college professors, advocate giving to the people of all nations the opportunity freely to compete with ourselves in our markets, and insist that by so doing we will greatly augment our export trade. Adherents of the other school object to a voluntary surrender of this enormous American trade, and claim that even if it were surrendered our export trade would be affected thereby in no perceptible degree.

In normal times and before the European war the American people were enjoying nearly 14 per cent of the export trade of the world and were yielding only 1⅓ per cent of their domestic trade.

Please consider whether in your judgment it would be wise to invite larger imports in the expectation that by so doing we would secure a larger foreign market for the products of American labor. Would we be likely to gain as much as we would certainly lose?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: In my last letter I asked you to consider the advisability of permitting the world to share our domestic trade, five times as large as the aggregate international trade of the world, on equal terms with ourselves in the hope thereby of increasing our export trade. Perhaps it will widen your range if you somewhat specifically consider how far, if at all, export trade is in fact influenced by imports.

Until comparatively recent years international merchants were compelled to be shipowners, and they found it convenient, therefore, to buy where they could also sell. Merchants now ship their goods over established lines of ocean freighters, and pay and collect in terms of cash. Thus the one great inducement to import from countries that consume our exports has been destroyed.

Under these modern conditions, if you were a merchant abroad seeking goods to please your American trade, would you inquire whether the people of the country in which you were making purchases were liberal or limited consumers of American products? Would you be influenced, for example, to buy in England rather than in France because in ordinary times the former country buys over $600,000,000 per annum of us, while France buys only $150,000,000 per annum?

As you doubtless know, a very large part of the foreign merchandise which we consume is brought to this country by the producer. Do you think the Frenchman is less likely to send his goods to the United States because his country buys of us less than England? Could the English manufacturer expect to influence a sale of his wares by reminding the American merchant that his country consumes far more American products than his French and German competitors combined?

If merchants buy where they can buy to the best advantage, independent of the amount of American goods consumed by the countries in which they purchase, what becomes of the principal argument of college professors, free-trade newspapers, and advocates of "tariff for revenue only," who insist we must allow the whole world to share our market on equal terms with ourselves if we expect to sell much abroad?

Young man, as you grow older, you will find it much more satisfactory to do some of your own thinking instead of accepting the unproven economic theories of impractical and inexperienced men.

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: For many years the American people have divided, and perhaps to the end of time will divide, on questions of political economy. Every country in the world needs revenue, and every country has custom-houses and collects revenue from custom duties. Free trade therefore does not mean absence from tariff laws.

Each of the great political parties of the United States believes in tariff laws and the first thing each party does when it gets into power is to pass a tariff measure. The difference is in the character of the bills they enact. One party, as its platform of 1916 states, "revises the tariff in the interest of the consuming masses," and the other revises the tariff in the interest of the producing masses. That is to say the one levies its duties for revenue only and the other primarily for protection, placing a revenue tariff on luxuries and articles consumed largely by the wealthy and the well-to-do.

There are in the United States nearly 300 hat factories, which employ 25,000 wage earners who receive $14,000,000 in wages. Hats are mostly made of wool or fur and are largely labor. There are also in the United States over 350 glass factories, which employ nearly 70,000 wage earners who receive $39,000,000 in wages. Glass is made of sand and is all labor. (These figures are given in round numbers and are taken from the census reports of 1910.)

These hat factories produce practically all of the hats consumed in this country and the glass factories produce nearly all our ordinary glass. In other words, until recently the tariff laws in force required the foreigner who would import hats or glass products to pay into the Treasury of the United States a prohibitive per cent of their foreign value and thus preserved the American market for Americans. Now the war affords protection.

Query: How can the Government get customs revenue from hats or glass or anything else and still permit the American laborer to produce them? Is there any way to get customs duties on everything we consume and at the same time keep all our wheels of industry turning? Suppose the American laborer should consent to work at the foreign scale of wages, and thus enable the American factories to continue. Would that not defeat the purpose of the law by preventing revenue? Is a tariff for revenue only a tariff designed to have each article contained in the several schedules produced abroad and imported? And if not, what is its purpose and effect?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: Many years ago Americans frequently contracted labor in foreign countries at low wage scales, and brought them to the United States in competition with American workmen. Congress then prohibited contract labor, and for years no immigrant has been admitted to this country who has not been free to charge and receive whatever his toil would command. Chinamen also came and voluntarily worked for less than Americans charged. Then Congress prohibited their admission regardless of contract.

I have already reminded you that our President said at Baltimore, in September, 1916, that he wanted to see "America pitted against the world, not in selfishness but in brains."

Query: Do you see any material difference in effect between admitting contract and coolie labor in competition with Americans and admitting free of duty the products of the same labor when expended in their native countries with machinery, tools, and equipment identical with that which is used here? To what extent, if at all, are women weavers of New England and the Southern States, for example, benefited by the exclusion of laborers who seek admission under contract to work for 50 per cent of what is paid in America, if what the same women produce with American looms in the countries from which they seek to come be admitted in competition with the products of American weavers? Can you find an explanation why all labor organizations demand the exclusion of both coolie and contract labor, while a large majority of laboring men vote to admit free of duty the output of foreign shops and factories operated by the very same class of laborers as those they demand shall be excluded? I am very anxious that your generation shall think consecutively and act consistently. Will you not write out, for your own future use, concrete and well-considered answers to these questions?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: The American people are to-day prosperous. They were also prosperous during the Napoleonic wars just 100 years ago. Woodrow Wilson in his History of the American People states that "in the year 1815 close upon $50,000,000 had been invested in the manufacture of textile fabrics alone," and adds, "almost everything in general use was sooner or later added to the growing list."

Immediately following the Napoleonic wars, several shiploads of merchandise entered New York Harbor and the cargoes were sold at auction on the streets. These goods were not imported in the hope of finding a profitable market, but with intent to break the American market. The scheme was successful. Horace Greeley writing of that period said: "Our manufactories went down like grass before the mower. Agriculture and labor soon followed. In New England fully one-fourth of all property went through the sheriff's mill."

Thomas Benton, in his Thirty Years in Congress, refers to the same period in this language: "No price for property, no demand for labor, no sound of the hammer except that of the auctioneer knocking down property." Woodrow Wilson, in the third volume of his history, page 229, says: "The remedy was a protective tariff. * * * Every State

in the Union, except Delaware and North Carolina, was represented by at least one Member in the vote that established it. Men of the most diverse views and interests united in wishing to give their country not only political but economic independence."

The question that I desire you to consider at this time is our pay roll after the war. David Lloyd George, the English premier, is my authority for the statement that England is manufacturing to-day four times as many dollars' worth of goods as before her army was recruited from peaceful pursuits. While these are largely war supplies, England is exporting to this country even now and to the world at large more than ever before in her history. Her exports increased over $590,000,000 in 1916.

Germany is reported as having over $2,000,000,000 in merchandise ready to export when the seas are open, and new ships in which to send them aggregating 1,000,000 tonnage. Universal service, long hours, and multiplied efficiency have done wonders for all belligerent countries.

When the war ends these countries will still produce, and being to poor to consume they must export. One hundred years ago, when English imports ruined our industries, put one-quarter of New England through the sheriff's mill, and silenced every hammer except that of the auctioneer, the average tariff duty collected was 20 per cent. Under the present Underwood tariff law the average collected is less than half that.

Query: If it be true, as Prof. Woodrow Wilson says in his history, that "the remedy was a protective tariff," what would you think of a protective tariff as a preventive?

YOUNG MAN: I recently called your attention to our President's expressed wish "to see America pitted against the world not in selfishness but in brains." Very soon, if not already, you will find yourself face to face with somewhat stern realities. Unless the Government extends its paternal care even further than the most radical now advocate you will confront intense competition and will be forced to rely in great degree upon yourself.

In the great distribution of the world's work it matters little what your assignment shall be provided you do your work better than it is now being done.

At present the law of human life is competition. The alleged purpose of all antitrust laws is to enforce competition. Yet recently a disposition has developed to punish those who successfully compete, and hence we have several processes of taxation, hitherto unknown, based upon the theory that at least a portion of every successful man's accumulations should be confiscated, and that the per cent of confiscation should be increased in proportion as the individual is able to withstand competition. Incidentally you will observe it is very difficult for any people to be consistent with themselves.

I think it important that the generation to which you belong shall definitely determine certain principles, adopt some well-defined chart, so to speak, and then sail the ship of state by that chart.

But the question I desire to ask at this time is whether you believe you have sufficient brain power to enter the field of manufacture, for instance, pay the American scale of wages, and win when "pitted not in selfishness but in brains" against countries where wages are 25 per cent or more below those which you will be compelled to pay, not to mention Japan, where wages are 90 per cent below ours? Again, are you confident you have brains adequate to operate a transoceanic line of freight and passenger steamers in competition with subsidized ships from every other country in the world, when the crews of no country in the world receive over 75 per cent of what you will have to pay under our flag? In other words, do you also wish to see "America pitted against the world not in selfishness but in brains"?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

YOUNG MAN: You doubtless recognize that the task of self-government is the severest that God in his wisdom ever placed upon his children.

After six thousand years of human history this Government was launched. It has stood the strain from within and the storms from without for a century and a quarter, but there is no thinking man between the seas and no thinking man beyond the seas who does not recognize that representative government in the great Republic is in its experimental stage.

Your study and observation have doubtless revealed that the centuries have wrought many changes in relationships between the individual and his government. The proper attitude of the one toward the other and the appropriate functions of each are fundamental and of greatest importance.

You have also doubtless discovered that the "trend of the times" is toward paternalism in government, but your reading as well as your observation should have shown you that the "trend of the times" is not always in the direction of truth. There always have been and always will be "trends of the times."

Daniel Webster began his immortal reply to Senator Hayne as follows:

"When the mariner has been tossed for many days in thick weather and on unknown seas he naturally avails himself of the first pause in the storm, the earliest glance of the sun, to take his latitude and ascertain how far the elements have driven him from his true course."

Query: Do you think it the part of wisdom always to follow the "trend of the times," or should your generation take latitude and determine whether the elements of ambition, or some other of a hundred winds of passion and prejudice, is driving the ship of state from its true course? Does the fact that you find her where she is raise a presumption that she has or that she has not abandoned her chart or proof that her helm is in safe hands?

I will write you further along these lines, for I think it imperative that you arrive somewhere near truth, or at least that you start in the direction of truth, and that you do this through analytical thinking rather than by simply observing and following the "trend of the times."

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: Ranchmen have found from experience that partially fed cattle are more likely to perish during the unavoidable hardships of winters than those compelled to "rustle." An occasional feed very soon develops a disposition to depend upon assistance. Even cattle take kindly to paternalism. It has been found best, therefore, simply to provide a range where, with proper energy, a great majority of the herd will thrive, and to fatten and slaughter the defectives. Laziness is as much a defect as any other characteristic, brute or human. In this way the average fortitude of the herd is improved.

Do you discover any analogy between the practice of herdsmen and governmental operations? To what extent should a government nurse the citizen? Should it insure him against nonemployment, regardless of a desire for employment; should it guarantee a fixed wage however inefficient the workman, and limit the hours of labor independent of ability or wish to render extraordinary service for extraordinary pay? Or does the Government discharge its appropriate function when it provides conditions where, with fair aptitude and proper application, a large majority can thrive with some measure of comfort and a large measure of self-respect, and having done this make charitable provision for the unfortunate, whether the cause be accident, inherited inaptitude, thriftless habits, or vicious living?

You know there are still some who desire release from leading strings in the belief that if given freedom of action they can acquire a competency, be independent, merit the approval of their neighbors, the respect of themselves, and above all the admiration of their children.

The foregoing questions your generation must solve. The issue is pending and it is fundamental. The issue is individualism versus collectivism, toward which paternalism is the halfway house. If Abraham Lincoln was correct in saying, when he faced an issue no more vital than that which now confronts you, "The Nation can not exist half slave and half free," you are justified in believing that the Nation can not exist half individualistic and half socialistic. Is it not necessarily true that one policy or the other must prevail?

Cordially, yours.

LESLIE M. SHAW,
Washington, D. C.

YOUNG MAN: Pensions are rewards for heroic service, and generally presuppose the voluntary assumption of personal risk in behalf of others; while charity is a provision for the needy resulting from misfortune, misapplied energy, inaptitude, indolence, or vice.

Doubtless you are willing to assume responsibility for the support of yourself and your family, and will gladly contribute in some fair and equitable manner, through appropriate processes of taxation, toward pensioning those who bear arms in defense of our common flag and for the dignity of this blessed land which we are proud to call "Our Country," and you will also pay your share toward the maintenance of the helpless and the unfortunate few.

I write to inquire whether you are also willing to assume the burden of paying pensions to men and women who have no other claim thereto than that they have grown old and have failed to provide for themselves?

In your own case do you desire the Government to promise you a pension independent of the manner in which you may acquit yourself? Or do you want to face the future in the belief that if you win through merit the rewards of victory will be yours to enjoy, and if you lose you will be expected to suffer the consequences? In other words do you desire the Government to pension you simply because you hold a poor hand or play a good hand badly?

I am expressing no opinion, and before you answer the question even to yourself, I want you to carefully consider whether pensions and charity are synonymous terms. Unless your generation discerns the distinction, if there be a distinction, it may go far afield. I shall not be surprised to see some progressive, paternalistic, legislative uplifter of the present generation appear and advocate pensioning men because they have spent all the productive period of their lives serving the State by compulsion, and in a penitentiary. If there is to be any limit, your generation must set the stakes. This generation seems disposed, just now at least, to destroy all ancient landmarks and obliterate all boundary lines.

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: You may have observed that all business stands on three legs. No business can stand on two legs. Capital and labor unsupported have never accomplished anything and never will. Alone and unaided capital languishes and labor starves. The third and all essential leg is management.

Please imagine the various business enterprises of the world, from peanut stand to United States Steel, each a three-legged stool. Occasionally a concern topples over. It fails. It is not necessary to examine, for you know in advance which leg buckles. It is management every time and always. The concern that fails for want of capital fails, in fact, because management attempts too much with its available capital. Capital never deserts its functions; labor never justly quits its job so long as management remains efficient and effective.

I submitted the foregoing to the president of a federation of labor at Chicago a year or so ago, and he replied, "Everybody has been talking about capital and labor, capital and labor, nothing but capital and labor. We knew there was another guy in there, but we couldn't find him; and that guy must be paid."

Query. Was this labor-union man correct or incorrect in his deductions? In solving industrial relations and allied problems are there three definable interests that must be considered or only two? If there be three, discover if you can why management as a distinct and essential element has been so generally ignored by teachers, writers, and speakers on the subject. Have they been seeking to teach, write, and speak the truth, or have they been pandering?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: Please consider this proposition: In a certain city there are 10,000 men out of employment; in a certain bank of that city $1,000,000 are out of employment; and in the foothills across from that city 10,000,000 tons of coal are out of employment.

The unemployed men offer their joint note for the unemployed money with which to develop the coal mine, but the officers of the bank will not loan money that does not belong to them on the signature of 10,000 men, each out of employment. Later a group of men who have succeeded in the coal business, and therefore possess management, the all-essential third leg of successful business, after investing $2,000,000 of their own money in the proposition, desire to borrow $1,000,000, and offer as security therefor a majority of the capital stock of the company, all of its bonds, and their personal obligation.

"Socialism demands that labor shall get the full product of its toil, or its equivalent, less the amount required to keep the machinery with which he works in an efficient condition." How much do you say these hitherto unemployed men should receive for their labor in excess of a wage scale at which they are glad to work?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: I recently submitted for your consideration a question involving just and adequate compensation for coal miners, whose employment was made possible by the investment of accumulated capital, supplemented by the personal obligations of men already in financial circumstances that would justify retirement from business, and especially from activities necessarily hazardous.

In considering the foregoing you may have thought out some possible plan of cooperation between owners and operatives, or some profit-sharing scheme. You are probably aware that leaders of organized labor, with scarcely an exemption, strenuously object to anything of that kind. They insist that the distinction between employer and employed shall be clearly marked, and that no community of interest can be tolerated. There must be a reason for this attitude.

Do you agree with them that it is better for the personnel of labor to have class distinction emphasized, or as far as possible obliterated? Does the spirit of unrest within the ranks of organized labor, manifested in so many ways, conserve the actual laborer, or may it conserve only labor leaders and agitators, who, from actual choice and acquired skill, find it more congenial, and incidentally more profitable, to sow seeds of discord than to reap rewards of personal toil?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: If you have not already begun your life career that all-important step must soon be taken. If you enter a city or town and inquire whether there be an opening in any of the learned professions, you will be told that they already have more lawyers than can make a living, more doctors than sick people, a good per capita of dentists, and twice as many applicants as positions in the field of pedagogy. If you ask whether there be an opportunity for another store, they may tell you there ought to be, for several have gone out of business during the year.

But if you say you have come with intent to build a public utility, promote an electric or steam railway, develop a water power, or build a factory you will be immediately welcomed, the chamber of commerce will give a dinner in your honor, and you will have offers of free sites, exemptions from taxation, and everything else within the realm of legitimate encouragement. Your enterprise will be approved and your foresight lauded until you have reached that degree of success where you can enlarge your plant, extend your influence, and find an outside market, perhaps a foreign market, for the products of domestic labor.

The public may them assume that your success has been at its expense, and you are liable to see everything done that can be legitimately done to circumscribe your influence and cripple your efforts. Some indirect way to confiscate your investment may be thought out and proposed. You probably recall instances of this kind in your own community, for they exist well-nigh everywhere.

Query: Where is the seed from which spring these inconsistencies? Can it be sterilized, and how? Are big enterprises and great successes essential to a great country? Can our matchless resources be developed and the matchless resourcefulness of the American people given adequate swing under any legislative policy that limits the rewards of achievements resulting from exceptional aptitude crossed on courage?

Cordially, yours

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: The lands of Indiana, Illinois, Iowa, and several other States were sold by the Government at $1.25 per acre. These lands are no more productive to-day than they were originally, and many of them have deteriorated in fertility because of improvident and unwise farming. Nevertheless the owners have watered the capitalization more than 10,000 per cent, so that in buying a dozen eggs, a sack of flour, or a pound of meat one is helping to pay dividends on a capitalization of over $125 an acre exclusive of buildings and other improvements on all farms in the rich agricultural belt.

All early attempts to build railroads across these States resulted in a loss of every dollar invested. Subsequently, through wisdom bought with costly experience, and courage born of hope, roads were constructed and made profitable.

The wealth of the United States, aggregating $200,000,000,000, is three-fourths unearned increment-water. Farm lands, timber tracts, city lots, coal measures, iron, copper, and zinc deposits, gold and silver mines, and oil fields were originally worth little, but increased population plus American enterprise and courage have made them valuable.

QUERY: How shall this enormous unearned increment be apportioned? Shall those who have merely watched this development, assumed no risks, and therefor suffered no anxieties, because they outnumber the fearless and the energetic, confiscate by indirect legislation, or discourage further enterprise by limiting incomes to the equivalent of a moderate rate of interest on money loaned with approved security? Shall farm lands pay 10 per cent on a capitalization nine-tenths water and railroads and public utilities be limited to 6 or 8 per cent on actual physical cost? Shall pioneer capital receive no greater reward than money invested in extensions and betterments where returns are certain? I express no opinion, and simply want your best and sanest thought.

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

—

YOUNG MAN: John D. Spreckles, of California, is a very wealthy man. He owns over 51 per cent of the gas and electric light plants, the street railroads and ferries of San Diego, but he does not enjoy 51 per cent of the food cooked, the light emitted, or the rides taken, and not 1 per cent of the increased value of property caused by his public-spirited enterprises inures to him.

For some years Mr. Spreckles has been projecting a steam railway from San Diego to the Imperial Valley, the most fertile spot on earth, lying in between the mountains and extending far across the Mexican border, and being the only proven region where two crops of cotton, each over a bale to the acre, can be grown on the same land in a single season and without fertilizer.

The undertaking necessitates many miles of tunnels through solid granite. After many disappointments, with all he is worth imperiled, he believes he has finally secured the necessary funds, and seems likely to realize his ambition.

In the meantime the papers at both ends of the road are loudly boasting that the enterprise will inject fully 50 per cent of water into the present capitalization of all farm lands and city real estate directly affected the day the road is opened as a common carrier, while the people owning this real estate stand ready to demand rates low enough to preclude any possible profit on road or public utility beyond a rate on replacement value equal to that obtainable for money loaned on first mortgages with these same lands as security.

The wealth of California, and therefore of the United States, will be increased tenfold the cost of the road.

Query: Shall this enormous unearned increment be apportioned solely among those who have taken no part, made no contribution, incurred no risk, and suffered no anxiety, or shall those whose foresight, enterprise, and courage make them possible be permitted participation? Do you think the question of justice is involved? Do you believe the policy applicable to this concrete case, and therefore to all similar cases, likely to affect future developments? Is there a middle ground of both justice and wisdom? Should there be a distinction between pioneer capital and money expended in extensions and betterments? Can the American people afford to be other than liberal with genius?

Cordially, yours,

LESLIE M. SHAW,
Washington, D. C.

Speech of Hon. Burnett M. Chiperfield Before the Traffic Club of New York.

EXTENSION OF REMARKS
OF
HON. BURNETT M. CHIPERFIELD.
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. CHIPERFIELD. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I insert a speech delivered by me before the Traffic Club of New York at their eleventh annual dinner. The speech is as follows:

SPEECH OF HON. BURNETT M. CHIPERFIELD BEFORE THE ELEVENTH ANNUAL DINNER OF THE TRAFFIC CLUB OF NEW YORK, HELD AT THE WALDORF-ASTORIA HOTEL, NEW YORK CITY, N. Y., FEBRUARY 21, 1917.

[President T. N. Jarvis, toastmaster.]

The TOASTMASTER. Gentlemen, at this time, when the events of the day or a week may change the whole course of our social and industrial life, I would like to propose a toast to the health of the President.

[All rose.]

The TOASTMASTER. Gentlemen, on your behalf I extend to the ladies who so graciously add a charm by their presence to this occasion, and to our guests, a hearty welcome to this, the eleventh annual meeting of the Traffic Club of New York.

All events connected with this organization are important, but this annual banquet of ours is the most important of them all, bringing together as it does, in this great center of social, industrial, and civic life prominent men from all parts of the country, men who are known as captains of industry, men who are charged with responsibility for the management of our great railroad, steamship, express, and industrial corporations, and men who have a part in the making of our laws and in guiding our ship of state.

I also want to take this occasion to thank the many representatives from our sister clubs and thank them for coming to our party. We have among them the presidents of practically all the prominent traffic clubs in the country; a large delegation from Chicago has honored us, and at one table there are six former presidents of the Chicago Traffic Club. [Applause.]

There are a great many things I could say about the New York Traffic Club. I could tell you that it is the largest club in the largest city, and has one of the best looking presidents of any of them. [Laughter.]

We have always had quiet, refined, and excellent dinners; we have always had the best orators to address you. The first gentleman that I will introduce you will all be able to see when he stands upon his feet. He had the perspicacity to choose a clergyman for his father. He indulged in so many activities that I could not commit them all to memory, so I will read a few of them. He took up law early in his life, became State attorney of Fulton County, Ill.; elected representative to the General Assembly of the State of Illinois; secretary and member of the board of trustees; connected with the National Guard of Illinois; was judge advocate of the Illinois National Guard; organized a regiment in the Spanish War; he is a farmer—nothing said about whether he makes money on his farm or not, but he is a farmer—he has been a consistent Republican [laughter and applause] and was elected Congressman at large by a tre-

mendous majority—I won't mention it, because this will probably get in the papers, and his opponent, a Democrat, may find it out and have to read it over again the second time—he is also a member of the Rules Committee, one of the most powerful committees in Congress.

Gentlemen, it is my great pleasure and our great privilege to listen to Mr. [refers to list of speakers amid laughter]—the Hon. BURNETT M. CHIPERFIELD, who will tell you "What Washington might say." [Applause.]

Hon. BURNETT M. CHIPERFIELD. Mr. Chairman, I never knew before in my life how utterly worthless that Congressional Directory is. [Laughter.] There is where he got all those very kind—if not overly truthful statements.

I know now why I always did hate the book.

I did not blame the chairman for failing to recall that long name of mine. It is not his fault.

It reminds me somewhat of the man who was called upon in his pastoral capacity to preach a funeral sermon for a prominent man who was a very dear friend of his, and as he wanted to make sure that he would not forget, he jotted down a few names, and at the appointed time for the service the good man spoke somewhat upon this wise:

"We have met to-day to pay a tribute and to extoll the virtues of the dear departed whom we all knew so well, our loved friend, Mr. [refers to paper]—Mr. Smith. Mr. Smith was a truthful man. In that respect he emulated the Father of his Country [picks up paper], George Washington. He lived an upright and an honest life like that other great President of the United States [referring to paper], Abraham Lincoln. [Laughter.] But now he has left us and has departed to the better land; he has gone to meet his [referring to paper]—his God." [Laughter.]

I am delighted to have the privilege of meeting with this great club. Up to the present time I have enjoyed this delightful occasion most thoroughly, and if it could just stop right here I would enjoy it much more, and I have my suspicions that this may be true of you. [Laughter.]

I am at the present moment a good deal like the butcher who had made quickly in his business a whole lot of money. He had been so very busy with his butchering and rendering that he had not time to accumulate very many of the social graces, but as he acquired wealth his wife acquired social ambitions; and so every so often, and, alas, sometimes more frequently, she trotted him out, much to his disgust, to various social functions of one kind and another. There was a very fashionable masked ball to which she had contrived to secure an invitation, and so she insisted that he should lend dignity to the occasion by his graceful presence.

Not only this, but to add insult to injury, she arrayed him in the character of Appius Claudius, a Roman senator [laughter], and he was, if you will believe me, some senator! [Laughter.] He stood around the wall the most perfect picture of distress that mortal man could imagine, and finally a kindly disposed soul came along and, noticing his anguish, said to him, "Ah! I see you are in character to-night—you are Appius Claudius." "Ho, no, sir," the butcher rejoined; "hi am not 'appy as Claudius. Hi am un'appy as 'ell." [Laughter.]

And so I and my good friend over by the door who said "Hear! hear!" a minute ago are in the same "un'appy" boat.

But I do not quite despair, although you are practically all strangers to me in a way. [Cries of "No!" "No!"] But I have been in this railroad work in some capacity or other, and mostly at the trial table, for 25 years, and the questions that have concerned you I have tried before the juries of the land, and have been in touch with in various legislative bodies. So I wonder if I am not, so far as the right to talk intimately with you to-night is concerned, somewhat in the condition of the man who was initiated into the Order of Grangers some years ago when that order was thriving.

They put him through all the degrees, and he felt very sore about the treatment accorded him in the initiation. He thought that he had been given much more than was coming to him, and he did not hesitate to express himself to that effect to his newly made brethren.

They disclaimed his unkind accusation, and said to him, "Oh, no; you will understand it all so much better, and you will appreciate it so very much more when you see some other fellow get his. You come up to the lodge the next meeting night and see some other fellow initiated." And to this he agreed.

Upon coming down the street a few nights later he saw the lodge room lighted up, and so he went and rapped on the outer door and gave the correct alarm and the wicket was duly opened, and through it he gave the password of the Order of Grangers, which I do not mind telling you in the strictest confidence was "I hoe, I plow, I spade."

Well, a very wicked man was on the inside of that hall, I am sorry to relate, and so when he said, "I hoe, I plow, I spade," the wicked inside sentry made reply, "The h—l you say," and it made him very angry. He went down the stairs, and meeting one of the men who had helped to give him his initiation said, "This is a nice way to treat a brother. I went up there and gave the alarm, and when I said, 'I hoe, I plow, I spade,' the inside sentry said, 'The h—l you say.'" "Good heavens, you didn't do that, I hope," said the brother, and the novice replied, "Yes; I did." Then said the older member, "Those are not the Grangers up there to-night; those are the Knights of Pythias, and you have given them our password." [Laughter.] The fellow scratched his head and seemed very much cast down until a happy thought struck him. "Well, boys, I guess I did give them our password; but I guess I got theirs, didn't I?" [Laughter.]

And so I feel that by association of interest and by close familiarity for many years with the problems that concern you here to-night, and in your daily life, that I have your password—at least I am going to assume that that is so.

Those who know me best would say that I am not given to extravagant statement or the bestowing of fulsome flattery. I hope this is true. I endeavor to measure the words that I speak, and I only pay a just tribute to this club when I say that gathered together to-night within the four walls of this great banquet hall are nearly twelve hundred men who perform as responsible and important a part in the affairs of this country as any similar number of men that could come to any banquet hall. [Applause.]

The railroads that you represent cover like a network this land of ours. The remotest part of this country and of foreign lands is touched by the interests that are in your hands, and to you is confided the task of providing for the manifold and complex wants of the people of the greatest land that lies beneath the sun of heaven. [Applause.]

Upon your unerring care and activity depends the daily bread, and the raiment, and the comforts and the conveniences of this vast Nation—and admirably is that work performed.

It is a land worth living in; it is a land worth living for; and, if the test comes, it is a land worth giving to—anything that we possess, even life itself—for the wonderful privilege of American citizenship. [Applause.]

Let us see just for a minute what it means. I am not here to-night to assume to teach you lessons of patriotism, although on this evening of the birthday of that great American who was "first in peace, first in war," and still remains "first in the hearts of his countrymen" [great applause] we might very well pause and rededicate ourselves once more upon the altar of our country, of liberty, and of patriotism. [Applause.]

To-day, this wonderful land of ours, with its area of 3,000,000 of miles, has less than 33 people to the square mile.

Settled as thickly as France, we would have a population of 570,000,000 souls; settled as thickly as Great Britain and Ireland, we would have a population of 1,000,000,000 souls. With its diversified interests, with its sterling manhood and its magnificent womanhood, with the glowing patriotism that I know prevails from coast to coast, it is no idle word, nor do I say it merely to make more pleasant the passing hour, that it should be the first object of pride and of the unqualified devotion of us all. [Applause.]

Three topers gathered together on a patriotic occasion for the purpose of paying their tribute to the land, and at the same time to enjoy their libations.

After the drinks had made one round, one arose and gave his toast to the United States. He was a modest soul, and spoke without imagination. He said, "I propose a toast to the United States; bounded on the north by Canada, on the east by the Atlantic Ocean, on the south by the Gulf of Mexico, and on the west by the Pacific Ocean."

After a couple more of the glasses that cheer and inebriate, the next man got up, and holding on to the table just a little, proposed his toast to the United States, and he with fervor extended its boundary on the north to the Arctic Circle, on the east to the rising sun, on the south to the Antarctic Circle, and on the west to the setting sun, and that put the other fellow in a mighty hard hole, for he had made the country cover a lot of territory.

To meet this required additional inspiration, and after it had been generously provided, the third good fellow rose and he said: "I propose a toast to the United States: Bounded on the north by the aurora borealis [laughter], on the east by primordial chaos, on the south by the procession of the equinoxes, and on the west by the day of judgment." [Laughter.]

And that, in my judgment, is just about the kind of a land we have. [Applause.]

I duly appreciate some of the trials of the railroads and of the traffic men, of those who carry, and of those who furnish and produce the goods to be transported.

There has been brought about by wise and intelligent action on the parts of each of you a very widely modified relation toward each other and toward the public in the last 25 years—that has been productive of great good, and that has made for a much better understanding.

My good friend Mr. Bessler, who sits at the table here to-night, came from the same part of Illinois that I do. [Applause.] And Illinois looks to the East with its wonderful interest and its marvelous resources and looks to Mr. Bessler with a very great deal of pride. [Applause.]

Just as an illustration of the way in which railroads did business in those days, one of the principal lines in my vicinity had a conductor whom we will call Jim. Jim had been a mule whacker in the Civil War, and he could not get over the idea that that was still his occupation. He could make all the women in a car cry within 30 seconds after he entered the door. If a little child was on the train its mother would hide its face to keep him from scaring it into convulsions.

I remember my first acquaintance with Jim. I had at a very early age been appointed an attorney for this road, and Jim, who was bigger than a stuffed ox, came stalking down the aisle, and as he halted before me with a great deal of assurance I handed up my pass. "What is that, young fellow?" he inquired. As I was not then filled with the same awe that I am now for the truly great, I said, "What is the matter; have you gone blind?" He looked again and asked, "What's your name?" I told him. "Aha!" he roared; "traveling on your father's pass, are you?" And Jim ushered me to the door; and, like the bulls of Bashan, he bellowed, pulling the bell cord, "Get off!" "Well," I said, "hadn't you better wait a minute? That's my pass." "Can't be, young fellow; get off! You can't put that stuff over on me." [Laughter.]

And that was an example of the way in which the rights of the traveling public, and of those having business to do with the railroads, were too frequently disregarded.

The only question that the lawyers asked of the jurors in that section of the country was: "Did you ever travel on the train with Jim?" [Laughter.] And if so, that was all they wanted to know; and you could be most certain that Mr. Juror brought in a verdict against this road every time.

There have been many respects in which these things have been modified—although I am not going to discuss railroad situations—and that is that the public are now taken into full confidence, and the relative rights of each are considered and regarded.

You know, they tell the story of a time when there had been a terrible wreck with one of the directors on board.

After it was all over the director was found out on the right of way sitting on the sand box, that had been thrown about a hundred yards from the other fragments of the locomotive, with many of his teeth knocked out, his nose skewed over to one side, and his ears half torn off. Along came a reporter and asked the director, "How did the wreck happen?" The director made reply, "Young man, I want you to distinctly understand I haven't heard anything of any wreck." [Laughter.]

Public and railroads alike have learned their lesson from experience. It is a good deal like the negro about to be hanged, and the sheriff said, "Sam, have you got any remarks to make?" He said, "Yes; please, sir, I have." "Well," he said, "make them quickly." Sam said, "I want all you gentlemen to know this sho' am goin' ter be a great lesson fo' me." [Laughter.]

But now those early days are past, and the public and the railroads—those who have things to be transported, or who produce the articles that furnish the freight, or those who travel upon the road—have commenced to learn the fact that railroads and shippers and producers and the country itself can only prosper when all prosper together. [Applause.]

If the politicians, whether in Congress or in higher places, keep their hands off of the problems that are affecting the railroads, and the American people, when their sole interest is only with regards to the effect their actions will have on their political campaigns and fortunes, these problems will be solved better and more lastingly and with greater intelligence. [Great applause.]

I do not mean that Congress and executive officers should not attempt the solution of these questions, but when they do they should divorce them absolutely from all political considerations. [Applause.]

My subject is, as you may have gathered [laughter], "What Washington might say."

It would be a very presumptuous man who would attempt to voice sentiments for the Father of his Country, and I want to disclaim to-night that I come for the purpose of presenting to you my notions of what Washington might say, except as there is basis for such statements, from the utterances that Washington did make.

When Washington, on the 4th day of December, 1783, left Fraunces Tavern, in the lower part of this city, after saying farewell to his officers, and went to Whitehall and took his departure by boat, he required 15 days to make the trip to Annapolis. He did not return to this city again until he took the oath that made him the first as well as one of the most loved Presidents of the United States. [Applause.]

If Washington could return to New York to-night, we might well ask ourselves the question what he would say after he had gotten used to the great city, with its white lights and its marvelous activities.

When he left it was a small city of less than 50,000. With the never-ceasing traffic now—upon, above, and below the surface—with wireless, telegraphic, and telephonic communication; with submarines and the other horrible and newly devised engines of war; with automobiles and flying machines; and the wonderful progress that has been made in the housing and the caring for all of these millions of people, I take it that Washington would be silent for lack of words to adequately express himself at the marvelous progress that this city has made since the day that he left, after having laid down the leadership of the victorious army that makes it possible for us to meet here as a free people. [Applause.]

As I think of the marvelous progress of this city, which excels in so many respects all the other cities of the world, I am reminded of the story that was suggested by the friend sitting on my right who told another one, along the same lines, of the negro who was in a town where there had been a race war from which he had fled.

A few days after it was over he came out of the brush, and when he got back to town some one said to him, "Jim, did you run like the wind?" "Lawdy, massa," he said, "I didn't run like the wind, but I passed a few fellows what was running like the wind." [Laughter.]

And so it is with this wonderful city of yours in so many respects. It has passed all the cities of the world; and I fancy what Washington would say upon that subject would be about what the old soldier said who had been sick for a long time and just as he was convalescing the thought came to him if he could just have a couple of poached eggs that he would give anything he possessed for the rare treat.

Presently, so it seemed, a kind of Providence sent an old colored aunty with two eggs into the camp, and he bought them for the last dollar he possessed on earth. He took his tin plate and went over to the camp fire and there he poached his eggs to his satisfaction and then started for his tent.

The boys watched the proceeding with a good deal of curiosity, because he was the most profane man in the whole army corps, and sure enough, weak as he was, as he got about halfway to his tent, he caught his foot, and the eggs fell in the sand and were ruined.

He stood there quietly gazing on the wreck, and seeing this the boys gathered around—they didn't want to hurry him any [laughter]—they wanted him to take his time and get good and ready before he started [laughter]; but he continued to stand there very quietly, and by and by, seeing that he was lost in thought and did not show signs of action, somebody pulled him by the sleeve and said, "Bill, why don't you cuss?" Bill shook his head sadly. He said, "It's no use, boys; there is no words in the whole English language that will do this occasion justice." [Laughter.]

So it is with this marvelous city and its wonderful progress, the relation of which sounds like a fairy tale.

It is not, however, the material side of things that I wish to consider in the light of "what Washington might say," but I do now, for a very few minutes, invite your earnest attention and consideration to something that I do not dwell upon for mere sensationalism—but something that I must speak about, because the last fiber of my being is impressed with its importance, and that is the great crisis that confronts the American people this night.

Before Washington's Birthday arrives, as it will in a few minutes now, I want to discuss with you very briefly the situation that exists.

The honor and dignity of our country is at stake at this hour; its future prosperity and its welfare is involved. Let no man minimize the danger of the situation that confronts us to-

night—it is a situation more serious than any that has existed since the close of the Civil War.

The United States can not, without losing its last vestige of honor, stand passively by and hear the doctrine advanced, I care not by what nation it may be, that America and its lawful commerce is to be deprived of the freedom of the seas. [Great applause.]

To-night I read in the public prints, officially inspired by a foreign Government I have no doubt, the amazing statement:

"It must be repeated again and again, that whoever dares to penetrate the barred zone perishes in it."

[A VOICE. Oh!]

I can't even smile, over any aspect of this matter. If this speech were mere entertainment on my part, or my purpose only to help fill some of the minutes of this banquet, I would feel certain that I had not risen to the height, or the dignity that you would expect your invited speaker to rise to this night. [Applause.]

As the American people, we ask the consent of no man and no country to sail the seas.

[A VOICE. Hip, hip, hooray.] [Three cheers.]

Thomas Jefferson—I am going to quote you Washington in a minute, but now want to address the words of Jefferson to you in the most serious strain I possess—Thomas Jefferson under circumstances similar to those which now prevail made use of this language in 1808:

The crisis in which it is placed can but be unwelcome to those who love peace, yet spurn at a tame submission to wrong. So fortunately remote from the theater of European contests, and carefully avoiding to implicate ourselves in them, we had a right to hope for an exemption from the calamities which have afflicted the contending nations, and to be permitted unoffendingly to pursue paths of industry and peace.

But the ocean, which, like the air, is the common birthright of mankind, is arbitrarily wrested from us, and maxims consecrated by time, by usage, and by an universal sense of right, are trampled on by superior force.

And Washington said, expressing the hope that we might be free from aggression of foreign nations and that our neutrality would be respected:

If we remain one people under an efficient government the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel.

And, then, as the complement to both of these statements, I invite your attention to the utterance of the defender of the Constitution, and its greatest exponent, Daniel Webster.

And this is not done with the thought that by his inspiring statement we should add aught to a situation that is already tense.

Webster was speaking of the days when more than a hundred years ago we were menaced on all hands, and when by certain Governments we were denied the freedom of the seas, as we are denied it to-night, although at that time it was without the terrible and diabolical addition of the hideous implements of war that are "ruthlessly" availed of and used from the depths of the sea against defenseless women and helpless children. [Great applause.]

Then he said:

To her maritime ascendency England owed everything, and we were now at war with her. One of the most charming poets had said of her:

Her march is on the mountain wave,
Her home is on the deep.

Now, sir, since we were at war with her, I was for intercepting this march; I was for calling upon her and paying our respects to her at home; I was for giving her to know that we, too, had a right of way over the seas, and that our marine officers and our sailors were not entire strangers on the bosom of the deep. I was for doing something more with our Navy than keeping it on our own shores, for the protection of our coasts and harbors; I was for giving play to its gallant and burning spirit; for allowing it to go forth upon the seas, and to encounter on an open and an equal field whatever the proudest or the bravest of the enemy could bring against it. I knew the character of its officers and the spirit of its seamen; and I knew that in their hands, though the flag of the country might go down to the bottom, yet, while defended by them, that it could never be dishonored or disgraced.

And I want to tell you, friends, if we care for the respect of the civilized world, it is time for us to run the flag up to the masthead, declare our rights, and stand back of the flag and behind our declaration. [Great applause.]

I know to some extent what the problem means. I know if the call to duty comes that it means me, and you—your service and mine—as it does the service of thousands of other men in the country, but friends we must give of service whatever the hour shall require.

We can not perform our patriotic duty by waving the flag or applauding it when it comes upon a moving-picture screen or by standing at attention when the orchestra plays "The Star Spangled Banner"; but if we are going to rise to the true level of American patriots and citizens our lives, our liberties, and our sacred fortunes must be laid, if it is required and demanded, upon the altar of the United States. [Great applause amid cheering.]

Every hour that we delay the assertion of our rights adds to the difficulty of the task. We have waited too long as it is.

Now is the time to speak before all the world, not bombastically but with firmness for our Nation, its honor, and its sacred rights. [Applause.] If the first aggressions upon the rights of the American people upon the seas by any nation had been properly resented, there would have been no *Lusitania* horror and there would have been no such condition as that of the present day. [Great applause.]

[A VOICE. Down with "Watchful waiting"!]

Let no man misapprehend anything I say about our present duty.

I do not care what the past has been. That is gone. The book is closed, but the present confronts us as free-born citizens of a free-born land, and for one, although he is not of my political faith, I propose to hold up the arms of the President of the United States. [Great applause amid cheering.]

We can not afford to have any divisions now. [Cries of "No!" "No!"] And in the eyes of the world we stand as one people, not English-Americans, not German-Americans, but just plain, red-white-and-blue Americans, ready for the service of the Nation. [Applause.]

We have each of us absorbed the benefits that this land has had to give for many years. You men who form this club here to-night, in the event that your services are needed by the Nation, can furnish more aid in your present capacities to the Government of the United States than could 100,000 troops, and I know there is no question but that every one of you would do your bit and give freely to the Nation the best that is in you. [Applause.]

So to-night we do not look upon this situation with bitterness, nor do we know where it will lead us, but we do know this: We know that we have got to commence—and I say "commence" advisedly—that we have got to commence to prepare for the defense of our country if need be; prepare without limit or stint, and to follow the flag, no matter at what cost, wherever it may lead. [Applause.]

We are too apt to forget these things.

We are a good deal like the Scotchman who was in the habit of going to the seashore once a year for a bath. One year, with a number of his friends, he went down, and when he came back he told his sister Tibbie that he could not find his waistcoat, and although they searched high and they searched low, it was not to be found. The next year came the annual bathing, and once more he journeyed to the seashore. He came home very jubilant and with glee exclaimed to his sister, "Tibbie, I found my weskit; it was under my sark." [Laughter.]

Let us solemnly think about this thing that means so much to each of us; let us well understand that it is a problem that comes home to one and all.

Here in New York City, during the dark days of the Civil War, when the Nation needed recruits, a great gathering was held—I think it was in Cooper Union—and Roscoe Conkling presided.

Such an oration as he delivered in behalf of the Union they say never will be heard again, and under its magic spell mothers came and gave their sons to the service of their country. Wives brought their husbands, and sisters gave their brothers, and young girls their sweethearts, and one who witnessed it said to me, "I doubt if there will ever be such another melting hour in all the history of the land."

It seemed as though the very fount of patriotism was opened and that the benediction of freedom and liberty rested upon this meeting.

A young man was seen making his way to the platform. He walked past Roscoe Conkling to the front of the stage.

When there he held up his hand and he said, "Friends, I have come to give the paramount sacrifice of all, and to make the supreme offering that a man can give." He said, "Mothers have given their sons, girls their sweethearts, sisters their brothers, wives their husbands, and all of these are good, but," he added, "I propose to give a sacrifice that will transcend them all." And then, turning, he took the chairman of the meeting by the arm and turning to the audience said, "Ladies and gentlemen, I lay my uncle, Roscoe Conkling, on the altar of his country." [Laughter.]

It can not be done that way. It is the personal obligation that we must discharge.

And those of us who choose to live under the Stars and Stripes will respond, I have no doubt, in the hour of the Nation's stress, if it is to come.

The Senate has passed laws within the last few hours that will punish the damnable system of espionage that this country

has been subjected to by men who have grossly and vilely abused the hospitality of this haven of liberty. [Applause.]

And while probably there is not a less bloodthirsty soul on all this earth than myself, if this thing continues I will rejoice to live to see the day when the papers will publish the news that some of these vermin of the earth, who seek to betray the country that harbors them, have been backed up against a blank wall and shot to death in the name of the outraged law. [Great applause.]

Washington knew that an adequate preparation was the best guaranty of peace.

We can well be guided by his advice to-day.

He said:

The United States ought not to indulge a persuasion that, contrary to the order of human events, they will forever keep at a distance those painful appeals to arms with which the history of every other nation abounds. There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness. If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

We can not do better than to remember his words of wisdom this day.

Now, let me hurry to conclude. [Cries of "No; do not hurry!"]

But there are others to speak and the hour grows late, and I must close. [Cries of "Go on; go on!"]

If the call to arms shall come, which God in His infinite goodness forbid—if it shall come, there will be no doubt about the response of the people of this land. The poet has told what it would be, and I just want to give you his words:

Up the hillside, down the glen,
Rouse the sleeping citizen;
Summon out the might of men;

Like a lion growling low,
Like a night storm rising slow,
Like the tread of unseen foe,

It is coming—it is nigh;
Stand your homes and altars by;
On your own free thresholds die.

Clang the bells in all your spires;
On the gray hills of your sires
Fling to heaven your signal fires.

Oh, for God and duty stand,
Heart to heart and hand to hand,
'Round the old grave of the land.

Whoso shrinks or falters now,
Whoso to the yoke would bow,
Brand the craven on his brow.

Freedom's soil hath only place
For a free and fearless race—
None for traitors false and base.

Perish party; perish clan;
Strike together while ye can,
Like the arm of one strong man.

That is the response the people of the United States will make. [Applause.]

No man can say with certainty what the course of this country, in that dire event, will be, but I want for a moment to call your attention to this thought that Washington expressed against entangling foreign alliances.

Wisely he said:

Against the insidious wiles of foreign influence (I conjure you to believe me, fellow citizens) the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy to be useful must be impartial, else it becomes the instrument of the very influence to be avoided instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious, while its tools and dupes usurp the applause and confidence of the people to surrender their interests.

I can not conceive of the boys in blue in any foreign land taking their orders from any king or potentate. [Applause.]

I can not understand that we are concerned in establishing, or helping to establish, the boundary lines of the kingdoms of the Old World.

I know that no king, potentate, or monarch of the Old World shall ever have the voice in declaring or deciding what are to be the principles of this land of freedom. [Applause.]

To submit any of our differences to an international court composed in whole or in part of any of the contending powers of the earth at this time, would be the wildest degree of folly.

They are insane with the lust of blood; they are drunk with the delusions of conquest and dreams of power; they have not a single thing or thought at this time that is in harmony or in keeping with the free institutions of America—the cradle and the repository of liberty. [Applause.]

I venture the prediction that if it becomes necessary to send forward the flag in assertion of our rights that America, and America alone, will define where it will go and when it will come back, and which will only be when our honor is satisfied and our rights attained, and that we will not attempt to settle the differences of the contending and warring factions of the Old World. [Applause.]

Washington understood that it was not our province to be drawn into the disputes of the Old World, and to that extent he would approve the policy that the honor of our country and our interests and those of our citizens should alone move us in this crisis.

This is patent from these words of his:

Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties in the ordinary vicissitudes of her politics or the ordinary combinations and collisions of her friendships or enmities.

I am sure from the sage utterances of Washington, which he has left for our guidance and direction, that in this crisis these would still be his words.

He would speak for the honor and dignity of our country, and he would dare to do all that the hour might require to protect and uphold them.

Many a time I have stood with my regiment at the end of a day at the ceremony of the evening parade.

At the right of the formation the band would be playing, and stretched across the field would be the line of troops.

As the hour of sunset would approach the band would strike up that national anthem, dear to the heart of each and all.

The troops would stand in respectful attention, and the head of every man not under arms would be bared.

Then there would reverberate and echo and reecho over the hills and vales the inspiring strains of the Star Spangled Banner.

As the last note would be reached the sunset gun would be fired, the trumpets would sound the salute to the standard, and then Old Glory would come down from the masthead for the night, but not a thread or a shred of it would be permitted to touch the ground, but the banner would be received by the loving hands of the color guard and folded away, and if need be protected with their lives until again upon the morrow at the coming of the day it would once more be raised to its proud position as the emblem of freedom and justice and equality and opportunity to all.

We are the color guard of the Republic.

Let us see that no thread or shred of the Old Flag is permitted to touch the ground, and let us hand it down as the symbol of our country with every stripe and every star and every one of its dear and beloved colors preserved to our children and our children's children forever as the greatest heritage of freedom that ever came from the hand of God. [Great applause.]

Standing in a beautiful park in the city of Chicago is a monument that was erected by a loving people to one of the world's greatest men, the humble rail-splitter of the prairie of Illinois, Abraham Lincoln. [Applause.]

There it stands beside the great inland sea, whose ceaseless surf sounds a requiem never ending by day and by night.

At the first coming of the day, the sun rests upon it in rosy saluation, and here again it pauses in benediction before the night closes down.

Here the people gather, the poor people of whom Lincoln once said, "God must have loved them or else he would not have made so many of them."

Here the little children play.

At the foot of this great monument princes and kings and rulers have laid their floral tributes in loving recognition of the great and matchless work which Lincoln accomplished as the result of the unselfish life and devoted service which only ended when God took him before the zenith of his life had been reached.

Upon the base of the monument in the lasting granite is chiseled one of the greatest sentences in all the English langauge.

It is a sentence that we may all live by, and it is a sentence which the people of the United States can take as their slogan to-day.

I care not where it may lead us, it will be as true now as it was then; as true at the end of the contest, if it should come, as when it was spoken by Lincoln, and with these words of his I conclude the few disjointed remarks that I have made to-night.

Here are his words, notable and courageous: "Let us have faith to believe that right makes might, and firm in that conviction, let us to the end dare to do our duty as God gives us to see it." [Great applause.]

New Zealand Flax, a Substitute for Sisal Destined to Strike Down the Binder Twine Trust.

EXTENSION OF REMARKS

OF

HON. GEORGE M. YOUNG,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. YOUNG of North Dakota. Mr. Speaker, I desire to have printed in the RECORD, to be considered along with my remarks delivered yesterday, an article prepared by Charles Christadoro, of Point Loma, Cal.

NEW ZEALAND FLAX A FUTURE SOURCE OF TWINE.

[By Charles Christadoro.]

I sit in a wheel chair and look around and across the chaparral and out to sea upon the southern California sun-glinted and cloud-shadowed everchanging land and seascape. I have done this for 10 years, and will so continue to the end. I live by day in a lath house so arranged as not to keep out too much southern California sunshine and ocean breeze. I am embowered within and without the house in blooming growths and am droned to by bees and hummingbirds feeding within the blooms.

Visitors come, old friends and new friends, from all points of the compass, all prepared to commiserate and sympathize but going away in cheerful laughter and with promises to come again soon. I am resigned and contented with a lot that can not be changed; and life yet has its charms, because daily active occupation means almost complete extrospection; and that is beyond compare in the case of a shut-in, contentment making the daily cycle ring true.

ROMANCE VISITS SHUT-IN.

But to my romance. It so happened that an inventor called upon me one day. He said he wanted my advice, my help. He really wanted me to become his business "promoter."

A wheel-chair occupant is not generally associated with the idea of an ordinary promoter, for the very nature of a promoter's work is to look up moneyed men, get them interested, run after them, or, like J. P. Morgan I, emperor of promoters, to have a waiting list of investors.

Our inventor had run foul of promoters, the 99.44 per cent for themselves kind, and they had left deep scars on his psychic anatomy. It looked as if he was selecting me because if I landed any deal I could not get safely far away with the proceeds before he caught up with me.

"Show me what you have," said I.

"Copper and nickle-plated aluminum and aluminum solder, and here is a rust and damp proof paint."

He put the samples of copper-plated aluminum and the rustproof painted sheet iron upon a near-by blue-flame stove, heated them red-hot, and then threw them into cold water. No blistering occurred. The copper plating held firmly, and the paint and iron as one body—galvanized iron in effect.

Wood, covered with fireproof paint, came next. That, too, was put over the flame and, whilst the wood in time charred and got black, no flame came forth. Then came ordinary paint colors of various shades, made from the cheapest of bases and costing from 3 to 15 cents per pound, including a superb vermilion. Then a paint that when sprayed upon cheap porous brick made it water resisting, in effect, an enamel for bricks. Also a teredo-proofing process paint that coated a piling with a granitelike surface through which no infant teredo could bore to grow and fatten upon the interior of the log. Boiling a piling in miniature so painted in a saturated solution of salt for hours had no effect in the softening of the painted surface. Of world-wide application, for the teredo and borers are in salt water everywhere. Apparently a very simple and cheap solution of this problem.

INVENTOR WAS VERSATILE.

There were other processes of more or less interest. He had a list of 92, and many presumably of great value. Then he drew forth a bunch of bean straw, fiberized and snow white, and as tough as flax. Bean straw shredded as strong and tough and white as linen rag stock.

We burn up 75,000 tons of bean straw in California annually and four or five times as much in the East. Seemingly it is of no account; there is no use made of it, yet it should all go back into the soil. In the light of the paper-pulp famine in the East—all over, in fact—this interested me above all his other samples. Paper surely is a live problem, and growing more live every day, especially linen rag paper.

Now came a sample of vegetable silk made from the raffia, fiber of the talipot or buri palm. This fiber was open to uses innumerable.

I was interested in this process at once, but the millions of fiber-bearing palm trees off in Ceylon and elsewhere grew "too far from the Bowery" to suit me. If he could, wizardlike, produce vegetable silk threads, why could he not do that with other fibrous growths? A leading question. He surely was a pulp and fiber "wizard."

And I began to test him out. I sent him leaves of the Spanish bayonet to be fiberized; the yucca that grows wild, millions of tons of it, upon the desert, and back the leaves came a mass of fiber. Samples of Kentucky hemp stalks were sent him. He freed the bark from the stalk in 15 minutes, just shook it loose from the stalk, and then processed the hemp into such a soft, delicate fiber as to make it worth $400 to $600 per ton and fit for spinning and weaving into the finest fabrics.

But Kentucky hemp will yield, according to the Government, but 750 or 850 pounds of tow-free fiber per acre: 1,000 pounds under the best possible conditions. Too small a yield. No better than sisal from henequin. The ramie stalk met with the same success at his hands. No trouble whatever to quickly debark and degum the fiber. The fiber-freed stalks of hemp and ramie he transformed into paper pulp.

BINDER TWINE NEEDED.

I still kept on hunting. Incidentally the cotton stalks, the cereal straws, wheat, oats, barley, and rice he made into paper pulp. He found no difficulty in bleaching the cotton-stalk fiber and removing the color. The Dakota flax straw, grown for seed, he defiberized, freeing the fiber from the stalk. We burn up 6,000,000,000 pounds of this paper-making linen-rag straw annually. But a great howl was going up all through the northwestern wheat States, and I wanted a binder-twine fiber. The Sisal Trust was grinding the face of the wheat farmer and at this time, strange to say, down from the University of California came a leaf of New Zealand flax 8 feet or more in length. I examined it carefully. It seemed to be almost pure fiber, so far as my eye could judge. The wizard (my neighbor, the Hon. Lyman J. Gage, refers to this inventor as a composite of a modified Edison-Burbank) sent this leaf back to me a mass of the strongest, most lustrous, and silkiest fiber I had ever seen. Apparently here was a fiber find, a fiber bonanza, so to speak. Later a leaf was sent down to me, followed by great bundles, from our exposition grounds from a plant two years old, leaves 8½ feet long and weighing half a pound each. A hundred pounds of these leaves, more or less, to a mature plant!

SCIENTIST BEGINS STUDY.

At once I began to read up on New Zealand flax (*Phormium tenax*). It is a perennial growth, everlasting, so far as I can learn, once it takes hold, and indigenous to New Zealand, but eminently adapted to a California environment, growing here more quickly than in New Zealand, plants grown from roots maturing and yielding in our fair grounds in two years. In New Zealand it grows in swampy lands without care or cultivation, yielding easily 10 to 15, sometimes 25, tons of leaves per acre! Much of our swamp-land areas could be reclaimed by this plant most profitably and yet with an "equal-to-lemon" orchard irrigation it will grow on all but worthless soil, and may turn our mesas into dividend-paying lands that no orange or lemon orchard or alfalfa field can equal. Irrigation, seemingly, more than soil is needed.

Under cultivation and irrigation, leaves might grow to a length of 12 to 14 feet. It grows from seed and from roots, presumably better from the latter. It resists everything, even a moderate 26° F. frost. [Note from New Zealand Agricultural Reports: One of the easiest plants to grow. Is not in any way affected by frost nor the most severe winds.]

Once planted, the growth is permanent. A single plant under proper cultivation is said to yield 50 to 100 pounds of green leaves at a single cutting, and a yield of 50 tons per acre is reasonably to be expected. Grown in our Imperial Valley and southern California generally, it no doubt would do far better than the above. It is said if properly irrigated it will grow on the poorest of soil.

This New Zealand flax is rated as to tensile strength at 100, whilst hemp is rated at but 70 (presumably the manila or sisal fiber) and flax (presumably the European flax) at but 50. That is where the tenax comes in—tough—100 per cent stronger than flax when woven into cloth.

The wonderful India paper that for strength is the marvel of the paper world is made from European flax, and that accounts for its unapproachable strength. And here is Phromium tenax double the strength.

FLAX TO SUPPLANT SISAL.

So this was not only to prove a most suitable fiber for binder twine, supplanting sisal from Yucatan, but a field of unlimited uses are to be opened up to it. Sisal is the ordinary raw material from which most of the binder twine is made, but at present there is an air-tight trust on sisal in Yucatan from which the International Harvester Co. suffers like all the rest. It is not in the sisal trust.

Rope, cordage of all kinds, thread, nets and fishing lines, linen, paper, and many other manufactured products await an abundant and cheap supply of this fiber. Automobile tires are to be made of this fabric because of its toughness. Even cotton, long staple, appears rotten alongside this tensile giant. All of these are of great importance when one can take the leaves green or dry as leather from this plant and machine them into a mass of lustrous fiber and the yield is 50 tons of leaves 8 to 12 feet long to the acre—longer, perhaps. A yield of fiber of 12 to 14 per cent from the green leaf.

SUPT. MORLEY APPROVES.

Already Phormium tenax plants are growing and thriving by the thousands in California, as ornamental growths, no one paying any attention to the wonderful commercial possibilities of the plant along agricultural and manufacturing lines. Here is what Mr. Morley, superintendent of parks for San Diego, says of this plant:

SAN DIEGO, CAL., *November 21, 1916.*

DEAR MR. CRISTADORO: I hope the following information relative to New Zealand flax (Phormium tenax) will be of use to you:

It is a plant that has been grown in California for many years as an ornamental plant. I have so grown it for 20 years. It grows well in any ordinary soil, will grow very luxuriantly in rich soil and where it can have plenty of moisture. It will stand a great deal of drouth, but under such conditions will not produce commercially. Phormium tenax (plain and variegated) are the tallest growing varieties; in southern California the leaves frequently grow 10 feet long.

The seedlings are two years old before they make a good single crown, and as they grow older produce other crowns. Propagation by division of the crowns is generally done to increase stock and single established crowns will make a plant 5 or 10 crowns in three years provided it has good soil and is well watered. Eventually the plant will grow 3 to 5 feet or more in diameter with about 20 crowns to a plant, 10 leaves to a crown, weighing about 8 ounces each.

They have been found to be quite hardy in the south of England and Ireland, and consequently should stand all the frost we have in southern California. In fact, where you can grow oranges, New Zealand flax will thrive.

J. G. MORLEY,
Superintendent Parks.

ANOTHER EXPERT APPROVES.

And now comes Mr. Osborn G. Austin, expert horticulturist for the Harris Seed Co., San Diego, who informs me as follows: That he has grown New Zealand flax (Phormium tenax) for many years; that to get immediate results divisions of the root should be planted, young crowns from the parent plant. At three years or less you should, under favorable conditions, be able to get 75 or 80 leaves from each plant, 6 to 8 feet in length, averaging 8 ounces per leaf, and from then on you could reap from 5 to 25 leaves per plant every two months, cutting the mature leaves and letting the others grow on.

It stools out in a number of crowns from the ground, increasing the size of the plant very rapidly. These can be split off from the plant and reset. A crop of 50 tons of leaves per acre is a very conservative estimate. I know of very few plants which would respond more quickly to generous treatment and repay the grower better. It will thrive in

almost any soil and grow in swamps where the water is not stagnant. It needs little attention, stands both cold and heat, and will give the grower far better returns than can be had from any plant or tree grown in southern California.

The uses of the fiber are almost beyond estimation, being the strongest of any fiber known, and opens a wide field for a score of manufacturing industries.

All of this information obtained, a set of samples was prepared to await the coming of Mr. Daniels, manager of the fiber department of the International Harvester Co., manufacturing many thousands of tons of binder twine annually. In company with Mr. P. M. Price, the local representative of the company, Mr. Daniels called upon me in my lath house. One by one he examined my samples, remarking that my Kentucky hemp samples were far too valuable to go into binder twine, when so finely processed should sell for $600 to $800 per ton, especially in these days of fiber hunger all through the East.

WONDERFUL OFFER MADE.

He finally came to a sample of the New Zealand flax. He knew about it, but our samples were different. Most carefully did he test each sample and the result is shown in the accompanying facsimile letter from the Harvester Co.

The romance in the case is that a captain of industry should call upon me and tender me an order for nearly $2,000,000 worth of New Zealand flax fiber with not a single growing ton of it available in the entire United States, although thousands of these plants for ornamental purposes are growing in California. Yet by going to it and planting it we can within the next two or three years plant and grow thousands upon thousands of tons of it.

Here was where the commiserated friend of our schoolboy days came in, Tantalus punished by Jupiter, for could this order be filled at the most generous allowance for growing and processing, it would make the inventor more than a millionaire over night; and this is but a sample order, so to speak; only a few days' supply out of the many, many thousands of tons said to be manufactured annually. Certainly this is a business romance with a Tantalus-like sequel.

All that is necessary is to plant the thousands of acres of rich lands in our southern California valleys, Imperial Valley and the San Diego County valleys as instances, with this wonderful fiber growth, to wait a matter of two years, at most three, to give the plants time to mature, and to harvest 50 tons or more, perhaps, to the acre. An Arabian night's dream or a reality, which? Time alone can tell.

POSSIBILITIES UNLIMITED.

But this is only the beginning, the agricultural end of it. And when the rancher has grown his flax and harvested it, then the score or more of manufacturers take hold and the spinning and weaving of linen, various cloths, and canvasses begin; the manufacture of rope, cordage, twines, thread, binder twine, automobile material, and a score of kindred products are manufactured. The Japanese are making silk material from Phormium tenax fiber, illustrative of its possibilities.

The control of the binder-twine situation would be in American hands, and binder twine in connection with this general manufacturing proposition may be considered but a mere speck in fiber space, despite the fact that annually Yucatan sends us about 1,000,000 bales of sisal of 500 pounds each, worth in the New York market, say, $50,000,000; and, like the ticking of a clock, sisal is advancing a cent at a move.

The Northwestern wheat farmer knows too well all about this sisal and tells about an air-tight trust in Yucatan beyond the reach of the Sherman law, financed from the side by American bankers; and the wheat farmer wants Congress to take a hand and run down these bankers. But this is not the kind of relief the wheat farmer really wants.

The Lord helps those who help themselves, and the only way to get from under this trust is to grow our own binder twine and under control on American soil. There is no other practical way. And once we have begun to produce New Zealand flax in appreciable quantities, say in two or three years from now, its effect upon the sisal market will be pronounced, and the time will come when the New Zealand flax will have entirely supplanted the Yucatan sisal growth, so far as binder twine is concerned. California will be able to make money out of this home-grown binder-twine material when sisal is being sold in New York at cost or even at a loss. Manila hemp will not be able to compete.

The henequin or sisal green leaf yields 3 to 3½ per cent of fiber; the manila but 1 to 2 per cent. Sisal yields about 1,000 pounds of fiber per acre, which is on an average 250 pounds more than the yield of tow-free Kentucky hemp fiber per acre grown under average eastern conditions, whilst the New Zealand flax in its native land produces 50 tons of leaves per acre and a yield of 12 to 14 per cent of fiber when properly processed. What this plant will produce under the forcing sun of southern California per acre no one knows. One experienced grower estimates 100 tons, but he is an enthusiast, and yet he claims he is right and says time will prove him so.

The suggestion is made that because of the immense growth of this flax it be spaced 8 by 6 feet. This would permit of cotton, Kentucky hemp, or other crops being cultivated during the maturing of this growth, to be finally discarded when the cutting of the flax begins.

Once this growth is well grounded in California nothing can prevail against it, even Yukatan foreign cheap labor.

BANNER CROP, MAYBE.

All this can not be done in a day. But we have the land and the sunshine, unlimited irrigation water, and a plant growth that requires no care other than plenty of moisture; in fact, less care than the Yucatan henequin, and is afraid of no enemy, even frost, if the New Zealand agricultural reports ring true.

No matter how many acres the rancher may plant, and no matter how many tons he may harvest to the acre, he never can catch up to the demand. It always will exceed the supply. The more the uses for this fiber develop the more will new ones arise.

The export field may prove unlimited. One single concern uses 100,000 tons, more or less, of fiber annually. If New Zealand flax were used, this would mean the crop off of only a few thousand acres of land, and that, too, is but a speck, so to speak, in our agricultural space in California when we consider the 152,000 square miles within the State and 640 acres to a square mile!

There is no reason why the monetary returns from the growing and manufacturing of this flax should not compare favorably with or perhaps exceed any other industrial enterprise in the State. The banner crop of California in time. Surely no crop, acre for acre, oranges or anything else, can be made to show the profit that can be derived from the growing of this flax. There is no reason why the Imperial Valley and southern California generally should not be able to set aside enough of her broad and producing valleys and mesas to give this growth a good momentum. Acre for acre, value and production, alfalfa and cotton and Kentucky hemp are dwarfed by this flax. No more irrigation is demanded than for lemons.

I can only point the way. It is all up to the enterprising ranchers of California, and, in fact, of the great Southwest, with its fertile plains and irrigation dams.

It would seem as if the United States Department of Agriculture, in its seed-distribution efforts, might import from New Zealand and Australia, at the cost of digging the roots or crowns, plus the freight, a few hundred tons of bulbs or roots and seed (it is of the lily family, and it is said exposing the roots to the weather does not harm them) and distribute these throughout the great Southwest. It would be building better than it knew by giving an impetus to this growth.

And so the fertile plains and irrigation dams are awaiting this flax, and without question the incomparable growth is to enrich the ranchers who have the enterprise and foresight to plant it—New Zealand flax, Phormium tenax.

There is more to be said whereof there is not room to write here and now, but I am always (of necessity) "at home," and to the really interested and forward-looking man who wants to know more about it the door of my lath house is always open, and the mail man delivers letters twice a day. I have no time whatever for the idle curious in person or through the mail.

[International Harvester Co. of New Jersey, manufacturers of the "Champion," "Deering," "McCormick," "Milwaukee," "Plano" harvesters and other lines of machinery.]

CHICAGO, *November 23, 1916.*

Mr. CHARLES CRISTADORO,
San Diego, Cal.

DEAR SIR: We offer you 9 cents per pound f. o. b. San Diego or Los Angeles, Cal., for 500 tons of New Zealand fiber, quality equal to the sample you furnished us. If this 500 tons of fiber proves to be satisfactory in quality, we are ready to follow it with an order for 10,000 tons, at a price equal to that of Yucatan sisal. We have in our possession the sample of New Zealand flax which you delivered to Mr. Price, which we are holding as representing the grade which you are to produce and ship to us under this arrangement.

We hope you will succeed in interesting the farmers of your State in the cultivation of this plant, known as New Zealand flax. If, as appears probable, it will grow successfully in California, it will certainly become a very profitable crop. You need have no fear regarding a permanent market. The United States uses in the manufacture of cordage more than 1,000 tons of this type of fiber daily, and the consumption is increasing.

Very truly, yours,

INTERNATIONAL HARVESTER CO.,
By H. L. DANIELS, *Manager.*

Armed Neutrality.

EXTENSION OF REMARKS
OF
HON. EDMUND PLATT,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. PLATT. Mr. Speaker, I have been strongly of the opinion that this great country of ours, great at least in population, in wealth, and in traditions of devotion to liberty and human rights, should protect its citizens and its ships from destruction wherever they may lawfully be. I have believed that earlier and more vigorous action might have saved American lives and that earlier and more adequate preparation for defense might have made our country more respected abroad and might have averted some of the crises that have followed each other in our relations with Germany.

When finally the inevitable rupture of diplomatic relations with the Imperial German Government was announced by the President on February 3, I wondered why it was not immediately followed by an announcement that measures would be taken to provide protection for our ships in the area of threatened destruction.

A week went by and nothing was done, though our ships were held fast in our harbors and long lines of freight cars loaded with the commodities that were to have been carried in those ships blocked our railways and caused such congestion that famine seemed to be imminent in our great cities. The situation appeared to me intolerable and to show that some notice was taken of it in the House of Representatives I introduced the following resolutions on February 10:

House resolution 494.

Resolved, That the President of the United States be requested to furnish to the House of Representatives information as to whether American ships engaged in trade with Great Britain, France, or Italy are being held in the ports of the United States in the face of threats of destruction by the naval vessels of a foreign power.

Resolved further, That the President of the United States be requested to furnish the House of Representatives with information as to what steps, if any, have been taken by the Navy Department to give protection to American shipping, following the precedent of 1798, by convoy or by providing armament for defense.

These resolutions were privileged, and under the rules of the House of Representatives, if not reported from the committee to which they were referred, could be called up for considera-

tion at the end of a week. Meanwhile they attracted considerable attention, and when the Army appropriation bill was under consideration there was an animated debate on our relations with Germany and on the necessity of doing something to relieve the intolerable and humiliating condition of American shipping, which had just begun to be again a factor of importance in foreign trade.

On February 16 I introduced three bills giving the necessary authority to arm our ships and protect our commerce, following exactly the language of the bills of 1798. These bills have been widely commented on in the press of the country and have at least shown distinctly what we once did when a small struggling little Nation against a great European power. During the somewhat notable debate of February 17, the Army appropriation bill being still under consideration, a debate in which the gentleman from Wisconsin [Mr. LENROOT], the gentleman from Massachusetts [Mr. GARDNER], and the gentleman from Tennessee [Mr. GARRETT], and others took part, I obtained opportunity to explain these bills of 1798, briefly speaking as follows:

These bills represent the vigorous action that President John Adams and the little new Nation of his day took against the powerful French Republic, then coming under the control of that greatest of military leaders, Napoleon Bonaparte. They had their *part* in arousing sentiment in the House of Representatives when at last, on February 26, the President decided to ask Congress for authority to arm our merchant vessels for protection. The President's address on that occasion was somewhat disappointing, as it did not advocate as distinct and aggressive a policy of armed neutrality as that of 1798, but it marked the end of the humiliating policy of hesitation and inaction, and those of us who believed that all criticism and all partisan considerations should be thrown aside devoted our whole energies to obtaining the enactment of a measure which should sustain the President by as nearly unanimous a vote as possible and as promptly as possible. The tangled situation in the Senate and the President's long delay in asking for action made it seem possible that the opposition in the Senate, small as it was, might defeat the bill, by a filibuster, as the Sixty-fourth Congress was to expire at noon on March 4. The bill reported by the gentleman from Virginia [Mr. FLOOD], chairman of the Committee on Foreign Relations, was passed after a historic six-hour debate, in which the opposition, indifference, and pacifism that had been so voiceful in the House at times melted away. Only 13 votes in a membership of 435 were cast in the negative, a remarkable showing by contrast with the vote on the McLemore resolution a year ago, when there were 142 negative votes. My part in the debate was the following short speech:

Up to this time, Mr. Speaker, the President has followed generally the policy of fruitless protest and note writing of Presidents Jefferson and Madison, a policy which led inevitably to participation in the great European war of that period, instead of following the more virile, aggressive policy of John Adams, which kept us out of war. I hope that his present attitude marks a complete change. He may have been held back from any attempt to carry out the "strict accountability" promise of February 10, 1915, through fear of lack of complete support of Congress. If that be the true explanation or excuse, it no longer exists. Congress will stand by the President with substantial unanimity in providing such "instrumentalities or methods" as may be necessary to protect our ships and our citizens on the high seas or elsewhere.

A Protective Tariff is the Remedy for the Economic Disturbance Created by the Close of the European War.

EXTENSION OF REMARKS

OF

HON. STEPHEN G. PORTER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, March 4, 1917.

Mr. PORTER. Mr. Speaker, the wordsmiths of the world have failed to find language that would adequately describe the horrors, the magnitude, and the economic disturbances created by the war which is now devastating Europe and part of Asia. It will go down in history as the "great war." It is my purpose to analyze its effect now and hereafter on the American Republic. Many of our people, I fear, have their vision dimmed as to the future by the slogan of "peace and prosperity," just as our forefathers' vision was dimmed at the close of the Napoleonic wars. *It is the future that is* before us and not the past. We have been so far free from armed conflict, but the future is filled with grave dangers. After this war of blood is over a commercial warfare will ensue in which our Republic will be one of the most active and interested participants. Many, no doubt, are familiar with the preparations which the belligerent nations of Europe are now making for this commercial warfare after peace has been declared. Upward of a year ago the allied nations entered into a commercial alliance to take effect immediately at the close of the war. Germany also in many ways is preparing for this trade war, and we Americans should prepare ourselves in advance for this inevitable conflict.

How are we to prepare? Our close relations, commercially and otherwise, with many of the belligerent nations of Europe makes it impossible to define a policy for America which will not hinder one or other of them. They will all be our enemies commercially after the war is over, and the sole object of my argument is to suggest a policy that will protect us from the trade war that is bound to ensue. America's sole defense in this coming economic struggle is a firm adherence to a protective-tariff policy.

That the protective tariff has been a powerful agency in the development of the wealth and strength of this Republic no one can successfully deny. The policy is almost as old as the Nation, and it is a curious fact that it was forced upon the Nation as a matter of protection at the closing of the Napoleonic wars in 1816. While it is true that immediately after the adoption of the Constitution tariffs were placed on certain imports for the purpose of raising revenue for the Federal Government, you will find but a trace of the protective principle prior to the protective-tariff act of 1816. From the passage of this bill by Congress down to the present day the protective policy has largely dominated the councils of the Nation. Those who now oppose the principle of a protective tariff started out as free traders. Subsequently they advocated a tariff for revenue only, and the recent Underwood tariff bill was founded on the theory of a competitive tariff. They have been driven from pillar to post, until to-day an out-and-out free trader is something of a curiosity.

Ours is an extremely youthful Nation as nations measure time, for in less than 250 years we have taken a wilderness and developed its natural resources to such an extent that we are now the wealthiest Nation of the world. Our wealth of two hundred billions is almost as great as the combined wealth of Great Britain, France, and Germany. Surely our policies must be sound, otherwise we could not have achieved such a marvelous success.

To understand the economic struggle which will confront us we must go back to the close of the Napoleonic wars and our War of 1812, for we will find the condition of affairs identical with the one which now menaces us.

From the settlement of the Colonies until we gained our independence from England the mother country exercised a policy of repression on manufacturing in the American Colonies. The colonists were compelled, by various acts of English Parliament, to buy all manufactured articles from England, with the result that the products of the cobbler, blacksmith, wagon maker, and seamstress represented practically all the manufacturing of the Colonies. This policy of repression, as many of you will recall, was one of the principal causes of our war for independence. After we had gained our liberty England still boasted that while she had lost political control of the American Colonies, she still had complete commercial control over them. This was largely true for many years following the founding of our Nation, as after the adoption of our Constitution in 1789 the colonists made little if any headway in manufacture.

Weak attempts toward the manufacture of woolens, cottons, and iron met with indifferent success. The people were contented with the returns from farming, fishing, lumbering, and so forth.

The Napoleonic wars broke out in the spring of 1794, and, with the exception of the brief peace of Amiens in 1802, continued until the peace of Aix la Chapelle, in 1815. England and France were parties to these wars and early instituted a policy of oppression and vexatious annoyances toward our commerce on the sea, which in 1807 became so unbearable that Congress, as a reprisal, laid an embargo on all articles of commerce, thus preventing their import and export. This embargo did not have the desired effect, and in 1809 Congress passed the celebrated nonintercourse acts, which prohibited American citizens from trading in any manner with English citizens. In the course of six or eight months after the nonintercourse acts were passed tremendous shortages occurred in woolens, cottons, and manufactured irons, as our people were unable to buy them from abroad. American enterprise grasped the opportunity and established the woolen and cotton industries in New England and the iron industries in the mountains of the Middle States. These new industries—infant industries, as Alexander Hamilton, who was

the greatest economist the Nation has ever produced, called them—met with immediate success, because they controlled the home markets by reason of the nonintercourse acts, and our war with England beginning in 1812 was largely waged on the sea, our privateers inflicting tremendous losses upon English commerce. England, exhausted by her years of warfare with France and other European countries, finally agreed to a treaty of peace which was ratified at Ghent December 24, 1814.

From the time the nonintercourse acts were passed, in 1809, cotton, woolen, iron, chemical, and other manufacturing industries had prospered to such an extent that when this war closed our entire imports amounted for the fiscal year ending September 30, 1814, to only $12,965. To give you some idea of how small our manufacturing establishments were before the war of 1812, it is an historical fact that in 1811 we made a treaty with an Indian tribe which obligated us to furnish it with 6,000 woolen blankets, and our Government—at least, it is so intimated—was compelled to violate its own nonintercourse acts to secure the necessary blankets. In other words, curious as it may seem, the home market created by the nonintercourse acts and the War of 1812 was the foundation of the present colossal iron, steel, woolen, and cotton industries of America. During all these years of warfare England, by reason of her supremacy at sea, was never invaded, although her commerce was largely driven from the sea by the American privateers. She is an industrious and efficient nation and continued throughout the war to manufacture and store millions of dollars' worth of manufactured articles, especially cotton, woolens, and iron. She was almost bankrupt at the war's close. She had the manufactured articles but needed money, and every available English ship was loaded with these manufactured goods and sent into the markets of the world, especially those of America. Our imports jumped from $12,965 for the fiscal year ending September 30, 1814, to $113,000,000 for the fiscal year ending September 30, 1815, and to $147,000,000 for the fiscal year ending September 30, 1816. It was a deadly and unnatural competition, so far as our infant industries were concerned.

In less than six months after the treaty of Ghent those improvident advocates of free trade who had been shouting the loudest about "peace and prosperity," just as they are doing to-day, saw with amazement every cotton and woolen mill and every iron foundry in America close its doors. The home market was gone, a great panic ensued which Daniel Webster well described in a speech in the Senate as "an auctioneer on every street corner in New England." There was great excitement in the country; Congress convened on the first Monday of December, 1815, and under the leadership of the followers of Alexander Hamilton, who for years had advocated the Hamiltonian policy of a protective tariff, passed the first real protective tariff law in the history of the Nation.

Under this protection the industries were promptly rehabilitated and prosperity came again to our land. It will be noted that this protective tariff was not adopted until after the damage was done. If the Nation had listened to the followers of Hamilton and other protectionists the tariff act of 1816 would have been passed before the close of the war and before the industries of America had been paralyzed. The protectionists, however, were unable to control the policy of the Nation, which refused to visualize the future until the damage was done. This damage will be repeated at the close of the present war unless Congress forthwith excludes the products of Europe by a high protective tariff. Whether you believe in the protective tariff as a general principle or not, you must concede that extraordinary and unheard of conditions will confront us at the close of this great war in Europe. Let us protect ourselves from the economic disaster before it is too late. I have given the causes which brought about the passage of the first protective tariff law in 1816, and the result of lack of protection at the right time, solely for the purpose of pointing out that the same danger which existed at the close of the Napoleonic wars will confront us at the close of this great war, but it will be a thousand-fold more injurious to our commercial life. In the meantime shall we see this danger from afar and continue to stand idly by and do nothing to protect ourselves?

No one has been able to ascertain with certainty the exact cause of this war in Europe. The better opinion appears to be that it is a contest between Great Britain and Germany for commercial supremacy.

Prior to the Franco-Prussian war the German people were largely agriculturalists, the country was small and the population large, and notwithstanding intensive farming, many of them immigrated from the home country because they were unable to make a satisfactory living. The public men of Germany, recognizing these conditions, turned the minds of the people to manufacturing. To-day Germany is one of the great manufacturing nations. Its products are common in every market place of the world. In fact, few of us realized how much the world was dependent on Germany for manufactured articles, especially drugs, chemicals, and dyestuffs, until they were shut off by the English blockade. They are now engaged in the greatest war of history. Every port has been blockaded for the last two and a quarter years; but it should be remembered that the thing which takes the heart out of a nation—fighting on its own soil—has occurred but once. Many years ago Germany recognized the great benefits of a protective tariff and put a high tariff wall around the Empire, which has taught the German people to live largely upon the products of Germany and exist without intercourse with the outside world. What stronger argument in favor of a protective policy could be advanced than the fact that for two and a half years she has been denied intercourse with the outside world? It is true that her productive capacity has been largely reduced by the calling of the men to the front; but we should remember in this connection that she has upward of two millions of military prisoners tilling the soil and, in some instances at least, working in her manufacturing plants. Her enormous exports before the war have been entirely shut off by the blockade. She is unquestionably storing away millions of dollars worth of manufactured articles, just as England did during the Napoleonic wars, and intends to let them loose on the markets of the world the day the war closes. She is prepared to do this because most of her merchant vessels are only interned and will be released by a treaty of peace.

It may be argued that Germany will eventually be overrun by her numerous enemies, and the danger to our commercial life which I have pointed out thereby averted. Assuming this to be true, it is certain that her conquerers will not destroy these manufactured goods, as they represent money which they all will need. Assuming, however, that Germany will be conquered and these manufactured articles destroyed, what about the competition which we must meet from Russia, a nation with upward of 200,000,000 of people and having no outlet to the sea since the war began except from the north, and that only three months in the summer? The Dardanelles have been closed to her since the beginning of the war. What has she been doing with her immense stores of wheat, rye, barley ,and other argricultural products? They are being stored away awaiting the close of the war.

What about the recent commercial treaty between Russia and Japan whereby Japan secures control of the Russian trade? Will this not compel England and France to abandon the Russian market and center their attention on American trade?

The allies entered into a treaty agreement some time ago, agreeing not to trade with Germany or Austria-Hungary, their best customers before the war, and Japan, by force, has closed the commercial door to the allies in China. Conceive, then, the plight of these belligerents refusing to trade with each other owing to the bitter hatreds engendered by the war. They will have practically no market except America, which to-day holds two-fifths of the gold supply of the world. Shall we permit this war to close without making an effort to protect ourselves and our industries from being submerged by this avalanche of manufactured goods and products of the farms, which will be thrown upon us if our ports are left open by the existing Underwood tariff law?

As I have said before, we are the richest Nation in the world. We have the cash which Europe so badly needs, and therefore our markets will receive the preference over all others. Unless we protect ourselves we shall be swamped with the dumpage of Europe as we were in 1815. We should remember the lessons taught our forefathers at the close of the Napoleonic wars. We should profit by their experience and protect our industries from this deadly and unnatural competition from the outside world. Our experienced forefathers locked the stable door after the horse was stolen by enacting a protective tariff law after the war was over. Let us, with the light of their experience, disastrous as it was, lock the door before the war closes, and thus remove this dire peril to our industries. Congress should lay everything else aside until a protective tariff law is passed that will give us this much-needed protection.

It is reasonably safe to say that 20 per cent of our people are now engaged directly or indirectly in manufacturing supplies for the belligerent nations of Europe, and the large exports resulting from the demands of those nations are responsible for the high prices of the necessities of life in America. In many of our industrial centers tens of thousands of men are engaged in the manufacture of war supplies. The day the treaty of peace

is signed all of these men who are directly or indirectly engaged in making supplies will be thrown out of employment, and I fear that our highways will be filled with idle men seeking employment. There is no way by which we can protect ourselves against this condition, which will create a grave economic disturbance in the Nation, but we can minimize the damage by passing a new tariff law that will insure the home markets to the American manufacturers, thus giving employment to many of these idle men.

In conclusion, I desire to repeat that the failure on the part of the party in power to protect our Nation, as I have above indicated, shows such a lack of vision and indifference to the country's welfare that a day of reckoning will come at the hands of the American people.

Post Office Appropriations.

EXTENSION OF REMARKS

OF

HON. HALVOR STEENERSON,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. STEENERSON. Mr. Speaker, during the debate on the Post Office appropriation bill I called attention to the fact that under the system of accounting in use in the Post Office Department the amount of surplus or deficit for any one year was determined by the difference between the audited postal receipts and audited disbursements; that sales, being for cash, receipts were known, but that many obligations, amounting to millions, incurred near the close of the year, are usually audited and paid after the close of the year, and hence this difference between receipts and disbursements does not accurately represent the financial operations of the year. The last four annual reports of the Postmaster General call attention to this. In 1914 he says:

The audited surplus does not, however, represent the actual financial results of the year.

Within certain limits, therefore, it is possible near the close of the year, by either expediting or delaying the payment of bills, to increase or diminish the total disbursements, and hence to show either an "audited deficit" or an "audited surplus." This is what the present Postmaster General actually, and, as I think, unjustly, charged was done by his predecessor in 1911, and by reason thereof began to substitute "estimated surpluses" for what the figures on their face showed.

Every annual postal appropriation act contains two kinds of appropriations, one payable out of postal revenues, the other, in case the revenues are insufficient, payable out of the Treasury, to be advanced upon requisition of the Postmaster General. These grants from the Treasury are not included in the receipts, and seem to have been made during years of annual surpluses as well as years of annual deficits. Thus in the fiscal year 1913 there was drawn out of the Treasury $3,027,368.79, and $2,000,000 was repaid, leaving a net grant of $1,027,368.79; and yet on June 30, 1914, just one year after the fiscal year had expired, $3,800,000 was turned into the Treasury as an alleged surplus for the previous year. In March, 1915, $3,000,000 was drawn out as a deficit and $3,500,000 paid back as an alleged surplus. In 1916 $5,500,000 was drawn out on certificate that there was a deficit and nothing was paid back until six weeks after the close of the fiscal year, when $5,200,000 was paid in as an alleged surplus of that year, although there still appears to be a net loss to the Treasury of $300,000.

Taking the four-year period embracing the fiscal years 1913, 1914, 1915, and 1916 we find these official figures, to wit:

Service, fiscal year.	Audited revenues.	Audited expenditures.	Audited surplus.	Audited deficit.
1913	$266,619,525.65	$262,067,541.33	$4,510,650.91	
1914	287,934,565.57	283,558,102.62	4,376,463.05	
1915	287,248,165.27	298,581,474.24		$11,333,308.97
1916	312,057,688.83	306,228,452.76	5,829,236.07	
			14,716,350.03	11,333,308.97

Net audited surplus, $3,383,041.06.

Based upon the above figures, the Postmaster General's Annual Report for 1916 contains the following, to wit:

The total payments into the Treasury during the past four years is therefore $12,500,000.

That the Postal Service is now self-sustaining is evidenced by the fact that for three out of the four years of the present administration audited surpluses aggregating $14,716,350.03 have been shown. Deducting the audited deficiency in 1915 of $11,333,308.97, the net surplus for the four-year period is $3,383,041.06, and but for the business depression occasioned by the European war the department would have undoubtedly secured a surplus of not less than $18,000,000.

This paragraph was quoted by one Member in the House approvingly in the debate as conclusively showing that the United States Treasury had been enriched in these four years by $3,383,041.06. It is perfectly plain from the above that the Postmaster General's report was intended to convey the idea that the Treasury had been the gainer by reason of its connection with the Postal Service, and that but for the European war the $11,333,308.97 deficit of 1915 would have been converted into a surplus of $5,500,000, making a total of $18,000,000 net surplus for the four years, and that that idea has been conveyed not only to the general public, but to Members of Congress, is evidenced by their speeches made on this floor. It is, of course, of the utmost importance that the truth in regard to this matter should be known. Fortunately the Treasury Department has furnished me with the official figures, which I think demonstrate the error of this contention to an absolute certainty. In order to make the matter perfectly clear, I requested them to furnish a statement showing grants from the Treasury and payments into the Treasury during the fiscal years 1912 to 1916, both inclusive. First, the statement shows separately each of the five years, then a summary of the five years, giving the date when each payment out of and into the Treasury was made. This summary shows that for the five years there was drawn out of the Treasury $2,232,156.27 more than was paid in, and, omitting the year 1912, for the last four years the sum of $663,961.39 was drawn out in excess of what was paid in. The statement follows:

TREASURY DEPARTMENT,
OFFICE OF ASSISTANT SECRETARY,
Washington, January 8, 1917.

Hon. H. STEENERSON,
House of Representatives.

MY DEAR CONGRESSMAN: By direction of the Secretary and in response to your request of this morning, by telephone, I inclose herewith statements showing grants from the Treasury and payments into the Treasury during the fiscal years 1912 to 1916, inclusive, on account of postal deficiencies, as follows:

During the fiscal year 1912.

When made.	For fiscal year 1909.	For fiscal year 1910.	For fiscal year 1911.	For fiscal year 1912.	Total.
1911.					
July 25	$1,953.31	$67,917.29			
Oct. 17				$2,000,000.00	
Nov. 11	7,391.08	47,348.33			
Dec. 15				1,000,000.00	
1912.					
Feb. 5	6,047.61		$43,042.37		
May 1			394,494.89		
	15,392.00	115,265.62	437,537.26	3,000,000.00	$3,568,194.88
Less repayments into Treasury on account of fiscal year 1912:					
Jan. 31, 1912				$1,000,000.00	
May 31, 1912				1,000,000.00	
					2,000,000.00
Net amount of warrants issued to Post Office Department during fiscal year 1912					1,568,194.88

During the fiscal year 1913.

When made.	For fiscal year 1910.	For fiscal year 1911.	For fiscal year 1912.	For fiscal year 1913.	Total.
1912.					
July 26	$70,885.97	$208,826.96			
Aug. 28				$2,000,000.00	
Nov. 14	207.42	52,673.53			
1913.					
Mar. 29	52.21	11,066.81	$197,237.55		
May 12	65.70	11,809.54	331,823.44		
	71,211.30	284,376.84	529,060.99	2,000,000.00	$2,884,649.13
July 26, 1912, deficiencies for 1909					122,214.67
Nov. 14, 1912, deficiencies for 1909					203.14
Mar. 29, 1913, deficiencies for 1909					324.27
May 12, 1913, deficiencies for 1909					6,477.84
Sept. 17, 1912, certified claims of various years					236.46
Do					8,187.13
Dec. 7, 1913, certified claims of various years					419.03
Mar. 29, 1913, certified claims of various years					3,867.55
May 12, 1913, certified claims of various years					769.57
					3,027,368.79
Less repayment into Treasury Jan. 28, 1913, on account of fiscal year 1913					2,000,000.00
Net amount of warrants issued to Post Office Department during the fiscal year 1913					1,027,368.79

During the fiscal year 1914.

There were no payments from the Treasury or repayments into the Treasury during the fiscal year 1914 on account of postal deficiencies.

June 30, 1914 (fiscal year 1914): Surplus revenues of Post Office Department for fiscal year 1913 ---------- $3,800,000

During the fiscal year 1915.

When made.	For fiscal year 1911.	For fiscal year 1912.	For fiscal year 1915.	Total.
1915.				
Mar. 2	$1,911.23	$321,441.72		
4	191.74	1,230.04		
24			$1,000,000.00	
26			1,000,000.00	
30			1,000,000.00	
June 22			500,000.00	
23			500,000.00	
24			500,000.00	
25			500,000.00	
26			500,000.00	
29			800,000.00	
	2,102.97	322,671.76	6,300,000.00	$6,624,774.73
Mar. 2, 1915, deficiencies for 1900				1,005.16
Mar. 4, 1915, deficiencies for 1909				200.00
Mar. 2, 1915, deficiencies for 1910				262.12
Mar. 2, 1915, certified claims of various years				11,888.72
Mar. 4, 1915, certified claims of various years				2,605.29
				6,640,736.02
Less repayment into Treasury Feb. 25, 1915, on account of fiscal year 1908				4,143.42
Net amount of warrants issued to Post Office Department during the fiscal year 1915				6,636,592.60
Mar. 29, 1915 (fiscal year 1915): Surplus revenues of Post Office Department for fiscal year 1914				3,500,000.00

During the fiscal year 1916.

When made.	For the fiscal year 1916.	Total.
1915.		
Aug. 4	$500,000.00	
5	500,000.00	
6	500,000.00	
Sept. 1	500,000.00	
2	500,000.00	
3	500,000.00	
21	500,000.00	
22	500,000.00	
23	500,000.00	
24	500,000.00	
27	500,000.00	
	5,500,000.00	$5,500,000.00
Aug. 21, 1916 (fiscal year 1917): Surplus revenues of Post Office Department for fiscal year 1916		5,200,000.00

The above statements for the years 1912 to 1916, inclusive, are summarized, as follows:

Fiscal year.	Gross amounts paid from Treasury for postal deficiencies.	Repayments to Treasury on account of postal deficiencies and surplus revenues.	Net payments from the Treasury on account of postal deficiencies.
1912	$3,568,194.88	$2,000,000.00	$1,568,194.88
1913	3,027,368.79	[1] 5,800,000.00	[2] 2,772,631.21
1914		3,500,000.00	[3] 3,500,000.00
1915	6,640,736.02	4,143.42	6,636,592.60
1916	5,500,000.00	5,200,000.00	300,000.00
Total	18,736,299.69	16,504,143.42	2,232,156.27

[1] Repayments, $2,000,000; surplus revenues, $3,800,000.
[2] Excess repayments and surplus revenues over payments from the Treasury on account of fiscal year 1913.
[3] Surplus revenues. No payments from the Treasury on account of fiscal year 1914.

Very truly, yours,

WM. P. MALBURN,
Assistant Secretary.

Desiring to have things perfectly plain and beyond cavil I then requested them to prepare a table, giving the items of "Treasury gains" and "Treasury losses" for each year. The table follows:

Amounts drawn from the Treasury for postal deficiencies and amounts returned thereto, including deposits of surplus postal revenues, fiscal years 1912 to 1916, inclusive.

Part 1.

	Advances from the Treasury on account of postal deficiencies.	Repayments to the Treasury on account of postal deficiencies.	Net grants from the Treasury.	Surplus revenues deposited in the Treasury.	Treasury gained (+); Treasury lost (−).
1912	$3,568,194.88	$2,000,000.00	$1,568,194.88		−$1,568,194.88
1913	3,027,368.79	2,000,000.00	1,027,368.79	[1] $3,800,000.00	+ 2,772,631.21
1914				[1] 3,500,000.00	+ 3,500,000.00
1915	6,640,736.02	4,143.42	6,636,592.60		− 6,636,592.60
1916	5,500,000.00		5,500,000.00	[1] 5,200,000.00	− 300,000.00
Total	15,168,104.81	2,004,143.42	13,163,961.39	12,500,000.00	− 663,961.39

[1] Surplus revenue of the year indicated, but not deposited in the Treasury until the following year.

—

Certain additional payments from the Treasury under various laws on account of the Postal Service, fiscal years 1912 to 1916, inclusive.

Part 2.

[Treasury gained (+); Treasury lost (−).]

1912.	Miscellaneous payments under relief acts, etc		− $7,791.92
1913.	Parcel-post equipment	$370,217.26	
	Judgments, Court of Claims	8,400.28	
	Miscellantous payments under relief acts, etc	4,995.55	
			−383,613.00
1914.	Parcel-post equipment	359,767.74	
	Equipment and moving expenses, new post office, Washington, D. C.	5,000.00	
	Judgments, Court of Claims	25.00	
	Miscellaneous payments under relief acts, etc	234.20	
			−365,026.94
1915.	Equipment and moving expenses, new post office, Washington, D. C.	55,000.00	
	Parcel-post equipment	19,352.11	
	Judgments, Court of Claims	1,256.97	
	Miscellaneous payments under relief acts, etc	12,073.59	
			− 87,682.67
1916.	Judgments, Court of Claims	114.95	
	Miscellaneous payments under relief acts, etc	247.27	
			− 362.22
	Additional payments		−844,476.84

—

Summary.

Part 3.

[Treasury gained (+); Treasury lost (−).]

1912	−$1,575,986.80
1913	+ 2,389,018.12
1914	+ 3,134,973.06
1915	− 6,724,275.27
1916	− 300,362.22
Net loss 1912–1916	− 3,076,633.11

TREASURY DEPARTMENT, *January 31, 1917.*

The last column of Part 1 of the table is marked "Treasury gained (+)" and "Treasury lost (—)." The first figures are for 1912 separately; then follows 1913, 1914, 1915, and 1916, separately and together. Then follows Part 2, being a detailed statement of certain additional (omitted from the first statement furnished by the Treasury) payments from the Treasury which foot up to $836,684.92 for the four years, the amount for 1912 being deducted so as to avoid confusion. These additional payments out of the Treasury increase the loss for the last four years to the Treasury to $1,500,646.31. Then follows Part 3, being a summary of Part 1 and Part 2 of the table, showing the loss or gain for each of the five years, and from which it appears that the total loss to the Treasury from its connection with the Post Office Department for that period to be $3,076,633.11. If we deduct the item for 1912, it leaves a net loss for the last four years of $1,500,646.31, as above stated. However, as eight months and four days of the fiscal year 1913 was under Taft, the whole year should be excluded, making the loss for the three years that belong to this administration $3,889,664.43. I want to call special attention to the last item of the summary, for it shows that there was a loss to the Treasury for the fiscal year 1916 of $300,362.22, while the Postmaster General published to the world that he had paid into the Treasury a surplus of $5,200,000.

Let us now take up the claim made in the Postmaster General's report, that "but for the business depression occasioned by the European war, the department would have undoubtedly secured a surplus of not less than $18,000,000." While it is true that the Post Office Department deposited a total of $12,500,000 on account of alleged surpluses for 1913, 1914, and 1916, there is nothing in the circumstances to indicate that if there had been no European war the $11,333,308.97 deficit of 1915 would have been changed into a surplus of $5,500,000. That deficit was incurred between July 1, 1914, and June 30, 1915, 11 months of which was contemporaneous with the European war, and the first month of which was during peace; but the next year, when the war raged continuously with still greater violence, the Postmaster General's report shows an alleged surplus. A more obvious and better explanation would seem to have been that a business depression set in soon after the Underwood tariff law of October, 1913, went into effect, and that this depression continued until the influence of war orders upon our exports began to be felt with constantly increasing force, which still continues. Our trade balance during the fiscal year 1914, which ended one month before the war began, was only $470,000,000, as compared with $652,000,000 the previous year; but the next year, 1915, it rose to $1,094,000,000, and in 1916, with the war more widespread and severe than ever, it reached the enormous sum of $2,185,000,000. War, therefore, seems to have been the cause of prosperity rather than depression in business.

There are still outstanding bills for services of the railroads during 1914, 1915, and 1916 in carrying the increased weight limit of parcels, officially estimated at $1,400,000, and withheld rural carriers' salaries estimated at $3,000,000, making a total loss on the postal operations of this administration of $8,289,664.43.

The Late Senator James P. Clarke.

MEMORIAL ADDRESS

OF

HON. HENDERSON M. JACOWAY,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 18, 1917.

The House had under consideration the following resolutions (H. Res. 512):

Resolved, That the business of the House be now suspended, that opportunity may be given for tributes to the memory of Hon. JAMES P. CLARKE, late a Senator from the State of Arkansas.

Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of the exercises of this day, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk send a copy of these resolutions to the family of the deceased.

Mr. JACOWAY. Mr. Speaker, the sudden death of Senator JAMES P. CLARKE, of Arkansas, in last October was a terrible shock to us.

Born and educated in Mississippi, Senator CLARKE studied law in the University of Virginia and entered upon the practice of that profession in the State of Arkansas in 1879. Here he began his political activities by serving two years in the State legislature, following it up by a four-year term in the State senate, of which he became president pro tempore and ex officio lieutenant governor. He later served his State as attorney general and governor, in which positions he was fearless, just, and decisive in the honorable discharge of the duties thereof, and also as one of her able lawyers until his election to the United States Senate in 1902.

Our State properly and speedily voiced its appreciation of his worth and services by the adoption of a resolution providing for the placing of his statue in Statuary Hall.

In his young manhood he had an ambition of becoming a United States Senator. He showed that strength of character and that independence of action which have ever been true of him, and even then caused his associates to predict for him a brilliant future.

Though of an impulsive nature, Senator CLARKE was free from indiscretions and possessed of noble personal habits; impetuous, he was nevertheless invariably gentlemanly in his manner; impatient in speech, he ranked high among debaters and revealed great thought and knowledge on the questions that engaged the attention of public men.

Like any successful public servant, Senator CLARKE had opponents and was subjected to open and hostile criticisms. But his was a sturdiness of character that enabled him to pursue the pathway of duty in the face of all opposition. He brought to his great task of a public servant knowledge, industry, and mental and moral integrity.

He was not a Senator occupied only with matters affecting the welfare of his own State; he had the interests of the whole Nation at heart. By his death not only Arkansas and the United States Senate, but the entire country as well, have suffered a great loss.

Preparedness.

EXTENSION OF REMARKS

OF

HON. STEPHEN G. PORTER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. PORTER. Mr. Speaker, anyone who has made even a meager study of preparedness must realize that it is interwoven with every fabric necessary to the Nation's existence. It is not merely a matter of building battleships and the arming of soldiers, as these are only component parts of real preparedness, which rests primarily on social, industrial, political, and educational preparedness.

It is impossible, in the brief time allotted to me, to do more than touch the high spots of this great question, while laying down a few general principles to which we can, with safety, anchor.

It is rather strange, but true, that every century considers itself better than the one which preceded it; probably for the reason that those who have gone before are not present to contradict the claims of the living.

I often wonder how the future historian will, in the calmness of his study, analyze the civilization of this century. It was ushered in with the close of the Napoleonic wars, which devastated half of Europe; then followed the Mexican War, our great Civil War, the Crimean War, the Boer War, the Russo-Japanese War, the opium wars between England and China, the French Revolution, the Spanish-American War, and others, and finally the present great war, which for imbecile brutality is unequaled in the world's history, and which certainly has made of mechanical murder an exact science. If he compares this record of human slaughter with, say, the thirteenth century, when civilization was just emerging from the Dark Ages, when literature had its climax in Dante, art its Michael Angelo and Gothic architecture, education the establishment of the great colleges and technical schools of Europe, medicine the organization of the hospital systems of the world, and politics the foundation of Anglo-Saxon liberty, the Magna Charta, I am afraid the verdict of the future will be against us.

Every reasonable human being knows that war is violative of every principle of humanity, and yet our so-called civilization is such that it requires but a little of the fever of war to melt its veneer from all of us and leave us savages.

We have been taught throughout our national existence that our isolation, with the Atlantic Ocean on the east to protect us from war-torn Europe and the Pacific Ocean on the west to protect us from the subtle Oriental, was so great that it would be practically impossible for foreign nations to harm us. Benjamin Harrison, while President, stated as late as 1893:

> Our isolation is so great that little, if any, harm can come to us except from within.

This idea, fortified as it was by the Monroe doctrine, seemed to be correct until steam and electricity revolutionized every line of human action and resulted in undreamed-of means of communication.

The *Deutschland*, a submarine, rose from beneath the waters of Chesapeake Bay and subsequently off the coast of Connecticut. It had traveled over 4,000 miles and evaded capture by the greatest fleet that has ever been upon the waters. If one submarine can do this, hundreds of them can do likewise, and spread havoc and death in every harbor of our Nation.

The men who in the past claimed that our isolation was a complete protection never had a vision of a *Deutschland* or a modern airship. Hence it is but sound common sense to meet the changed conditions.

The owners of the Anglo-French bonds, the munition manufacturers, and the Anglicized Americans, both in and out of public life, who have so strenuously and openly urged our Na-

tion to take part in this war on the side of the allies, claiming that Germany can do us no harm, must now admit the fallacy of their arguments. The *Deutschland* conveys a stern warning to America and should still the tongues of the mercenary jingoes who want us to enter this war of blood and carnage.

We are a Nation worth upwards of two hundred billions of dollars, which is two and one-fourth times greater than the wealth of any other nation in the world. Europe will be bankrupted when this war is over; will look with greedy eyes upon our prosperity, and we must prepare to protect ourselves against a coalition of desperation.

For years I have been convinced of the importance of preparedness. This war in Europe has been a blessing to us to the extent, at least, that it has awakened our people to the positive necessity of insuring ourselves against war as well as against fire.

We all dream of the time when human conduct will be governed by the Decalogue and the Sermon on the Mount; but that is in the far-distant future. We must meet conditions as we find them, or, as Grover Cleveland so well stated it, "It is a condition, not a theory, that confronts us"; and reluctant as we may be to do so, we must prevent war by preparation.

I do not agree with the interpretation placed by many upon Washington's advice: "In times of peace, prepare for war." He certainly did not intend that the infant Colonies, representing less than five millions of people, should devote their energies to building up great naval and military machines. What he did mean was this, that we should prepare ourselves to such an extent socially, industrially, politically, and educationally, that the institutions of our country would be so grand and so noble as to excite the envy of the world and would inspire in the heart of every American who enjoys the beneficent privilege of American citizenship a willingness to shed his last drop of blood in defense of the flag.

This is the real foundation of preparedness, upon which everything else must rest. We should prepare industrially so that this insane conflict between capital and labor will cease. Capital should be protected in all of its legitimate enterprises and labor should be made pleasurable.

We should prepare educationally, so that our public schools and colleges will in the course of time totally obliterate illiteracy. As the Talmud says:

The child is the foundation of the universe.

We should prepare ourselves socially, so that class distinctions will forever cease and every man, woman, and child in the Nation will receive such consideration from the Government as will best promote his social welfare.

We should prepare politically, so that only the best men will be elected to public offices and thus equip the Nation with public officials inspired only by a lofty patriotism.

And finally, we should treat the care of the loved ones of the soldier who has gone to the front as a positive duty of the Government and not allow their welfare to depend on uncertain public charity. Peace of mind is essential to efficiency. If the soldier at the front knows that his family is being cared for by a grateful Government he will perform his services much more cheerfully and much better. In case of war and our men are called to the front, their innocent families should not bear the entire burden of the breadwinner's absence.

These are the things which Washington intended us to do when he said: "In times of peace, prepare for war"; for back of every army and navy there must be a beautiful patriotism and a sublime obedience to constituted authority; otherwise these instrumentalities are helpless and impotent. In other words, and I desire to emphasize this even at the expense of a repetition, all preparedness must rest upon a citizenship which would gladly and loyally in times of stress and danger defend the Nation from its foes. The development of the Army and Navy, while important, is after all but a superstructure.

Hardly a day passes but that every Member of Congress receives suggestions as to how we should prepare the Army and Navy to successfully resist an invader. As a rule, these suggestions come from men entirely unfamiliar with the science of war. It is rather a strange anomaly that the American people when they need expert advice in medicine, law, architecture, or anything else except governmental matters, go to those who are specially trained in these callings. If the Pennsylvania Railroad, for instance, desires to extend its lines, it turns the matter over to its expert engineers. The stockholders certainly have no voice in establishing the grades or fixing the size of the rails. Our Nation is a great corporation and all of its citizens are stockholders. In the matter of the Army and Navy, we should do that which business men would do—obtain the advice of those who have been trained by the Government to perform those particular duties.

I believe, therefore, that Congress should establish three institutions:

First. A council of national defense, composed of the President, the Secretaries of State, War, and Navy; chairmen of Committees of both Houses of Congress on Foreign Affairs, War, Navy, Ways and Means, and Appropriations; and the Chiefs of Staff of both the Army and the Navy, charged with the duty of evolving a systematic program of national defense, which would conform to our international powers and responsibilities.

Second and third. An Army and Navy general staff similar to those in use by at least two of the belligerent nations of Europe. Under this management the duty of advising Congress on preparedness would be vested in the officials best qualified by experience and training to perform this function.

We are spending to-day, exclusive of pensions, 47 per cent of our annual revenue for national defense; but we must concede that we are not getting the results that we should get, and this is entirely due to lack of an organized method.

The American genius for organization is recognized throughout the entire world, and we should apply it to the development of the Army and the Navy. We lack a well-defined policy and allow politics and commercialism to override expert judgment.

A study of the details of preparedness has convinced me of the necessity for a large number of submarines, sufficient to put at least 10 in every harbor of the Nation; a railroad along our coast to carry heavy guns to any point of attack; shooting ranges in every congressional district under Government supervision and at Government expense, so that the ability to shoot will not become a lost art; the building and equipping of at least three more West Points, so that at all times we shall have trained officers from every congressional district, as modern warfare is largely a question of officers.

I do not think a stockholder in the Pennsylvania Railroad Co. would ordinarily dispute the methods adopted by the engineers in fixing grades, and so forth, nor ordinarily do I believe that I would be justified, unless clearly satisfied that it is wrong, in going contrary to the policy laid down by a council of national defense and an Army and Navy general staff, created with the powers and duties I have stated heretofore.

I am in entire accord with the Army and Navy officials who advocate not only compulsory military training but compulsory service. Under the existing volunteer system the man who loves the Nation goes to the front and risks his life, while the laggard and coward are permitted to remain at home. It penalizes the patriot by exposing his breast to the bullets of the enemy and rewards the coward by allowing him to remain at home in the full enjoyment of peace and prosperity.

Training and service should be compulsory, and no man under any circumstances should be allowed to hire a substitute as was so common in our Civil War.

We get nothing in this world without a proper consideration. We must pay for our liberty just the same as we must pay for a sack of flour or a bushel of potatoes. It is useless for men to talk of fighting for the flag and then refuse to equip themselves by military training so as to fight at their maximum efficiency unless they desire to be classed as "lip patriots."

Therefore I believe that we should adopt the Swiss system, which requires the youth to submit to military training, amounting in all to about 100 days. Any man who enjoys the privileges of American citizenship and is not willing to carve out of his life 100 days for military training, so as to do his whole duty to the Nation in time of war, is not fit to be called an American.

You may ask, "How are we to pay for the extraordinary expenses that even the present program of preparedness has cast upon us?" My reply it, From a graduated income and inheritance tax, which is the only equitable and just way to raise the money. Our present system of taxation is indeed faulty, so much so that many of the States of the Nation have commissions trying to devise some new and more equitable way of assessment. The trouble is that we cast an unfair burden upon those who are the least able to pay. If we pay a premium against loss of property by fire, based on the value of the property, why should not the same rule apply to premiums—taxes—against loss by war? Surely, no one will contend that the laborer should pay the same fire-insurance premium on his cottage as Mr. Frick does on the Frick Building. But this is precisely what he does in paying his indirect taxes for the support of the National Government.

One illustration will suffice. The tariff is an indirect tax. Let us take the item of sugar, which raises upward of seventy millions of revenue a year. The laborer uses as much sugar, probably more, than Mr. Rockefeller, and under our system of taxation that laborer, who at the most owns but a modest home,

great, if not greater, than Mr. Rockefeller, with his eight hundred millions of wealth and an income of approximately $10,000,000 a year. This, it goes without saying, is brutally unfair. But if you require Mr. Rockefeller to pay an income tax based upon his income and the laborer to do likewise, you will have an equitable and just assessment, insuring that each of them will pay his proper premium against war. I believe that the inheritance and income taxes should be looked upon purely in the light of premiums with which to insure the Nation against war, and should be set aside by the Government as a special fund for that specific purpose.

There are dangers in a policy of preparedness, against which the people must be careful to protect themselves. I do not especially fear militarism, because there is a vast distinction between militarism and preparedness. The former is intended to wage wars of conquest, while the latter is intended for a defense against an alien enemy, and we should be thankful that the lofty morality of the American people will never permit this Government to wage a war of conquest against another nation.

I intend, however, to call your attention to a few of the dangers which will be created within the Nation by a policy of preparedness, as I sometimes think they are greater from within than from without.

First. The propaganda in favor of an international court, which is being earnestly advocated by many of our public men. It is their theory that the nations of the world should agree by treaty that all disputes between nations should be determined by an international court, composed of representatives of all the nations in the world. Assume that we had made a treaty of this kind with the nations of the world before the present war began. A degree would have been made by such a court settling the dispute between Austria and Servia and it would have been our plain duty to help the other nations to enforce that decree. It is certain that Austria would not have submitted to it, and we would have become involved in the present maelstrom of war.

Europe has been the battle field of the world for centuries before this Nation of ours was ever thought of, and there is nothing we can do to stop these bloody contests. Selfish as it may seem, our safest policy is to allow Europe to fight, while America, at peace, attempts to work out the destiny of mankind, and through her refining influences and splendid example eventually compel the rulers of Europe to follow in the pathway which we have made for the onward march of civilization. We should continue to stand with Washington and Monroe by avoiding all "entangling political alliances with European countries."

Second. There is a tendency to weaken to some extent the rigid enforcement of the Monroe doctrine, which prohibits the founding of colonies by foreign nations in the Western Hemisphere. This policy is absolutely essential to the national defense, and should be enforced at all hazards, as it insures to us all of the advantages of our splendid isolation by compelling foreign nations to cross the sea to attack us. Otherwise they would have a base of supplies in South America from which to invade our country.

Third. In the Civil War, in the Spanish-American War, and even in times of peace there have been many ugly scandals connected with Army and Navy contracts. The farmer who lays aside his hoe, the mechanic who lays down his tools, the professional man who lays aside his books and leaves a lucrative position to accept the meager pay and dangers of a soldier's life is entitled to the best food and clothing and best equipment that this wealthy Nation can buy, and any man or company which sells to the Government defective supplies for these soldiers is guilty of the blackest treason known to man. I realize that commercial diplomacy, commonly called the "trade lie," has a strong foothold in our commercial life, and it should be recognized as a menace to real preparedness. Defective material on our warships or defective guns in the hands of our soldiers might not be discovered until it was too late, and no mercy should be shown any one who thus imperils the safety of the Nation.

Fourth. Another of our great weaknesses is this—a tendency to subordinate everything to commercialism. The moment the present war broke out organizations of various kinds were formed to advocate preparedness. They hired lecturers and lobbyists, held public meetings, rented storerooms in many of the larger cities for the display of instruments of war, expended large sums of money in promoting their propaganda, and induced many real patriots to accept memberships. The American people, appalled by the magnitude of the struggle in Europe, gave an attentive ear to these exaggerated stories of our unpreparedness, and many citizens believed that the American Navy was a pile of junk and America as defenseless as China.

From the time John Paul Jones lashed the sinking *Bon Homme Richard* to the *Serapis* and announced that "he had just begun to fight" to the time that Admiral Schley said at Santiago Harbor "There is honor enough for all" the American Navy has never met a defeat. All patriotic Americans should condemn these vicious slanders, especially when we consider the fact that there is hardly a pound of steel, iron, brass, or wood on an American vessel to-day that was not furnished by the promoters of these organizations.

If what they say of the condition of our Navy is true, they have been guilty of the grossest fraud against the Government, and they should be hanged as high as Haman. Most of these organizations were promoted and financed by the munition manufacturers, who have carefully kept in the background. I find no fault with their efforts to sell their products to the Government, but I deny with all the power that is within me their right to do so in the guise of a sacred thing like patriotism. If they have no sense of the proprieties we should teach them that patriotism is not to be measured by the amount of profits a man can make out of it. It is indeed unfortunate that we find patriotism to be so often mingled with lust for gain.

Fifth. Tolstoy, with that wonderful vision of his, said many years ago that the division between the classes in America was wider than in any other nation in the world, and that it was growing wider from day to day. In fact there are men of profound thought who openly express the opinion that the centralization of wealth in this country in the hands of a few men is creating a condition of affairs similar to that in France prior to the French Revolution; that it is only a question of time until this Nation will be torn asunder by a similar internecine war. While I can not agree with them in their conclusions, still we must admit that there is force in their arguments, and we therefore should strike down class distinctions wherever and whenever they appear.

I have in mind the establishment of military training camps which are exclusively for a certain class of our citizens. Particularly one which excludes everyone who is not a college or a high school graduate. The farmer, mechanic, and laborer are barred; and yet this camp is maintained at Government expense. I certainly believe that at least one training camp should be established in every congressional district of the Nation, under the direction and control of officers of the Regular Army; but all should go to the same camp, without regard to wealth or social position. This service should be like death—the leveler of all distinctions—and the millionaire should be happy to rub shoulders with the laborer in the defense of our common country.

In conclusion, every patriotic American should lay aside his selfish interests and do a patriot's duty in bringing about in this Nation of ours social, industrial, political, and educational justice. He should earnestly advocate a preparedness sufficient to meet the dangers which confront us, and leave the details of that preparedness to those who have been trained to perform that duty, and at all times guard the Nation against the mercenary who seeks to profit from the necessities of our troubled country.

If we will but do this, when foes assail us every man in the trenches will be a Sir Galahad and the perpetuity of our beautiful institutions will be assured.

Indian Appropriation Bill.

SPEECH

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, December 12, 1916.

The House in Committee of the Whole House on the state of the Union had under consideration the bill H. R. 18453, the Indian appropriation bill.

Mr. JOHNSON of Washington. Mr. Chairman, I move to strike out the last word, for the purpose of again calling the attention of the committee to something that the committee itself can not help, and that is, the peculiar condition of some wealthy and aged Indians of western Washington who own rich timberlands and are not permitted to sell the same, and who actually are dependent upon others for their daily food.

I have here a photograph of an old Indian woman, 103 years old, worth anywhere from $80,000 to $100,000. This picture was taken 10 or 12 years ago. She is now living with a nephew who is himself 100 years old. She is worth probably $100,000. Her condition is exactly like this. If my friend Mr. HEFLIN, the distinguished Member from Alabama, there, had a watch worth $100, and he wanted to raise $75 on it, and offered the watch for sale, and I was his guardian, I would say, "Yes; he can sell the watch if he gets $100 for it," but no one would put up the $100. Now, that is the situation of dozens and dozens of old Indians in the 19 tribes in southwestern Washington. I realize it is not a matter for this committee to waste time upon now, but it is a matter for the attention of the country.

Nearly all of these Indians have sick children now in the third generation. The children are dying off, and the old Indians are waiting along until they die. When their children die they have nothing with which to pay the bills. The undertaker then presents his bill, usually a good stiff one. A relative of this old Indian, Mrs. Mason, has lost three or four grandchildren in the last two years from consumption, and the undertaker's bill and associated bills, doctors, etc., in each case is from $200 to $300 and is unpaid, when it ought to be paid. I think that should be regulated by the guardian of these Indians, but if the undertaker has to wait from two to seven years for burying these Indians he will charge a pretty stiff sum and give them a pretty poor burial. If the Government is to be the guardian of these Indians, it should do something for them. I presume in my district there are 200 poor, old Indians who own timber lands, allotted and even unallotted, who are actually without food from day to day except as they get it from the white people or from relatives.

Mr. STEPHENS of Nebraska. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. STEPHENS of Nebraska. The reason for these large fees is usually due to the fact of the indifference of the department in settling these claims?

Mr. JOHNSON of Washington. Absolutely, yes.

Mr. STEPHENS of Nebraska. Which makes the service so risky that men do not care to render the service to the Indians?

Mr. JOHNSON of Washington. And I might say also that to bury one of these Indians they have to go over almost impassable roads for 10 or 20 miles. This particular reservation, the Qui-nai-elt Reservation, which I presume is as large as the State of Rhode Island, has not a traversible road there.

Mr. NORTON. Will the gentleman yield?

Mr. JOHNSON of Washington. Yes.

Mr. NORTON. In my mail this morning, I received a statement from an undertaker for burying one of the Indians on the Standing Rock Reservation. It was a bill for $50.

Mr. JOHNSON of Washington. What has the gentleman from North Dakota to do with it?

Mr. NORTON. It was a bill that was referred to the Indian Department, and because of the fact that they were not prompt in paying it they referred it to me.

Mr. JOHNSON of Washington. I contend that a Member of Congress should not have to be a go-between in settling the affairs of these Indians who are the wards of the Government.

Mr. Chairman, I make an appeal that a committee be appointed to investigate the handling of the funds which belong to these Indians. I do not desire to criticize any Indian Office official, but my contention is that the entire system is wrong. As an illustration of the complaints which I receive, I append the following letter in which a constituent says:

These Indian funds are kept in the bank or some other place and are used apparently in whatever way the local agent sees fit to use them. Taking it for granted that he uses his best judgment, it would seem to me the Indians ought to have some little something to say about this money received from the sale of their property.

They are as helpless as new-born babes. They seem to have no rights and can do nothing except as the local agent is willing to let them do. They are punished just as children for the most trivial matters. Some of these Indians—a drunken bunch—will get on a drunk and will be fined 10 days' work on the road or something like that, and the fines never imposed. Other Indians for the most trivial matter are fined 15 and 20 days and are compelled to work out their fines. Now, it seems peculiar that some of the Indians are punished in this way and others are not. There is a reason for this.

I wish it were possible that a committee could be sent out to investigate these various reservations and their conduct without having a special sent from the Indian Department itself. We will never accomplish anything with one of these specials from the Indian Department. They are all under the same umbrella, painted with the same political brush, and their motto is and always has been to stand together. I am not making any charges against any one in particular, but it seems to be a general system and it is not right.

If we could have an investigation by some one not in any way connected with the Indian Department, the whole underlying foundation of their methods would be torn to pieces. It is not right.

Prohibition of the Liquor Traffic.

EXTENSION OF REMARKS
OF
HON. LOUIS C. CRAMTON,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. CRAMTON. Mr. Speaker, availing myself of leave given me by the House, I desire to submit a few observations upon the question of prohibition of the alcoholic liquor traffic in the District of Columbia. Without attempting any general discussion of the merits of the question of prohibition itself, I desire only to touch upon the rapidly changing public sentiment concerning it.

Opening the debate upon the rule for consideration of this bill in the House, the gentleman from Mississippi [Mr. HARRISON] commented upon the rapid progress of the prohibition movement in these later days. The liquor traffic is as old as humanity. With the use of liquor has always come abuse as well, and the movement for the prevention of such abuse has always accompanied the traffic. But what was in other days a solitary small voice here and there in the world, voicing an unheeded protest, has now become the ceaseless chant of vast multitudes, compelling the attention of rulers and lawmakers the world over, in despotism and in democracy.

PROGRESS OF SENTIMENT IN THE INDUSTRIAL WORLD.

Nowhere has the progress been more pronounced than in the industrial world. Two centuries ago a young American engaged as printer with Watts in London, and in his autobiography written for his son it is recorded how the solitary voice of Benjamin Franklin was in that day raised against the industrial folly of drink. There we read:

At my first admission into this printing house I took to working at press, imagining I felt a want of the bodily exercise I had been used to in America, where presswork is mixed with composing. I drank only water; the other workmen, nearly 50 in number, were great guzzlers of beer. On occasion, I carried up and down stairs a large form of types in each hand, when others carried but one in both hands. They wondered to see, from this and several instances, that the "water American," as they called me, was stronger than themselves, who drank strong beer. We had an alehouse boy who attended always in the house to supply the workmen. My companion at the press drank every day a pint before breakfast, a pint at breakfast with his bread and cheese, a pint between breakfast and dinner, a pint at dinner, a pint in the afternoon about 6 o'clock, and another when he had done his day's work. I thought it a detestable custom; but it was necessary, he supposed, to drink strong beer that he might be strong to labor. I endeavored to convince him that the bodily strength afforded by beer could only be in proportion to the grain or flour of the barley dissolved in the water of which it was made; that there was more flour in a pennyworth of bread; and, therefore, if he would eat that with a pint of water it would give him more strength than a quart of beer. He drank on, however, and had 4 or 5 shillings to pay out of his wages every Saturday night for that muddling liquor; an expense I was free from. And thus these poor devils keep themselves always under.

In these days when even the proprietor of a saloon prefers a bartender who does not drink, the view of the leaders of industry everywhere would condemn the Watts shop management on the ground of absolute inefficiency. Read the present day industrial view:

Of all the pernicious practices going on in this world, drink is at once the most common and most dangerous, and more sins can be directly traced to it than to any other cause. It is an exceedingly easy habit to drift into, and a difficult one to part with. The most deluded of all mortals is the so-called "moderate drinker." The moderate drinker does not know when to quit. He has the idea that his acquaintances and friends are drinking too much, and wakes up some morning somewhat surprised to find that they have the same opinion of him. There is only one safe thing to do, and that is to cut it out. If the signs of the times are being read aright, that is exactly what the world is doing. The sentiment against drinking is growing very rapidly, and the time is not far distant when the so-called moderate drinker will not be employed. Large undertakings can not be handled by men who are addicted to drink. No man is quite normal if he has taken even a single drink, because its immediate effect is to alter his point of view. In all industrial enterprises the drinking man is the first to be laid off in times of depression, and the last to be taken on in times of prosperity.

The railways of the United States are taking a firm stand on the subject, and any of its trainmen who are seen to enter or leave a saloon are liable to discharge. So great indeed is the revolution against alcohol that medical societies are declining to continue its use in prescriptions. Statistics prove that over 90 per cent of the men imprisoned for criminal practices have had intemperate habits, while alcohol creates more insanity than all other causes combined.

It is highly gratifying to note among the recommendations of the industrial committee the following:

"That all masters and chief engineers of the Lake Carriers' Association be instructed that temperance should be encouraged as much as possible among the crews and be made a consideration of promotion

as between men of otherwise equal merits. Further, that notice to the effect that drinking is prohibited aboard the boat and that no person be allowed to carry liquor aboard the vessel be posted in the rooms of the deck hands and firemen. Further, that the Lake Carriers' Association provide temperance pledges and buttons in their assembly rooms and aboard the vessels for free distribution to the men."

That reads much like a tract from the W. C. T. U., but it is found in the annual report of the Lake Carriers' Association for 1914, that great organization which represents the immense commerce upon the Great Lakes.

PROGRESS OF SENTIMENT IN THE FIELD OF MEDICINE.

In the field of medicine likewise the progress has been pronounced and is typified by resolutions adopted generally by organizations of physicians in Michigan in the recent State-wide campaign. At Detroit the following resolutions were adopted by a vote of 8 or 10 to 1 at a meeting attended by nearly 200 physicians:

Whereas the Wayne County Medical Society, as a result of the technical training and experience of its members, has intimate, accurate, and scientific knowledge of the deleterious effects of the moderate and immoderate uses of beverages containing alcohol upon the normal physiological functions so necessary to the prevention and cure of disease, and realizes that the deleterious effect of alcoholic beverages is a direct cause of many diseased processes, is a definite cause of lack of resistance to diseased processes from other causes, and that the elimination or decrease of the use of alcoholic beverages would be of the greatest service in preventing and curing diseases: Therefore be it

Resolved, That the Wayne County Medical Society favor and urge State-wide prohibition of the manufacture and sale of alcoholic beverages.

I have at hand also the following resolutions adopted by many medical associations in the State:

Whereas it has been clearly established by the painstaking experiments of European and American scientists that alcohol is a definite poison; and

Whereas it is now well known that the general use of alcohol as a beverage is the direct or indirect cause of a very large percentage of our crime, insanity, epilepsy, feeble-mindedness, disease, divorce, child misery, and pauperism; and

Whereas the definition of alcohol as a poison contradicts all our inherited notions regarding its value as a food and beverage: Therefore be it

Resolved, That we, the undersigned physicians, hereby express to the people our earnest convictions regarding this vital matter as follows:

Resolved, That we positively condemn the beverage use of all alcoholic liquors, including wine and beer, because by their effects on the germ plasm they curse the unborn child; because even their moderate use has been proven to reduce the efficiency of the user; and because in multitudes of cases the continued use of alcohol in moderation proves to be impossible. The moderate drinker is a social menace. If he drinks without becoming a drunkard his example is certain to influence others, who, by imitating him, acquire an ungovernable appetite for liquor. If he finally passes from moderation to excess, as multitudes of moderate drinkers do, he and his family become a burden to society. It is impossible to know beforehand whether one will be able to drink moderately or not. After one finds out that he can not drink moderately it is generally too late to quit. Therefore total abstinence from all intoxicating liquors is the only guaranty of safety and of the highest personal efficiency.

MODIFIED POSITION OF CHAMPIONS OF THE LIQUOR TRAFFIC.

The number of protests that I have received from any source whatever against the passage of this bill is remarkably small. Among them are, however, two from one T. M. Gilmore, of Louisville, Ky., in his capacity as president of the Model License League (Inc.). Other correspondence in my files shows him in the capacity of president of Bonfort's Wine and Spirit Circular, protesting against the bill to restrict liquor advertising in dry States. Mr. Gilmore's connection with the liquor interests is therefore to be taken as not only friendly but sufficiently close, and his position of sufficient standing to constitute him a witness that would not be unfair to the liquor traffic.

Hence, as illustrative of the progress of sentiment concerning the traffic, even among those intimately connected with it, I quote the following from a letter from Mr. Gilmore to Dr. Lyman Abbott, dated February 11, 1910, and published with the correspondence between Mr. Gilmore and Dr. Abbott in the Outlook, March 19, 1910:

I agree with physicians that the excessive use of alcohol is a prolific cause of disease; with sociologists that it is a prolific cause of poverty; with penologists that it is a prolific cause of crime; and I agree with you that mankind should be educated either to avoid the use of alcohol altogether or to use it in moderation.

TREND OF SENTIMENT AS MANIFESTED AT THE BALLOT BOX.

But it is in the ballot box itself that the most striking evidence of progress of general public sentiment on this question is found. Without giving space to discussion of the general spread of dry territory, well known to us all, permit me to submit some analysis of the vote upon State-wide prohibition in Michigan last November. I desire to particularly emphasize the fact that no longer is the city vote assuredly wet. Long ago the wet forces conceded the rural sections to the drys and fell back to their strongly intrenched positions in the cities. Their strength there heretofore has been conceded by dry leaders. The Anti-Saloon League Year Book for 1916, saying—page 49:

The rural population has adopted the no-license policy more readily than the urban population, who live where the liquor traffic has a better opportunity to organize and thus resist more strongly the prohibition advance.

But now the cities fail them, and the end is near. In the Michigan election the cities of that State, thriving and growing centers of industry that they are, voted a judgment of expulsion from the State for the saloon.

THE CITIES NOW VOTE DRY.

There are in Michigan 24 cities, each with a population of 10,000 or over by the census of 1910, besides the village of Highland Park, the home of the Ford, which has a population now of more than 25,000. The vote in these 25 towns may fairly be called the urban vote of the State. That vote on the question of State-wide prohibition was—yes, 147,044; no, 134,710, a dry majority of 12,234. The vote by cities was:

City.	Now wet or dry.	Voted wet or dry.	Vote yes.	Vote no.	Population 1910.
Adrian	Dry...	Dry...	1,536	1,125	10,763
Alpena	Wet ..	Wet ..	999	1,122	12,706
Ann Arbor	...do ..	Dry...	2,548	1,516	14,817
Battle Creek	Dry...	...do ..	3,630	3,588	25,267
Bay City	Wet ..	...do ..	4,309	4,305	45,166
Detroit	...do ..	Wet ..	53,823	62,947	465,766

Muskegon	...do ..	...do ..	2,951	3,558	24,062
Pontiac	Dry...	Dry...	2,757	1,973	14,532
Port Huron	Wet ..	...do ..	2,321	2,027	18,863
Saginaw	...do ..	Wet ..	4,958	5,529	50,510
Sault Ste. Marie	...do ..	Dry...	1,191	929	12,615
Traverse City	Dry...	...do ..	1,271	974	12,115
Highland Park	...do ..	...do ..	2,153	1,116	4,120
Total	.....	.....	147,044	134,710	.....

Urban dry majority, 12,234.

Every town which is now dry by reason of village or county prohibition gave a majority for State-wide prohibition, thereby expressing their approval of prohibition as experienced by them, even in a limited area. In this list are eight places—Adrian, Battle Creek, Flint, Kalamazoo, Lansing, Pontiac, Traverse City, and Highland Park. Quite noteworthy, also, nine other cities, now well supplied with saloons, did not by their vote likewise approve of their experience therewith, and voted to oust their own saloons and all others in the State—Ann Arbor, Bay City, Grand Rapids, Holland, Ironwood, Ishpeming, Jackson, Port Huron, and the Soo.

That great industrial center, Detroit, having almost doubled its population since the last census was taken, with its extensive foreign quarters, and its new labor elements drawn from all the world, went against prohibition by only a small majority. Flint, the home of the Buick, the Chevrolet, the Dort, the Patterson, a great manufacturing city, with an increase of population of 40,000 in six years, for several years without saloons, voted more than two to one to have none in the State. Lansing, the capital city, which has prospered and developed without saloons and found that both laws and automobiles can be made without the presence of saloons, voted overwhelmingly against them.

THE PROHIBITION BAND WAGON RUNNING AT HIGH SPEED.

In Michigan it can not be said that prohibition is forced upon the cities by the rural vote. The industrial centers, through the votes of employer and employee alike, have declared against the paralyzing and wasteful influence of the saloon upon industry. The city and the country joined together in ridding Michigan of the saloon. The prohibition band wagon is a 12-cylinder car, recognizes no speed limits, travels city pavements as well as country roads, and shies not at street cars or factory whistles.

Statement by Arthur MacDonald.

EXTENSION OF REMARKS
OF
HON. JAMES T. LLOYD,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. LLOYD. Mr. Speaker, I submit herewith a statement prepared by Arthur MacDonald, Washington, D. C., honorary president of the Third International Congress of Criminal Anthropology of Europe and author of Man and Abnormal Man. I am in no sense responsible for his views and do not stand sponsor for them, but I am of the opinion that he has the right to have his information given to the public for what it is worth, and therefore present them in what follows:

Peace and war are fundamental phenomena in the study of anthropology. Peace is normal, war is abnormal. From the scientific point of view war is not only abnormal, but a sociological monstrosity, and belongs under the head of teratology, a science which treats of all kinds of monsters in nature. The monstrosity consists in militarism or navalism forcing itself into the new humanity; it may be called atavistic or a return to a primitive state.

War is probably an anthropological necessity, and if this war had not come now it might have started later, and would have been still more terrible. But no one can make a virtue out of this necessity.

In the study of the present war the psychological element is of much more significance than in former wars, due mainly to great increase in facilities of communication, as telephone, telegraph, and wireless telegraphy. Thus the mental condition of a country can be much more easily and quickly inflamed than ever before in history. The dangers therefore of becoming involved in the conflict are correspondingly greater, and the unexpected can happen before its seriousness may be realized, perilizing the future and even involving a nation in war against its desire and will.

Almost all of our ideas are caused, whether they are right or wrong; they get their cue naturally before we are conscious of it. We imagine to ourselves that we can think as we please, but nothing, as a matter of fact, is further from the truth, as will be evident to anyone who lives in foreign countries, and experiences how intelligent people hold opposite views from his own on often very simple matters. The psychological mechanism of the mind is almost as rigid as the physiological mechanism of the brain; thus a conviction is something we can not doubt—it is an idea or combination of ideas we can not separate, a habit of thought we can not change—in brief, a mechanism that compels our thought.

The danger of American citizens being maltreated and killed by accident, by mobs or otherwise, increases as the belligerents become more desperate and reckless, and, as a natural consequence, careless of the rights of neutrals. But the neutrals themselves are liable to become nervous and irritable, and so more susceptible to warlike spirit through reading the newspapers, especially when horrors are described and often exaggerated. Such stirring up of the feelings or excitement from some sudden catastrophe inflames the popular mind and can force a nation into war without sufficient reason.

Just as a man can be his own enemy, so a nation can, especially in abnormal conditions, which are the most extreme in the world at present; under such circumstances, general principles, even the highest, are not necessarily to be followed. To so act on the general principles of humanity as to lead a nation into war is a questionable humanity. It is not a general principle so much as a practical question which confronts us. It is this: Is what we want to do for our good? The question is not the good of humanity, nor the good of the world or universe. Humanity, like charity, begins at home. From an extended experience of talking with all classes of Americans and purposely stirring up pro-German and anti-German feeling, I am convinced that we all want peace, and I am equally convinced that peace is for our good, especially in our state of unpreparedness for war.

EXPERIENCE IN WAR CREATES HATRED OF WAR.

If everyone could have a taste of war, this would probably bring an end to it. If the public knew really what war was, they would not allow it to be declared.

It must be remembered that the amount of suffering varies often with the capacity to suffer, which is greatest in the healthy strong man. The wasting processes of disease usually lessen the capacity of suffering, so that in most deaths there is little or no pain; the patient is often unconscious, and passes away without suffering. But the wounded in battle are alive and can endure most excruciating pain. The soldiers are there to lacerate each other's bodies and break one another's bones, if they can not kill each other outright, which is often more merciful, for the wounds may mean pain, misery, and woe for the rest of their lives.

If every official in power, if everyone who is influential in causing a nation to go to war, were in as much danger of suffering the physical pains and horrors of war as is the lot of the ordinary soldier, very few wars would occur.

For a few persons to cause thousands to suffer the horrors and tortures of war, generally contrary to their wills, is inherently unjust and should not be permitted longer.

SENSE OF JUSTICE DESTROYED BY WAR.

It will be found that even distinguished jurists, who in a case of law or equity would not vary a hair's breadth from strict justice, will be ex parte or one sided in their opinions as to justice between nations, especially in time of war. This psychological anachronism may perhaps be due inconsciously to the deep-seated antagonistic feelings that have existed for thousands of years in our remote ancestors; they have also been present for hundreds of thousands of years in tribes, races, and peoples. These past experiences seem to have left psychological tendencies, which make it easier for the human mind to hate than to love, to dislike than to like, to antagonize rather than to agree with, especially when conditions arise which produce friction. Whether inherently man hates easier than he loves is an uncertain question, yet conditions which develop friction seem much more frequent than those which tend to harmony. This is desirable to a certain extent, as we all recognize that a certain amount of struggle and effort are good for the development of everyone, but unfortunately the friction often becomes excessive, and the weaker tendencies in man manifest themselves.

The persistent and tenacious character of antagonistic feeling seems as manifest as ever in the world. Thus long before the present war, in times of peace there has been little indication of any love between nations; while on the other hand there is much to indicate extreme rivalry and jealousy among them all, in varied degrees according mainly to conflict of their economical interests. They seem always to be looking at each other with suspicious eyes. This distrust between nations is increased by secret compacts. Diplomacy is not noted for it frankness and is not always synonymous with honesty, as will be mentioned later.

This country is prepared for defense, as shown by the statement of Gen. Erasmus Weaver before the House Committee on Military Affairs. He stated:

"We have the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense."

Admiral Fletcher, of the Navy, said of the navies of other countries:

FRANCE.

Mr. WITHERSPOON. Now, take France. This Navy Yearbook says that France has a grand total of battleships, built, building, and authorized, of 29—11 less than we have.

Admiral FLETCHER. Yes.

Mr. WITHERSPOON. Would you not say, if she sent all of hers against us, we would be able to successfully resist them?

Admiral FLETCHER. Yes; our forces available being the greater.

Mr. WITHERSPOON. And if she only sent one-half of them we would not have much of a fight, would we?

Admiral FLETCHER. No; we ought not to.

Mr. WITHERSPOON. That is the way I look at it.

JAPAN.

Mr. WITHERSPOON. Here is Japan, which according to the Navy Yearbook, has only 19 battleships, or 21 less than we have got. If Japan should send all of her 19 against us, do you not think we would be able successfully to resist them?

Admiral FLETCHER. Yes. I should say so, if our forces were free to meet them at the time.

Mr. WITHERSPOON. And if she did not send but half of them, there would not be much of a scrap, would there?

Admiral FLETCHER. Probably not.

RUSSIA.

Mr. WITHERSPOON. Now, here is Russia, that the Navy Yearbook says has a grand total of 15 battleships, completed and building. If she should send all of them against us, would you not say that we could successfully resist them?

Admiral FLETCHER. Yes, sir.

Mr. WITHERSPOON. And if she sent half of them, there would not be any fight at all, would there?

Admiral FLETCHER. Not much.

ITALY.

Mr. WITHERSPOON. Here is Italy that has a grand total, according to the Navy Yearbook, of 17 battleships. We could successfully resist them whether she sent all of them or a part of them, could we not?

Admiral FLETCHER. Yes; I think so.

Mr. WITHERSPOON. Yes; I do, too.

AUSTRIA-HUNGARY.

Mr. WITHERSPOON. Now, Austria-Hungary, according to the Navy Yearbook, has a grand total of battleships, built and building, of 10. We could successfully resist them, could we not?

Admiral FLETCHER. I think so.

ENGLAND ALONE TO FEAR.

Mr. WITHERSPOON. Then what nation is there that we are not prepared to successfully resist? There is not one on earth, is there, Admiral—not a single one?

Admiral FLETCHER. Well, Judge, I think there is.

Mr. WITHERSPOON. Well, which one? I have gone through the big ones. Tell me which one.

Admiral FLETCHER. I should say England has a navy so much more powerful than that of any other nation in the world that she could easily keep control of the seas.

Mr. WITHERSPOON. England. Well, what other one, then?

Admiral FLETCHER. I do not think that we need greatly fear any other single nation.

Mr. WITHERSPOON. There is no other nation, except England, that in your judgment we could not successfully defend ourselves against; I mean, except England.

Admiral FLETCHER. I think that is correct. Yes.

The following is a list of publications which those interested in peace or war should read:

Peace, War, and Humanity. Printed by Judd & Detweiler, Washington, D. C., 26 pages, 1915, 8°.

Comparative Militarism. Reprint from publications of the American Statistical Association, Boston, December, 1915, 3 pages, 8°.

Atrocities and Outrages of War. Reprint from the Pacific Medical Journal, San Francisco, April, 1916, 16 pages, 8°. Gives data for Civil War, Boer War, Bulgaria and Russia and Germany.

Some Moral Evils of War. Reprint from Pacific Medical Journal, San Francisco, August, 1916, 8 pages, 8°. Refers especially to Boer War.

Reasons for Peace. Machinist's Monthly Journal, Washington, D. C., July, 1916, pages 708–710, 8°.

Choosing between War and Peace. Reprint from Western Medical Times, Denver, Colo., 6 pages, 8°.

Statement of European War. Reprint from Pacific Medical Journal, San Francisco, Cal., February, 1917, 8 pages, 8°.

Prevention of War. Reprint from CONGRESSIONAL RECORD, Washington, D. C., February 27, 1917, 8 pages, 8°.

Military Training in the Public Schools. Educational Exchange, Birmingham, Ala., February and March, 1917.

Letter From Maj. H. B. Campbell, Eighth Massachusetts Infantry, National Guard.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, February 21, 1917.

Mr. GARDNER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I insert the following letter:

HAVERHILL, MASS., *December 22, 1916.*

Hon. A. P. GARDNER, M. C.,
Washington, D. C.

DEAR SIR: Allow me to thank you for your kind consideration of my letter of December 5, and for all the trouble I have put you to.

The papers have quoted Gens. Scott and Wood and Members of both Houses on the National Guard and its failure in the recent mobilization. Having been, as you know, a member of the militia and the National Guard, so called, for about 16 years, and having been "mobilized," I am conceited enough to think I know something about its condition and workings. The War Department, the Regular Army, and the National Guard each did the best they could under a jumble of laws the like of which can only be found in a Government like ours.

All intelligent and thinking National Guard officers believe the volunteer system a failure, and the National Guard, composed of 48 units, or parts of units, and with 48 minds and ways of doing things is worse. The election of officers is pernicious and the "dual oath" confusing.

In case of a great war this county will need every man in some capacity, so why not find out now how many fighting men we have, how many are fit to drive teams or auto trucks, how many are only fit for munition plants, etc., and have them listed and assigned in advance of trouble?

We—and by "we" I mean every National Guard officer I have talked with—want every man, rich or poor, to be obliged to do his share as soldier, driver, munition maker, etc., according to his physical ability; and we want Federal control and support only.

Have I made myself clear?

You may use this letter or not as you see fit.

Sincerely, yours,

H. B. CAMPBELL,
Major, Eighth Massachusetts Infantry,
National Guard.

Vocational Education.

EXTENSION OF REMARKS
OF
HON. EDWARD E. BROWNE,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. BROWNE. Mr. Speaker, national aid for education is not new.

Congress, in 1862, passed what is known as the Morrill Agricultural College Act, which was signed by President Lincoln.

The Morrill Act gave to the various States large tracts of valuable public lands for the purpose of enabling the States to erect and maintain agricultural and mechanical colleges.

James Buchanan, who took the same view of this question as some do to-day, vetoed a bill similar to the Morrill Act passed by Congress, assigning the reason "that education was purely a State function." Lincoln, however, favored it and believed that national aid would be a great stimulus to agriculture, which he argued was an occupation requiring much study, as well as experience. In 1859 Lincoln, speaking at the State fair of Wisconsin, held at Milwaukee, said:

> No other human occupation opens so wide a field for profitable and agreeable combination of labor with cultivated thought as agriculture.

The stimulus given to agriculture by national aid has been wonderful. For every dollar this Government has appropriated for agricultural education and experiment, it has been compensated more than a hundredfold.

The believers in vocational education are therefore asking the Federal Government to give aid and encouragement to industrial education the same as it does agricultural education.

NECESSITY OF INDUSTRIAL EDUCATION.

Twenty-three million five hundred thousand children are attending school in the United States, according to the United States Bureau of Education. In other words, approximately 24 per cent of the inhabitants of this country are attending school.

The taxpayers are paying each year for the support of our schools over $600,000,000. The highest tax that every taxpayer pays, whether he lives in the city or country, is the school tax. Every taxpayer is, therefore, entitled and should insist upon having the most efficient school that it is possible to have.

Are the common schools of America meeting the requirements of this twentieth century civilization?

I give you the facts and you can answer that question for yourself.

Each year over 1,000,000 school children stop school without having finished the sixth grade and without having been taught the first principles of supporting themselves. Eighty-five per cent of all the children that enter the public schools of the United States leave school before reaching their sixteenth year or completing the eighth grade. The whole aim of our educational system is to prepare pupils for the high school, and the high school to prepare for the college or university. What percentage of the school children enter the high schools? Eight per cent. Ninety-two per cent never pass over the threshold of a high school. Of the 8 per cent who enter the high schools only 3 per cent graduate, and only a small per cent of this 3 per cent ever go to college.

Notwithstanding these startling facts we go on, year after year, devoting our best energies and giving our whole attention to the 3 per cent who appear on the commencement platform in our high schools, and we lose complete sight and interest in the 97 per cent.

Is an educational system that permits 97 per cent, or over 1,000,000, of its children to go out into the world without being taught any form of labor by which they can support themselves a success? Many of these children leave school because of poverty, many leave school because they never intend to go to college or follow any of the professions, and they see no practical benefits to be derived from over half of their studies they are compelled to take. But whatever the causes are for the 97 per cent leaving school before ever entering the high school, it is a condition and not a theory that confronts us.

SCHOOLS NOT MEETING THE DEMANDS.

Is the crying demand that this twentieth century civilization is making upon the coming generation for efficiency being met? What opportunity for advancement are we offering the boys and girls of to-day who are to become the men and women and future citizens of to-morrow?

INDUSTRIAL EDUCATION A REMEDY.

Industrial education, as defined by this bill, means that kind of a practical education which will prepare girls and boys for useful employment and make them self-supporting. In other words, we want every child to be given a practical education that will enable that child to become self-supporting. Whether it be in agriculture, domestic sciences, the manual trades, or the professions, we want every child to become as skilled in the trade or employment followed as his capacity will permit.

Industrial education, when it reaches the perfection that I believe it ultimately will reach, will go with its pupil to the workshop, the farm, the home, the factory, or the counting-house and allow the pupil to work part time at the vocation he is studying, returning to the school for further instruction. This is done to-day in some of the cities in the United States where vocational education has reached a high state of perfection.

We want our education so practical and complete that it will awaken a boy's ambition before he has been at school a year; an education so practical and inspiring that when a boy enters the back door of the factory his first day, the light shining from the front and upstairs will point the way to him to the superintendent's chair and be an incentive to the highest achievement.

EDUCATION THE GREATEST CONSERVATION MOVEMENT.

Industrial education, viewed from a purely commercial standpoint, is the greatest conservation movement we can undertake. To add 10 cents per day to the earning capacity of the working people of the United States would increase the national wealth $750,000,000 annually. To add 25 per cent would add $1,870,000,000.

OTHER COUNTRIES.

Other countries are recognizing the importance of industrial education. Bismarck 30 years ago saw the great possibilities in such an education and made the industrial education a part of the school system of Germany.

To-day 55 per cent of the master mechanics in German industries, both technical and managerial, have come from the ranks of boys who left school at from 12 to 14 years of age and went into industrial training.

GREAT EFFICIENCY NEEDED IN THE NEAR FUTURE.

At the close of the European war there will be the greatest contest for commercial and industrial supremacy among the nations that the world has ever known.

The United States has had an advantage in the past because of her almost inexhaustible natural resources. Our virgin soil, our public domain, where homesteads could be obtained for the asking, our great forests, that furnished untold wealth and gave employment to millions, are fast disappearing.

Conditions are materially changing. Our population has doubled in the last 20 years. Our public lands which are subject to cultivation without the expenditure of capital are gone. Our urban population increased in the last 10 years, according to our census, 50 per cent, while the rural population increased only 11.02 per cent. To support our large urban population we will be obliged to give them employment. In the future we will be obliged to keep our raw material at home and manufacture it into the finished product and give employment to our own labor. That labor must be highly skilled. Sixty per cent of our great cotton crop is exported to other nations and gives employment to their labor. We are sending cotton to Switzerland at from 14 to 20 cents per pound and buying it back at $40 a pound in fine handkerchiefs and other fine fabrics. In many of our skilled trades we have sent to Europe for foremen and skilled workers. With industrial education we will manufacture our raw material at home and sell abroad more brains and less raw material.

In my opinion, Mr. Speaker, no more important legislation has been considered in a generation than this vocational education bill.

Armed Merchant Ships.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. WILSON,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. WILSON of Illinois. Mr. Speaker, the respect I have for the opinions of mankind, in this day of national and international complications, when all the world is aflame with passion and hatred and sober judgment has taken flight on the wings of the wind, compels me to declare the causes, or motives, which moved me to vote as I did in refusing to give my sanction to the delegation of the power of Congress to our President as set forth in what is commonly known as the Flood-Stone armed-neutrality bill before Congress.

It is not my purpose, and whatever may be my right, I will not now, or at any other time, assume the right to criticize, condemn, or question the good faith of President Wilson or any man sitting on the floor of either House of Congress for anything he may have done, and to each and every one I give full faith and credit, if he has followed the honest and fearless dictates of his mind and heart, after due and careful consideration of the effect of his vote on this great national question, which affects not only us in this day and age, but generations to come, and which goes to the very vitals of our scheme of government which the fathers and founders of our country devised and established in the fullness of their wisdom, experience, and patriotism.

Every American knows, as it is taught in our homes, our churches, and our schools, that the cornerstone of our liberty, which has given us such a prominent place as a nation and a people in the affairs of the world, is the distinct and clearly marked line between the functions of the three great coordinate branches of our form of government.

The Constitution of the United States declares in most positive terms, in separate and distinct articles, that the executive power shall be vested in a President, and defines his duties and obligations; the legislative power shall be vested and imposed in a Congress, and defines those powers.

Section 8, Article I, of the Constitution says:

> The Congress shall have power to declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

I will not discuss what are the powers of our President, irrespective of those which it was sought to give him in the armed-neutrality bill, against which I voted.

I do not intend to make any excuse or defense of my position or vote on this grave question, but in order that all of the people of the district which I have the honor to represent may be advised, I distinctly and unreservedly declare that I have not one word of regret or apology to make for the position I took, and for which I have been freely and cruelly criticized.

I think it is due my friends that they should know just why I was unwilling to disregard what I considered to be my solemn duty and obligation under my oath of office and vote for the passage of the bill and thus avoid harsh criticism and win the praise and applause of thousands, which I could easily have done by following the great majority in Congress, and smothering all conscientious scruples.

As a Member of Congress I have imposed upon me the duty of safeguarding, in so far as it may be in my power, the rights of the people of the United States under the Constitution, as does every man serving in a representative capacity, and I can not conceive of a more serious and solemn occasion than when a Member of Congress casts his vote on any question that may or would tend to plunge a hundred million people into the cruel and savage war which is devastating Europe and making a desert waste of the garden spots of the world.

I have always tried to approach each question upon which I have ever cast a vote during the last 15 years with a consciousness of my serious duty and obligation to the people I represent.

I have never felt a graver or greater responsibility than now.

Nor given any question more thought and study.

Nor had a more determined conviction that I was right in acting as I did, regardless of my future political career, than when I voted.

Not against the President of the United States.

Not against the interest of my country.

Not against the protection of American industries and our various rights upon the seas by armed neutrality.

Not against the protection of the lives of Americans at any place or at any time.

Not against preparation and preparedness to defend our national life and national honor or our homes, our institutions, or our country's welfare, *as some would have you believe.*

But against violating the fundamental principles upon which our national existence depends and has survived and weathered the storms and trials and troubles of an ambitious, brave, and fearless people for over 100 years.

Against the surrender of the rights and functions of the legislative branch of our Government or the delegating of the power of Congress to the executive branch of our Government and the placing of such authority in the hands of any one man who is now in power or who may hereafter be in power.

Against establishing a precedent, contrary to the spirit of our form of Government, and which may be used at a more dangerous time, and thus destroy that great safeguard which our forefathers, in whose wisdom the great principles of our national existence were conceived and clearly defined, and who established the three great coordinate branches of our form of government.

The delegation of the legislative power of our Government to our President, the surrender not only of those rights but of our duties and our obligations to our people, is a precedent, a new and untried step in the history of our country, which no other President of the United States has ever requested, desired, or sought during any of the critical stages of our national existence.

History records no such requests from Washington to Jackson, from Jackson to Polk, from Polk to Lincoln, from Lincoln to Grant, from Grant to Cleveland, and Cleveland to McKinley.

Why should we grant it now?

I believe the people of the third congressional district of Illinois expect me to do my duty as I see it, honestly and fearlessly, *and without hope or thought of future reward.*

I do not believe anyone expects me to do anything that would tend to destroy the scheme of our national affairs, and I can not conceive of any greater violation of an oath, to uphold and defend our Constitution, than to delegate to another, be he ever so capable and patriotic, because of popular clamor and hope of public praise, the power to determine the destiny of our country.

Chief Justice Marshall, speaking for the United States Supreme Court, over 100 years ago, in the case of Cohens *v.* Virginia (19 U. S., 389), said:

> It is very true that whenever hostility to the existing system shall become universal it shall also become irresistible. The people made the Constitution, and the people can unmake it. It is the creation of their own will and lives only by their will. But the supreme and irresistible power to make or unmake resides only in the whole body of the people, not in any subdivision of them. The attempt of any of the parts to exercise it is usurpation, and ought to be repelled by those to whom the people have delegated that power of repelling it. The acknowledged inability of the Government, then, to sustain itself against the public will, and, by force or otherwise, to control the whole Nation is no sound argument in support of its constitutional inability to preserve itself against a section of the nation acting in opposition to the general will.

In Wilkerson *v.* Rahrer (140 U. S., 545) Chief Justice Fuller, speaking for the same court, said:

It does not admit of argument that Congress can neither delegate its own powers nor enlarge those of a State.

I could cite numerous and distinguished authority to the same effect, but the opinion of that sturdy American patriot, Justice Marshall, who had so much to do with the blazing of the way of our judicial procedure, and whose judicial interpretations of the Constitution have never been successfully attacked, and who spoke at a time when he was inhaling the patriotic atmosphere of the framers of the Constitution and the sound principles upon which were based the hopes of our future as a free people, can now best speak to the American people in this hour of the greatest and most trying crisis of our national existence.

When our President shall inform Congress, as he is directed to do by his oath of office and the Constitution, that the needs and demands of the country require certain legislation, and if, after careful, full, and deliberate consideration and investigation, it shall appear that the most drastic measures for protection and defense are needed, *he will find, and the people will learn, that no one is more willing or more anxious than I to discharge my duties and vote in support of such legislation in the future as I have done in the past.*

You will find from my record that I have been advocating and working for full and adequate preparedness for the last three years; that I have voted for every such measure that has been up for consideration in Congress during that time; and that I have been no less critical and disgusted with the manner in which such legislation has been handled, in and out of Congress, than have all of the people who are for real substantial preparedness.

We are not, at this time, as well prepared to go to war with Germany as we were last year when we went to war with Mexico.

I can not, as a red-blooded American, bear to see the heart and brains of the best young men in this country spilled on an unprepared soil.

There is another reason why I voted against the armed-ship neutrality bill.

It gives the President authority and power to supply American merchant vessels with guns, gunners, and ammunition, and the right to use them for the purpose of shooting and destroying at sight any German submarine that might be found on the high seas. It places in him the gravest responsibility that can be imagined, and clothes him with unlimited authority.

It authorizes him to place in the hands of a few gunners on American merchant trading vessels, while they are at sea working for a profit-seeking, private corporation, the peace and security of a great and proud Nation of over a hundred million people.

It gives them the right and power to wage war on another nation which is trying to be friendly with us while in the throes of a life and death struggle, as are all of the warring European countries; all fighting like wild beasts at bay, and paying little attention or respect to the welfare of neutral nations when their own interests are at stake.

If the American vessels and gunners do not come in contact with German submarines, and if Great Britain does not exercise the right of search, confiscation, and censorship of our mails, and if they would be permitted to travel unmolested to other neutral ports with their cargoes and noncontraband of war no serious trouble would occur, but that is begging the question, and is not the purpose of the proposed law, and such a desired condition can not be expected under these trying circumstances, as many of the American vessels will be laden with guns, powder, and shells, and all kinds of war munitions intended for the warring nations of Europe, and may be destroyed at sight.

If such an act is committed and the lives and property of American citizens are destroyed, the question of declaring war will then be considered by the Congress of the United States as decreed by the Constitution.

Why should we tempt fate?

Why should we court and encourage acts of war while we are prosperous, happy, and at peace with all the world, in this day of war-maddened strife, when the nations of Europe are at each other's throats, *and no rule of reason governs their conduct,* to secure a doubtful, insecure, and disputed right on the high seas, for the sake of private gain and jeopardize the peaceful welfare of our country with its millions of people.

I understand all of our differences with Great Britain, and they are many, are to be settled after the war, by peaceful arbitration.

What is the reason the same peaceful course can not be pursued with all the warring nations?

I have given you some of the material and substantial reasons why I voted against a resolution which would in all probability cause war and surrender the power of Congress and the people to one man, but there is another reason, which is as potent and powerful and just and righteous, and that is the moral side of the question which must be considered, because we are a moral, God-fearing, peace-loving people, who condemn the present war as the most brutal, wicked, useless, and senseless of mankind, and which we believe is, at this very hour, knocking at every door of every American home.

The horrors of it are all so vivid and ghastly that our senses are paralyzed and we tremble with fear that we may all be plunged into it beyond recall before we know it, if some step be taken or something be said or done by some one in high political life that can not be repudiated, although their motives be the highest, their ideals the loftiest, their patriotism the purest and truest and noblest of all men.

I fear our peace and happiness, our prosperity and freedom, our homes and institutions, are all at stake, hanging in the balance over an abyss of misery and desolation, which can only be contemplated by comparison with the misery and desolation found in the trenches, and on the battle fields, and in the homes of warring Europe.

No human being can predict when this war will be over, or what will be the final result, or the cost in life, health, and wealth to this country if we go into it.

We all know the warring nations have all drawn heavily during the last three years on their men and resources, and if we go or are drawn into it against our will, we can not honorably escape a like fate.

Not to bear our full share of the burdens of war as a nation would be pursuing a base and cowardly course, and a disgrace to the best traditions of our country.

The only way we can realize the awful cost in life and property to this country is to gaze on war-stricken Europe, where five million (5,000,000) brave, patriotic, useful men are lying dead on their battle fields and eight or ten millions more crippled or blinded for life; where some twelve or fifteen million families, like yours and mine, have been sorrowed and broken up forever; where millions upon millions of children are made fatherless and homeless; where untold millions of wives and mothers, like yours and mine, are made widows, mourning and bewailing the loss of husbands and sons, like you and me. When every nation is bankrupt, with sorrow, misery, poverty, and war debts, which are increased each day to untold millions, and which now aggregate approximately one hundred and fifty billion dollars ($150,000,000,000), which is more than the total wealth of the United States, and the war is not yet over.

Who believes this great war loss will ever be paid; and if so, who will bear the burden?

Should this country, without due deliberation by that branch of government upon which is bestowed the power to declare war, join in the terrible conflict, because of some fancied wrong to our national honor, or an infraction of some disputed international principle of law, by war-crazed nations which can not get out of their frightful situation without surrendering their national existence?

Does anyone think we should be a party to this war and possibly be compelled to assume a part of the tremendous loss the nations have sustained?

Do you realize that when this war is over and peace has been declared thirty million (30,000,000) soldiers, with aching hearts and heavy feet, will return to their homes and find "crêpe on every door knob," empty chairs at every table and around every fireside; public institutions, asylums, hospitals, and public parks filled with their old friends and neighbors as victims of a war waged for years to settle some fancied wrong or doubtful international question?

Do you wonder I do not want this country to go to war?

Do you wonder I did not vote to give our President the power to cause, or give cause, for war, and later ask Congress to declare war and save our national honor?

Do you wonder I am opposed to creating a one-man power in our country?

Do you wonder I refused to surrender any of my constitutional obligations or power as your Member of Congress?

Do you wonder that I wanted the President to keep Congress in session during all of this trouble?

Do you wonder that I think there never was a time in our history when our President needed help and patriotic advice more than is needed at this time?

President Wilson requested all neutral nations who have suffered as we have and whose grievances are no less than ours, individually and collectively, to join with him in forcing Germany to discontinue her ruthless and unlawful submarine warfare, and each and everyone refused to follow him, except China.

Why do they not arm and man their ships and fight for freedom of the seas?

I wonder if they, too, do not expect to settle their differences by peaceful arbitration.

The great reason for the President's request for plenary power and his apparent anxiety to discharge Congress from further deliberation on the momentous questions facing us at this time, were understood to be the unwillingness to have Congress remain in session after the expiration of the present Congress, and I here announce and declare that as long as the demands of my country require, as long as emergencies exist, as long as the exigencies of our national affairs demand it, I am not only willing and glad to remain at my post of duty, but I decline to voluntarily yield my rights, privileges, and duties under my oath of office, or by any act of my own or sanction of the action of a majority, even though it be overwhelming in numbers, of the Members of our National Legislature, to be denied the opportunity to do my full duty as I may see it and as God gives me power to perform it.

I have endeavored, possibly all too briefly, to give the reasons for my vote against the armed-neutrality resolution to confer upon the executive branch of this Government the legislative functions which only the Congress can execise, and neither criticism, threats, nor any form of personal calamity which may be impending over me can swerve or change my avowed course of conduct in this or in any other matter where I conceive my duty to lie in a certain channel.

If the people of the third Illinois district are not willing to have as their Representative in Congress one whose sole purpose is to safeguard the fundamental institutions of our Government, protect and preserve the principles upon which our national welfare exists and do his full duty to them, to the whole people of that State and to the citizens of this great Republic, then they not only erred in sending me here with the seal of their approval on seven different occasions, but they err in keeping me here, and if they want someone to violate the trusts imposed in him, to surrender their rights and delegate the powers and duties which I enjoy, then it shall be their privilege to choose someone else at another time.

Life and Character of the Late Senator Clarke.

MEMORIAL ADDRESS
OF
HON. WILLIAM S. GOODWIN,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Sunday, February 18, 1917.

The House had under consideration the following resolution (H. Res. 512):

Resolved, That the business of the House be now suspended, that opportunity may be given for tributes to the memory of Hon. JAMES P. CLARKE, late a Senator from the State of Arkansas.

Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his distinguished public career, the House, at the conclusion of the exercises of this day, shall stand adjourned.

Resolved, That the Clerk communicate these resolutions to the Senate.

Resolved, That the Clerk send a copy of these resolutions to the family of the deceased.

Mr. GOODWIN of Arkansas. The death of Senator CLARKE removed from the Senate one of the most striking figures in American public life. Courageous, quick in apprehension, direct, at all times forceful, possessing a keen, analytical mind, discriminating to a rare degree and with an aptitude for the solution of complex political questions, he easily rose to first rank and then to leadership among the trained veterans in the upper branch of the Federal Legislature.

No one can adequately review in brief compass the varied activities and accomplishments of Senator CLARKE; for, indeed, his life was one of strenuous devotion to certain concepts of duty, and once his mind was fixed as to his duty he was immovable. It has been said by those unacquainted with Senator CLARKE that party ties and obligations hung loosely on his shoulders. That he manifested a rare independence along party lines in their common acceptation his best friend would not gainsay; but an analysis of that independence will disclose that his breaking away from party ties was largely based upon constitutional grounds or upon those matters that pertained to the welfare of the Nation. Hailing from a State where party regularity has been a condition precedent to political success, it took rare courage to be independent of party action or the decrees of party caucus.

I have often thought that Senator CLARKE did himself a great injustice in not participating oftener in the discussion of the public questions upon the floor of the Senate. For, indeed, everything he touched he illumined by his mental alertness and adorned with grace and an unaffected wealth of rare and limpid English. Few men have entered public life better equipped for public service than Senator CLARKE. Gifted by nature as few men are; possessed of a prescience that enabled him to read the minds of men and to almost divine the oncoming of the times; second to no man as a lawyer, he stood high as a statesman of first rank, lending always dignity to the Senate and honor to the Commonwealth he represented. His was a stupendous figure. He died, no doubt, as he had wished—at the zenith of a career distinguished for public service.

With all of his varied accomplishments Senator CLARKE doubtless was greatest as a lawyer. I doubt, indeed, if he had a superior at the American bar. It is true his life was devoted largely to statecraft, yet during all of his political career he never abandoned his chosen field of endeavor, but always kept abreast with the evolution of the law and the decisions of the courts. Few men possessed the rare discriminating judgment that characterized Senator CLARKE as to the interpretation and the construction of the law or its application to government. A great part of our law—the fundamentals—are inherited from the Roman law, which was transplanted to English soil. At first, of course, there was no general code of law; but certain great principles having been enunciated, these were finally crystallized into maxims, and these maxims—the datum posts, signboards, or finger pointers to certain great principles—were adopted, and around these maxims the Roman law gravitated and evolved; and no man can be a great lawyer unless he thoroughly understands and appreciates these datum posts of the law, their justness, and the reason why these maxims have been woven into the fabric of the law. In other words, Mr. Speaker, law in its final analysis is not merely a philosophy but a science, and few men understood better the science, the reason for the great elementary underlying principles of the law than did the late Senator CLARKE. And no man can be a statesman, no man can be a lawmaker in the true sense of that term unless he has an understanding of these great principles of society and their application to the pattern of good government. For, after all, governments are instituted among men, not for the sole purpose of manufacturing the machinery to govern men, but to equalize the burdens of the Government; to fashion and to apply justice to all alike, and to restrain the strong from overpowering the weak, and to lift the feet of the struggling masses and to place them upon the great tablelands of justice and equity. The crime of all the ages is the history of inequality among men, the favors granted to the few and denied to the many, the inequality of burden borne by the toilers, who by their labor create the wealth of the world but have little to show for their handiwork.

Let me say, Mr. Speaker, that I believe Senator CLARKE was misunderstood by many of his friends and practically by all of his enemies; and he had enemies, as every public man must have who fearlessly discharges his duties and will not become the tool and slave of those who would bend his will. It has been said that he was cold and cared nothing for the masses, that he was an aristocrat, but those who were close to him know that he had a heart for the right, that he was too lofty, too imperious, too independent to play the demagogue, that he had a hot fervor and a passion for the right, as God gave him the power to see the right, but in his imperious pride he refused to display the heat that warmed his soul. He was devoted to duty, and was an interpreter of the times and of the selfish designs of men, and he never failed to express himself in the plainest and the most emphatic terms in giving expression to his understanding of these elements of selfishness. No, Mr. Speaker, the world will never understand certain types of great men and no man can be great unless he is good, and all good men possess some elements of greatness. There are those in public life who strive, who toil, who have a vision, and above all possess a passion for the right and their loyalty to the people can not be honestly questioned; but their loyalty is challenged by those who would profit thereby, and for these Senator CLARKE had no patience. I know that he had compassion for the poor, for the little man, for the struggling masses, for the man with "slanting brow," who, having been made in the image of his Creator is destined to serve as a slave at the treadmill of life, while hunger gnaws at the heartstrings of his wife and little children who shiver in cold while the cotton fields around them are white with the labor of their hands. And the crime of civilization, Mr. Speaker, is for these unfortunates, these burden bearers, to be forever denied the privilege of even a vision of happiness. On more than one

occasion Senator CLARKE talked most feelingly about the pitiful condition of all such unfortunates. Indeed, Mr. Speaker, I believe he felt like America's greatest poet, Edwin Markham, feels to-day in that most telling and true picture of the Toilers entitled "The man under the stone," which is as follows:

THE MAN UNDER THE STONE.

When I see a workingman with mouths to feed,
Up, day after day, in the dark before the dawn,
And coming home, night after night, through the dusk,
Swinging forward like some fierce silent animal,
I see a man doomed to roll a huge stone up an endless steep.
He strains it onward inch by stubborn inch,
Crouched always in the shadow of the rock. . . .
See where he crouches, twisted, cramped, misshapen!
He lifts for their life;
The veins knot and darken—
Blood surges into his face. . . .
Now he loses—now he wins—
Now he loses—loses—(God of my soul!)
He digs his feet into the earth—
There's a moment of terrified effort. . . .
Will the huge stone break his hold,
And crush him as it plunges to the gulf?
The silent struggle goes on and on,
Like two contending in a dream.

Senator CLARKE'S last great fight was made in behalf of the people of the Philippines when he sought to give them independence within four years, and no American name to-day in the far off Philippines is so sacred as the name of Senator CLARKE. He was looked upon as their political savior and as their best American friend, and I pray that the seed sown by him will ripen into a full harvest, and that the 10,000,000 Filipinos whom we hold in subjection, contrary to the spirit of American liberty and American institutions, will be granted their full stature of liberty within the next few years.

The legislature of our State at its present session most appropriately voted to have the statue of Senator CLARKE placed in yonder Statuary Hall with other brilliant American compatriots, and, if the sculptor chisels the late Senator as he looked in life, thousands of spectators who annually visit this Hall who never saw Senator CLARKE will be attracted by his noble figure, though made of bronze or chiseled in stone. For, indeed, Mr. Speaker, as you know and as we all know, there was no figure among all the great Senators who served with Senator CLARKE that equaled him in commanding, physical appearance, and I imagine that he typified the imperious bearing of a mighty and noble Roman senator—rugged, bold, courageous, outspoken, impatient, nervous and restless over those things which challenged the onward march of the true spirit of justice as interpreted by him. He marshaled all the brilliant forces of his thought, to the end that equity might obtain in the councils of his Nation, fighting always for that conception of duty which he thought should prevail. This, indeed, Mr. Speaker, is the rock from which he was hewn, the pit from which he was digged.

A great oak has fallen in the forest of big men, and we shall not soon look upon his like again. He had his faults, and they were many and sometimes, I thought, most grievous, but who does not possess a multitude of faults? He likewise had his virtues, and these towered above his faults, his shortcomings, and since his death the universal comment made by Members of the House, as well as Members of the Senate, is that the late Senator CLARKE was one of the big Americans of his day; and numbers have told me that he was the greatest Senator they have ever known. The historian will write his name high on the scroll of American honor, while his deeds may be found among the archives of his country's history.

A Valuable Agricultural Bulletin.

EXTENSION OF REMARKS
OF
HON. GEORGE M. YOUNG,
OF NORTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. YOUNG of North Dakota. Mr. Speaker, Bulletin No. 757, Commercial Varieties of Alfalfa, preferred by Dr. R. A. Oakley, agronomist, deserves more than passing notice. It is timely and particularly valuable to the farmers of the Northwest, who are now turning their attention to the production of alfalfa. It is written in understandable English and not in Latin or Greek. The highbrows connected with the departments of the Government should be encouraged in their occasional efforts to get down to earth. It is especially commendable with so ancient a plant as alfalfa, which, though a novelty in America within this generation, was familiar to the old Latins long before Christ, and they got it from the Greeks, who in turn got it from ancient Persia. I guess it was alfalfa which Nebuchadnezzar chewed when he went crazy over the high cost of living. Yes, Mr. Oakley could have been excused for dropping back into the Latin to describe a plant so ancient. Columello, who wrote at Rome two centuries before Christ, and who was the forerunner of the modern producers of agricultural literature, said:

Of all the legumes, alfalfa is the best, because when once it is sown it lasts for 10 years; because it can be mowed four times, and even six times, a year; because it improves the soil; because all lean cattle grow fat by feeding upon it; because it is a remedy for sick beasts; because a jugerum (two-thirds of an acre) of it will feed three horses plentifully for a year.

When I came down here to serve in Congress I asked Dr. Oakley to prepare a bulletin upon the subject of alfalfa in common language, free from mystifying scientific terms. He has done it, and he has my thanks. I am going to send it out to every farmer in my district.

For those who wish to pursue the subject further Dr. Oakley has prepared a professional paper, Bulletin No. 428, Medicago Falcata, a Yellow-Flowered Alfalfa, which I shall send out upon request. I can also furnish upon request Farmers' Bulletin No. 399, upon the subject of seeding and general culture of alfalfa.

My belief is that if Members of Congress will explain to the department officials the particular needs of their constituents they will find them ready to respond with helpful literature direct to the point.

Our National Defenses.

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN,
OF ILLINOIS.
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. BUCHANAN of Illinois. Mr. Speaker, much has been said in the daily press and otherwise about the unpreparedness of the United States to resist invasion. Not only have our defenses been minimized but the actual conditions have been either smothered or grossly misrepresented, and I desire here to insert an article by Mr. Arthur MacDonald, which, in my opinion, discloses some startling information on the subject:

PEACE AND DIFFICULTIES OF INVASION—GIVING TESTIMONY OF LEADING AMERICAN NAVAL OFFICERS.

[By Arthur MacDonald, Washington, D. C., honorary president of the Third International Congress of Criminal Anthropology of Europe.]

All American citizens—in fact, citizens of all neutral nations—in their own way and according to their own convictions, should do everything they can to keep their country out of the European war.

The author resided some four years in Europe, mostly in France, Germany, and Switzerland, pursuing university studies, and, mingling with the people, he had many advantages in gaining an insight into their life and thought. His specialty also was criminal anthropology, which includes the subject of war, more particularly in its psychological aspects.

The average normal man, who is compelled to do most of the fighting, with his family impoverished by the money powers, does not desire war. As an illustration, a shoemaker in Alsace-Lorraine was asked whether he preferred to live under the French or German Government. His answer was as follows:

You know that our language is French and our sympathies are with them.

When questioned as to actual practical differences under the Germans, he said:

As far as business is concerned, I am a little better off; the Germans are more rigid in enforcing laws as to apprenticeship so that unskilled shoemakers are not able to compete with us so much as when under French rule. But we want to be let alone; we don't want any more fighting over the matter.

PROALLY OR NOT, LET US KEEP OUT OF THE WAR, AND BE AMERICANS FIRST, LAST, AND FOREVER.

Since some of the proallies are advocating that the United States join England in the European struggle, and since as a people, we are naturally proally, such agitation may lead us to extremes and endanger the real welfare of our country.

If we should join the allies, I can picture England (I do not criticize her) talking something like this: "I am glad you have

come in; you know we have financed and are expected to finance this war because we are considered the richest of the allies; but you are wealthy also, and we need your help very much; you can at least contribute half as much as we do or better, say $15,000,000 a day. In addition, it would be well to send over 25,000 soldiers, so as to make you feel that you are really in the war."

THE MOMENTOUS QUESTION IS OUR OWN WELFARE.

Germany may not give up her submarine warfare, no matter how much she desires to avoid trouble with us. Admitting that she is breaking international law in more serious ways than the other belligerents, the momentous question for us is, not to defend the rights of neutrals in general, not to insist on international law for humanitarian reasons, however high these things may be, but the question is a practical one and not theoretical—a condition and not a theory—it is, "Shall we plunge 100,000,000 of people into war for the sake of upholding international law, or for the sake of humanity, when we are not being invaded and when every nation desires to live in peace with us?" It is a questionable humanity to plunge 100,000,000 of souls into war, for the sake of humanity. Americans have a legal right to travel in Europe for money, pleasure, or thrills, but have they a moral right, under the present conditions, to do so, and shall we cast this great Nation into the volcano because such Americans are killed.

AIR MACHINES MORE INHUMAN THAN SUBMARINES.

The dropping of explosives by air machines on noncombatants in their homes is more illegal and unjust than submarine warfare, because, while few are compelled to travel, many can not leave their habitations. All the belligerents have used air machines against noncombatants. Why, then, let us not protest against all the belligerents for this inhuman warfare, as well as against the submarine, and not join any belligerent; that is, keep out absolutely from the whole European struggle, and not engage in "entangling alliances" (George Washington).

CONDUCT OF NEUTRAL NATIONS IN EUROPE.

While all nations approve of international law, the history of war shows that when a country feels its own existence to be in peril it places military necessity above international law, and proceeds to justify almost all the horrors of war. Thus in the present European war, international law is being broken by all the belligerents and the neutrals are made to suffer, but the belligerents all claim to be fighting for their existence, and if neutrals come so close as to be killed or have their property held or confiscated they should not consider their honor at stake, for such acts are not malicious but the results of military necessity.

Swedish, Norwegian, Danish, and Dutch steamers, with their own citizens aboard, have been torpedoed by German submarines. False flags, paint, and other means are being used to make belligerent vessels appear like those of neutrals, so that mistakes are inevitable. If the European neutrals thought that the illegal acts of the belligerents were malicious they would doubtless take action. Since these nations are zealous for national honor and brave and fearless, their attitude should have great significance for us. It is no discredit to us that we may not understand the conditions as well as the neutral nations do who have had first-hand knowledge of European politics all their lives.

DANGERS FOR UNITED STATES.

Some time ago 500 American citizens, called the "American Legion"—mostly natives—left Canada to fight for Great Britain, and more have followed, until now it is said thousands of Americans are in the ranks of the allies. Their wounds and death in battle will carry war sparks back to this country. Still more dangerous for peace is the increasing number of Americans who are openly advocating joining England in the war. If, under such conditions and in our uncertain state, due to the great fundamental differences of opinion, some untoward event, like the sinking of an American ship with American passengers should occur, efforts might be made to make it a second *Maine*, and this notwithstanding the sinking might be accidental.

MASSES NATURALLY PEACEFUL BUT HELPLESS BEFORE WAR AGITATION.

Small manufacturers, keepers of little stores, the mass of laborers, artisans, and farmers are peace loving by instinct, and happy in their work when justly paid, and want to be let alone. But these human beings who make our food, clothing, and houses, upon whom we depend and without whom we could barely live, these are silent forces, passive and defenseless against the infection of war-like feeling.

Thus a few individuals, groups or cliques, agitating for war, are abnormally powerful to such a degree as to be irresistible to the masses, who do not realize the terrible evils, injustice, and suffering that war has in store for them.

Thus the majority of mankind yields blindly to fatal suggestion and is ready to respond to patriotism when their country calls; a patriotism supported by powerful money interests.

UNJUST TO MALIGN A NATION.

All peoples and Governments are sincere. There is not a ruler in Europe who would not surrender his throne in the interests of his people; each has done what he thought right, and it is very probable that we would have done as every nation has done under similar conditions. It is ridiculous to blame this or that nation; it is like assuming to be able to relieve the Almighty from His final judgment, after all the facts are in. "Judge not that ye be not judged."

CAUSES OF PRESENT WAR LONG STANDING.

The war, however great its magnitude, is fought for similar reasons and by the same peoples as previous wars were fought; it is one of a series, though a most extensive one, because facilities of communication and intricacies of agreements, secret or otherwise. If settled, it is possible that some, if not all, of the parties may be satisfied, and such settlement be only a resting place to fight again. For one says its fundamental demand is control of the seas, and another insists that there can be no peace until there is freedom on the sea. The public is slowly becoming conscious that the causes of the present war are long standing, and in the last analysis, like most wars, is due to ignorance and selfishness—like most evils. The agents are the rulers, but they are not the cause of the war.

CURE FOR WAR EDUCATIONAL.

The cure for ignorance and selfishness is knowledge and humanitarian feeling, and everything that tends in this direction will tend to lessen war. To extend arbitration and promote natural friendships is in this direction. Knowledge, good will, and forbearance—to increase these between nations will lessen the war spirit.

TESTIMONY OF AMERICAN OFFICERS AS TO DIFFICULTIES OF INVASION.[1]

OUR COAST DEFENSES.

The highest authority on our coast defenses is Gen. Erasmus Weaver. In his testimony before the House Committee on Military Affairs he said:

"We have the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense."

* * * * * * *

"Mr. McKELLAR. If we conclude to carry out your recommendations and give you the 11,000 men, then, as I understand you, you would have a perfect system of coast defense that you think would be adequate for any purpose?

"Gen. WEAVER. Yes.

"Mr. McKELLAR. Your idea is that your guns are sufficient now?

"Gen. WEAVER. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

"Mr. McKELLAR. You do not take any stock in this idea that the ships of foreign nations carrying guns of longer range can silence your guns?

"Gen WEAVER. No."

TO MOVE GREAT ARMY OVERSEAS IMPRACTICABLE.

Rear Admiral Knight, member of the General Board and president of the Naval War College, said that it was practically an impossibility to convey an army across 7,000 miles of water to prosecute a campaign.

"Mr. CALLAWAY. I want to get a concise statement. You consider the enormous dangers of transporting a fleet across a great expanse of hostile water——

"Admiral KNIGHT. And maintaining it.

"Mr. CALLAWAY. And maintaining it.

"Admiral KNIGHT. Yes; I think those dangers are almost insuperable.

"Mr. CALLAWAY. Almost insuperable?

"Admiral KNIGHT. Yes.

"Mr. CALLAWAY. And the maintaining of it is necessary to the conduct of war?

"Admiral KNIGHT. Yes.

"Mr. CALLAWAY. And you say those difficulties are almost insuperable?

"Admiral KNIGHT. The difficulties are almost insuperable."

ADMIRAL FLETCHER'S ADMISSIONS.

"Mr. BUTLER. We have been put down as second, third, or fourth in the number of ships. Is not that true?

"Admiral FLETCHER. That is about our relative position—second or third.

"Mr. BUTLER. Where do we stand, Admiral?

"Admiral FLETCHER. I have not personally gone into that, but I have estimates that place us about third at the present time.

"Mr. BUTLER. Are we strong enough to offer a decided resistance at this time against any nation?

"Admiral FLETCHER. Not against all nations."

Mr. BUTLER had asked:

"Are we strong enough to offer a decided resistance at this time against any nation?"

The admiral replied:

"Not against all nations.

"Mr. BUTLER. I do not mean in a combination.

"Admiral FLETCHER. Not against the most powerful nation."

ENGLAND.

"Mr. WITHERSPOON. It has been told this committee by high authorities in the Navy Department—among others, Admiral Vreeland—that if we had a war with England, on account of its relations with other nations in Europe, it could not afford to send more than 50 per cent of its ships against us. Do you believe that is so?

"Admiral FLETCHER. That is a question of policy and of political conditions in Europe upon which I would not pretend to pass judgment.

"Mr. WITHERSPOON. Then your statement that we could not resist England would be on the assumption that she could send her entire fleet, or more than one-half of it, against us?

"Admiral FLETCHER. Yes, sir; she would control the sea if she could keep there a more powerful fleet than ours.

"Mr. WITHERSPOON. Or not afraid of war with the rest of the world; not afraid to take all the ships away from her own coast and to send all of them, or a large majority of them, against us? Your statement is based on that?

"Admiral FLETCHER. Yes, sir. It is based on actual superiority.

"Mr. WITHERSPOON. Well, on the assumption which certain naval experts have told us is correct—that she could not send more than 50 per cent of her 72 against us—you would not say then that we would not be able to resist them successfully, would you?

"Admiral FLETCHER. I would not like to pass judgment upon a supposititious case of that kind.

"Mr. WITHERSPOON. What I am asking you about—without going into it more carefully—is this: You do not mean to say that we could not successfully resist them?

"Admiral FLETCHER. Could not successfully resist a power like England if she utilized only half of her force against us?

"Mr. WITHERSPOON. Yes, sir.

"Admiral FLETCHER. That question I would not like to pass judgment upon.

"Mr. WITHERSPOON. It would be a pretty close question, and you would not want your statement which you made to Mr. BUTLER to apply to that condition?

"Admiral FLETCHER. I am unable to say.

GERMANY.

"Mr. WITHERSPOON. Now, according to the Navy Yearbook, Germany has of battleships, built, building, and authorized, 39. That is according to the last Navy Yearbook. Would you say that if she could send all those ships against us we would not be able to resist them?

"Admiral FLETCHER. I would say that we ought to, if we have the greater force.

"Mr. WITHERSPOON. Yes; we ought—certainly we ought, and we could.

"Admiral FLETCHER. Yes, sir. The greater force should win.

"Mr. WITHERSPOON. Yes; we could.

"Admiral FLETCHER. I think so.

"Mr. WITHERSPOON. Now, it has been stated to us that if Germany was at war with us she could not afford, either, to send more than one-half of her ships against us.

"Admiral FLETCHER. That I do not know.

"Mr. WITHERSPOON. I am not asking whether you do or do not. Assuming that she could only send half her 39, would you not say that we could successfully resist that number?

"Admiral FLETCHER. Yes, sir; I would say that, if all our force is available to meet her.

FRANCE.

"Mr. WITHERSPOON. Now, take France. This Navy Yearbook says that France has a grand total of battleships, built, building, and authorized, of 29—11 less than we have.

"Admiral FLETCHER. Yes.

"Mr. WITHERSPOON. Would you not say, if she sent all of hers against us, we would be able to successfully resist them?

"Admiral FLETCHER. Yes; our forces available being the greater.

"Mr. WITHERSPOON. And if she only sent one-half of them, we would not have much of a fight, would we?

"Admiral FLETCHER. No; we ought not to.

"Mr. WITHERSPOON. That is the way I look at it.

JAPAN.

"Mr. WITHERSPOON. Here is Japan, which according to the Navy Yearbook has only 19 battleships, or 21 less than we have got. If Japan should send all of her 19 against us, do you not think we would be able successfully to resist them?

"Admiral FLETCHER. Yes. I should say so, if our forces were free to meet them at the time.

"Mr. WITHERSPOON. And if she did not send but half of them, there would not be much of a scrap, would there?

"Admiral FLETCHER. Probably not.

RUSSIA.

"Mr. WITHERSPOON. Now, here is Russia, that the Navy Yearbook says has a grand total of 15 battleships, completed and building. If she should send all of them against us, would you not say that we could successfully resist them?

"Admiral FLETCHER. Yes, sir.

"Mr. WITHERSPOON. And if she sent half of them, there would not be any fight at all, would there?

"Admiral FLETCHER. Not much.

ITALY.

"Mr. WITHERSPOON. Here is Italy that has a grand total, according to the Navy Yearbook, of 17 battleships. We could successfully resist them whether she sent all of them or a part of them, could we not?

"Admiral FLETCHER. Yes; I think so.

"Mr. WITHERSPOON. Yes; I do, too.

AUSTRIA-HUNGARY.

"Mr. WITHERSPOON. Now, Austria-Hungary, according to the Navy Yearbook, has a grand total of battleships, built and building, of 10. We could successfully resist them, could we not?

"Admiral FLETCHER. I think so.

ENGLAND ALONE TO FEAR.

"Mr. WITHERSPOON. Then what nation is there that we are not prepared to successfully resist? There is not one on earth, is there, Admiral—not a single one?

"Admiral FLETCHER. Well, Judge, I think there is.

"Mr. WITHERSPOON. Well, which one? I have gone through the big ones. Tell me which one.

"Admiral FLETCHER. I should say England has a navy so much more powerful than that of any other nation in the world that she could easily keep control of the seas.

"Mr. WITHERSPOON. England. Well, what other one, then?

"Admiral FLETCHER. I do not think that we need greatly fear any other single nation.

"Mr. WITHERSPOON. There is no other nation, except England, that in your judgment we could not successfully defend ourselves against; I mean, except England.

"Admiral FLETCHER. I think that is correct. Yes.

SHIP FOR SHIP WE EQUAL ENGLAND.

"Mr. WITHERSPOON. Has England got any such powerful ships in her navy as we have, or have you ever studied that?

"Admiral FLETCHER. Yes.

"Mr. WITHERSPOON. Have you ever taken up the English ships and compared them with American ships, so as to form your own judgment as to whether she had any such ships as we have? Do you think she has?

"Admiral FLETCHER. She has many ships which are very nearly of the same power as our own ships of the same time of building.

"Mr. WITHERSPOON. Let us see about that, now. I do not believe she has, although you know more about it than I do.

"In this Navy Yearbook, which gives us a list of the English battleships, I find that the last five dreadnaughts that England has built or is building are named the *Royal Sovereign*, *Royal Oak*, *Ramillies*, *Revolution*, and *Revenge*, each of which has a tonnage of 26,000.

"Admiral FLETCHER. Yes, sir.

"Mr. WITHERSPOON. And we have two ships, the *Pennsylvania* and *No. 39*, which have a tonnage of 31,400, and then we have authorized three more which are to have a tonnage, as I understand, of 31,800.

"The CHAIRMAN. Thirty-two thousand.

"Mr. WITHERSPOON. Thirty-two thousand tons. In other words, the tonnage of the *Pennsylvania* and *No. 39* is 5,400 more than that of the last five English dreadnaughts that are building, and the last three dreadnaughts that we are building have a tonnage of 6,000 tons greater than the last five English ships. Do you mean that those ships are equal to ours?

"Admiral FLETCHER. No; I do not say that.

"Mr. WITHERSPOON. Do you regard them as inferior to ours?

"Admiral FLETCHER. Yes; as near as we can estimate it.

"Mr. WITHERSPOON. I do, too; and the armament of those five ships is eight 15-inch guns, while the armament of the five

American ships is twelve 14-inch guns. Which is more powerful armament, eight 15-inch guns or twelve 14-inch guns?

"Admiral FLETCHER. I think the twelve 14-inch guns more powerful, but I am not sure that opinion is concurred in by all authorities.

AMERICAN SHIPS SUPERIOR.

"Mr. WITHERSPOON. Then, according to your judgment, the last five ships in both navies show a superiority of the American ships to the English ships?

"Admiral FLETCHER. Yes.

"Mr. WITHERSPOON. Have you compared the English ships, ship by ship, with ours, to form the same kind of judgment as to which is superior as you have just formed in reference to the last five?

"Admiral FLETCHER. Not in detail; no.

"Mr. WITHERSPOON. Then you can not give a judgment as to which has got the more powerful, ship for ship, England or America?

"Admiral FLETCHER. No; not in detail. In a general way it has been our policy, and the committee has appropriated money to build ships heavier than the ships of foreign countries.

"Mr. WITHERSPOON. Then, understanding your testimony, after reviewing it, do you want us to understand that England is the only nation on earth that has a navy that we could not successfully resist?

"Admiral FLETCHER. I think that is the fair conclusion. Yes, sir; at the present time."

ADMIRAL BADGER'S TESTIMONY.

Rear Admiral Charles J. Badger, a member of the General Board and lately commander in chief of the Atlantic Fleet, testifying before the House Committee on Naval Affairs, was interrogated by Representative Witherspoon, as follows:

"Mr. WITHERSPOON. Now, Admiral, in your first statement I understood you to say that our Navy, ship for ship, was as good as the navies of other countries.

"Admiral BADGER. Yes.

"Mr. WITHERSPOON. I want to ask you if it is not a fact that, ship for ship, they are better?

"Admiral BADGER. I can not answer that absolutely. I believe they are as good or better. They are not inferior."

"Mr. WITHERSPOON. Then the fact of ours being so much larger than Germany's shows that they are better or we are wasting money in building them larger, are we not?

"Admiral BADGER. Yes. We are building them to be better than the German's. That is the idea in building them larger, that they shall be better than corresponding ships of other nations, if possible.

"Mr. WITHERSPOON. Then there would not be any question about the superiority of our Navy; is not that so?

"Admiral BADGER. There are a few other points, but I do not think it is necessary to go into them.

"Mr. WITHERSPOON. Well, I wanted to get your view about that, because I do not like to hear Americans running around and talking about the German Navy being superior to ours. I know it is not so.

"Admiral BADGER. You have not heard me say that.

"Mr. WITHERSPOON. No; and I am glad that it is so. I hope you never will say it, because there is not any truth in it."

TESTIMONY OF SECRETARY OF NAVY.

"Mr. GRAY. Is it not a fact that we have more complete defenses at these harbors than ever before?

"Secretary DANIELS. Much better. That is a matter which the Army has under its control. Your statement is true, however.

"Mr. GRAY. Is it not a fact that we have more men than ever before?

"Secretary DANIELS. Yes. We have 4,600 more newly enlisted men and 7,000 more are available than 15 months ago.

"Mr. GRAY. Are these men not more efficient and better educated and trained than ever before?

"Secretary DANIELS. Far more so.

"Mr. GRAY. And is it not a fact that we are more completely equipped in every department, and more efficient than ever before in all the history of this country?

"Secretary DANIELS. Undoubtedly.

"Mr. GRAY. Then you do not think there is anything in this concerted newspaper charge that is going over the country of the declining strength and efficiency and adequacy of our Navy?

"Secretary DANIELS. Nothing at all. It is not true in any particular. The truth is that in every respect the Navy has been greatly strengthened during the past two years."

Admiral Blue says also:

"Mr. HENSLEY. As a fighting machine, it has never been in better shape than it is to-day; is not that true, Admiral?

"Admiral BLUE. Never in better shape than it is to-day, in my opinion.

"Mr. HENSLEY. And in your opinion, its improvement is constant?

"Admiral BLUE. Yes; all the time.

"Mr. HENSLEY. And has been for the last three or four years more rapid than it was preceding that time?

"Admiral BLUE. I think so; yes."

PROTECTION OF HARBOR WITHOUT AID OF FLEET.

"Mr. GRAY. Suppose that a harbor is protected by the ordinary land forts and also by a sufficient number of torpedoes, mines, and submarines, how large a hostile fleet would be required to enter that harbor if it was protected by those instruments?

"Admiral FLETCHER. It would be a very difficult matter. They probably would not attempt to enter the harbor. As a matter of fact, under modern conditions of war it is doubtful if it ever becomes necessary for the fleet to enter a harbor.

"Of course, it depends on the size of the forts, the area, and so many conditions that it would be difficult to specify the exact size of the attacking force, but, as I say, in general they would not attempt to enter such a fortified harbor by means of a fleet alone; it would not pay.

"Mr. GRAY. Then those instrumentalities would be sufficient to protect the harbor without any warship in the harbor, or would you require a warship in the harbor in order to cooperate with those instrumentalities?

"Admiral FLETCHER. You would not require a warship in the harbor. The protection of the harbor itself should be sufficient by forts, mines, and submarines without the aid of the fleet."

PROTECTION OF PANAMA CANAL.

"Mr. GRAY. The principal defense rests with the Army and not the Navy, would you say, Admiral?

"Admiral FISKE. No, sir; the principal defense would rest with the Navy, because if our fleet commanded the sea an enemy could not get near the canal; only in the case of the defeat of our fleet could he land there.

"Mr. GRAY. Is it not a fact that the approach to the Panama Canal is being fortified with very large guns that have a range longer than the range of the guns on the ships?

"Admiral FISKE. I think they are practically the same.

"Mr. GRAY. Practically the same?

"Admiral FISKE. Maybe a little longer, but it is not always the range that counts; it is the distance at which you can hit.

"Mr. GRAY. Would not a gun placed in a fort on land be able to strike with more accuracy than a gun on a rocking ship? Would it not be possible to strike a target more accurately from land than from a ship?"

"Admiral FISKE. Oh, yes. The office of the guns on land is to keep the fleet away.

"Mr. GRAY. I believe Admiral Fletcher stated that, as I understood him. But in connection with these guns for harbor defense, would it not be possible to mine the waters there as well as at any other harbor?

"Admiral FISKE. Oh, yes.

"Mr. GRAY. Could you not also protect the mouth of the Panama Canal with a sufficient number of submarines?

"Admiral FISKE. Yes, sir.

"Mr. GRAY. What would you say, without having any Navy at all at the mouth of the Panama Canal, would it be possible with those guns mounted there with longer range than the guns on the ships, and with the mines and the submarines, to prevent a hostile fleet coming into the canal, without any ships of the Navy there to defend it?

"The CHAIRMAN. They would not try that.

"Admiral FISKE. No; they would go to some other place to land and make the attack.

"Mr. GRAY. But would it be possible, with those defenses I have spoken of, for a hostile fleet to enter the canal?

"Admiral FISKE. I think not.

"Mr. GRAY. Then you say we could defend the canal without any part of our fleet at all, as against the approach of a hostile fleet? Would you say that?

"Admiral FISKE. Yes, sir; I should say that.

"Mr. GRAY. Now, if that is true, it would leave all our Navy free to engage the hostile fleet and prevent them from landing an armed force.

"Admiral FISKE. If our fleet was strong enough to do it.

"Mr. GRAY. I understood you to say that if the Panama Canal was defended with these guns in the forts and by the mines and by the submarines, if they could prevent a hostile fleet coming into the canal without the aid of the fleet, then that would leave the fleet free. Is that right?

"Admiral FISKE. Yes, sir.

"Mr. GRAY. And if that is true our fleet would be free to engage the enemy and prevent him from landing a hostile force a few miles away and marching to attack the Panama Canal?

"Admiral FISKE. Yes, sir; provided our fleet were strong enough.

"Mr. GRAY. Yes, sir. Then it is only a question of whether our fleet would be strong enough to prevent a hostile fleet from landing an army?

"Admiral FISKE. That is right.

"Mr. GRAY. And marching to attack the canal?

"Admiral FISKE. That is right.

"Mr. GRAY. In time of peace would it be considered good policy for any of the naval powers of Europe in close proximity with each other, assuming conditions shall continue in Europe as they have been in the past, would it be probable that any one of the three great naval powers would withdraw all of her fleet from her own shores and bring it to the Gulf of Mexico to engage our fleet and attempt to land a force on Mexican soil? Would it be probable that they would do that?

"Admiral FISKE. It might be probable, but not more than 50 per cent probable.

"Mr. GRAY. Then, with the naval power that we have to-day, and with the fortifications I speak of as defending the Panama Canal, you would not say that even the highest and strongest naval power could go in there and destroy the canal, either by attacking it directly or by landing an armed force to attack it?

"Admiral FISKE. Not if they only sent 50 per cent of their forces.

TO INCREASE OUR NAVY IS OF LITTLE ADVANTAGE IF OTHER NAVIES ARE INCREASED.

"Mr. GRAY. I wish to inquire of the admiral if it is not the policy of other Governments to increase their navies with all the other leading powers?

"Admiral VREELAND. It is, sir.

"Mr. GRAY. What would be the advantage to us or any other power if the navies were increased equally by all the nations of the world? Would there be any advantage to us or to any other power?

"Admiral VREELAND. Not if you mean in the same ratio.

"Mr. GRAY. Would not the same grounds exist after an increase for a further increase?

"Admiral VREELAND. It would seem so.

"Mr. GRAY. They are all going up together?

"Admiral VREELAND. Yes, sir.

"Mr. GRAY. There would be no advantage gained by any nation, then. How long could that be maintained, that even increase, and what advantage would it be to any nation?

"Admiral VREELAND. If it continues to increase, the poorer nation will eventually exhaust itself, and then the other nations, the United States included, will have a free hand—I mean be free to build in accordance with the changed conditions. I think it proper to add that rivalry, in the sense in which that word has been used here, does not really exist, nor do I think it is contemplated.

"Mr. GRAY. Then it is only a question of the limit of taxation?

"Admiral VREELAND. Yes, sir."

PREPAREDNESS ACCORDING TO GEN. MILES.

(Substance of testimony given by Gen. Miles before Senate and House Committees on Naval Affairs.)

"Gen. MILES (January, 1916). Nearly 1,000,000 men in our country have received military instruction either in the Regular Army, National Guard, or the agricultural colleges. Added to the above number there are between two and three millions in our country who have passed through all the drill, discipline, and instruction of European armies.

"There are many officers on the retired list who have seen more actual warfare than any body of men in any part of the world. In case of emergency they are capable of organizing and commanding large bodies of men.

"The result at Alexandria, Port Arthur, and the Dardanelles is sufficient evidence that guns aboard ships are no match for coast fortifications and submarine mines.

"Our coasts are as well defended as the coast of any country, with the same class of high-power guns and heavy projectiles.

"What do you say about universal military service? You can not Germanize the American people. It would be a step toward imperialism, and a very dangerous one.

"The placing of an army on American soil is the last thing any European Government would attempt; it could never be reembarked. It would dissolve like the snow beneath the midday sun. It would be impossible to build ships to carry coal enough to bring them over here and take them back. If they could not be destroyed by the patriotism and valor of the American people before they could send their ships back and get another load, then I would want to live in some other country.

"The talk about making this, our Army, similar to the military force of Switzerland is useless. Switzerland is a little community up in the snows of the Alps. There is not a nation in Europe that would care to expend the amount of life and treasure to conquer it; and there is no comparison with that community and a great Nation covering a continent like ours. As to the physical strength of the Nation, it is safe to say that it includes 20,000,000 capable of bearing arms and 10,000,000 capable of doing effective military service—one in ten in proportion to the population. The guns are better in some respects than the guns that are mounted in the Dardanelles which have resisted the most powerful ships of war of the British and French navies and practically resulted in that expedition being a total failure with a loss of 125,000 men and $1,600,000,000 in money.

"A cry is raised that we are liable to be invaded and our country overrun by three or four hundred thousand men. As to this, Gen. Miles says: 'That seems to be an unreasonable proposition, because you would have to suppose that some of the navies of the foreign countries were at the bottom of the seas, and that our own Navy was at the bottom of the sea, and that some foreign government could land that number of men. Over-seas expeditions have always been very expensive.'

"As to compulsory military service, Gen. Miles says: 'Conscription was tried out during the Civil War and with unsatisfactory results. I think there were 54,000 men added to the Army additional to the 2,000,000 by conscription. But I know just at the time of the crisis of the Gettysburg campaign, thousands of the best troops, drilled and disciplined men in the Army, had to be taken out of the field where they were needed; they were sent to Philadelphia to maintain order. It was a very unpopular measure at that time.'

"As to the campaign for preparedness, Gen. Miles said: 'I think it is as much misleading to the public as it is advocating a wise measure. I do not think it necessary to discuss it.'

"As to the dangers of centralization of military power, Gen. Miles said:

"'It would be putting into the hands of some future Executive a tremendous military power, a power not anticipated by the framers of the Constitution. The country is not ready for compulsory military service, and I hope it will never be. Any force that invaded the United States would not have the ground it stood on long. I will suppose an unsupposable case. Suppose they could put an enemy on a fleet of 500 ships and move it across the Atlantic without being disturbed by any naval power, and they could land. They certainly could not go into any port, no more than they could go to the Dardanelles. Suppose they got that far as to land at some remote point. If we could not gather men in the Army and militia and by other means to destroy that army before they could send their ships back and get another load, I would want to move to some other country.

"'The militia as organized to-day is far superior to the militia who met the British. This comparison is only an effort to decry the militia by bringing up some incident which occurred 100 years ago, and that, in my judgment, is not good faith, and I have no sympathy with it.'"

ARTICLES ON WAR.

[By the author.]

Peace, War, and Humanity. Printed by Judd & Detweiler, Washington, D. C. (1915, 26 pp., 8°.)

Comparative Militarism. Reprint from publications of the American Statistical Association, Boston. (December, 1915; 3 pp., 8°.)

Atrocities and Outrages of War. Reprint from the Pacific Medical Journal, San Francisco. (April, 1916; 16 pp., 8°.) Gives data for Civil War, Boer War, Bulgaria, Russia, and Germany.

Some Moral Evils of War. Reprint from Pacific Medical Journal, San Francisco. (August, 1916; 8 pp., 8°.) Refers especially to Boer War.

The Late Representative Michael F. Conry.

MEMORIAL ADDRESS.

OF

HON. GEORGE W. LOFT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. LOFT. Mr. Speaker, my late colleague and friend, MICHAEL F. CONRY, has answered the final roll call, and it shall be my last act as a Member of Congress to pay a fitting though brief tribute to his honored memory.

His was a lovable character, which, after all, is the very essence of manhood. He might have been sad, disconsolate, and even sullen, and his physical infirmity would have successfully plead any human indulgence for his frailty; but he disguised pain with a smile, fought nobly and bravely under a handicap which would have driven a man who did not possess his character to despair, and not only found comfort and happiness but spread it wherever he went.

He had served four consecutive terms in the House, and had been reelected for a fifth term, which demonstrates the regard of his constituents and the esteem in which he was held by them. And it was well deserved. He was a man of deeds, always ready and anxious to help those who sought his service. His attitude in this respect is typical of the lines penned by Sam Walter Foss:

Let me live in my house by the side of the road
And be a friend to man.

A man who could and did appreciate the consideration shown him, he was the most considerate man toward others it has ever been my privilege and pleasure to associate with. It seems to me as if he began each day with a firm determination to adhere to the motto:

To thine own self be true,
And it must follow, as the night the day,
Thou canst not then be false to any man.

He has lived a life, and won a fame among his fellow men the knowledge of which should be a consolation to his widow and their three beautiful children.

God bless and comfort them, and may the soul of our beloved colleague rest in peace.

No More Power Should Be Given to the President—Grave Danger.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. CARY. Mr. Speaker, I have no apologies to make for my negative vote on this bill—a bill that to my mind is a preposterous proposition fraught with the gravest danger to the Republic. When I voted no, in company with such experienced and patriotic leaders as Gen. SHERWOOD and Judge SHACKLEFORD on the Democratic side and Mr. COOPER and my other colleagues from Wisconsin on the Republican, I fully realized that I would be in a small—almost insignificant—minority of big men who voted in accordance with their convictions and not at the behest of popular clamor, inflamed passion, and Tory demand. It is far easier to run and to vote with the big crowd than to vote in the minority on a grave question like that involved in the pending bill, but I venture to assert that the time will come when the American people will say that we were right in voting as we did.

Ever since I have been a Member of Congress, I have consistently voted against one-man power in any way, shape, or form. I was one of the first to vote against the usurpation of legislative power by the Speaker of the House, and I am just as much, if not more, opposed to one-man power in the country than I am to one-man power in the House of Representatives or any other American legislative body.

Mr. Speaker, there is not a man living in America to-day who calls himself an American citizen who is not here because either he or his ancestors came here to get away from personal rule. The very principles upon which our Government is founded are bound up in the sentiment expressed in the immortal words of Lincoln, that this Government is "a Government of the people, by the people, and for the people."

Countless lives have been sacrificed for this principle. Wars have been fought that it might endure, and the legislation that is to be enacted to-day is a direct retrogression from this vital principle—a step distinctly backward from democratic republicanism to dictatorship or monarchism.

I do not believe that the American people are ready to surrender the rights which they have made so many sacrifices to obtain. I recall, in a debate many years ago, the patriotic Speaker of the House, then a Member on the floor, said tersely: "This country went out of the king business on July 4, 1776."

I believe, Mr. Speaker, that we are not ready to go back into the king business yet, although in recent years it has looked at times as though the administrative section of the Government was doing its best to usurp the functions that properly belong to the legislative branch.

Our constituents did not elect us to Congress merely for the purpose of registering the will and giving legal force to the wishes of the Chief Executive. We represent a people unalterably opposed to a one-man's power and believing in a republican form of government. We are as liable to make mistakes as the President is, but we are not liable to make mistakes in the direction of expanding our powers. On the contrary. For years past we have transferred some of our powers to the executive branch of the Government by the creation of all sorts of boards and commissions appointed by the President and possessing not only executive but even quasi legislative powers.

The President of the United States is to-day the most powerful ruler in the world. He is more powerful than the German Kaiser, the Russian Czar, the British King, or the Turkish Sultan, not to mention the French President. In his capacity as the Commander in Chief of the Army and Navy the President can make a general out of a shoemaker and a rear admiral out of a doctor, and by reason of his appointing power he can elevate a police-court shyster lawyer to the Supreme bench, always provided the Senate stands behind him, which, thanks to the good Lord, is not always the case. No civil-service laws hamper him. He is above them and can appoint whom he pleases, regardless of aptitude. Congress alone can limit his powers. As long as the Congress of the United States backs up the President and gives him almost unlimited financial means, as this Congress has done, the President can bring the Nation to the verge of war. But with his almost unlimited powers the President wants more power. By means of the pending bill he will not only bring the Nation on the brink of war, but directly into the war, and without asking Congress about it. Pass this bill and the constitutional provision giving Congress the exclusive right to declare war will become a myth. If the President had the confidence in the Congress of the United States he ought to have, he would not ask for the power given by this bill. He should feel that Congress stands ready at all times to assist him in maintaining the honor and the dignity of the Nation. He knows, or he ought to know, that Congress will give him all the needed money and the needed men to fight the enemies of our country, and he should also know that no enlargement of the presidential powers is necessary to safeguard the country. But it looks as if the President has no faith in Congress. He evidently fears that some of the 96 Senators and the 435 Representatives may differ with him as to the policy this country ought to pursue in the gigantic struggle now engulfing nearly the whole of Europe. He evidently fears that some of the Representatives of the people will refuse to embroil this country into war at the dictation of one or more of the European belligerents. In this last-mentioned apprehension the President is right.

But I readily admit that in a world's war like the present something may happen that will force us to participate. When this time comes it should be the Congress and not the President to so decide. That the President seeks to hasten this time, that he desires this country to enter the war, is proven by the pending bill.

Although the language of the bill is very ambiguous and perhaps no man in Congress knows what the President really wants, we all know that the arming of our merchant vessels is sufficient to drag us into the war. It is not so very long ago that the administration condemned even the arming of merchant vessels of the belligerent powers, and talked about excluding such vessels from American ports, and to this day the administration has conceded the right of the German submarines to sink armed merchant vessels of the enemies without warning, considering them, as they undoubtedly are, auxiliary men-of-

war. It may be, and probably is, wrong for a Dutch, a Swedish, a Norwegian, a Danish, or a Spanish steamer to sail about armed aft for defense and forward for offense, but it will be all right for United States ships to do so by the kind permission of the British Government, which is well aware as to what this will lead to. If the President is in possession of reasons why American ships should now be armed, these reasons must have existed before he questioned the entering of British armed merchant ships into ports of the United States. If armed British vessels a few months ago were undesirable and liable to draw the fire of German submarines close to the American shore, what effect will the arming of American merchant vessels have now?

President Wilson was working for peace when the break came. Since then a change must have come over the spirit of his dreams, and apparently he is now working for war. For the break meant that Germany is able and determined to crush England, and England must be saved if we can save her. But the American people have in unmistakable terms declared against war, and so this plan has been concocted to give the President autocratic powers and a full purse and with no Congress to hinder him. Under the blanket authority granted by this bill the President could unite our fortunes to those of the allies, so that we and our children should assume their debts. They would save something out of the crash, being already reconciled to defeat.

As a Representative of the people in Congress, I am unalterably opposed to any extension of the powers of the administration. I believe that the executive branch of the Government possesses too much power already and the legislative branch too little. It is said that it is but a step from the sublime to the ridiculous, and I fear that it is but a step from the Presidency to a Dictatorship if we grant the President the powers he seeks through this bill. Since the beginning of the agitation for the enlargement of the powers of the President I have received many letters from constituents and others asking me to oppose this and all similar bills. Lack of space prevents me from inserting many of these letters in the RECORD, but some of them deserve to go down to posterity. A practicing physician of Milwaukee, Dr. Walter Kempster, of Simon-pure American ancestry, writes:

Hon. W. J. CARY, M. C.,
Washington, D. C.

MY DEAR SIR: I am so deeply interested in the trend of events that I am led to write this letter.

The President of the United States in his address to Congress speaks of the conditions of to-day as among the most grave that have ever come before the Chief Executive. In this situation he calmly requests the Congress to disregard and set aside their advisory powers by requesting that they confer upon him and take away from themselves two propositions which the Constitution of the United States declares is vested solely with them, namely, to declare war and to make peace. Why, then, if either war or peace are imminent, does he wish to settle such momentous questions himself? Does he possess the all-wise ability which is so far superior to that of the Congress of the United States that he can dispense with their services by declaring him virtual dictator for the next nine months? I hope that this will not be done.

Please excuse me for intruding upon your valuable time, but my deep interest of loyalty to my country in this hour must be my excuse. This is not a question as to whether the Germans or the allies are right or wrong. It is a question whether or not Congress proposes to abide by the provisions of the Constitution or whether the Congress of the United States is ready to abdicate in favor of one man.

I am, very respectfully, yours,

WALTER KEMPSTER.

DRIVING VITAL TRUTHS HOME.

If I ever had any doubts as to the correctness of my vote on the pending bill, such doubts were removed after reading the following letter, which, long as it is, deserves the careful consideration of every Member of this House and of every true, unbiased American citizen.

You know, and I know, that we are on the verge of being hurled into the cataclysm of Europe; that we are standing on the precipice of the most terrible of all terrible wars, with the battle god in our rear anxious for the fatal push.

You know, and I know, that we have been brought to this perilous position by the deliberately unneutral attitude of our Government, in assuming a pronounced and ever-increasing stand of benevolent neutrality which has advanced to the point of combative neutrality leading straight to war.

You know, and I know, that the foreign policy of the United States in the last four years has not been formulated and directed by the representatives of the people in the Congress and executed through their national spokesman, the President; but that the Chief Executive has usurped this power in direct violation of a fundamental principle of the Constitution.

You know, and I know, that Woodrow Wilson, as President of the United States, has created and carried out the foreign policy of this country without first consulting with or receiving instructions from the Congress, which the Constitution clearly demands; that, instead of outlining the situation and requesting the people's representatives to frame our policies, he has ignored this body and directed the affairs of the Nation according to his personal ideas and prejudices.

You know, and I know, that Woodrow Wilson has, on his own initiative and in violation of the Constitution, taken certain action involving the whole Republic and then has appeared before the Congress and announced to the people's representatives what he had done, asked their approval of his action, irrespective of the dictates of their own conscience, and requested more illegal power to do with this Nation what he saw fit.

You know and I know that the Congress of the United States, in dereliction of the sacred duties imposed upon it by the Constitution, ignominiously submitted to this usurpation of national prerogative, and not only permitted the President to exercise extreme illegal authority but actually approved such procedure and vested in him further power in derogation of the Constitution, which distinctly provides that such power be exercised by the Congress and not by the President.

You know and I know that Woodrow Wilson as President assuming, with the consent of the Congress, this illegal power in defiance of the Constitution, committed a series of flagrantly unneutral acts against one of the belligerents in this war and in favor of another; that he weakly and insincerely filed protest with one belligerent, who showed no disposition whatever to respect our sovereignty, for continual incidental and direct violations of our rights, and subsequently wholly ignored such transgressions, while, on the other hand, he vigorously and threateningly held to account the other belligerent who, through our toleration of infringement by her enemy, found that in rightfully protecting herself she was incidentally interfering with our rights, this latter belligerent showing amicable inclinations for an arrangement whereby our rights would be fully safeguarded by her.

You know and I know that Woodrow Wilson, as virtual dictator of this Republic, persisted in arbitrary negotiations with this belligerent, while he condescendingly permitted the greater and more frequent offender to indulge in continual violation and aggression of our rights, and that just as he was grossly unneutral concerning the rights of this country with regard to both belligerents, so was he unneutral in the application of international law. He protested to one belligerent's violation of international law, as a friend, and to the other, if not as an actual foe, then in tones of a threatening and potential enemy.

You know and I know that Woodrow Wilson in pursuing these two distinct unneutral courses, both as regards our rights and international law, has brought us to the verge not of a just but an unjust war.

And knowing all this—the usurpation of authority by the President, the passivity of the Congress to this usurpation, and the un-American exercise of this usurped authority—are you, the Representatives of the people, to continue in the comatose state of inaction, shirking your sworn responsibilities, and playing the part of modern Pilates, while an egotistical, subtle, dangerous, highly impractical idealist takes a nation of over 100,000,000 people into his hands and pilots it into the abyss?

Are you going to betray the trust placed in you and allow the Congress to sink to the iniquity of a puppet for a twentieth century tyrant, who, through the Presidency of the United States, aims to be the potentate of the world?

Are you going to allow the people to believe that you are the pawns of a suave despot; that they have sent peons to the Congress and a slave master to the White House?

Are you going to close your eyes to the distrust of Woodrow Wilson that has invaded the hearts of the people; that they are thinking of him as "the British spider" and "the American Judas," vowing that if the United States is thrown into the European battle pit Woodrow Wilson will receive the traitor's noose?

Are you to permit the impression that the screeching of a traitorous press awes you into disregarding the will of the people and that you fear castigation at the hands of the treason hearted?

Are you, after four years of docility to the whims of a dangerous Executive, to allow this crafty brain to continue its work to a logical conclusion—ruin for this Republic?

Or will you assert yourselves as true Representatives of the people and restore the Congress to the high dignity of its rightful heritage, raising it out of the ignominy into which it has fallen since the advent of Woodrow Wilson?

And having asserted yourselves and once again clothed the Congress in the garb of honor, then take immediate action to create, maintain, and enforce the strict, impartial and just neutrality of the Government of the United States, and so instruct the President.

Let it be engraved in your minds that you are in the Congress to give commands, not to take them; that the President is not the United States, but only the spokesman of the people, and that the people speak through you, the Congress; that it is not only your prerogative but your sworn, solemn duty to formulate the policies of the United States, and acquaint the President accordingly.

And now, gentlemen, when the President again comes before you seeking further usurpation of power, remind him that the Congress no longer will remain the tool of the Chief Executive; that the Representatives of the people will put into concrete form the will of the people, and that he, the President, will henceforth take his instructions from the Congress. Let Woodrow Wilson understand that he is President of the United States under the Constitution, and that he is in the White House to fulfill the will of the people, and not to force his will upon them. Make him realize that the Congress is not putty in his hands, but that he is the servant of the Congress, who, in turn, is the servant of the people. Let the Congress take the foreign affairs of this country out of the hands of the President and place them where they belong, in the hands of the Congress.

Members of the Congress, this is a most critical hour in the life of our Republic. Are we a democracy only in name? Are we to be ruled by an autocrat in the guise of a President? Shall a single individual decide the fate of this Nation? Do your duty, and do it quick, ere eternal shame blots the escutcheon of the American Eagle!

TITUS BRUSUS.

February 22, 1917.

A LAWYER'S VIEWS.

I may be permitted to select from a very large number of letters I have received from my constituents, a few from representatives of different occupations. These letters tend to strengthen my belief that I have voted right on this bill. Mr. Erich C. Stern, a prominent lawyer of Milwaukee, writes:

MILWAUKEE, WIS., *February 19, 1917.*

Hon. WILLIAM J. CARY,
House of Representatives, Washington, D. C.

MY DEAR MR. CARY: At this time of crisis I feel impelled to express to you my very strong convictions on four propositions upon which Congress may soon be obliged to vote:

1. I am unalterably and absolutely opposed to having this country enter the European war on any pretext whatsoever, except to repel invasion. Ordinarily I would not express myself so extremely because

I am not a doctrinaire pacifist or peace-at-any-price man. The present war, however, seems to me to be nothing short of suicidal for the Caucasion race, and we owe it to ourselves, to our future, as well as to our race and to humanity, to hold ourselves aloof from this conflict.

In order to stay out of the war I should favor any of the half dozen or more expedients which have already been proposed. England and Germany are certainly giving the appearance of being in a death struggle; let Americans keep their persons and their property out of the way.

II. It is reported in the press that the President will ask Congress for blanket authority before it adjourns. This would be practically equivalent to a surrender on the part of Congress of its constitutional right to declare war. Even without such action on the part of Congress, the President now has it within his power virtually to make us enter the war. Instead of surrendering any of its power Congress ought, on the contrary, to insist, much more vigorously than in the past two years, upon its constitutional prerogatives.

III. If you believe, nevertheless, that the time has come, either now or within the next few weeks or months when you can not withhold your assent to a vote for war, then I beg you to make your vote conditional upon a popular referendum to the people upon the question. Had this been done in any one of the European countries in the summer of 1914, it is safe to say that there would have been no war. Let us be a democracy not only in name and in times of tranquility but also when we are facing a crisis.

IV. I understand there is pending before Congress a resolution calling for a thorough investigation of the ownership and control of the leading American newspapers. I can hardly think of any one step more important to insure the future well-being of this country, both in peace and in war, than to expose fully who it is, or what interests they are, that have it within their power, by means of molding public opinion, to determine the great policies of this country.

With personal regards, I remain, yours, very truly,

ERICH C. STERN.

THE VIEWS OF A DISTINGUISHED PRIEST.

The distinguished Catholic clergyman who wrote the subjoined letter is well known throughout the United States. Being a great traveler, the gentleman has come in contact with a great many people of all classes and knows public opinion so well that he need not hesitate to express his own opinions. He writes:

THE IMMACULATE CONCEPTION RECTORY,
JACKSON, MO.

Congressman CARY,
Washington, D. C.

HONORABLE AND DEAR SIR: Admiring your stand for the common people in this trying hour, I am taking the liberty of expressing to you what I have to-day to our Senator STONE. I am in touch with all classes of people and have been in many States the last few months some several times and 44 since last June. I do not need nor want advertising, so this is not the purpose of this letter. I want to state that, much as I desire to do so, I do not criticize an official in Washington, from the President down, on any public question from the platform. But as an individual I do so as a publicist. I can not add to or take from the following for your consideration.

I feel forced to write you again not only as your friend and your well-wisher but also within my rights as a citizen and one of your constituents to protest most earnestly against acts that are tending to drag us into this war.

It does not require the experience and judgment possessed by statesmen like yourself to see through this latest proposed outrage of American rights, the request of the President to arm American ships and to use the Army and Navy as he may deem fit. The people see through it, and, I assure you, they protest against it, and they will hold party and Representatives to the strictest accountability in the future, if they continue to so far contemn our rights and wishes in the matter.

You know as well, if not better, than I that there is not the slightest excuse in reason and justice, if we remain honestly neutral, why American ships should go armed.

The people see that it will be, indirectly, an act of war on the part of the United States against our friend of years, Germany, to have our Navy Department, either directly or indirectly, give guns for this purpose. It will also follow, of course, to provide gunners from the Navy to man those guns. You know, under those circumstances, that Germany will be perfectly justified in sending every ship so armed to the bottom; because if they were not put on there to send German submarines to the bottom they would not be on there.

There is not a drop of German blood in my veins nor in any member of my family, which has given several members for every battle ever fought in this country for the freedom of this country and for its preservation after. Do not get the idea that the people are going to "stand by the President" when the President is in the wrong. (This does not mean dissension in case war is declared.) To have him make a request from Congress to decide whether or not to use the Army and Navy is too great a request of Congress or for him to decide, though he were the wisest, the ablest, the greatest, and the most successful man in handling difficulties—which he certainly is not. There has been too much secret diplomacy going on under the administration of a man who is publicly and widely reported (without contradiction to the present) some years ago of stating he would be more proud to receive an Oxford cap than to be President of the United States. But let us suppose he denied such a statement, though I personally believe he said it, such a request as he contemplates asking is too great to be granted even to George Washington himself, if he were alive. It is a violation of the Constitution in letter and spirit. The man who asks for it has a record for incompetency and inefficiency that makes every drop of blood boil and every movement of the intellect rebel at granting him his outrageous and un-American request; a function that belongs to Congress with all its powers and responsibilities as well as judgment.

If granted it will mean that we shall never be able again to keep clear from foreign entangling alliances, an act as treasonable as if our country were bartered as Arnold bartered himself by endangering its safety.

The Democrats had the finest chance to show, in spite of the war, the finest administration of any of the previous ones, with the keeping of the highest ideals, but they have made Democracy a by-word and have put Senators and Congressmen, as a whole, in the position of stultifying their intelligence and judgment, and made American patriotism to appear as though founded on Wall Street investments or foreign sympathies, and true Americans as traitors who do not stand by them and those who are ignoring the rights of Americans who are pained, disgusted, and protesting. Do not feel resentful at what I state. I state facts and can prove them.

This "claptrap" of standing by the President is not fooling the people; the President is not standing by the people. The Congress and Senate did not "stand by the President" in the immigration bill and other incidents in the past I could mention. If it be a lack of patriotism not "to stand by the President" before war is declared, then you honorable gentlemen have first set the bad example.

The people prefer an extra session of Congress to grant what the President may need when it is necessary than to grant it now when it is not, and is dangerous in the hands of a man in whom they are fast losing confidence.

God help and pity those men in Washington who are defying an outraged and condemned people in case we are brought into the war on either side; they (the people) may not be able to express themselves as they would wish—others may lack the courage—but, believe me, you gentlemen, by your seeming indifference to their rights and requests, are fanning the scorching flames of socialism, anarchy, and revolution. I earnestly and respectfully protest against your voting for granting the President the authority he asks, to arm ships of any nationality or to let him have the authority to use the Army and Navy while Congress is not in session, because it is against the letter and spirit of the Constitution and a very dangerous authority in the hands of a President. You may make any use you please of this; it may not get any further than your waste basket. But these are the thoughts not only of myself, but the thinking man among the workers.

Yours, respectfully,

Rev. W. D. COLLINS.

FROM PROFESSIONAL AND BUSINESS MEN.

The following three letters reflect the views of professional and business men of my district:

FERDINAND PIETSCH,
STRUCTURAL STEEL AND ORNAMENTAL IRON WORKS,
Milwaukee, February 21, 1917.

Hon. W. J. CARY,
Member of Congress Fourth District Wisconsin,
Washington, D. C.

DEAR SIR: As an American-born citizen, I protest against the United States showing any further favors to the allies in the way of delivering to them ammunition and contraband of war and permitting American citizens to take passage on boats carrying contraband of war (as determined by the allies) under American protection.

It is all wrong for this Government to insist upon going into a blockaded zone carrying contraband of war per se into the allies' camp, and not even asserting its right to carry Red Cross supplies or food to the central powers. This country is, to the best of my observation, to blame for about two years of the war's duration to date and should be stopped forthwith.

Congress should not relegate its power in the slightest degree to the President, and an improvement on that would be a referendum on the war question, excepting in case of invasion by an enemy.

Hoping you will do your duty as a fair-minded, impartial American and Christian, I am,

Yours, very truly,

FERD. PIETSCH.

MILWAUKEE, WIS., *February 22, 1917.*

To Hon. Mr. CARY,
Washington, D. C.

DEAR SIR: We the undersigned constituents of yours, and your friends as well, request that you oppose strenuously any act by Congress to give to the President the sole power to act at this critical time as his judgment may dictate. We, and we believe the majority of the people, desire to remain at peace with Germany and not become implicated in the European war in any way. We favor an embargo on all foodstuffs, and wish that you would direct your efforts to this purpose.

Very respectfully, yours,

Dr. M. ROSENHEIMER.
M. H. ROSENHEIMER, Jr., M. D.
GEO. H. BARELMAN.
F. H. FRANK, M. D.

MILWAUKEE, WIS., *February 22, 1917.*

United States Representative Mr. CARY: From newspaper reports I see that the President may at any moment address Congress for additional power to handle the present crisis. There may be particular cases where this may be done. On the other hand, however, the great majority of the people do not wish to place the vital issues of this country into the hands of one man, but has its Representatives at Washington for this reason to represent the people and not the proally press. Therefore I consider it altogether unjust toward the American people to give the President certain powers which, according to the Constitution, solely belong to Congress.

To-day on our first President's birthday, the great majority of the American people kindly request their Representatives to guide themselves by Washington's Farewell Address. "Nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded and in place of them just and amicable relations with all should be cultivated."

ONE OF THE GREAT MAJORITY OF AMERICAN CITIZENS.

WHAT A LADY HAS TO SAY.

Among my home correspondents is a lady whose interesting letters have always pleased me. She appears to be extraordinarily bright. She writes:

MILWAUKEE, *February 20, 1917.*

To Congressman CARY.

DEAR SIR: We plead for a referendum if worst comes to worst. In the name of hundreds of conscientious, earnest, thinking women of Milwaukee, I wish to protest emphatically against this country being dragged into the horrors of the European war. Both sides of the belligerents have violated international law and our rights. We feel confident that had a firm stand been taken by the President at the very

beginning, when England—or the entente—took the first step on the road to "frightfulness" by deliberately setting out to starve the innocent women, children, aged, and invalided of a whole nation by declaring a blockade—declared by our own Government to be "illegal, indefensible, and ineffective"—although not a step was taken to effectively protest, all the hideous events that have followed and have now brought us near the precipice, could have been avoided. Is it not a strange thing that this initial step and all the diabolical character of such a plot has never roused in this our would-be neutral and moral country (as far as fine rhetoric can make us so)? What has followed has grown out of this first step, has been retaliatory in the defense of the existence of a whole nation. I was East last winter—in Washington some weeks—and intensely interested in the proceedings in Congress, but oh, so disillusioned as to the extent to which that body seems to take independent action as individuals during this administration. I regretted much that there was no opportunity at just that time to hear anyone of our own Representatives speak, but was appalled at the seeming, at least, lack of moral courage displayed by some of the other Members as well as the violent partisanship from Members. This slogan, "Stand by the President" seems to me pernicious in the extreme. We are told to stop to think and just so our Congressmen elected to represent the wishes and opinions of the people are supposed to be "patriotic" when they join in this slogan.

It seems preposterous and almost criminal and a betrayal of the splendid doctrines and principles on which the fathers of our country (oh, that some of them and their truly independent fine spirit were with us now) laid the foundation of our glorious Republic. Doesn't it seem at all incongruous that in this the much-boasted of all democracies, *the ultimate* power in a crisis such as this, is being seriously contemplated to be put into the hands of one man, the destiny of 100,000,000 people is to be guided by a single hand? The papers tell us that President Wilson is going to go before Congress with the plan to ask for full authority to act in whatever way he (sole man) deems necessary for the security (?) of the Nation after Congress adjourns March 4. Will Congress, in whom our Constitution placed the faith of being able to steer this Nation through all the shoals it may encounter, give up its prerogatives like this—now when the greatest crisis in history is before us? Is it thinkable? And can we for one minute look the rest of the nations in the face and call ourselves a democracy? Does any monarchy in all the annals of the world offer comparison with such autocratic power as that demanded now? Such splendid, sterling advice has been offered on the floor of the House how to keep out of the conflict by not allowing Americans to go on board of belligerent ships except at their own risk and by refusing clearance papers to ships carrying contraband. The remedy is so simple, and little nations, like Sweden and Holland, have shamed us by their fair, sane, courageous attitude. Even Carranza has been in his message fairer and has offered a splendid example of a sincere and efficacious way to put a stop to this heinous crime of futile slaughter and take an effective step toward bringing about reflection, sanity, and ultimate peace. Are we as a Nation to give up forever our splendid advantages of aloofness and isolation, to forget our beloved Washington's immortal message of keeping forever out of entangling alliances? What right will be left to us, then, to insist on our Monroe doctrine, and once plunged into the maelstrom there is no doubt but that war will follow war in this our dear country? Our criminal, venal, purchased press—wishing to humiliate us to a dependency of England—our big interests fattened already by the blood money this war has filled their coffers with—are at the bottom of this hideous conspiracy. We here in the Middle West have watched and studied and been appalled.

Congress stands as our last ray of hope, a bulwark between these unthinkably criminal howlers for war and the wishes, hopes, and prayers of the people. Will Congress desert us—the people—and deliver us into the hands of these inhuman vultures who cry for war to make more millions? What is our beloved country going to be asked to bleed for? All the belligerents have done wrong to us, and war is hell, each nation fighting for its life, how dare we side with one nation as against another? It is a European conflict, and to us will fall the honor—the precious prerogative—to be the most influential voice in the ultimate peace conference on a moral pedestal so high that we shall have almost unlimited power to make ourselves heard. Let us stay out and do not pave the way for the yellow race to gloat over the shambles of the white. President Wilson has to be lauded for his success in so far, at least, keeping us out of war. His severance of relations with Germany in the face of all the insults and humiliations we pocketed from England—our President even made a target in English music halls and by English poets and the insolent ignoring of our contemptuous assertion, "We'll do as we please."—was, to say the least, inexplicable from a moral standpoint. Should our country be invaded or attacked, it goes without saying that to the last of our breath we all, men and women, will rise to her defense. But that is no justification for war now—the pretexts are too frivilous for words—a simple warning to Americans to stay off the ships or go at their own risk suffices. What can we gain? What must we lose? May we not bank on you, our Representative, in vain. Forgive this lengthy and impassioned strain. We are harassed beyond endurance.

Very sincerely, yours,

WARDA BECKER.

THE BILL IS BUT A STEP TOWARD WAR.

I voted against this bill because I believe that it is but a step toward a war wanted by our money interests and by our pro-British press and not by the people. If the increasing of the powers of the President would set a dangerous precedent that some day might endanger the very existence of the Republic and would not be a sufficient reason for the rejection of this bill, the specter of war arising therefrom should be. The arming of our merchant vessels is but a subterfuge. The President wants more than that. He wants powers purposely withheld from him by the Constitution, powers that this House will not give him before the Senate has done so. Popular clamor, skillfully manipulated by the British and the American pro-British press, will make some of us here vote against their better convictions. I can not do it and be just to my country, my constituents, and myself.

For my opposition to the pending bill and for being against our entrance into the war through the subterfuge of arming American merchant ships I have been severely criticized, abused, villified, caricatured, and libelled by the subsidized pro-British press, of which we have a shining example in my home city of Milwaukee. But that I mind but little. I far more regret the loss of the friendship of some men who have been dear to me. I hope that in time they will understand me better and return their friendship to me. Those who have criticized and abused me have lost sight of the main question in this controversy. They want me to stand by a President not of my choice, who so little stands by the people that he is unwilling to trust Congress—the Representatives of the people. But, as I said before, the time will come when this question will be better understood and when the howlings of the subsidized press will cease and when the American people will recover their equilibrium. I deem it unnecessary to answer the condemnatory and criticizing letters received by me. My answer is found in these remarks and in the following letter I addressed to a very dear friend:

DEFINING MY POSITION.

DEAR FRIEND: Your letter of recent date duly received and contents noted.

I regret exceedingly that you have been led astray by the subsidized press of this country when questions of such vital importance arise and which involves the interests and welfare of all American citizens.

The seriousness of this question has not been carefully considered by the people and I have gone into the matter very deeply. In supporting the bill I feel that I would not only do an injustice to this great country, but would go against my oath in defending the Constitution of the United States.

I do not believe in monarchy. Surely you would not want me to vote for a czar, king, or an emperor. That is what I would do by delegating the power of Congress to any one man.

Let the President call a special session, and let Congress say whether or not we shall have war. The arming of boats would be a declaration of war, especially arming munition carriers.

I am not a tool of the Armor Plate Trust, Powder Trust, Munition Trust, Steamship Trust, or any other—just a plain American citizen trying to do my duty and live up to my oath of office.

I want to protect the Constitution, which our forefathers fought, bled, and died for; that's all. If the people would forget Europe entirely and think of America, they would then see things right.

Large scarecrow headlines in the newspapers, evidently engineered by the "big profit takers," has preyed on the people's passion; it's too bad.

The President should not be without the presence and advice of Congress in these trying times, and he should not be given unlimited authority to take any measures which may seem to him wise, even though their logical result will be to bring us into this insane world war. This is one time he should call a special session at once, as we are all here now. Dear friend, we may differ on this subject, but that should not destroy our friendship of years past.

You can rest assured that I am an American, first, last, and all the time.

Yours, sincerely,

WM. J. CARY.

THE VOICE OF THE PEOPLE.

That all of our people, especially not all of my constituents, are not bereft of all reason in blind obedience to popular clamor is proven by the following resolutions adopted at a mass meeting attended by 4,000 of the citizens of Milwaukee, as good and loyal Americans as can be found in the land:

Whereas there is great danger that our country will be plunged into war and the manhood of our Nation destroyed in order that our manufacturers may safely transport ammunition and war material to Europe, and that our food speculators may sell our food at exorbitant prices to feed the fighting armies; and

Whereas certain mouthpieces of the munition makers declare that the dignity of the Nation and our sovereignty demand that our citizens be permitted to travel on belligerent ships, even when these ships carry ammunition and war material: Therefore be it

Resolved, That we, loyal American citizens, in meeting assembled, hereby declare that to our best knowledge and belief the common people of our country are in favor of peace and against war; that the common people protest against taking away our food in order to provide for the soldiers of Europe; and that the common people of our country therefore do not want a declaration of war on any power in order to protect a blood-stained commerce; and be it further

Resolved, That we hereby declare that the dignity and sovereignty of our Nation do not demand that our citizens be protected on belligerent ships any more than that they be protected on belligerent soil—and that we, therefore, demand that American citizens be warned against boarding ships of belligerents except at their own risk, and that American ships be forbidden to enter the war zone; and, be it also

Resolved, That the President and Congress hereby be petitioned, requested, and urged to declare a complete embargo on all food products in order to protect the necessary food supply of our own people and to prevent famine, starvation, and all concomitant evils; and finally, be it

Resolved, That a copy of each of these resolutions be sent to President Woodrow Wilson, to the two United States Senators from Wisconsin, and to the Wisconsin delegation in the National House of Representatives.

I thoroughly approve every word of these resolutions and find in them a justification and approval of my position on these questions. I am further proud of having received the following

letter from the Emergency Peace Association, composed of well-known ladies and gentlemen, headed by Mrs. Henry Villard:

We do not desire any hostile conflict with the Imperial German Government. We are the sincere friends of the German people and earnestly desire to remain at peace with the Government which speaks for them.—(Woodrow Wilson, addressed to Congress, Feb. 3, 1917.)

[Emergency Peace Federation. Object: To keep America from war and its attendant consequences. Room 901, 70 Fifth Avenue, New York.]

648 MUNSEY BUILDING,
Washington, D. C., March 6, 1917.

Hon. WILLIAM J. CARY,
Washington, D. C.

DEAR CONGRESSMAN CARY: On behalf of the Emergency Peace Federation, let me extend to you the sincere thanks of thousands upon thousands of American citizens for your brave stand in opposing armed neutrality despite the criticisms of the entire press, and despite the hazard to your personal fortunes which your action must have entailed.

I feel certain that the further we become removed from the passion and excitement of the present hours the more will your action stand out as a truly heroic thing, and as prompted by the highest patriotic motives of trying to save this country from the horrors of war.

I am, most respectfully, yours,
LOUIS P. LOCHNER, *of Milwaukee.*

I am unalterably opposed to this country entering into the European war, either on the side of the so-called allies or on the side of the so-called central powers. It is not our fight. There is neither reason nor right for the American public to take the part of any foreign Government in a fight against another foreign Government. We have proven that in this country people of all races and all religions can live peaceably side by side and develop a citizenship united and harmonious, devoted to the principles of liberty, equality, and fraternity. The example that we have set to the world by our Government and political and social life will be nullified forever if we take sides in this quarrel of conflicting dynasties.

The last election proved decisively that the people of America, as ready as they will always be to repel invasion, were and still are against war and in favor of a strict and peaceful neutrality. "He kept us out of war" was the slogan on which Wilson was elected.

There has been no truer expression of the absolute right of every American to oppose war than you will find in the brave and manly words of William Jennings Bryan, which I beg to quote here:

OUR RIGHT TO OPPOSE WAR.

First. As it is the citizen's duty to give to his Government wholehearted support in time of war, it is his right, before war is declared, to put forth every legitimate effort to prevent war. Because the Government will have our loyal support in the event of war, we should not allow ourselves to be terrorized by the militarist portion of the daily press, which, while constantly arguing for war, denounces as unpatriotic all who work for peace. They give us a foretaste of the tyranny they would establish if they were in control of the Government.

Second. The war party deliberately misrepresents the President's attitude. While he hopes for peace, the war element is doing what it can to force the Nation into war. In spite of the fact that the Constitution expressly confers upon Congress the exclusive right to declare war, the jingoes try to make it appear that a calm and conscientious exercise of this right by Congress would be an attack on the President, and they misrepresent Congress also by intimating that Senators and Representatives would resent an expression of views by their constituents.

We but do justice to the President, Senators, and Representatives when we assume that, whatever their personal views, they will be pleased to learn the views of the rank and file of this Nation—those who produce the Nation's wealth in time of peace and fight the Nation's battles in time of war.

Third. We are within our rights, therefore, when, as means of preventing war, we urge resort to the treaty plan—offered to all the world and never withdrawn—providing for submission of every dispute to an international tribunal for investigation before going to war—a plan employed by the President, indorsed by the United States Senate, and approved by three-quarters of the world.

We are within our rights, too, when we urge postponement until after the war is over of every dispute that can not be settled by peaceful means during the war.

And we are within our rights, also, when we urge that, except in case of actual invasion, a declaration of war should be submitted to the people for approval before we join a war-mad world in its carnival of blood.

But, Mr. Speaker, the question of war or peace is, to my mind, the least important question connected with this proposed bill.

The history of the world has shown in numberless instances that in times of stress, under the influence of popular clamor, the best of rulers have been able to acquire powers which under other circumstances would never have been granted to them. Every coup d'état that has ever taken place took place in a period of danger, such as we are now passing through, and once the people of any country yielded up their power to an individual they never regained that power. Over and over again the power that was yielded to a good ruler has been the beginning of a long series of tyrannical and infamous despotisms. Cæsar Augustus was a good Emperor; Nero the most infamous figure in history. But if the Roman Republic had never yielded its power to Cæsar Augustus, there never would have been a Nero.

Napoleon Bonaparte, as the First Consul of the French Republic, led it to glorious victories and great achievements. Napoleon Bonaparte, the Emperor, led it to the disastrous defeat of Moscow and the desolation of the Battle of Waterloo.

Mr. Speaker, I do not impugn either the motives, the patriotism, or the wisdom of the present incumbent of the White House, but while I have the greatest faith in the world in American citizens as a whole, I know, and every man in politics knows, that there is more than one man in the United States who, if elected President, and invested with the power that this bill will create, would not hesitate to use that power for the advancement of his own personal ambition. I know, as I stated in the beginning of my speech, that the stand this small minority is taking to-day in Congress will subject us to invective and abuse, and will possibly mean the political downfall of some of us, but when I look back over the history of this magnificent country, and the countless men in all walks of life who have given their lives and sacrificed their fortunes that liberty and freedom might endure, I, for one, am willing to lose my seat in Congress and every political power that I possess in the same great cause.

For it is a great cause. This country was founded on vital, enduring, and eternal principles, crystallized in the immortal sentences of the Declaration of Independence, baptized in the blood of noble heroes, consecrated by the prayers and tears of thousands of self-sacrificing women, and I, for one, will never yield one iota of the principles that no government is just that is not founded upon the consent and direct expression of the will of the people.

I see a grave danger menacing this Republic to-day, a graver danger than many people for one moment imagine, for reading the history of the past, with its countless stories of the downfall of free republics and the building of personal dynasties, I can see in the vistas of the future that if this bill passes and this dangerous personal power is given even to the best of men, the end of a republican form of government.

I can almost hear the distant hoof beats of some powerful, conscienceless man on horseback, riding over the ashes of a dead republic to the throne of a despot and a tyrant.

May God in His mercy guide us aright and keep us strong in the faith of the fathers, that this free Government may not perish, but endure unto all the ages.

The Late Representative Michael F. Conry.

MEMORIAL ADDRESS

OF

HON. JOHN J. EAGAN,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. EAGAN. Mr. Speaker, MICHAEL F. CONRY has answered the final roll call. America has lost one of its best citizens; this House one of its ablest Members, one of its noblest characters; the fifteenth congressional district of New York a conscientious, hard-working Representative; his colleagues in this House a steadfast friend; and his sorrowing widow and children a devoted husband and father.

Membership in this great body has its responsibilities and cares, but it also has its compensations. One of the greatest of these is the opportunity to have known men like MICHAEL F. CONRY. My friendship for Mr. CONRY began the moment I was introduced to him, and it ripened as I grew to know more and more of him. The memory of the friendship will live in me as long as life lasts.

Though suffering constant and intense pain as the result of an accident while working as a boy in the coal mines of Pennsylvania, his disposition was as cheerful as his voice was sweet, as his heart was tender and true. Instead of harrowing others with his physical ills he seemed to forget them completely, and helped many of us by his sunny disposition and his all-pervading good humor to forget our imaginary troubles.

To know MICHAEL F. CONRY was indeed to love him. In his death I have suffered the loss of one of the best and truest friends I have ever had.

Mexico.

EXTENSION OF REMARKS

OF

HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. STEPHENS of Texas. Mr. Speaker, during the recent national campaign Republican campaign orators viciously attacked President Wilson's Mexican policy, charging he used the Army of our country in his endeavor to end the reign of anarchy existing in that country without declaring war against it. Recent events in Mexico have fully justified his course in that regard.

The recent election of Gen. Carranza as President of the Republic of Mexico, the collapse of the Villa revolution, and the general improvement in the condition of affairs there show fully the wisdom of the course pursued by the President. His oratorical campaign critics, however, had to find fault with him for campaign purposes and selected what they termed the "Mexican fiasco" as his most vulnerable point of attack. Their purposes reminds me of a story that is told of a new pastor who was conducting the first service on the charge. He was reading the injunction to the disciples who were being sent out to heal the sick, raise the dead, and cast out devils. Adjusting his spectacles, he looked out upon the congregation. "Now, brethren and sisters and friends," he stammered out in an embarrassed sort of way, "that is just what I am here for—to heal the dead, cast out the sick, and raise the devil."

These Republican campaign faultfinders were simply trying "to raise the devil" with President Wilson over the Mexican situation. These politicians proposed to retire the President from his high office in the November elections. The voters, however, disposed of the matter by triumphantly reelecting him President for a second term, and thus ratified his Mexican policy.

The Philadelphia North American on July 25, 1916, in its vain endeavor to defeat President Wilson for reelection, published the following article, namely:

WILSON BADLY BEATEN IN TEXAS PRIMARIES; HIS CANDIDATES LOSE—PRESIDENT AND HIS POLICIES WERE CHIEF ISSUES IN CAMPAIGN—FIVE CONGRESSMEN OUT—COLQUITT, RUNNING ANTIADMINISTRATION, LEADS FOR SENATE.

WASHINGTON, *July 24.*

A stinging defeat was administered to President Wilson by the voters of Texas on Saturday.

Such is the belief of the Republicans, now that the returns from the Lone Star State, virtually all in, indicate a straight-out victory for the anti-Wilson men.

Wilson's Mexican policy and Wilson's foreign policy were the three chief issues in the campaign. The supporters of Wilson and his policies were beaten wherever there was opposition to them, according to the reports.

Former Gov. Colquitt, basing his campaign entirely on opposition to Wilson and Wilson's Mexican policy, is far in the lead for the senatorial nomination.

Congressman at Large McLEMORE, basing his campaign on opposition to both Wilson's Mexican and foreign policies, is leading the race for the two positions of Congressman at large.

Five Wilson-Democratic Congressmen went down in their efforts to win renomination by hanging on the coattails of the President.

The Congressmen who failed to get renominations were CALLAWAY, STEPHENS, BURGESS, SMITH, and DAVIS. CALLAWAY ran as a pro-Wilson man. He has made a record for himself in this Congress by opposing all measures for adequate national defense. He and HENSLEY, of Missouri, were responsible for blocking battleships out of the naval bill as it passed the House. Likewise they persuaded the President to give the no-battleship bill his approval.

STEPHENS is chairman of the House Indian Committee, SMITH of the Committee on Irrigation of Arid Lands, and BURGESS was in line to become chairman of the Rivers and Harbors Committee, the present head of which, SPARKMAN, of Florida, was beaten for renomination a few weeks ago. DAVIS is widely known as "Cyclone" DAVIS. He went down in the ruck along with the other pro-Wilson Members. However, he ascribed a different reason for his defeat.

"Booze, boodle, and big business brought about my defeat," said DAVIS, when he made certain there was no chance for him to win out. "These interests prevented my name from going on the ballot as 'Cyclone' DAVIS. Every one in Texas knows me by that name."

Along with the victory of Colquitt, the victory of Congressman at Large McLEMORE was a severe jolt for Wilson. McLEMORE is the author of the now famous "McLemore resolution" which precipitated the armed-merchantman dispute between Wilson and Congress.

After Wilson compelled the Democratic majority in the House to table the McLemore resolution, warning Americans off armed merchantmen, he started out to defeat McLEMORE in Texas. McLEMORE, however, ran right along with Colquitt in the State at large, outdistancing his pro-Wilson competitors.

The fight on Colquitt was extremely bitter. The administration got behind Congressman HENRY. When it saw HENRY had no chance it persuaded Senator CULBERSON, who had virtually decided to get out of politics because of ill health, to go back into the race. CULBERSON is running second, but more than 20,000 behind Colquitt. He will take part in a second primary with Colquitt as his only opponent.

Mr. Speaker, at the time this editorial was written full returns of the Texas Democratic primary election were not in, but Senator CULBERSON was defeated, and in the second primary, held shortly afterwards, he defeated Colquitt by many thousand votes.

In this second primary race I sent a circular letter into my district advocating the reelection of Senator CULBERSON.

My open letter on this subject is as follows:

To the voters of the thirteenth congressional district of Texas:

I desire to request my friends and supporters to vote for Senator CULBERSON and against ex-Gov. Colquitt on the 26th of August. A vote for Colquitt would be a vote against Wilson, his administration and supporters, and therefore a vote for Hughes and the Republican Party. Can you afford to so vote? I think not. Colquitt in his now famous interview—which is being used as a campaign document by the Republicans—denounced the Wilson Democratic administration and said, among other things, that "the Wilson administration's foreign policy has been imbecile"; and he further said: "The Wilson administration is the greatest failure in the history of the Presidency." He substantially repeated this abuse of the Wilson administration in a speech at the Vernon fair last fall. I replied to him the next day, defended Mr. Wilson and paraphrased the Colquitt libel by saying that the Colquitt administration in Texas was not only imbecile but that he was the greatest failure as governor that ever disgraced that great office in our State; that he had pandered to the liquor interests of the State and was then and is now their willing tool. He had pandered to and secured the German vote of the State—which was and is now violently opposed to the Wilson Democratic administration. The Democratic voters of Texas can not afford to defeat Senator CULBERSON, who is supporting Mr. Wilson, and elect Mr. Colquitt, a man who is fighting the present splendid Democratic administration. They can not afford to slap Senator CULBERSON and the able Democratic Texas members of the Wilson Cabinet in the face by voting for this swashbuckling egotistical maligner of Democracy and the panderer to the vicious elements of our State.

Mr. Speaker, on July 21, 1916, the Wichita Times, an ably managed and edited Democratic paper published in Wichita Falls, Tex., published the following editorial in relation to the candidacy of Gov. Colquitt, viz:

[From the Wichita Falls Times, July 21, 1916.]

O. B. Colquitt is making a strong bid for the antiprohibition vote. His speech here last night, as have been his speeches everywhere, was directed to the antiprohibitionists. A good many antis would support him if they believed he could win in the second primary, but there's where the rub comes in. It is hard to believe that a majority of the Democrats of Texas will vote for the man who has declared over his own signature that "The Wilson administration has been the biggest failure in the history of the Presidency" and who predicted that the electorate of 1916 would end the Democratic régime. The selection of O. B. Colquitt as one of the two candidates for the run-off primary would be construed by the people of the country as a slap at the Wilson administration by Texas Democracy. The Times believes that the great majority of Texas Democrats indorse the Wilson administration and that the success of Mr. Colquitt, in view of his statements and his attitude toward the administration, would be a humiliation.

I fully agree and believe with this editor, that Gov. Colquitt in order to defend his own foolish and unwise course in trying to thwart the President's policy in relation to Mexico, would have been willing to bring on a bloody war between the two countries.

Mr. Speaker, Gov. Colquitt undoubtedly conspired with Victor Ridder, of New York, to secure the German vote of Texas. The following editorial from the New York Times dated April 24, 1916, leads me to this conclusion:

ANTI-WILSON MEN WILL GET GERMAN VOTE—VICTOR RIDDER QUOTED ON AN ORGANIZED CAMPAIGN FOR CONGRESSMEN—COLQUITT TO BE SUPPORTED.

The New York Times this morning publishes the following:

Victor Ridder, the brother of Bernard Ridder, editor of the Staats-Zeitung, said last night, that the German-American vote was being organized in this country in a campaign against any presidential candidate not acceptable to the German-Americans, and that the start of that campaign was being made now in an effort to see that no Congressmen or Senators were returned to Washington who were not in opposition to President Wilson.

BELIEVES COURSE JUSTIFIED.

In his statement, as reported to the Times, Mr. Ridder said he believed that the use of the German-American vote to beat men for Congress who might support Wilson was perfectly justified in view of the unwarranted attacks Mr. Wilson had made upon the Germans and the German-Americans living here.

Mr. Ridder was asked about the story appearing in a New York newspaper to the effect that Bernard Ridder had written to German language Texas newspapers asking them to support O. B. Colquitt, one of the candidates for the United States Senate.

"It is true that my brother and the Staats-Zeitung are using all the influence in their power," Mr. Ridder is reported to have said in reply, "to see that as large a vote as possible is swung to support men for Congress, Senators and Representatives who are not in sympathy with President Wilson and who can be depended upon to oppose him to the last.

"I consider this is a perfectly justifiable action on our part in view of the unjust and unfair imputations of President Wilson against the German-Americans who are living peacefully as members of this Nation despite the troubles in Europe. It is true that Bernard Ridder has written to friends in Texas asking their support of former Gov. Colquitt's election to the Senate.

Mr. Speaker, the New York World, on April 25, 1916, contained the following editorial relating to Gov. Colquitt's campaign methods. It is self-explanatory, and is as follows:

COLQUITT'S REDEEMING SHAME.

We find it necessary to give former Gov. O. B. Colquitt, of Texas, credit for one thing. His conscience smote him when as a candidate for the United States Senate he solicited the assistance of the pro-German propaganda.

"Of course," he says in his appeal to Mr. Koelble, of the German-American Alliance, "it would be well for such letters as you may write to be confidential, for reasons which you can readily understand." "I hope," he pleads in his communication to Bernard Ridder, in which he boasts of his own eminent services for Germany, "you will treat this letter as confidential."

With these requests he fell in with the spirit of the movement engineered from Berlin to intimidate or corrupt American sentiment. Every bomb, every torch, every forged passport, every bribe, every conspiracy, and every threat used by or for Germans against the peace and dignity of this country has been employed in strict confidence, for reasons readily understood.

Whether Mr. Colquitt's adoption of the same methods was due to mimicry or shame, it is evident that he did not want to be caught in the Kaiser's service. Such a man must still have a trace of Americanism in him.

Mr. Speaker, the primary election resulted in my defeat, and I lost my seat in Congress by standing by the President and remaining at my post of duty during the entire session. I have always supported President Wilson and his policies. On June 23, 1915, in a speech before the Commercial Club at Childress, Tex., I spoke as follows:

COMMERCIAL CLUB BARBECUE GRAND SUCCESS.

Hon. JOHN H. STEPHENS, of Vernon, Congressman from this section of the State, was the last speaker. He did not exactly make a political speech, but devoted the greater part of his time to explanation of some of the national questions now before the people. He was particularly strong in his upholding of President Wilson, also condemned Hon. W. J. Bryan for resigning from the Cabinet at the time he did. Mr. STEPHENS said that he was opposed to war, either with Europe or Mexico, but said that the President could not afford to give in to all the demands of foreign countries. He was of the opinion that affairs in Mexico would reach a crisis in a short time, and if a strong man did not come to the front in that country and control affairs this country might find it necessary to send an army down there.

The talk of Mr. STEPHENS was applauded quite freely, showing that the crowd was with him on the stand he had taken. Also the next day many compliments were heard and the wish was expressed by many that he return at an early date and give a talk to the public along the same lines, only more extended.

On June 14, 1915, I was interviewed by a reporter of the Wichita Times, and made the following statement, viz:

CONGRESSMAN STEPHENS IN ACCORD WITH WILSON IN POINT BEYOND WHICH NATION CAN NOT MAINTAIN PASSIVE POLICY AND HOLD SELF-RESPECT.

When questioned as to his views with reference to the action of Secretary of State Bryan retiring from the Cabinet, Congressman JOHN H. STEPHENS, of this city, chairman of the House Committee on Indian Affairs and dean of the Texas delegation in the lower House, yesterday expressed his approval of the course pursued by President Wilson in the diplomatic correspondence with Germany, and further stated that he was not greatly surprised to learn of Mr. Bryan's resignation, since the Secretary of State had advocated a policy of peace at any price.

Continuing, Mr. STEPHENS said that such a policy was unwise because there is a point beyond which it is impossible for a nation to retain its self-respect and the respect of the world by pursuing a passive policy in its international relations. The local Congressman then stated that, in his opinion, this point had been reached in our relations with Germany and the President was correct in insisting upon Germany respecting our rights as a neutral power.

Owing to the very meager reports concerning the causes of Mr. Bryan's resignation received in Vernon yesterday, Mr. STEPHENS said he felt a hesitancy in discussing the matter, but that if the reports were correct in stating that Mr. Bryan's action was prompted by his disapproval of the note which is about to be forwarded to Germany, which, it is generally understood, simply inquires whether Germany intends to conform her maritime warfare to recognized principles of international law, he is unable to see why anyone should disapprove the sending of such a note.

Passing to the phase of the question involved in the possible unfavorable answer of Germany to the American demands, Mr. STEPHENS said he believed that the United States in such a contingency should sever diplomatic relations with Germany and impound German ships now interned in American waters to be held until the claims of this Government are satisfied. The action, Mr. STEPHENS pointed, could not mean war, but would simply be a protest on the part of the United States against the violation of the rights of neutrals upon the high seas.

Mr. STEPHENS expressed the opinion that the resignation of Mr. Bryan would not affect the attitude of the American people toward the Wilson foreign policy and that the Nation would continue to unitedly support the President in whatever action he and the other members of the Cabinet may decide in the crisis now on in our foreign relations.

Mr. Speaker, I think that I have made it clear that I am now, and always have been, a loyal friend and supporter of President Wilson and his policies and that Gov. Colquitt and his henchmen have been disloyal to him. The following letter from the Democratic chairman of one of the counties of the district I represent is self-explanatory:

JULY 17, 1916.

DEAR MR. STEPHENS: This is the ticket put out by the antis, and they are giving it to every voter in the county. Wish you were here to offset it. Things are warming up here, but I am confident that you will have a handsome majority.

The ticket referred to was the Texas Democratic ticket, printed for use in the State primary election held on July 21, 1916.

The ticket is as follows, viz:

ALL DEMOCRATS.

All Democrats are asked to vote this ticket for old Democracy's sake.
Against the submission of an amendment of the constitution providing for State-wide prohibition.
For governor: James E. Fergerson.
For United States Senator: O. B. Colquitt.
Congressman at large: JEFF: MCLEMORE and Hugh Nugent Fitzgerald.
Chief justice of supreme court: Nelson Phillips.
Associate justice supreme court: R. W. Hall.
Attorney general: John W. Woods.
Railroad commissioner: Allison Mayfield.
State treasurer: J. M. Edwards.
Judge court criminal appeals: A. J. Harper.
Commissioner of agriculture: H. A. Halbert.
Comptroller: H. P. Terrell.
Against the resolution without modification or change of the compulsory investment feature of the Robertson insurance law.
For associate justice, court of civil appeals, seventh judicial district: William Boyce.
Member of Congress, thirteenth congressional district: Marvin Jones.
For representative, one hundred and first district: E. R. Greenwood.

Mr. Speaker, my successful opponent lived at Amarillo and ran for Congress on this Colquitt ticket. He was elected by a plurality vote over myself and two other avowed prohibition candidates, thus giving this anti-Wilson, pro-German, and pro-saloon ticket an easy victory, but he failed by over 3,000 votes of receiving one-half of the votes of the district in the Democratic primary. There can be no run-off or second election in Texas between the two candidates for Congress receiving the highest number of votes.

On July 5, 1916, I made a speech in the House of Representatives giving my reasons for not going home and canvassing my district.

That speech is as follows:

ON THE NECESSITY FOR EVERY DEMOCRAT REMAINING AT HIS POST DURING THE REMAINDER OF THIS SESSION OF CONGRESS.

"Mr. STEPHENS of Texas. Mr. Speaker, the country must and will recognize that the present session of Congress is one of the most important since the Civil War. The great war in Europe, the alarming conditions in Mexico, the changed trade and business relations growing out of these world calamities make it absolutely necessary for the President and Congress to be more alert in framing policies and laws to meet the existing and contemplated troubles than ever before. It is therefore more necessary than at any other time since I have been a Member of this House that Democrats should remain on guard, and, if necessary, forfeit their seats here to some one running against them at home rather than desert the Democratic ship, so well commanded by Woodrow Wilson in this great storm period of our national history.

"Our constituents at home, I know, despise deserters and desire every Democrat to remain here and aid our presidential leader in his great endeavor to prevent war in Mexico or elsewhere if possible, or, if war is forced upon us, to furnish all the means and legislation necessary to conquer the enemies of our country.

"Keeping these things in mind, I think and hope that all Democrats in Congress should remain here and endeavor to carry out the splendid policies of the Woodrow Wilson administration. I know by experience that it is hard to remain here at our post of duty while our opponents are fighting us at home for our seats, and by taking advantage of our absence are misrepresenting to our constituents our votes and records here, claiming that we have never done anything for them while in Congress. My record in Congress will show the falsity of my opponent's claim that I have never done anything to benefit my constituents. This false charge convicts its maker of either willfully misrepresenting facts, as shown by the CONGRESSIONAL RECORD, or of inexcusable ignorance of the past political history of his country.

"In any event he proves himself unworthy to be my successor in this House.

"Mr. Speaker, I desire to state that I am a conservative in all matters of legislation and that I am not an advocate of peace at any price, but only when it can be had by patiently waiting and diplomacy as the President so far has so well accomplished. The country is to be congratulated in having President Wilson now at the helm. He is a man of conservatism and prudence rather than a man of fiery and warlike instincts.

"My votes at this session of Congress on the various preparedness measures coming before us show that I am in favor of adopting such strong military measures as the President may find necessary to prevent any further butchery of our soldiers or citizens by Mexican bandits.

"That I favor the building of merchant marine and warships in the Government shipyards. I also favor the Government building plants and manufacturing all of its munitions of war, and I shall vote, as heretofore, for reasonable appropriations of money in the Army, Navy, and fortifications bills as will, in my judgment, be sufficient to adequately defend our country from foreign invasion.

"That I favor a small standing army in time of peace and the use of the National Guard to supplement the Regular Army in time of war; in other words, I favor the same system that has served us so well since the foundation of our Government.

"That I am opposed to compulsory military service and favor the volunteer system.

"I voted for the Hay bill because it was a comprehensive method of meeting all different views promulgated upon the preparedness question, and dealt with this question from a reasonable standpoint and did not go to either extreme. The Hay bill provided for a standing army of 140,000 men, which is an increase of 40,000 over the present standing Army. I voted against the Kahn amendment, which provided for an increase of the standing Army to 220,000.

"I favored the President's policy of warning our citizens against going into Mexico and also requesting those citizens already there to come out and remain out of that unhappy country."

The Life, Character, and Public Services of Hon. Michael F. Conry, Late a Representative From the State of New York.

MEMORIAL ADDRESS

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. HULBERT. Mr. Speaker, MICHAEL FRANCIS CONRY has gone to his last reward. No more shall we hear his sweet voice along the corridors and through the tunnel leading from the House Office Building to the Capitol humming the refrain of "Genevieve," "Mother Machree," "The End of a Perfect Day," or a song composed by himself upon the trip made by a congressional party to Honolulu last summer—all his favorites, with which he always sought to ease each belabored step, never knowing, as he expressed it, what it was to be without pain, as he attempted to hurry along in the performance of his duty, which he discharged with unerring fidelity to the trust reposed in him by an admiring constituency.

Born at Shenandoah, Pa., April 2, 1870, of poor but respected parents, when but a boy, working in the coal mines, CONRY met with an unfortunate accident, in which his ankles were crushed, rendering him a cripple for life, thus preventing him from pursuing further that occupation. But it gave him the unlooked-for and unexpected opportunity of attending and being educated in the public schools of his native town, following which he taught school for seven years, and then entered and worked his way through the University of Michigan. Graduating from that institution in 1896, he received the degree of bachelor of laws, and began the practice of law at Scranton, Pa.

Mr. CONRY was too modest and unassuming to take more than a conscientious pride in his own success, yet too proud to complain of any misfortune.

Probably few of his colleagues ever knew he had once been nominated as the Democratic candidate for, and, upon the face of the first returns, elected to Congress from the State of Pennsylvania, but the certificate was subsequently issued to his opponent.

Thereafter Mr. CONRY moved to and took up the practice of law in New York City, where he soon attracted attention as an orator of marked ability.

It was but natural that one of his humble origin, always considerate of the welfare of the toilers, should have allied himself with the Democracy of Tammany Hall, in which he became an ardent and enthusiastic colaborer and attained deserved popularity.

After serving for two years as an assistant corporation counsel of the city of New York he was elected to the Sixty-first, Sixty-second, Sixty-third, Sixty-fourth, and Sixty-fifth Congresses, and at the time of his death was a member of the Committee on Ways and Means.

Mr. CONRY was a man of great intellect and a diligent student; he possessed the talent to analyze an intricate problem until he had mastered its every detail, and acted only after the fullest deliberation, and while not so active upon the floor of the House as many of his colleagues, due to his physical infirmities, his counsel and advice were eagerly sought, and he gave a great deal of attention and deep thought to pending legislation, and his influence was a potent factor in its consideration. Aside from his attention to tariff and revenue matters, which were originated in the committee of which he was a member, he found time to organize and practically lead the successful opposition on the Democratic side to the Clarke amendment to the Philippine bill, upon the termination of which, after a continuous session of 13 hours, on May 1, 1916, he suffered a physical collapse which compelled him to take to his bed for several weeks, and which he prophesied "was the beginning of the end." He also delivered a carefully considered and well-prepared speech in support of the retention of the pneumatic postal tubes in New York, which is but one evidence of his readiness and eagerness to promote or protect the interests of the city of New York, which he in part and so ably represented whenever it became an issue.

During my brief service in Congress we had become warm personal friends, inseparable companions, and I never knew a more considerate, faithful, and devoted friend.

And friendship is the rarest and sweetest flower that grows in the garden of life; its soil is the human heart; it is planted by honest thought, nurtured by tears of sympathy, and kept alive by the breath of good wishes. Anyone who possessed the friendship of Congressman CONRY, and they were legion, might have applied the acid tests of a chattering tongue, a wind of adversity, a bit of good fortune, or a breath of slander, only to find that it was untarnished by any or all. It was pure gold.

My heart goes out to his wife and three little daughters, who have lost a devoted husband and loving father, while not only the people of the fifteenth congressional district, but the city, State, and Nation have lost a statesman in the hour of our country's peril.

Though I was one of the last to leave his bedside when his spirit had taken its final departure, I shall never be able to realize that he is other than "absent," for such a noble character as his but echoes:

There is no death,
The stars go down to rise upon a fairer shore
And bright in heaven's jeweled crown
They shine forevermore.

And ever near us tho' unseen
The nearer immortal spirit treads,
For all the boundless universe is life,
There are no dead.

I include the following newspaper articles on my late colleague, MICHAEL F. CONRY:

[From the Washington Post, Saturday, Mar. 3, 1917.]

DEATH OF M. F. CONRY—HOUSE HALTS SESSION FOR HOUR WHEN NEWS IS RECEIVED—AT WORK UNTIL LAST WEEK—SUCCUMBS AT PROVIDENCE HOSPITAL FROM HEART AND KIDNEY TROUBLE—DEMISE MAY MEAN REPUBLICAN ORGANIZATION OF NEXT HOUSE—WAS TAMMANY HALL MAN.

The House stopped work for an hour yesterday when announcement was made of the death of Representative MICHAEL F. CONRY, from the fifteenth district of New York. After an illness of six weeks of kidney and heart trouble Mr. CONRY died at Providence Hospital here shortly before 5 o'clock in the afternoon. The body will be taken to New York to-day, and funeral services will be held in that city next Tuesday.

Mr. CONRY, prominent in the affairs of this Congress, had been elected to succeed himself in the next House. He was a Democrat, and the vacancy created by his death may result in an advantage that will give the Republican side the necessary single vote required to organize the House and elect a Speaker.

It was said last night that it is not likely that Gov. Whitman, of New York, being a Republican, will call a special election before next November.

The Democrats and the Republicans each elected 215 Members. There are five independent Members. Each of the old parties is reasonably certain of receiving two votes from the independents, with Representative MARTIN, progressive-protectionist, of Louisiana, in doubt.

FOUR TERMS IN CONGRESS.

With one Democratic vacancy, it would be a tie vote if Mr. MARTIN casts his lot with the Democrats, and if he should go to the Republican side, the result would be a majority of two for that party.

Mr. CONRY was rounding out his fourth consecutive term in the House. He was 47 years old. He was a native of Shenandoah, Pa., and in his youth, following the occupation of a miner, sustained an injury that lamed him for life. He taught school for seven years and afterwards studied law in the Michigan University. He is survived by a widow and three daughters.

In the House Mr. CONRY was regarded as the leader of the New York delegation. He was known as the closest friend of Charles F. Murphy, chief of Tammany Hall. He was a member of the Ways and Means Committee, and until last week, though ill, worked hard with his colleagues in connection with the framing of the revenue bill and other legislation.

[From the Washington Evening Star, Saturday, Mar. 3, 1917.]

REPRESENTATIVE CONRY DIES AT HOSPITAL HERE—NEW YORK MEMBER ILL ONLY WEEK—FUNERAL SERVICES TUESDAY—HOUSE PAYS ITS RESPECT.

Representative MICHAEL F. CONRY, of New York City, died at Providence Hospital yesterday afternoon after an illness of a week. Funeral services will be held in New York City Tuesday. Mr. CONRY had been aware of an approaching illness for several weeks, but had continued at his work up until the time it was necessary for him to go to the hospital a week ago. The physicians found he had a combination of heart and kidney trouble.

His death was announced to the House late yesterday afternoon by Representative FITZGERALD, of New York City. As the announcement came at a time when the public business of Congress was in a congested condition, all the House could do in respect to the late Member's memory was to recess from 7 to 8 o'clock. Representative MANN and Representative BENNET made brief speeches, in addition to Representative FITZGERALD'S remarks, telling of their admiration for Representative CONRY'S many fine qualities.

LOOKED UPON AS LEADER.

The New York Member was especially valuable to the Ways and Means Committee and was looked upon as a leader in the New York City delegation in the House.

As it was known, he was one of the closest friends to Charles F. Murphy, the head of the Tammany organization, Representative CONRY'S political advice was considered valuable. His work in Congress was of the quiet kind, as he rarely made a speech. However, he exercised great influence, and his death will make a great gap in the power of the Democratic organization in the House.

He had been reelected to the next House, which would have made his fifth consecutive term. He was 47 years old, born in Shenandoah, Pa., in 1870. His first work was in a coal mine; later he became a teacher, and then attended the University of Michigan, graduating in 1896 with a degree of bachelor of laws. His practice in New York City brought him into prominence, and he became assistant corporation counsel of that city, a post he held for two years. He was elected to the House first for the Sixty-first Congress and for the succeeding Congresses with large majorities. A wife and three children survive him.

REPRESENTATIVE CONRY SUCCUMBS TO MALADY—"TAMMANY HALL" CONGRESSMAN DIES AT PROVIDENCE HOSPITAL.

MICHAEL F. CONRY, Democratic Representative of the fifteenth New York district in the House, died at Providence Hospital here last night of kidney trouble.

He had been ill only a few days, although his health had been bad for several years. He was 47 years old, and is survived by a wife and three children.

Representative CONRY was one of the leaders of the so-called Tammany group of House Democrats. He had been in Congress for eight years, and had been reelected to the Sixty-fifth Congress. His death materially lessens the Democratic chances to control the next House.

The House, despite the congestion of legislative business and the short time remaining for work, took an hour's adjournment last night out of respect to the memory of Representative CONRY.

Representatives FITZGERALD, of New York; MANN, of Illinois; and BENNET, of New York, paid glowing tributes to the dead Member. The body will go to New York to-day, and a congressional committee will attend the funeral, to be held Tuesday.

IF HOUSE DOES SING, 'TWILL BE A TRIBUTE—"MIKE" CONRY, GENIAL, SWEET-VOICED CONGRESSMAN, DIES AS SESSION ENDS—LED IN "GOOD-BY" SONGS—MEMBERS RECESS IN MIDST OF TASKS WHEN NEWS OF DEATH IS TOLD.

[By Theodore Tiller.]

Probably there'll be a song or two in the House of Representatives late to-night or in the early morning hours as this session passes into history. In the lower body there is generally a let-down of business just before the gavel falls, and somehow the fellows begin to hum an old-fashioned tune, the chorus swells, and soon half the membership is singing.

It is the mellowing influence of the time for good-bys, the relief from overwork, an outcropping of the sentimental among men who are soon to break pleasant associations, and who at heart are still just boys.

But if they sing to-night there will be a missing voice—and that is why this story is written. "MIKE" CONRY—genial, whole-souled, lovable "MIKE" CONRY—is dead, or has "crossed over," as Uncle JOE CANNON, who dislikes the word "death," would say if he were writing a story about the passing of a colleague.

VOICE CLEAR, HEART TENDER.

In former years Congressman CONRY has been there to sing as the last hours of a Congress slipped by. He had a voice as clear as a bell and a heart as tender as a child's. He was lame—was "MIKE" CONRY—but he'd limp toward the well of the House and soon you'd hear him above the rest as his tenor would blend in harmony with other Members who had good voices and sang with feeling under the thrill of good-by scenes.

"Auld Lang Syne," "Tenting To-night," "Old Black Joe," "Suwannee River"—the old favorites, with sometimes a verse of "Home, Sweet Home"—were among the songs they sang, while CONRY'S voice keyed true to every note.

Or perhaps they'd sing an Irish ballad—something that carried one back to the memories of green hills and clear lakes, to blue-eyed lassies, to cottages where old-fashioned mothers crooned the lullabys that have always put little children to sleep, and to a little isle whose national heart has been as big as the great out-of-doors.

"MIKE" CONRY STIRRED.

And then, too, "MIKE" CONRY'S voice was heard above the rest, but it had a sort of quaver in it and his eyes had that far-away look that comes when one's feelings are deeply stirred.

Maybe the Members of the House will not get a chance to sing at all before the adjournment comes sine die. But if CONRY were here he'd want them to, and now he is dead and the body is on the way to his New York home, "MIKE" CONRY would not have them refrain from song because of that.

This story might have been told in a few words—but the writer felt it was worth a bit more than that. In these final hours of an epochal session of the National Legislature, it can not be amiss to turn a moment from practical things and record that sentiment still exists, that there is not a Member of the House who doesn't miss MICHAEL CONRY to-day, and that if the songs of yesterday are sung again some of his colleagues will seem to hear once more the lead of CONRY, of New York.

HOUSE SHOWS SPIRIT.

Persons who have never seen the end of a session in the House of Representatives probably can not appreciate what adjournment means to the Members of the lower body. In the Senate there is always dignity, real or assumed. The farewells are grave, matter of fact, although doubtless sincere. In the House the scenes are entirely different.

House Members somehow are closer in their friendships. The complexion of the lower chamber is constantly changing. Men come and go every two years. The leader of to-day may be the vanquished of to-morrow. But during his term he has formed friendships that are as true as steel and associations that are hard to break.

Final adjournment in the House is much like the graduation day in a high school or a college. The young fellows assemble in class for the last time. Each one knows that never will they all meet together again. New faces are sure to appear and old faces are certain to be missed. It is a breaking of the ties that bind.

So with the House of Representatives, with its membership that comes "close from the soul of a great people." The end of business comes, the tension is relaxed, Members are saying good-by—perhaps for a day, perhaps forever; and then away over in a corner a song is begun, a hush falls over the crowded galleries, the membership joins in, the Speaker withholds the gavel, there is no word of reproof, and moisture dims the eyes of those who appreciate the note of pathos in it all.

Thus they have sung in the past and thus they will sing in the future. But "MIKE" CONRY'S voice will never lead them again.

NEWS OF DEATH COMES.

"MIKE" CONRY, beloved of every Member of the House, died last night at Providence Hospital. The end came quickly, unexpectedly.

The House stood in recess for one hour when the death was announced by Congressman FITZGERALD, dean of the New York delegation. The crush of legislation prevented a longer recess, but the tribute of the House was none the less sincere. Tears stood in the eyes of Mr. FITZGERALD as he told his colleagues that MICHAEL CONRY had answered the final roll call.

Should they sing as the sands of the Sixty-fourth Congress run low, there'll be a tribute to CONRY in that, and there'll be proof once more of the fact that the makers of national law have in them the touch of sentiment that makes us all alike.

REPRESENTATIVE CONRY DIES—NEW YORK DEMOCRATIC MEMBER KEPT UP CONGRESS DUTIES TO THE LAST.

WASHINGTON, D. C., *Friday.*

Representative MICHAEL F. CONRY, a Democrat, of New York City, died here to-day from kidney and heart trouble, from which he had been suffering acutely for about a week in Providence Hospital.

Mr. CONRY was 47 years old. He was born at Shenandoah, Pa., April 2, 1870. He studied law in the University of Michigan and was graduated in 1896. He was married and had three children. Mr. CONRY served two years as assistant corporation counsel of New York and had just been reelected to his fifth consecutive term in the House of Representatives.

Mr. CONRY was regarded as the real Democratic leader of the New York delegation. He was the only New York member of the Ways and Means Committee. It is said that he was the closest friend of Charles F. Murphy, of Tammany Hall. He has been a conspicuous figure in the House of Representatives ever since he began his service in the Sixty-first Congress.

During the present session, when the fight over the retention of the pneumatic-tube service in New York City reached its climax, Mr. CONRY was one of the foremost advocates of retention of the tubes. Mr. CONRY, although ill, remained at his post in the forefront of the struggle which finally resulted to-day in the retention of the tubes, the Senate having agreed to the conference report, which now send the bill to the President for his signature.
